First, the committee recommended a rescission of $38 million, the amendments I will submit contains a rescission of $48 million. The reason for this is that at the time the committee acted we had been told that the $38 million figure included $10 million carryover from fiscal year 1982. Subsequently we have confirmed that it did not. So we have added that amount to the amendment that will be submitted shortly.

The other difference is that section 129, concerning the implementation of the Foreign Missions Act as it relates to the District, is not included in the amendments that I will submit. The amendment's sponsor has withdrawn this amendment.

And finally as a result of the conference agreement with the House on the continuing resolution we are agreeing with their language on the D.C. lottery.

In addition, the committee has recommended an amount slightly over $2 billion including local revenues as the total D.C. budget for fiscal year 1983.

Mr. President, as part of the Federal portion of this bill I mentioned an item called the special crime initiative totaling $3.1 million. As we are all aware, crime in our Nation is reaching epidemic proportions in some areas. That is not a cliché, it is an unfortunate reality. It affects not only our large cities, like my home area, but it invades the rural areas of my State and those of every other State represented in this body. We are no longer safe anywhere. Crime erodes our quality of life. If we are not victims, we are prisoners of our fear.

Unfortunately, the Nation's Capital is not immune from this plague. During our hearings we received testimony from the Mayor, the Chief of Police, and the judges of the court system. All have told us of their efforts and problems in combating crime. Last May the Mayor and Chief of Police established a repeat offenders unit within the Police Department. This unit concentrates on about 1,000 criminals who commit a majority of all crimes in the District. The purpose is to locate and apprehend these individuals in the act of committing a crime.

Once apprehended our prosecutors and our court system must have the resources to deal with these offenders. With the recent changes in law and the additional resources provided in this bill, I believe we can have a major impact on crime in this city.

To combat crime in the District this bill includes: $800,000 for the U.S. Attorney to hire more prosecutors; $2.3 million for an automated fingerprint identification system for the Police Department to allow faster positive identification of arrested suspects; $285,000 to hire three hearing commissioners for the superior court. This will allow for speedier trials, where we are now experiencing a 1.6-percent increase per month in the felony case backlog; and a total of 3,880 police officers.

In addition to these important provisions we also have included: $2.4 million for the Fire Department to pro-

vide separate crews for the city's four heavy-duty rescue squads; $3.1 million to continue the implementation of the financial management system; $10 million toward retiring the accumulated deficit; $4.3 million as partial payment of a shortfall in retirement funds from fiscal 1981; and $306 million as the full budget request for the public school system.

Mr. President, this bill deserves our support. It continues the progress already made in managing the city's finances. We all know that in fiscal year 1981 the District had its first balanced budget, with a surplus of $68 million. What has been less publicized is that $8 million of that amount was the result of management savings through spending reduction. It is clear that as the city's managers are provided more tools, such as the financial management system, the quality of their management will continue to improve.

Mr. President, we should note that the Mayor has recently informed us of recent projections which indicate that the District may have a $110-million shortfall in fiscal 1983. This is caused by a revision downward of $51 million in the revenue estimates and a $59-million increase in projected expenditures.

I am confident that given this early knowledge and the resources provided in this bill the Mayor will be able to manage the District's resources to insure a balanced budget.

Before I close, Mr. President, I want to thank the members of the District of Columbia Subcommittee and in particular the ranking minority member, Senator LEAHY, who has offered his counsel and assistance in formulating this bill. And to the distinguished chairman of the Appropriations Committee whose leadership has kept us on track and proceeding in an orderly fashion to bring this bill to the floor today.

GOVERNMENTAL DIRECTION AND SUPPORT

The bill includes a total of $69,439,000 for governmental direction and support. For the District Council $4,914,300 is recommended. This is $200,000 more than the House provided.

For the Office of the Mayor the committee has recommended a total of $1,819,600, of which $750,000 is to support the implementation District Victims of Violent Crime Compensation Act.

The sum of $3,126,600 is provided, over the budget request, for the continued implementation of the financial management system.

For the Retirement Board a total of $1,689,000 is recommended, to be derived entirely from the investment income of the Board. The House had provided that of this amount $425,000 would come from the general fund of the District.

ECONOMIC DEVELOPMENT AND REGULATION

For the Department of Housing and Community Development the committee recommends $26,707,700. This amount is $2.6 million more than the House and the same as the budget request. The committee recommends that $3.4 million be used for the home purchase assistance program; $3.4 million for rehabilitation financing; and $1.75 million for acquisition of vacant buildings and land.

These and other city-wide development programs will be targeted to a major new initiative in fiscal 1983, the Ward 8 Alabama Avenue Renaissance. This project is designed to bring the efforts of many District agencies to bear on the Anacostia area, one of the sections of the city most in need of revitalization.

For the Office of Business and Economic Development the committee recommends $1,329,600. The office is responsible for efforts to retain and attract new employment opportunities to the District. And $307,500 is provided in the bill for the Minority Business Opportunity Commission, which represents the budget request.

PUBLIC SAFETY AND JUSTICE

For the agencies under the public safety and justice appropriation title the committee recommends $410,175,078. This amount is $4.7 million more than the budget request and $5 million more than the House allowance.

For the Metropolitan Police Department $2.3 million more than requested, and approved by the House is recommended. As noted earlier these funds will be used for the purchase of a computerized fingerprint identification system. In addition it will provide for the purchase of 210 additional portable radios in support of the 3,880 officers force size.

For the Fire Department $48,769,000 is provided, which is $2.4 million more than the budget and House allowance. This addition, also noted earlier, allows for the provision of separate heavy-duty rescue squads.

For the D.C. courts a total of $45,209,678 is recommended in the bill. This is comprised of $2.8 million for the court of appeals; $30.9 million for the superior court; $6.4 million for the D.C. court system; $3.4 million for the Public Defender Service; and $1.5 million for the Pretrial Services Agency.

For the Department of Corrections the bill includes $87,795,900. This amount provides for 90 additional correctional officers to help increase security at District prison facilities.

PUBLIC EDUCATION SYSTEM

For the public education system appropriation title $439,042,100 is recommended. This is $4.9 million more than the House allowance.

The principal components of this account are the public schools $306.5 million; the University of the District of Columbia $58.7 and the teachers retirement system $55.7 million.

For the public library the committee recommends $11,246,300. This includes an amount over the budget to allow the main library to remain open on Sunday afternoons during the school year.

HUMAN SUPPORT SERVICES

The committee recommends $465,103,800 for the Human Support Services appropriation.

For the Department of Employment Services $18,561,000 is recommended. This is $664,000 more than allowed by the House. This amount supports the out-of-school youth employment program and the adults with dependents employment program. The budget also includes $2.8 million for expansion of job training programs under the Youth Employment Act.

For the Department of Recreation $20,739,800 is provided. The District operates 44 neighborhood swimming pools, 10 day camps, and special programs for the handicapped, mentally retarded, and elderly through the Department.

For the Department of Human Services a total of $333,046,400 is included. DHS administers the District public assistance, AFDC, medicaid, and supplemental security income programs, as well as emergency assistance, child day care, and foster care programs.

For the D.C. General Hospital operating subsidy $35.1 million, the budget estimate and House allowance, is recommended.

For a payment to the federally owned St. Elizabeth's Hospital $22.9 million is recommended. This is $3.6 million less than allowed by the House and the same as last year.

TRANSPORTATION SERVICES AND ASSISTANCE

The bill includes $136,712,400 for the transportation services and assistance appropriation title. This is comprised of $43.5 million for the Department of Transportation; $91,000 for the Washington Metropolitan Area Transit Commission, and $93.1 million for Metro.

ENVIRONMENTAL SERVICES AND SUPPLY

The bill includes $32,910,000 in general fund appropriations for the Department of Environmental Services. In addition the $17.2 million request for a general fund payment to the water and sewer enterprise fund is recommended, rather than the $5.4 million allowed by the House.

PERSONAL SERVICES

For the personal services appropriation title $13,750,822 is recommended. This is $9.9 million below the budget request and $3.3 million below the House allowance.

In addition to the above appropriation accounts the committee recommends $142,204,200 for repayment of

loans and interest; $10,000,000 for repayment of the general fund deficit, this is $10 million less than the House; and $2,078,500 in energy adjustments.

For capital outlay the committee recommends approval of the budget request of $83,885,600. This is an increase of $446,100 over the House allowance. The committee concurs with the House provision of $1.6 million for four projects in the District courts.

ENTERPRISE FUNDS

For the water and sewer fund the committee recommends $114,479,400; for the Washington Convention Center fund $7,574,000 is recommended and for the lottery and charitable games fund $1,184,500 is provided.

UP AMENDMENT NO. 1415

Mr. D'AMATO. Mr. President, I send to the desk several amendments as described earlier and ask for their immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from New York (Mr. D'AMATO) proposes an unprinted amendment numbered 1415.

Mr. D'AMATO. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 2 at line 3 strike $336,600,000 and insert $361,000,000

On page 2 at line 6 strike the colon and all through line 12 except the period.

On page 2 after line 23 insert the following:

"SPECIAL CRIME INITIATIVE

For a Federal contribution to the District of Columbia to aid in the detection and prevention of crime, $3,142,600: *Provided*, That $2,342,600 shall be available to the Metropolitan Police Department: *Provided further*, That $800,000 shall be transferred to the Department of Justice for use in the Superior Court Division of the U.S. Attorney's Office for the District of Columbia."

On page 3 after line 2 insert the following: "(including rescission)"

On page 3 at line 6 strike, after the word "which" down through "purpose," on page 3 line 7.

On page 3 at line 9 strike all after the word "That" down through line 11 and insert before the period the following: "there is hereby recinded $48,832,500 in capital loan authority"

On page 3 at line 18 strike $68,312,200 and insert "$69,439,000"

On page 3 at line 24 strike the word *"Provided"* down through the word "constitution:" on page 4 line 11.

On page 4 at line 22 strike starting with the word "of" down through "rived" on line 24.

On page 5 at line 10 strike $58,263,400 and insert "$61,122,000"

On page 6 at line 11 strike $405,111,600 and insert "$410,175,078"

On page 6 at line 24 strike $230,000 and insert "$300,000"

On page 7 at line 18 strike $434,171,200 and insert "$439,042,100"

On page 7 at line 20 strike beginning with the word *"Provided"* down through the work "program:" on line 22.

On page 7 at line 23 strike the word "further"

On page 8 at line 16 before the period insert the following: ": *Provided further*, That of the $55,700,000 for the District of Columbia Teachers' Retirement Fund, of which $4,300,000 is to be applied against a fund shortfall in fiscal year 1981"

On page 8 at line 21 strike $450,550,880 and insert "$465,103,800"

On page 9 at line 10 strike, beginning with the word *"Provided"* down through "$26,548,700" on line 16 and insert before the colon the following: "*Provided further*, That total reimbursements in operating funds to Saint Elizabeths Hospital, including funds from title XIX of the Social Security Act, approved July 30, 1965 (79 Stat. 343; 42 U.S.C. 1396 et seq.), shall not exceed $22,948,700"

On page 9 at line 19 strike beginning with the colon down through the word "expenditures" on line 25.

On page 10 at line 7 strike $135,712,400 and insert "$136,712,400"

On page 10 at line 12 strike $38,337,000 and insert "$50,140,500"

On page 10 at line 19 strike $5,427,000 and insert "$17,230,500"

On page 11 at line 1 strike $17,100,000 and insert "$13,750,822"

On page 11 at line 1 strike all beginning with the third comma down through the word "Department" on line 2.

On page 12 at line 4 strike beginning with the word "cash" down through "$309,000,000" on line 5.

On page 12 at line 6 strike $20,000,000 and insert "$10,000,000"

On page 12 strike line 8 through line 11 and insert after line 11 the following: "The Mayor is hereby authorized and directed to apportion a reduction in the amount of $2,078,500 in authorized appropriations and expenditures within object class 30A (energy) within one or several of the various appropriations headings in this Act."

On page 13 at line 7 strike $83,439,500 and insert "$83,885,600"

On page 14 at line 9 strike $107,195,900 and insert "$114,479,400"

On page 14 at line 9 strike $16,726,500 and insert "$24,010,000"

On page 14 at line 16 strike beginning with the colon down through the word "heading" on line 20.

On page 15 at line 6 after the second comma insert the following: "as amended,"

On page 19 at line 2 strike 33,109 and insert "33,165"

On page 19 at line 2 strike 32,052 and insert "32,108"

On page 19 at line 12 strike 28,459 and insert "28,515"

On page 22 strike lines 12 through 19.

On page 22 at line 20, strike "Sec. 124" and insert "Sec. 123"

On page 22 at line 24 strike "Sec. 125" and insert "Sec. 124"

On page 23 after line 5 add the following new sections:

SEC. 125. (a) Notwithstanding section 422(7) of the District of Columbia Self-Government and Governmental Reorganization Act (D.C. Code 1-242(7)), the City Administrator shall be paid, during any fiscal year, a salary at a rate established by the Mayor, not to exceed the rate established for level IV of the Executive Schedule under section 5315 of title 5, United States Code.

(b) For purposes of applying any provision of law limiting the availability of funds for payment of salary or pay in any fiscal year, the highest rate of pay established by the Mayor under subsection (a) for any position for any period during the last quarter of calendar year 1982 shall be deemed to be the rate of pay payable for that position for September 30, 1982.

(c) Notwithstanding section 4(a) of the District of Columbia Redevelopment Act of 1945 (D.C. Code 5-803(a)) the board members of the Redevelopment Land Agency shall be paid, during any fiscal year, a per diem compensation at a rate established by the Mayor.

SEC. 126. Notwithstanding any other provision of law, the provisions of the District of Columbia Government Comprehensive Merit Personnel Act, D.C. Law 2-139, enacted pursuant to the District of Columbia Self-Government and Governmental Reorganization Act of 1973 (Public Law 93-198; 87 Stat. 744), shall apply with respect to the compensation of District of Columbia employees: *Provided*, That for pay purposes, employees of the District of Columbia government shall not be subject to the provisions of title 5 of the United States Code.

SEC. 127. None of the funds appropriated by this Act may be used to transport any output of the municipal waste system of the District of Columbia for disposal at any public or private landfill located in any State, excepting currently utilized landfills in Maryland and Virginia, until the appropriate State agency has issued the required permits.

SEC. 128. (a) No funds available in fiscal year 1983 or thereafter pursuant to this or any other Act may be used for leasing, promoting, or permitting the occupancy or use of any part of the Washington Convention Center (including any related facility) for any concert, athletic event, or similar entertainment activity (as defined in subsection (b)), unless—

(1) such activity is incidental to a convention, meeting, trade show, product exhibition, or similar primary event held at the Center, and the activity is of a type customarily performed as part of the primary event;

(2) admission to the activity is limited to those attending the primary event; and

(3) allowing the activity to occur is consistent with the purpose of promoting the use of the Center as a national and regional convention and trade show center.

(b) For purposes of this section, the term "concert, athletic event, or similar entertainment activity" includes—

(1) any concert or other performance of music,

(2) any circus or rodeo,

(3) any athletic competition,

(4) any theatrical production, or

(5) any similar spectator event,

which traditionally has been held in publicly or privately owned facilities within the metropolitan area of Washington, District of Columbia.

Mr. D'AMATO. I move the adoption of the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment (UP No. 1415) was agreed to.

Mr. D'AMATO. Mr. President, I ask unanimous consent that the bill H.R. 7144, as thus amended, be regarded for purposes of amendment as original text; provided that no point of order

shall be considered to have been waived with respect thereto.

The PRESIDING OFFICER. Is there objection?

Mr. LEAHY. No objection.

The PRESIDENT OFFICER. Without objection, it is so ordered.

Mr. D'AMATO. Mr. President, I yield the floor.

Mr. LEAHY. Mr. President, as the ranking minority member of the District of Columbia Subcommittee, I rise in support of the committee bill.

I should also say it has been a pleasure to work with the chairman, Senator D'AMATO, on this appropriations bill. During the past 2 years, he has handled an assignment which I am willing to venture, even though I am not a member of the Republican Party, was not his No. 1 committee request when he came to the Senate. Nor when he writes his biography years and years and years from now about his service here will be devote a chapter to this time as being the time that he looked forward to the most.

I might say, Mr. President, that he has received the acclaim and the praise of the political leaders, the public leaders, the business leaders, the civic leaders, and others throughout the city of the District of Columbia. This requires special political skill.

He has received it because he has worked very hard on this and has given great consideration to the bill. He has made every effort in our hearings to listen to the views of all affected parties. I know of nobody, whether they agreed or disagreed with a particular matter, who was not given a full and fair hearing.

He has worked closely with subcommittee members on both sides of the aisle. He has worked diligently and effectively.

As a result of his leadership, this bill was one of the first reported from the committee. I also wish to emphasize that one of the reasons that I found it so easy to support the bill is that it is below the 1982 appropriation, it is below the budget estimates, and it is below the level reported from the other House.

It funds the full payment requested by the District of Columbia. In spite of what has been contended by some, it clearly preserves the proper relationship between the District and the Congress, with due respect for the concerns of home rule.

In fact, I think the Mayor of the District of Columbia said it best when he described this appropriations bill, the one that is before us now, as "another positive step forward for the District."

I think the Mayor is correct. I think the Senate would be correct in passing this bill. When we come to the point of voting on the bill, I will certainly urge my colleagues on this side of the aisle to vote for the bill.

Mr. President, I yield the floor.

Mr. President, I would suggest the absence of a quorum, but before I do that, I would like to make a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. LEAHY. Mr. President, are there any unanimous-consent requests which have been entered into with regard to this bill?

The PRESIDING OFFICER. The bill is under a time limitation of 30 minutes on the bill, 20 minutes of first-degree amendments, 10 minutes on second-degree amendments, and 2 hours on the Eagleton amendment.

Mr. LEAHY. For now, Mr. President, I suggest the absence of a quorum and ask unanimous consent that the time not be charged to either side.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HATFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HATFIELD. Mr. President, as we resume consideration of our regular appropriations bills during this lameduck session I think important to point out to the Members of the Senate a very unusual and disturbing aspect of the budget procedures we are currently employing.

Were I so disposed, I, or any other Member of the Senate, could make a point of order against the consideration of this bill or any other measure or amendment which provided any increased spending for fiscal year 1983. This is the so-called nonwaivable point of order under section 311 of the Congressional Budget Act of 1974 which is intended to prevent any additional spending if the binding limits on budget authority or outlays of the second budget resolution have been breached.

I might add, parenthetically, for the benefit of any supplysiders that may still be among us, that this same point of order can be made against any proposal to reduce Federal revenues, since current estimates of receipts are far below those levels anticipated in the budget resolution.

Why do we find ourselves in this fix? Why, after enacting only 3 of the 13 regular appropriations bills for fiscal year 1983, is Congress technically precluded from considering any further spending bills? Why have our anticipated levels or spending and revenues been so off base? Indeed why are the spending and revenue "targets" of the first budget resolution binding on Congress when we have not considered and adopted the second budget resolution called for the Budget Act? Finally, why despite all our continuing and vociferous pledges to uphold the congressional budget process are we confronted with the need to suspend the enforcement procedures provided by that same process.

Mr. President, the answer to all these questions is fairly simple. Congress did not revise the targets of the first budget resolution, in a second "fall" budget resolution as required in the Budget Act.

Instead, the Senate accepted a provision proposed by the House which "automatically" converted the first budget resolution into the binding second resolution on October 1 in the absence of congressional action in actually adopting a second budget resolution. There was no adjustment made to the economic assumptions underlying the first budget resolution, despite the deteriorating and significantly changed economic projections of the summer and early fall. Increasing levels of program demand and requirements were also not considered, nor did Congress have the opportunity to reevaluate its economic and budgetry strategy in light of the deepening recession. None of this was done prior to establishing binding expenditure ceilings on October 1.

During the adoption of the first budget resolution, I stood on this floor and protested this ill-conceived and ill-advised departure from the Congressional Budget Act procedure. At that time I warned that the failure to update the budget resolution would force arbitrary and unworkable budgetary constraints on the Congress. I stated that to the extent that expenditure estimates increased, and the total spending ceiling was not revised, the burden of addressing the resulting gap would fall disproportionately on the discretionary programs funded in annual appropriations acts under the jurisdiction of the Committee on Appropriations.

Mr. President, I was right. Current estimates of the deficit for this fiscal year are running about 50 percent higher than the $103 billion assumed in the first budget resolution, and there are those who say this is very conservative. Not only are revenues down, but program requirements are increasing beyond our earlier assumptions, and this is before making any allowance for the infrastructure development and jobs programs now being contemplated by Congress. Under the budget resolution now in place all these appropriations proposals are out of order, as are each on the appropriations bills that we have remaining to be acted upon, even though each complies with the allocation on budget authority and outlays established by the Committee on Appropriations as required by section 302(b) of the Budget Act.

Mr. President, this circumstance makes a mockery of the budget process. The current budget resolution is so unrealistic that it constitutes a fraud on every American concerned with the economic future of our Nation, and as we take up and consider the 10 remaining appropriations bills, it presents a possible procedural obstacle which we can remove only by admitting that we have no budgetary plan worth respecting.

I hope each Member of this Chamber, as well as our colleagues in the other body, will take heed of this very serious departure from sound budgetary procedure, so that we can avoid repeating the blunder we have made this year.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. EAGLETON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 1416

(Purpose: To remove section 128 which restricts the use of the District of Columbia's Convention Center)

Mr. EAGLETON. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Missouri (Mr. EAGLETON) for himself, Mr. RUDMAN, and Mr. GLENN, proposes an unprinted amendment numbered 1416.

Mr. EAGLETON. I ask unanimous consent that further reading be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 23, after line 5, strike section 128.

Mr. EAGLETON. Mr. President, this amendment deals with the D.C. Convention Center and some language in the bill before us that seeks to restrict the uses of the D.C. Convention Center. I offer it in behalf of myself, Senator RUDMAN, and Senator GLENN.

Mr. President, as ranking minority member of the District of Columbia Subcommittee and as former chairman of that subcommittee, I have had a longstanding interest in the affairs of the District of Columbia. Indeed, one of the most significant pieces of legislation bearing my name is the District of Columbia Home Rule Act, passed by Congress in 1973. The basic principle behind that act—namely, that the District of Columbia should be a self-governing municipality to the greatest extent possible within the confines of the Constitution and the Federal Government's needs—is in serious jeopardy here today.

H.R. 7144, the District of Columbia appropriation bill for 1983, the matter before us, has language in section 128 which I find so appalling, so inequitable, so dictatorial, so misguided, and so unfair that I urge my colleagues to strike this section in its entirety. The section, which is a clear case of legislating on an appropriation bill, attempts to place statutory restrictions on the use of the District of Columbia's new $100 million convention center. Conventions and trade shows, for which the center is specifically designed, are OK, says the bill, but no city funds in 1983 "or thereafter," "pursuant to this or any other act," may be used for any "concert, athletic event, or similar entertainment activity."

That language, "similar entertainment activity," is then defined to include, as follows—these would be things prohibited from presentation at the Convention Center—

(1) any concert or other performance of music,
(2) any circus or rodeo,
(3) any athletic competition,
(4) any theatrical production, or
(5) any similar spectator event

which *traditionally* has been held in *publicly* or *privately*-owned facilities within the metropolitan area of Washington.

In other words, Congress now is telling the District, or would it this language remains, that, after 10 years of congressional review of a project for which local taxpayers have spent $100 million, the Congress—months before the Center opens its doors—will restrict the Center's use by Federal law.

In the House, Representatives FAUNTROY, DELLUMS, and MCKINNEY have removed the offending language from H.R. 7144 on a point of order. Since the Senate offers no such convenient procedural remedy, I am moving to strike the provision.

As a practical matter, the Center will be used primarily for trade shows and conventions. The Center consists of four main halls constructed for conventions, trade shows, and their peripheral activities. And the Convention Center Board, as part of its hockey policy, has set the following priorities for Center use:

Priority 1—Conventions and trade shows which are international, national, or regional requiring significant usage of hotel rooms.

Priority 2—Multiple-day annual public shows.

Priority 3—Multiple-day shows contracting no earlier than 12 months in advance, or a space available basis.

Priority 4—Single-day events, contracting no sooner than 6 months prior to the event, on a space available basis.

Adhering to these priorities, the Convention Center Board reports that the Center is booked at 85 percent of capacity for 1983, at 80 percent of capacity for 1984, and at 70 percent of capacity for 1985. The Center also reports commitments as far in the future as 1990.

If the remaining capacity, however, cannot be booked with conventions or trade shows, what should the Center consider? Section 128 clearly contemplates that the Center should remain dark.

Under Section 128, for instance, would the University of the District of Columbia, with a gymnasium that now seats 2,400, have been able to use the Convention Center for its NCAA Division Two championship game? The answer to that, under the language in the bill, NO.

Could locally-reared ballerina Andrea McKerrow appear for a local fundraiser? The answer, NO. What about locally-reared Roberta Flack, Goldie Hawn, Shirley MacLaine? Would they appear? NO.

Could the District of Columbia Youth Orchestra, a group of high school students who use Collidge High School auditorium give a city-wide performance at the Convention Center? NO.

Could local fraternities and sororities hold dances? NO.

Could local churches sponsor a Billy Graham presentation in the Convention Center? NO.

Could local or regional political groups use the Center for conventions? NO.

Would the majority of the residents of the District of Columbia—those citizens whose tax dollars have built this Center—ever see the inside of this Center? Probably NO under the language.

What will be the financial impact of these restrictions should Congress go blindly forward with this nonsense?

Convention centers, I am told by the managers, directors, general counsels, and presidents of 21 other major convention centers across the country, are highly competitive businesses. Parenthetically, Mr. President, we have been in contact with the 21 operators of major convention centers around the country. While most cities find convention centers good investments because increased tax revenues are realized from higher hotel and retail sales receipts, nearly all convention centers, nevertheless, lose money on rentals. To post a profit they depend on operating subsidies from their local tax bases. Further, none has the type of restrictions contemplated for the District, and all of the ones that we have contacted, the 21 biggest in the country, aggressively pursue nearly every revenue source available in efforts to fill their non-convention/trade show weeks.

The managers of these other institutions also tell me that the non-convention weeks represent a sizable chunk of a given calendar year. No conventions of note are held anywhere the

last two weeks of July, anytime in August, or during the two weeks before and after Christmas. Furthermore, trade shows simply cannot fill what amounts to nearly one-quarter of a year.

"I can guarantee," said the vice president and general counsel of the New York Convention Center, "that the District will be forced to approach Congress cap in hand for a massive subsidy if the restrictions proposed on its center are approved."

Here is a quote from Los Angeles: "Convention centers are a very competitive business and a manager can't be hampered at all. Washington has a great building, a great design, and it simply can't be restricted."

The man in Philadelphia said this: "Either the City or Congress will really have to bail out the Center if it can't have local bookings."

And from Houston came this: "A manager must have the leniency to book whatever he wants. We have three major halls and will book anything into any of them, with conventions overriding other events."

From Baltimore from its manager, we received this: "A convention center is a magnet. I would not like the kind of restrictions under consideration for Washington."

And from Cleveland we heard this: "It should be made impossible to restrict the use of these centers."

Mr. President, if these convention center experts from New York, Los Angeles, Philadelphia, Houston, Baltimore, Cleveland, and 15 of the other largest cities in the country are to be believed, the restrictions contemplated by Congress will guarantee a white elephant for Washington.

That is hardly the result both Congress and the City intended during the 10 years since 1972, when Public Law 92-520 provided for the construction of a Dwight D. Eisenhower Memorial Bicentennial Civic Center in Washington, to "provide * * * the District of Columbia facilities for the holding of conventions, exhibitions, meetings, and other social, cultural, and business activities."

Indeed, like most other cities, Washington had hoped that the Convention Center would help revitalize its downtown, increase hotel receipts, tax revenues, job opportunities, spending in the city, and use of the $10 billion subway system. Whether the City will realize these economic benefits has been widely debated during the 10 years the Convention Center has been in progress, but Congress now simply must not place any impediments in the City's way as it attempts to realize the Center's fullest potential.

Why is Congress even attempting this outrage? There appear to be two reasons. First, certain Members of Congress feel the City agreed to such restrictions when Congress reviewed and approved the project. Second, owners of potential competitive facilities apparently fear competition from the Convention Center in non-convention related activities. In the truest spirit of American private enterprise, they have come to Congress and asked for protection.

To refute this, let me say that I have reviewed thoroughly the legislative history on the Convention Center and outside of some general committee report language, I find no evidence that the City is bound in its uses of the Center. In fact, there is direct evidence to the contrary.

In 1977, when the House and Senate held their first major hearings on the City's Convention Center, the City testified that:

> The Civic Center will be a large meeting and exhibition facility specially designed for national, regional and local events, chiefly convention, trade shows, large-scale meetings and international conferences. It will provide a significant new resource for local meetings and community activities and events. It will bring public attendance shows and other activities for local audiences and citizens into downtown Washington.

Also in 1977, the Federal City Council, a Washington entity similar to a Chamber of Commerce, urged in a letter to the D.C. City Council that the Center be available for local events "such as meetings and special events like holiday basketball tournaments—during those times of the year when conventions generally do not meet." All interested members of Congress were made aware of the Federal City Council's position.

And, in 1978, a technical update prepared by the economic consultants, Gladstone Associates, for the District of Columbia Civic Center Task Force, stated:

> Certain local events, such as local shows (boat show, flower show, etc.), entertainment events, and sports events, are money makers for the Center itself * * *. One way to increase the revenue of the Center would be to schedule as many of these types of local events as possible.

All interested Members of Congress were made aware of this technical update and economic justification for the Center.

Meanwhile, on the Hill in early 1978, the City was telling Congress during hearings that:

> * * * the Center provides space for local open-to-the-public events such as a boat show, musical event or sports activity, primarily geared to the Metropolitan Washington market. A number of these local events will be accommodated in the Civic Center during the summer months and other vacation periods when conventions are normally not held.

And later in 1978, when the Center again was discussed at hearings, Mayoral candidate Marion Barry testified that:

> Our local universities—Howard, Georgetown, George Washington, American University—have no major sports arena * * *. Our citywide basketball tournament will be held there. It is now held at Cole Field House. The new Civic Hall will be the only hall in the District of Columbia to house a major concert or other entertainment event for a sizable audience.

Senator LEAHY, who was chairing the hearing, made no comments on, nor voiced any objections to, Candidate Barry's remarks about the Center's use.

Following the 1978 Congressional review, the City, in 1979, put its plans for the Center into a local law. Under Public Law 92-520, the enabling legisation for the Center, the District City Council was directed to approve a plan for the Center. The Council followed this instruction and enacted D.C. Act 3-102, the Washington Convention Center Management Act of 1979. Congress received and did not disapprove the plan during the Home Rule Act's required Congressional review period. D.C. Act 3-102 specifically said in section (d) that:

> A convention center would provide space and facilities for local public shows and exhibitions including, but not limited to, civic and community events and gatherings, athletic and cultural events, entertainment, and other such activities as may be in the interest of the citizens of the District of Columbia.

I must mention that in 1980, when the Senate held hearings on the City's fiscal year 1981 appropriation, the use of the Center was discussed at some length. Senator LEAHY, still chairman of the District Appropriations Subcommittee, mentioned concerns about the Center's use, emphasizing that it should be a convention center. A reading of the record indicates Senator LEAHY was satisfied with the City's response; namely, that the building was designed to be a convention center, but other uses, for example, "* * * certain sports and entertainment events, particularly college, high school basketball tournaments * * * a fund-raising activity that might entail some stars * * * would be legitimate * * * activities * * *."

That was testimony by one of the city witnesses at that hearing on the fiscal year 1981 appropriation. The hearing was held in calendar year 1980.

Further, in response to written questions on the Center's use, the City honestly, and again with no apparent Congressional objection, said that "possible" uses were boxing events, rock concerts, auto, boat, and wine shows, that the Center would be used for high school proms, graduation ceremonies, and gymnastic events, and that the Center would not be used for a circus, the Ice Capades, the Harlem Globetrotters, a horse show, or a rodeo, the latter uses being physically difficult or impossible to host.

While my reading of this hearing record is that Congress had no objec-

tions to the City's plans, the Senate Committee Report for fiscal year 1981 indicated that the Senate was moving in the direction of restricting the Center's use. Specifically, the report stated that the "Committee calls the attention to the Board" (the Convention Center Board) an earlier *House Public Works Committee* report (emphasis added) which noted that the Civic Center project did not include a sports arena. The fiscal year 1981 report also stated:

Uses which would compete with existing facilities in the National Capital Region, such as cultural or entertainment appealing to a national audience, were clearly not contemplated.

But over in the House, the fiscal year 1981 Appropriations Committee report said the Center would ". . . provide facilities for local events, local shows, entertainment, sports tournaments, meetings, and other civic events."

Finally we get to 1981 and 1982, the years specific restrictions were placed on the City's Convention Center. In 1981—and that was the bill appropriating for fiscal year 1982—some generalized restrictions were made in report language, (". . . the Center is not to be used for cultural events or entertainment appealing to a national audience and not to be used in competition with existing facilities"—that was some report language accompanying the fiscal year 1982 appropriations bill—and now in 1982, for fiscal year 1983, we see untenable use restrictions as part of the bill. In neither case can I find a hearing record which supports this Congressional interference with a City project.

On the House side, I find even less discussion of the issue. During hearings on the City's fiscal year 1982 budget, House Appropriations Chairman Julian Dixon notes that the Center's use was ". . . the Senate's concern." During hearings on the fiscal year 1983 appropriations, the House Committee discussed the issue, but again seemed satisfied that the Center was for conventions, both by design and by policy. Nevertheless, with no hearing record to support it, the House Committee agreed in both years to restrict the Center's use. As mentioned earlier, however, the full House deleted the statutory restrictions on September 30.

In conclusion, it seems clear to me that the bulk of the legislative record shows that the City and Congress always believed that the District of Columbia Convention Center would be a multipurpose facility.

Now it is said, however, that there was an unwritten agreement among concerned parties to the effect that the Center policy would be (1) to book only national conventions, and (2) not to compete with any other private or public facility. But I have spoken directly with those involved in its purported agreement, and each unequivocally denies having made such a deal. There were discussions about professional sports events and a general agreement that the Center was not a sports arena, but specific restrictions, say the people with whom I have talked, were never suggested and certainly never agreed to.

Mr. President, Representative MCKINNEY, of Connecticut, long known for his strong interest in the advocacy of District concerns, said Section 128 "stinks like the dead turkey that it is." I could not agree more. I urge the Senate to delete this most offensive language.

Mr. President, I ask unanimous consent to have printed in the RECORD following my remarks a lengthy memorandum prepared for me by my staff.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. EAGLETON. The memorandum provides a complete legislative history of use restrictions on the Convention Center, describes the physical layout of the Center, which proves the Center is a convention center and not a sports arena or opera hall, and details convention center uses, financing, ownership, size, and restrictions in 21 other metropolitan areas. In no area of the country are there any restrictions even remotely comparable to what is being herein proposed.

EXHIBIT 1

MEMORANDUM

I. ASSIGNMENT

A. History of D.C. Convention Center Use Restrictions:

Pursuant to your instructions, I have researched the legislative history of "uses" of the District of Columbia Convention Center in an attempt to document commitments made to restrict its use.

B. Survey of convention centers in 22 major U.S. cities:

By telephone, members of our staff and I have contacted managers, directors, presidents, and/or counsels of 21 convention centers located throughout the country to determine if any are restricted in their use. The survey was confined to the 20 largest U.S. cities, plus St. Louis and Kansas City. Columbus, Ohio, the 19th largest city, had no public convention facility, so the final total was 21 convention centers surveyed.

C. Actual and practical uses of D.C. Center/Need for Seats:

The proposal to impose statutory restrictions on the D.C. Center assumes that the Center can and will compete adversely with certain existing local facilities. Is that really the case? Also, if the facility is simply for conventions and trade shows, why does it need 10,000 theatre-style seats? To answer these questions, I toured the Center, studied the list of events already scheduled into the Center, and researched the legislative history of the seats.

II. SUMMARY OF FINDINGS

A. History of Use Restrictions:

1. *Verbal commitments.*—According to the three individuals purported to have agreed to restrict the Center's use—Rep. Walter Fauntroy, former D.C. Mayor Walter Washington, and D.C. businessman Robert Linowes—no such agreement was ever made.

All three told me in telephone conversations that "yes," there was an agreement, but all three said it consisted of three commitments: a reduction in the total cost of the Center, enactment of a local hotel tax to help cover costs, and evidence of sufficient private development in the area to generate necessary spin-off revenues. No agreement was made as to the use of the Center, although Mayor Washington recalled some "discussion" that the Center would not be used for a sports arena.

2. *Written Agreements or Commitments.*—I find no record of any written agreement restricting the use of the D.C. Center. In fact, most of the written record on the Center—the 1972 enabling legislation and debate thereon, committee reports, appropriations committee hearings, D.C. legislation, the environmental impact statement, and an economic feasibility study conducted by Galdstone Associates—clearly indicates that both Congress and the City assumed the Center would, should, and could be used as a multi-purpose facility.

3. *Legislative History.*—When discussing the "use" of the Center, the early Congressional documents, beginning with the enabling legislation in 1972, by-and-large paraphrased or repeated the original purpose of the Center, which was to "provide . . . the District of Columbia facilities for the holding of conventions, exhibitions, meetings, and other social, cultural, and business activities. . . ."[1] In 1977, however, when the House and Senate held their first serious hearings on the Center as part of the D.C. FY 1978 budget review process, the City expanded on the Center's purpose and stated:

The Civic Center will be a large meeting and exhibition facility specially designed for national, regional and local events, chiefly conventions, trade shows, large-scale meetings and international conferences. It will provide a significant new resource for local meeting and community activities and events. It will bring public attendance shows and other activities for local audiences and citizens into downtown Washington.[2]

(a) Senate Legislative History:

(1) As work on the Center progressed, it appears that the City and the Senate continued to assume multi-purpose use of the facility. In Senate hearings on the D.C. FY 1979 budget, held in February, 1978, the City again justified the project and stated as follows:

Overnight Visitors: The Chief Market Target.—The main purpose of the Civic Center will be to serve the national and international convention, trade show and large meeting market. It is these events which will be responsible for bringing new visitors and new spending to the City. Secondarily, the Center provides space for local open-to-the-public events such as a boat show, musical event or sports activity, primarily geared to the Metropolitan Washington market. A number of these local events will be accommodated in the Civic Center during the summer months and other vacation periods when conventions are normally not held.[3]

Later in 1978, when the City returned to Congress in October, and presented a revised plan for the Convention Center, Marion Barry, then a candidate for Mayor, testified before Senator Patrick Leahy, then chairman of the D.C. Appropriations Subcommittee, and said that:

Our new civic center will have 290,000 square feet of exhibit space . . . Additionally, the 108,000 square-foot column-free civic hall will seat 10,000 to 12,000 for a national convention or civic event.

Our local universities—Howard, Georgetown, George Washington, American University—have no major sports arena anywhere near that size. Our citywide basketball tournament will be held there. It is now held at Cole Field House. The new civic hall will be the only hall in the District of Columbia to house a major concert or other entertainment event for a sizable audience.[4]

Senator Leahy made no comments on, nor voiced any objections to, Candidate Barry's remarks about the Center's use. In fact, immediately following Barry's comments, Leahy addressed himself to the need to bring people into downtown Washington in the evening.[5]

(2) In the Senate hearings on the Fiscal Year 1980 D.C. budget, the use justifications published previously were repeated.[6]

(3) During the Senate hearings on the Fiscal Year 1981 D.C. budget, the use of the Center surfaced as a separate topic. Senator Leahy, still chairman of the D.C. Appropriations Subcommitte, commented during the hearing that to obtain Senate approval of the Convention Center, a number of commitments were made, including ". . . financial commitments, *use commitments* (emphasis added), design commitments. . . ." [7] Senator Leahy did not elaborate as to what the use commitments were, except to note that the City, in its budget justification, mentioned using the Center for sports.

In answer to Senator Leahy, the City responded that the Center could not physically accommodate a "sports season or an entertainment season," but that the flexible seating would "accommodate shows or sports events that might occur either as activities apart from or in conjunction with scheduled conventions." [8]

Leahy then mentioned rock concerts, while emphasizing that he wanted to make sure that the Center's use would be related to conventions. The City assured him it would, but stated that ". . . certain sports and entertainment events, particularly college, high school basketball tournaments . . . a fundraising activity that might entail some stars . . . would be legitimate . . . activities. . . ." [9]

Leahy appeared satisfied with this response. He then included in the record some questions prepared by Senator Mathias on the Center's use. The Mathias questions were specific, asking if the Center envisioned events ranging from high school proms to rodeos. The City answered "yes" or "possibly" to all uses except a circus, Ice Capades, the Harlem Globetrotters, a horse show, and a rodeo. Among the "possible" uses were boxing events, rock concerts, auto, boat, and wine shows. The City also responded to a separate question that a Presidential Inaugural Ball was a likely use.[10]

(4) Apparently in response to the FY 1981 hearing record, the Senate Appropriations Subcommittee report for FY 1981 brought up (for the first time, in a committee report), the subject of the Center's use. The report stated that the "Committee calls the attention to the Board" [11] (the Convention Center Board) and earlier *House Public Works Committee* report (emphasis added) which noted that the Civic Center project did not include a sports arena. The FY 1981 report also stated:

"Uses which would compete with existing facilities in the National Capital Region, such as cultural or entertainment appealing to a national audience, were clearly not contemplated." [12]

(In its FY 1981 committee report, the House was still saying the Center would ". . . provide facilities for local events, local shows, entertainment, sports tournaments, meetings, and other civic events.") [13]

(5) In 1981, when Senator D'Amato became chairman of the D.C. Appropriations Subcommittee, the question of the Center's use was again of minor importance. During the hearings on the City's FY 1982 budget, D'Amato questioned the City about whether the Center would compete with other local facilities and asked about rock concerts. The City replied that the Center's booking policy and events booked to date were not competitive.

"Senator D'Amato: The basic premise in which the Senate was given impetus to move forward, that there would be no real competition with the private arenas which are in the habit of having athletic events and rock concerts. It is still essentially, as you understand, alive and well?

"Mr. Gibson (City): It is very much alive and is explicit. The managing approaches and the schedule approaches conflict with each other and essentially it is an oil and water situation." [14]

According to Mr. Gibson, his use of the term "explicit" referred to no verbal or written agreements on the use of the Center, but rather to the fact that the Center was "explicitly" designed for conventions and would not be used for any seasonal athletic or entertainment events. Mr. Gibson reported that the City fully intended (and intends) to use the Center for short term or onetime productions which in no way conflict with the availability of the Center for convention bookings.

Nonetheless, the Senate report tightened the non-competitive words of the FY 1981 report and actually *prohibited* certain Center uses: " . . . the Center is *not to be used* for cultural events or entertainment appealing to a national audience and *not to be used* in competition with existing facilities (emphasis added)."[15]

(6) The hearings for the FY 1983 D.C. budget are not yet published. Persons in attendance report that the use of the Convention center was not an issue. The Senate FY 1983 appropriation bill for the City, however, includes section 123, which imposes stringent statutory restrictions on the Center's use.[16]

(b) *House Legislative History.*—In the House, nothing of substance on the issue of the Center's use appears until this year's hearings on the city's FY 1983 budget.

(1) During the hearings on the FY 1982 budget, the first time the issue surfaced at all, the House simply dismissed the matter. Chairman Julian Dixon noted that the potential use of the Center "was the Senate's concern."[17] Mr. Dixon commented on the language in the Senate's FY 1981 report and then asked if the Center's Board was developing a firm policy with regard to use. The Board's representative answered that development of such a ploicy was one of the first orders of business.[18]

(A booking policy was adopted by the Convention Center Board on December 22, 1981. The policy strongly favors conventions and trade shows.)

However, while the FY 1982 hearing record showed only this slight discussion of the matter, the House FY 1982 report followed the lead of the Senate and stated: ". . . the Committee reminds the . . . Board of previous legislative history indicating that the . . . Center is not to be used for entertainment purposes and was not intended to compete with existing facilities in the Washington area for entertainment and cultural events." [19]

(2) The use question received far more attention in the House during the discussion of the FY 1983 budget—the bill which proposed the statutory prohibitions. The Board was asked if the Center planned entertainment or cultural events. The Board said "no." The Board was asked about sports. The Board responded that the Center lacked the necessary facilities. The Board was asked about its request for theatre-style seats. The Board responded that conventions needed them for assembly events. The Board was asked about rock concerts. The Board responded that rock concerts were possible, but the Center's sound systems would be inadequate.[20]

The Committee went ahead, regardless of the testimony, and approved the statutory restrictions. On September 20, 1982, the full House voted to delete the restrictions on a point of order.[21]

4. *Other Documents Discussing Use of the Center.*—In addition to the congressional record, there was City legislation, an environmental impact statement, various letters, and an economic feasibility study which mentioned the use of the Center. All repeated or enlarged upon language which indicated the Center would be a multipurpose facility.

For congressional purposes, the most important description of how the Center would be used appeared in the City's "Washington Convention Center Management Act of 1979," a local law debated and approved by the City Council and signed by the Mayor. That bill, D.C. Act 3-102, stated in Section (d) that:

"A convention center would provide space and facilities for local public shows and exhibitions including, but not limited to, civic and community events and gatherings, athletic and cultural events, entertainment, and other such activities as may be in the interest of the citizens of the District of Columbia." [22]

As with all District legislation, Congress had 30 legislative days in which to review this legislation, which came to Congress for review on September 21, 1979. The Act became law on November 2, 1979. There is no indication that anyone in Congress had any objection to any part of the Act, including the section which explained how the City thought the Convention Center would be used.

III. SURVEY OF 22 OTHER U.S. CONVENTION CENTERS

A. None of the final 21 centers surveyed has any restrictions comparable to those suggested for D.C. Most give priority to conventions, and a number will not book non-conventions more than 6-12 months in advance. In the interest of taste, some do not book rock concerts. Because of physical limitations, some do not host sports. In Phoenix, the Mayor and City Council have the power to review bookings, but that power has never been used.

B. All 21 surveyed centers are publicly owned and operated, and all but one depend on operating subsidies from their local jurisdictions. Many have a percentage of earmarked taxes—usually a hotel tax. A few receive direct appropriations and are carried as line items in city budgets.

C. All 21 surveyed centers have major and serious competition, some from the public sector, but most from the private. Key competitors are convention centers in neighboring cities, large hotels, and other arenas/armories/sports complexes.

D. All persons surveyed emphasized the keenly competitive nature of the convention center business, many commenting that restrictions of any kind would be disastrous. (Note: This memo has not gone into the economics of convention centers. That would be a major subject in itself. All centers apparently lose money and justify themselves only by generating spin-off revenues. The fewer days the Centers are dark, the better their operating pictures; about one-fourth of each year, there are no conventions anywhere.)

E. See attached chart, Convention Centers in Major U.S. Cities, for summary of survey.[23]

IV. ACTUAL AND PRACTICAL USES OF D.C. CENTER/NEED FOR SEATS

A. The D.C. Center Board has repeatedly said it is operating a convention center, and it is. It opens for business in January, 1983. As of this time, its 1983 schedule is 85 percent filled. For 1984, it has 80 percent of its bookings filled, and for 1985, it has 70 percent of its schedule filled. It has some events booked as far in advance as 1990. All of the activities are conventions or trade shows.[24] There are no entertainment or sports events.

B. The booking policy adopted by the Center on December 22, 1981, shows conclusively that the Center would book non-convention events only to fill dark meeting rooms or periodic dark halls. The policy states:

"Priority 1—Conventions and trade shows which are international, national, or regional, requiring significant usage of hotel rooms.

"Priority 2—Multiple-day annual public shows.

"Priority 3—Multiple-day shows contracting no earlier than 12 months in advance, on a space available basis.

"Priority 4—Single-day events, contracting no sooner than 6 months prior to the event, on a space available basis."[25]

There is no evidence that the Convention Center has booked events in accordance with anything but this policy. The policy is self-explanatory and in itself sets standards which make it difficult for the Convention Center to compete with other local facilities.

C. The physical constraints of the Center also make non-convention/trade show use difficult.

1. Parking.—There is no parking available at the Convention Center. Even the Center administrators must park across the street or come by public transit. While 750 parking places had originally been approved, these were eliminated in 1978 as part of the required cost-cutting. George Demarest, Convention Center general manager, seemed to have no problem with the lack of parking, indicating that conventioneers come from out-of-town and are shuttled between hotels and convention activities at the center. Also should a convention require parking, the convention can contract with the Center to turn sufficient space in Exhibition Hall D into 200 parking spaces for conventioneers. As a practical matter, however, the lack of parking certainly is a drawback for the Center should it book non-convention events such as sports, theatre, or rock concerts.

2. Fire Code Restrictions.—The 10,000 theatre-style seats proposed for the Center would be used in Exhibition Hall A. D.C. fire code regulations require certain egress from large halls. Such egress can be achieved at the Convention Center only if Exhibition Hall B is vacant or used in conjunction with Hall A (i.e., part of the same meeting or group) so that the necessary walls and exit areas can be left open. Obviously, the Center will always attempt to rent both Halls A and B together to maximize receipts.

3. General facilities.—The Convention Center has no locker rooms for sports, no baskets, no floors, no scoreboards, no ice-making facilities. There is no room for animals. There is no stage, no wings, no backstage dressing rooms, rehearsal rooms, etc., for concerts, plays, or operas. Were the necessary accoutrements provided, however, and many could be in some "portable" fashion, most of the proposed "prohibited" activities could be held at the Center so long as there are theatre-style seats.

D. Need for Seats: Despite the basic inability of the Center to serve as other than a convention center, it does need its seats. These seats would be permanent, upholstered theatre-style seats which would retract against three walls of Exhibition Hall A.

1. There are 10 conventions already booked which require auditorium seating, and they are coming to Washington on the promise that the seats will be here.

These 10 conventions alone account for more than 100,000[26] visitors to Washington between 1984 and 1985. In addition, seven other conventions booked between 1986 and 1990 require the seats. These conventions all need the seats for assembly-type meetings. If the delegates were seated on the floor, they would be unable to see the speaker or the visual displays.

2. The seats have always been included as part of the Center's $98.7 million cost under the category of equipment. The first request for equipment was for $3.5 million; this amount was lowered to $3 million, but the equipment request has never been eliminated at any time during the congressional approval and review process.

3. The money for the seats is now at issue because the City appears to have put off buying the seats in favor of more immediate equipment needs. The seat money is now part of the Center's operating budget, rather than its capital budget. But outside of that one possible irregularity, there could be no serious objection to letting the Center go ahead and purchase the seats.

4. The seats are needed by April, 1984, at the latest. The Center needs 6-8 months to contract for the seats, and it would like them installed by the end of 1983 to work out kinks. The seat contract should be signed by March-April, 1983, at the latest.

5. Without the seats, the Center will lose not only the 17 conventions, but it will have to spend $144,000 each time it installs non-permanent, fold-up seats on plywood risers in Exhibition Hall A, where the automatic seats are planned. The temporary seats are so expensive because they take three days to set up and two days to remove, resulting in exorbitant labor costs (mostly to construct risers). The automatic theatre-style seats, on the other hand, could be put in place with three men working a total of 4.5 hours. In addition to the labor costs, the Center would lose money each time an assembly-type event was scheduled because Hall A could not be used if the seats were going up or coming down.

V. CONCLUSION

There is no rational reason for restricting the use of the D.C. Convention Center.

A. The legislative history shows that until Senate hearings on the City's fiscal year 1981 budget (calendar year 1980), it was assumed that the Center would be a multipurpose facility. Then, in 1980, in accordance with some unwritten and non-traceable agreement, the Center was not to compete with other local facilities. Still, at both the fiscal year 1982 hearings and in response to questions presented by the Senate Appropriations Committee, the City gave every indication of using the Center for a variety of purposes. No objections to the City's responses were ever voiced.

On the House side, no mention of the Center's use appeared until the fiscal year 1982 report. The restrictions in that report were not backed up by a hearing record. At House hearings for the fiscal year 1983 budget, the use of the Center was discussed at some length. There was no indication that the House expected the Center to do other than follow its booking policy which favors conventions. The House seemed satisfied that the facility was designed to be operated as a convention center.

When the city passed a local law in 1979 which stated the Center would be used as a multipurpose facility, Congress voiced no objections.

The record gives no indication that the statutory use restrictions were ever contemplated by Congress. The record gives no justification for such restrictions.

B. Of 21 other major convention centers surveyed, none faces restrictions similar to those being proposed for the Washington facility.

C. The 10,000 theatre-style seats are mandatory for conventions with assembly needs, and they could be used for non-convention activities. As a practical matter, however, the Center offers new facilities for non-convention events.

ROLE OF WASHINGTON CONVENTION AND VISITORS ASSOCIATION

Under the Convention Center booking policy, the Washington Convention and Visitors Association (WCVA) is designated as the official sales organization for the Center. With the consent of the Convention Center Board of Directors, WCVA will have the exclusive right to reserve all of the Convention Center facilities (with the exception of that area that may be designated for retail sales) for any event that will occur more than 18 months in the future. This policy also provides that the staff of the Center will work closely with the Convention and Visitors Association in developing promotional material, undertaking special marketing and sales efforts, and coordinating arrangements for the use of the Center by various groups.

By virtue of its ties with the Convention Center and local hotels and its affiliation with the International Association of Convention and Visitors Bureaus—and the information exchange within that Association regarding the needs and requirements of the potential users—the Washington Convention Center and Visitors Association possesses a unique capability to serve as the liaison between the potential customers and the District business community. It is the ideal organization for coordinating convention sales, promotion, housing, registration, planning and other related services.

As the sales organization for conventions and trade shows, the Washington Convention and Visitors Association will control the master advance booking calendar which will be maintained in the Association office. To coordinate the Association's and the Convention Center's marketing efforts a duplicate set of booking calendars will be maintained in the Center's offices. The Washington Convention and Visitors Association will have the right to make the Center available, including reserving dates, committing specific areas in the facility, and quoting current rental rates. Final rates will be confirmed at the time of contract signing.

Requests for reservation of dates from the Washington Convention and Visitors Association must be submitted in writing, identifying in detail overall dates and areas required. Requests will be addressed to the Convention Center General Manager and will only be considered a commitment when acknowledged by the General Manager.

For dates less than 18 months in the future, the Convention Center management will be responsible for booking those areas of the facility not previously committed. In scheduling the short-term events, the Convention Center General Manager will consider such factors as crowd control and the compatibility of events.

The key objective of the Convention Center is to serve as a generator of convention dollars brought into the community by convention delegates and exhibitors. This objective shall dominate booking and reservation functions.

When booking the Convention Center, consideration shall be given by both the Washington Convention and Visitors Association and the Convention Center management to the following factors:

(a) Projected overall economic impact on the City;

(b) Total number of hotel rooms required;

(c) Projected revenue to the facility both in terms of direct space rental revenue as well as projected revenue from concessions and other building services;

(d) Time of year;

(e) Potential for repeat booking; and

(f) Previous history and experience of the potential user with respect to use of similar facilities.

The primary function of the Center is to secure a market unique in itself and not in competition with currently available facilities. The primary type of events that may be scheduled include conventions, large meetings, trade shows and other flat floor exhibits. These events shall be given priority in accordance with Sections 406 through 409.

If special circumstances exist which would justify departing from the policy stated in subsection 400.3, the facility may be temporarily converted to handle such events as show-case concerts, theatre-style events, or sports events. Conversion may be made only with the express approval of the General Manager.

Any costs incurred in temporary conversion of the facility for non-primary events as described in subsection 400.4 must be covered by the particular promoter requesting those conversions.

OFFICIAL REPRESENTATIVE

The Washington Convention and Visitors Association shall be the official convention sales organization representing the Center. It shall serve as liaison between the customer and the community in terms of convention sales, promotion, housing, registration, planning, and other related services.

The duties, responsibilities, and obligations of the Washington Convention and Visitors Association shall be outlined in a written agreement which must be approved by the Board.

In carrying out its designated function, the Washington Convention and Visitors Association shall conform to and be bound by all provisions of this Chapter.

As the official representative, the Washington Convention and Visitors Association shall have the right to negotiate tentative arrangements with customers including reservation of dates, the committing of specific areas in the facility, and the quoting of current rental rates. Final rates will be confirmed at the time of contract signing.

CONTRACT APPROVAL

The Board of Directors shall be the final approving authority for all arrangements negotiated by the Convention and Visitors Association.

Each contract negotiated with a user of the Convention Center shall contain a clause in a clear and prominent location stating "All terms of this contract are subject to approval by the Board of Directors, Washington Convention Center."

LONG TERM ADVANCE RESERVATIONS

The Washington Convention and Visitors Association shall be responsible for booking all facilities in the Convention Center for any time more than eighteen (18) months in advance of the desired date.

The authority of the Convention and Visitors Association to reserve facilities shall not extend to that area designated for retail sales.

SHORT TERM ADVANCE RESERVATIONS

The Convention Center General Manager shall be responsible for booking any area of the facility not booked by the Convention and Visitors Association more than eighteen (18) months in advance.

In scheduling events within eighteen (18) months of the date of the event period, the General Manager shall consider appropriate factors, including (but not limited to) crowd control and compatibility, prior to agreeing to lease unused portions of the facility.

The Convention Center shall not release dates tentatively scheduled until first clearing those tentative dates with the Convention and Visitors Association, to insure there is no conflict with long-term advance reservations.

BOOKING CALENDAR

The Washington Convention and Visitors Association shall maintain the master advance booking calendar, and shall keep it in an appropriate location in their offices so that it may be available to the General Manager.

The General Manager of the Convention Center shall maintain a duplicate set of booking calendars at an appropriate location in the Convention Center offices.

FIRST PRIORITY BOOKINGS

First priority shall be given to conventions and trade shows which are international, national, or regional in nature, and which will have a significant impact on the hotel community in terms of hotel room patronage.

A signed, fully-executed contract for first priority events must be on file in the Manager's office no later than eighteen (18) months prior to the event and must be accompanied by a certified check, in the amount of at least ten percent (10%) of the total estimated rental.

A firm rental rate shall be guaranteed for first priority events at time of contract signing; provided, that contract signing occurs no sooner than two (2) years prior to the event.

SECOND PRIORITY BOOKINGS

The second priority for dates shall be given to multiple-day annual public shows

such as sport shows, boat shows, and similar events. These public shows shall be revenue producing events, from which the Washington Convention Center will receive a percentage of ticket sales.

Second priority events shall not be booked more than eighteen (18) months in advance of the event.

A contract shall be issued no sooner than eighteen (18) months prior to the event. A deposit representing at least twenty-five percent (25%) of the anticipated rental must accompany the contract.

THIRD PRIORITY BOOKINGS

Local multiple-day events shall be given third priority. When space is available, reservations will be taken by local, multiple-day events.

Reservations for third priority events shall not be made until the eighteen (18) month advance reservation period for first priority events has elapsed.

A contract shall be issued no sooner than twelve (12) months prior to third priority events. A deposit in the amount of rental for at least one full day must accompany the contract.

FOURTH PRIORITY BOOKINGS

Single-day local events shall be given fourth priority.

Requests for fourth priority events may be honored no sooner than six (6) months prior to the event, on a space-available basis, in order to allow the General Manager the opportunity of first booking local, multiple-day events.

A deposit of the full rental amount shall be received at the time of the signing of the contract for fourth priority events.

MEMORANDUM

To: George Demarest.
Thru: Alan Grip.
From: Khalil Johnson.
Date: May 6, 1982.

The following groups have bookings at the Washington Convention Center which require assembly-type seating for more than 3,000 in 1984, 1985:

1. Baptist Fundamentalism '84, 04/11-13/84, (20,000).
2. National Education Association, 06/29-07/04/84, (12-14,000).
3. Church of God in Christ—UNAC, 07/09-14/84, (12-15,000).
4. Alpha Kappa Alpha Sorority, 07/22-27/84, (8-10,000).
5. Pentecostal Assemblies of the World, 07/31-08/12/84, (6,000).
6. Church of God (Tennessee), 08/13-18/84, (15,000).
7. American College of Obstetricians and Gynecologists, 05/12-16/85, (6,500).
8. Women's International Convention, 05/27-06/01/85, (6,000).
9. American Baptist Association, 06/16-21/85, (3,000).
10. National Urban League, 07/20-25/85, (6,000).

In addition to the above in 1984, 1985, the following groups already have bookings spread over the next five years—1986-1990—which have similar assembly-type seating requirements:

1. Communications Workers of America.
2. National Rurl Electric Cooperative.
3. Kiwanis International.
4. Society for the Preservation and Encouragement of Barber Shop Quartet Singing in America.
5. Million Dollar Roundtable.
6. American Association of Operating Room Nurses.
7. American Business Women's Association.

Mr. RUDMAN. Mr. President, will the Senator from Missouri yield me 5 minutes?

Mr. EAGLETON. I am delighted to yield to my colleague from New Hampshire.

Mr. RUDMAN. Mr. President, being a member of the authorizing committee, let me just speak, if I may, very briefly on this issue.

The Senator from Missouri has, I think, in a very excellent and studious way outlined the entire legislative history of this convention center. I do not think it will be necessary, therefore, to repeat any of it.

Let me just make several observations;

First, if one were to look at the history of various attempts that have been made along the way to limit the use of this facility, it seems to me that we would end up with a facility being built at great public cost with extraordinarily limited use.

We all know why we are here talking about this. Obviously, there is an arena some distance from this building that is known as the Cap Centre that obviously would like to have as little competition as possible. I can understand that. But I certainly do not agree with it.

It seems at least to me that the District of Columbia, the city of Washington, should have a first-class convention center that can be used for all of those things that its directors deem appropriate.

For us, on the one hand, to see an expenditure of a large amount of public funds and then, on the other hand, place limitations of any kind is not prudent business practice and it is not good government.

Looking at the record of the Capital Centre and its performance over the last 5 or 6 years from available public records, it could not be said that that facility is in any financial difficulty, although it might be said that some of the sports teams might be. When one looks at the way they play their games it is no wonder.

Let me simply say that the Senator from Missouri has stated adequately the reasons why we should vote to make sure that this convention center when it opens can be opened to the residents and visitors to this city for whatever legitimate reasons the city government and its board of directors think appropriate.

We should not in any way restrict it. We should not confine it. And least of all should we do things for the benefit of a single enterprise, be it private enterprise, which somehow feels that it wants almost no competition at all.

It is my understanding that there will be an amendment offered which will purportedly limit the kind of exclusions that are spoken of in the pending matter before us by inserting certain words prior to the words that appear before each of the current restrictions.

It seems to me all we are doing then is to create a legal nightmare that will end up in the courts in which each event that is being presented by anything other than an eleemosynary institution will end up being challenged as somehow impinging on the language that was passed by this body.

So, Mr. President, I join my colleague from Missouri, and others, in hoping that we will, in fact, vote this restriction down, hopefully get this convention center completed, and the city will do that, and have a first class facility in this city to be used like other first class cities around this country for whatever purpose convention centers should be used for in the eyes of the local government and the people who live here.

Mr. EAGLETON. Mr. President, I thank my colleague.

Mr. President, I am going to have printed in the RECORD three letters. But before having them printed in the RECORD in their entirety, let me read some excerpts from them.

First is a letter from Mayor Marion Barry dated December 2, 1982. This is a quotation in part:

> The development and use of the Convention Center clearly involves no federal interest whatsoever. Therefore, Congress should exercise restraint in limiting in any way the use of this facility.
>
> As a practical matter the test of Congressional authority with respect to local District matters has been the review of pertinent federal interest. But there is a higher standard that needs to be reviewed. That standard is the philosophical commitment of the Congress to the principles of self-government. Almost eight years ago the Congress granted the citizens of the District of Columbia limited Home Rule. Since that time there have been a number of occasions when Members of the House or Senate have sought to modify or negate District programs or laws or to impose other restrictions or requirements. On these occasions, and I do not include those where there has been a legitimate federal interest, the Congress has retreated from their commitment to the people of this city. To place restrictions on the use of the Convention Center would be a similar breach of trust.

Then a letter dated December 7 from the District of Columbia City Council signed by Charlene Drew Jarvis, chairperson of the Committee on Housing and Economic Development. She writes in part:

> According to recent budgetary forecasts, the District expects a revenue shortfall of $109 million in this fiscal year alone and some believe it will grow to $257 million by 1987. Non-convention activities, held on days when no conventions are booked and the Center would otherwise be idle, could help reduce this shortfall.
>
> In cities with comparable 100,000 seat facilities, single night concert performances have generated significant revenues for

those cities and businesses. A recent survey revealed that within the last six weeks in eight other cities (Rochester, New York; Tucson, Arizona; Tulsa, Oklahoma; Worchester, Massachusetts; New Haven, Connecticut; Austin, Texas; Charlotte, North Carolina; Milwaukee, Wisconsin) one night concerts with a seating capacity of 10,000 or fewer generated a total of $902,696 in gross revenues.

Were the D.C. Convention Center available for only twenty single night concerts a year, $2 million in gross revenues could be generated, $240,000 of which would pass to the Center in rental income. This figure, of course, does not include concession profits, parking fees, merchandise sales, and other business revenues generated in the Downtown D.C. area.

The final letter that I will put in is from Matthew Watson, the former Auditor of the District of Columbia, and he raises this interesting point:

One serious impediment to management improvement in the District of Columbia government has been seemingly random Congressionally imposed limitations which restrict management flexibility. Such restrictions create a legal thicket which must be passed to determine the propiety of programs and expenditures. Resources at all levels of government today, particularly in planning and financial areas, are too scarce to burden with such extra requirements. Not only do such restrictions actually inhibit efficient operations, but they are sometimes used to shield unimaginative and inefficient administration.

The restrictions on use of the Convention Center contained in the FY 1983 appropriation bill, in addition to hampering efficient operation of the Center, may also adversely effect potential revenue. I strongly urge that these restrictions be rejected . . .

Mr. President, I ask unanimous consent that the three letters, one from the Mayor, one from the City Council, and one from Mr. Watson be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

THE DISTRICT OF COLUMBIA,
Washington, D.C., December 2, 1982.

Hon. THOMAS F. EAGLETON,
Ranking Minority Member, Senate Government Affairs Subcommittee on Governmental Efficiency and the District of Columbia, U.S. Senate, Washington, D.C.,

DEAR SENATOR EAGLETON: I greatly appreciate your efforts on behalf of the District of Columbia to insure that the District of Columbia Appropriations Act for Fiscal Year 1983 does not contain language restricting the use of the Convention Center.

As you have eloquently stated in the past, the basis of Congressional involvement in the local affairs of the District of Columbia should be limited to issues of overriding federal importance. The development and use of the Convention Center clearly involves no federal interest whatsoever. Therefore, Congress should exercise restraint in limiting in any way the use of this facility.

As a practical matter the test of Congressional authority with respect to local District matters has been the review of pertinent federal interest. But there is a higher standard that needs to be reviewed. That standard is the philosophical commitment of the Congress to the principles of self-government. Almost eight years ago the Congress granted the citizens of the District of Columbia limited Home Rule. Since that time there have been a number of occasions when Members of the House or Senate have sought to modify or negate District programs or laws or to impose other restrictions or requirements. On these occasions, and I do not include those where there has been a legitimate federal interest, the Congress has retreated from their commitment to the people of this city. To place restrictions on the use of the Convention Center would be a similar breach of trust.

Specifically, any area of competition between the District's Convention Center and other facilities in the region should be worked out directly between the affected governments. It should not be resolved by Congessional interference. This would not be done in any other jurisdiction in this country. Moreover, I believe that any area of competition is extremely limited and can be worked out to the satisfaction of the parties. There are many areas of intergovernmental cooperations within the region, ranging from sewage treatment to mass transportation. This is just another issue of regional interest.

It is true that I associated myself with language providing for limited restrictions on the Convention Center. At the time these discussion were held, it appeared that our entire budget would be held up. There were so many programs to be funded and our budget is so vital that I supported what appeared to be the "lesser of the evils." However, I indicated at that time my preference for an appropriation act free of restrictions, both because this issue is not budget related and because if there is a concern it is one that should be left to the local governments to address.

Your support on the District's behalf is greatly appreciated. You have supported us down through the years and we have come to rely on your efforts. It is sometime easier to fight for principle than to live by it. Thank you for doing both.

Sincerely,

MARION S. BARRY, Jr.,
Mayor.

COUNCIL OF THE DISTRICT OF COLUMBIA,
Washington, D.C., December 7, 1982.

Hon. THOMAS EAGLETON,
Committee on Appropriations,
U.S. Senate, Washington, D.C.

DEAR SENATOR EAGLETON: The Washington Convention Center represents a critical investment in the District's future: for the jobs it will create for many of our unemployed residents, for the vitality it will bring to the downtown area, and for the revenues it will generate for local merchants as well as D.C. government. The proposed amendment which would prohibit concerts, sporting events, and other entertainment activities from the Washington Convention Center will result in a substantial loss of needed revenues to the District of Columbia.

The approval of such an amendment could be a telling blow to the District in face of federal budget cuts and sustained demands for increased police protection, better public schools, and financial stability. The ability of the D.C. government to generate additional tax dollars to serve the needs of its 650,000 residents by levying a commuter tax has already been compromised. Further Congressional action to establish parameters for the operation of the Convention Center severely inhibits the capacity of this city to grow economically.

According to recent budgetary forecasts, the District expects a revenue shortfall of $109 million in this fiscal year alone and some believe it will grow to $257 million by 1987. Non-convention activities, held on days when no conventions are booked and the Center would otherwise be idle, could help reduce this shortfall.

In cities with comparable 10,000 seat facilities, single night concert performances have generated significant revenues for those cities and businesses. A recent survey revealed that within the last six weeks in eight other cities (Rochester, New York; Tucson, Arizona; Tulsa, Oklahoma; Worchester, Massachusetts; New Haven, Connecticut; Austin, Texas; Charlotte, North Carolina; Milwaukee, Wisconsin) one night concerts with a seating capacity of 10,000 or fewer generated a total of $902,696 in gross revenues.

Were the D.C. Convention Center available for only twenty single night concerts a year, $2 million in gross revenues could be generated, $240,000 of which would pass to the Center in rental income. This figure, of course, does not include concession profits, parking fees, merchandise sales, and other business revenues generated in the Downtown D.C. area.

As Member of the Committee on Appropriations, I urge you to vote against the restrictive language in Section 123 of the "District of Columbia Appropriations Bill, Fiscal Year 1983."

Sincerely,

CHARLENE DREW JARVIS,
Chairperson,
Committee on Housing and Economic Development.

KASWELL, PERAZICH & WATSON, P.C.,
Washington, D.C., December 2, 1982.

Hon. ALFONSE M. D'AMATO,
Chairman, Subcommittee on District of Columbia Appropriations, Senate Office Building, Washington, D.C.

DEAR SENATOR D'AMATO: I am a practicing attorney in the District of Columbia. Between 1975 and 1981, I was District of Columbia Auditor. As Auditor, I was charged by act of the United States Congress with conducting studies and making recommendations to the Mayor, the Council and the Congress to improve the management of District of Columbia agencies. I am concerned with restrictions on the use of the new Convention Center now being considered by the Senate.

One serious impediment to management improvement in the District of Columbia government has been seemingly random Congressionally imposed limitations which restrict management flexibility. Such restrictions create a legal thicket which must be passed to determine the propriety of programs and expenditures. Resources at all levels of government today, particularly in planning and financial areas, are too scarce to burden with such extra requirements. Not only do such restrictions actually inhibit efficient operations, but they are sometimes used to shield unimaginative and inefficient administration.

The restrictions on use of the Convention Center contained in the FY 1983 appropriation bill, in addition to hampering efficient operation of the Center, may also adversely effect potential revenue. I strongly urge that these restrictions be rejected in the interest of encouraging, rather than discouraging, effective management in the District government. It is clearly in our interest as residents, as well as in the Federal interest,

to improve the financial viability of the District.

Sincerely,

MATTHEW S. WATSON.

● Mr. GLENN. I am pleased to join Senators EAGLETON and RUDMAN as a cosponsor of an amendment to strike unwarranted language restricting the use of the newly constructed D.C. Convention Center from H.R. 7144, the D.C. appropriations bill for 1983. The amendment would delete language in the bill which would preclude the use of the center for any concert, athletic event, or similar entertainment activity.

I support the concept and philosophy of home rule for the District of Columbia. The District should be free to run its own internal affairs without interference by the Federal Government, except in matters involving a clear, overriding Federal interest.

My Senate colleagues should join us in the amendment to strike this language. Multipurpose use of the facility will provide additional revenue to help pay for the center; it will help avoid "dark days" during which no convention or trade show can be booked. In addition, because of its design and booking policy, the center will be used primarily for conventions and trade shows. Thus, it will not become a major competitor of local sports and entertainment facilities. For example, although the center's schedule has been substantially filled for 1983 through 1985, only conventions and trade shows have been booked to date.

The emergence of "restrictive use" language is relatively recent in the legislative history of the center. The early history does not indicate that Congress contemplated imposing such a restriction, and the record contains no adequate justification for doing so.

It would be unfair to saddle the center with use restrictions when no other major city, that is of the 21 largest cities, impose such restrictions on the use of their convention centers. Furthermore, since there is no overriding Federal interest in this instance, it is philosophically unjustified for Congress to interfere with the use of this facility by the District of Columbia.

I hope that the Senate will follow the action of the House of Representatives which recently deleted similar restrictive use language from its version of the D.C. appropriations bill for 1983, H.R. 7144.●

Mr. EAGLETON. I now yield the floor.

The PRESIDING OFFICER. Who yields time?

Mr. HARRY F. BYRD, JR. Mr. President, will the Senator from Vermont yield for a question?

Mr. LEAHY. Of course, I will be happy to.

Mr. HARRY F. BYRD, JR. Does the Senator from Virginia understand correctly that the total operating expenses for the District of Columbia represented by the bill now before the Senate, the legislation now before the Senate would be $1.919 billion in round figures, leaving off the odd figures?

Mr. LEAHY. Under the bill it would be $2 billion——

Mr. HARRY F. BYRD, JR. No; I am speaking of operating expenses.

Mr. LEAHY. Operating expenses, I am sorry.

Mr. HARRY F. BYRD, JR. As differentiated from the capital——

Mr. LEAHY. Not only is the Senator correct but even the rounding off of the odd numbers would appear to be still, at least in Vermont, a large amount of money.

Mr. HARRY F. BYRD, JR. So this bill would mean the District of Columbia would have for operating expenses $1,919,000,000.

Mr. LEAHY. Yes; the Senator is correct.

Mr. HARRY F. BYRD, JR. As I understand the figures for the year just ended, the operating expenses were $1,694,000,000.

Mr. LEAHY. The Senator once again is correct.

Mr. HARRY F. BYRD, JR. If my arithmetic is correct, if one subtracts the proposed amount of what was spent for fiscal 1982, it gives an increase of $245 million or a 14-percent increase in operating expenses.

Mr. LEAHY. The figures the Senator is giving sound very, very close if not exactly correct, but they are certainly within my understanding of the ball park figure.

Mr. HARRY F. BYRD, JR. So the cost of operating the District of Columbia, the expenses for operating the District of Columbia, will increase under this legislation by 14 percent.

Mr. LEAHY. The Federal share, I understand from the chairman's staff, is raised by 7 percent. The rest is raised as a matter of local revenues.

Mr. HARRY F. BYRD, JR. Wherever the money comes from, the cost of operating the government will increase 14 percent.

Mr. LEAHY. Absolutely, the Senator is correct.

Mr. HARRY F. BYRD, JR. I guess that is really the point I wanted to establish.

I am just wondering whether this Congress is prepared to vote sums of money that will permit the government of the District of Columbia to increase its operating expenses by 14 percent. I thank the Senator.

Mr. LEAHY. The Senator raises, as always, a good point. We also would, if the amendment before us were to go through, go even a step further. We would make sure that we also operate what normally would be considered a commercial venture, a private enterprise venture, for the city, but that is to go from being a convention center to going to, in effect, commercial sports, entertainment, and cultural arena, with the Federal Government guaranteeing a fairly significant part of those operating expenses.

The Senator from Virginia well remembers the strong objections I imposed for a number of years to the convention center, which then was going to be a $200 million white elephant. They reduced the cost to a $100 million boondoggle, and at that time, as the Senator recalls, the argument made by the city was that it would be done as kind of a joint city and business sector operation for conventions. The city was at that time either the No. 1 or No. 2 convention city in the country, but they said the one thing the city could not handle were conventions. By cutting the cost down to $100 million they assured the Congress that they would be able to handle it. As a consequence, we supported it.

Now, of course, they want an arrangement which would allow them to enter into a commercial enterprise with none of the risks which most business people have to take. Instead they would do it hoping we would always be here to bail them out.

I might say in that regard that I agree very much with the Senator from Missouri that we should not be stopping local schools from being able to use the facility for their sporting events and for a number of other things. Once his time is yielded back, I will then submit a substitute which would allow a number of the locally sponsored operations he discussed to be scheduled, if accepted by the Senate.

But I digress from the original point the Senator from Virginia was making.

Mr. HARRY F. BYRD, JR. I was not addressing the amendment.

Mr. LEAHY. I understand the Senator was not. I did not want to leave the impression he was, but I just wanted to point out some of my concerns that continue to this day, even though I no longer hold that lofty, exalted position of chairman, the position fought for so assiduously by the 100 Members of this body, and which I had to give up, of course, with great reluctance 2 years ago. [Laughter.]

Mr. HARRY F. BYRD, JR. It is interesting to note that the population of the District of Columbia has gone down from 797,000 in 1965 to 637,000, a reduction of about 20 percent, but the per capita costs have gone way up; a substantial reduction in population but the cost of Government is going up at a faster rate than when the population was greater.

I am concerned about an increase of 14 percent, and I just do not see how this Congress can justify passing legislation that will permit the cost of Government to increase by 14 percent.

Mr. EAGLETON. Mr. President, I ask the Senator from Vermont if he is

willing to yield back the remainder of his time.

Mr. LEAHY. Mr. President, how much time remains on the subsitute?

The PRESIDING OFFICER (Mr. QUAYLE). Twenty minutes equally divided.

Mr. LEAHY. I am perfectly willing, in the absence of the junior Senator from New York, to yield back the managers' time on this if the Senator from Missouri is willing to yield back his remaining time, after which I am willing to introduce a substitute.

Mr. EAGLETON. Mr. President, that is all right with me. I yield back the remainder of my time.

Mr. LEAHY. Mr. President, I yield back the managers' time on the same amendment.

UP AMENDMENT NO. 1417 IN THE NATURE OF A SUBSTITUTE TO UP AMENDMENT NO 1416

(Purpose: To offer a substitute to the pending bill)

Mr. LEAHY. Mr. President, I send an amendment to the desk in the nature of a substitute and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Vermont (Mr. LEAHY), for himself and Mr. D'AMATO, proposes an unprinted amendment numbered 1417 in the nature of a substitute to unprinted amendment numbered 1416.

In lieu of the language proposed to be stricken, insert the following:

(a) No funds available in fiscal year 1983 or thereafter pursuant to this or any other Act may be used for leasing, promoting, or permitting the occupancy or use of any part of the Washington Convention Center (including any related facility) for any professional concert, athletic event, or similar entertainment activity (as defined in subsection (b)), unless—

(1) such activity is incidental to a convention, meeting, trade show, product exhibition, or similar primary event held at the Center, and the activity is of a type customarily performed as part of the primary event;

(2) admission to the activity is limited to those attending the primary event; and

(3) allowing the activity to occur is consistent with the purpose of promoting the use of the Center as a national and regional convention and trade show center.

(b) For purposes of this section, the term "professional concert, athletic event, or similar entertainment activity" includes—

(1) any professional concert,

(2) any professional athletic competition, or performance

(c) For purposes of this section, the term "professional concert, athletic event, or similar entertainment activity" (as defined in paragraph (1)) shall not include any event which is conducted solely for educational, charitable, eleemosynary, religious, or philanthropic purposes.

The PRESIDING OFFICER. Who yields time?

Mr. LEAHY. Mr. President, I yield myself 5 minutes.

The PRESIDING OFFICER. The Senator from Vermont is recognized.

Mr. LEAHY. Mr. President, I am speaking for the committee. I would like to make a couple of brief points in regard to the argument made by the Senator from Missouri.

Both the Constitution and the Home Rule Act reserved the right of Congress to enact restrictions noted here. I commend the Senator for his involvement in the authorship of the Home Rule Act. In authoring it and passing it, those same restrictions were supported by him and became part of the law.

I also yield to nobody in an effort to move matters toward home rule. I voted for various home rule matters here in this city, I think, perhaps, more than any other Member in this body. I certainly know that I have been roundly criticized by just about every single issue group, especially those on the right, back in Vermont for supporting the city to the extent that I have.

I would like to point out the District's own convention board agrees with my interpretation of the legislative history.

These are their own words:

As I hope you all know, the sole purpose for building this long overdue facility—and the justification for its operating budget—is to attract the hundreds of major national and international conventions, conferences, and trade shows, and the hundreds of thousands of delegates and exhibitions to our city.

They were asked the following question:

Are any of you gentlemen aware of any written documentation that relates to previous legislative history indicating the Washington Convention Center is not to be used for certain purposes or activities?

The city's own Convention Board responded:

To the best of our knowledge, none of the testimony that was given in the past by proponents of the Convention Center anticipated the building being used for anything other than the national conventions and local flat floor shows that are currently reflected in our bookings . . ."

The chairman of the subcommittee and I both sat down with the Chairman of the Convention Board. He indicated that he supported the language in the bill. That is why I have put this in, to accommodate the concerns raised in the discussion. That is why I have put in this compromise amendment to make clear that charitable events are not restricted.

It removes limitations related to circuses and rodeos. I would allow local sporting events of schools that we have discussed.

I do this notwithstanding the fact that the mayor, on the day the committee approved the D.C. bill with the restrictions, hailed the bill as another positive step forward for the District, stating no objections whatsoever.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. The Senator from Missouri.

Mr. EAGLETON. Mr. President, I rise in opposition to the substitute.

Mr. President, what we now have here, instead of the "outright greed" in the section already in the bill, is "sanitized greed," the greed of Mr. Abe Pollin.

It is a great generosity that the Senator from Vermont is now going to permit a couple of college games to be played in the D.C. Convention Center. For that partial help, I say thank you.

But if you read his amendment in full, it says this: Anything that is going to make money, Abe Pollin gets, and anything that is eleemosynary, anything that will be charitable or lose money, the D.C. Convention Center gets. "Thank you, Abe."

Can you imagine Abe Pollin calling up Mayor William Schaefer of Baltimore—and his Capital Centre is not all that far from Baltimore—and saying, "Mayor, you have a convention center complex over there, and I do not want it to compete with me. Please pass a local city ordinance restricting the use of your own convention center for my personal gain out here at Capital Centre."

Mayor Schaefer, not known for his profanity, would say, "Blank you, Abe Pollin," and hang up.

But instead of Abe Pollin calling Mayor Schaefer, he calls upon the U.S. Senate to outlaw any competition.

We are going to stand here in a little time and vote on the kind of an amendment that no city in the United States would contemplate enacting. Baltimore would not; my home city of St. Louis, which has a new convention center, and 15 minutes away from it a stadium that is known as Checker Dome, our Capital Centre, would not. The owners of the Checker Dome would not have the gall, the greed, or the temerity to suggest that the St. Louis Convention Center be removed from competition.

The second largest city of my State, Kansas City, has a new convention center, and not far from it, much closer than the Cap Centre is to the D.C. Convention Center, are other facilities. No one in their right mind would have the arrogance to ask the Kansas City Council to restrict the use of its convention center.

But arrogance vis-a-vis the District knows no bounds. So what we have here with the Leahy substitute is that the District gets every losing proposition in the world—everything that is going to "lay an egg" and be a financial loss goes to good old D.C. Convention Center. And anything that might make a buck, Abe Pollin is going to keep out there in suburban Maryland.

A few minutes ago the Senator from Virginia (HARRY F. BYRD, JR.) came to

the floor and pointed out the fiscal dilemma of the District of Columbia. The fact is the city's expenses are going up. They are going up too high, I admit. One way to insure that the city has an even larger deficit is to restrict the D.C. Convention Center in such a way that the city is guaranteed to lose even more money thereat. Congress can make the D.C. deficit larger and then some Senators can issue press releases to their home States about how wasteful the District of Columbia is. Other Senators can come to the floor and kick the city around and beat up on the District of Columbia—that is good raw meat, it is wonderful raw meat in States removed from the District of Columbia.

The District of Columbia is almost a 50-State punching bag for Senators and House Members taking their favorite potshots.

We find that one of the reasons the city cannot operate and stay within a budget is that we restrict its income. Mr. Pollin urges that by Federal law we guarantee that the convention center has to be a certain loser. Suburban Senators from Maryland and Virginia say, "Over our dead body will you have a commuter tax." Every other major city in the country has a commuter tax. It is the principal source of revenue for other big cities. We deny that to the District because Maryland and Virginia do not want it.

Let us let it all hang out, Mr. President. Section 128 is nothing more than a money grab. It is a money grab. It is so shameful it should not have been proposed. But the ultimate is shame—the ultimate is shame—will be if 100 Members of the U.S. Senate vote to put this into Federal law. Such would be nothing less than a national disgrace.

The PRESIDING OFFICER. Who yields time?

Mr. LEAHY. Mr. President, since it is a fact that this appears to be what seems to me, at least, if not a personal attack, at least bordering on it from the Senator from Missouri, I ask unanimous consent that I may have 10 minutes to respond. I certainly would have no objection if he should ask for 10 minutes for himself on that.

The PRESIDING OFFICER. Is there objection to the request to have an additional 10 minutes for the Senator from Vermont? Without objection, it is so ordered.

Mr. LEAHY. Mr. President, the Senator from Missouri speaks of greed. he makes a very pointed comment that the amendment introduced by the chairman of the subcommittee and me was put in not by us but by another individual who does not serve in this body. I point out that the restrictions that we have, the chairman of the convention center board himself supported. He had absolutely no objection to it and he found nothing in those restrictions that varied in any way from the agreements entered into when this convention center was originally voted on.

I suspect the Senator from Missouri perhaps forgets, and I shall be charitable in putting it that way, the fact that this matter, the convention center, came up before the Senate of the United States and it lost about 3 to 1 when the city came in asking for the money for it. I was given the chore of sitting down with the various groups—civic groups, business groups in the city—to work out some kind of proposal that could be accepted by the Senate. This was after it had been voted down by something like 70 to 25. I do not recall the exact number, but I think I am within something like 3 or 4 votes on each side.

When we worked it all out, we got the convention center money for the city through on a unanimous vote. The restrictions I am talking about in the amendment put in by the chairman and myself carry out to the best of my recollection—and, I might add, to the best of the recollection of a lot of other people who were there—what restrictions were there at the time.

It does not say anything about the fact that we scaled the convention center down by tens of millions of dollars to get down to $100 million, but that is in the bill here.

I also note for the Senator from Missouri, who seems to suggest that this is somehow the result of personal greed on the part of unnamed Senators in this body——

Mr. EAGLETON. I did not say unnamed Senators. I said an individual in Maryland, namely Abe Pollin.

Mr. LEAHY. Mr. President, who has the floor?

The PRESIDING OFFICER. The Senator from Vermont has the floor.

Mr. EAGLETON. I specified who had the greed—Mr. Abe Pollin, owner of the Capital Centre in Largo, Md.

The PRESIDING OFFICER. Does the Senator from Vermont yield?

Mr. LEAHY. No.

The PRESIDING OFFICER. The Senator from Vermont.

Mr. LEAHY. Because of the clear implication of that, I also note for the Senator from Missouri that at the time I was given the chore of trying to resurrect this Convention Center and get it through, I never set eyes on the Capital Centre he speaks of. Nor did I at that time know Mr. Abe Pollin. Not only that, I had never met him, never talked with him. Nor do I recall, at least in the discussions I had, that he ever entered into them.

I do know that the Senator from Missouri was part of those discussions. I do know that he, as a member of the Appropriations Committee, both at the committee level and on the floor, supported the bill that I got through for the Convention Center. I do know that a number of people, both within the city government today and some who are without, supported the concept that was in there.

That is what came through here. If there were some kind of greed percolating out in the outskirts on that, I am not aware of it. I would be glad to be instructed by the Senator from Missouri, who apparently was more aware of what we agreed to than I was and I was the one who got the bill through for the Convention Center.

I stated at the time I thought it was a white elephant. I stated at the time I thought it was a waste of the taxpayers' money. I stated at the time that I thought the city made a mistake. But I also stated at the time that because of my commitment to home rule, which I had voted for time and time again, they ought to have it.

I also realized that it meant turning around three-quarters of the U.S. Senate to support it. I also realized that that was the result of a very carefully constructed agreement, both within this body and with the other body, to do it. I feel a certain responsibility that those involved in it—and I refer to myself—keep their word and keep consistent with what we agreed to at the time the Convention Center went through.

The PRESIDING OFFICER. Who yields time?

Mr. EAGLETON. Mr. President.

Mr. D'AMATO. Mr. President, I ask the Senator from Missouri if I may make one or two observations.

The PRESIDING OFFICER. The Senator from New York.

Mr. D'AMATO. Mr. President, I think that it is terribly unfortunate that this level of rhetoric and charges and countercharges have to be reached concerning this bill. I would have to say that in the 2 years that I have served as chairman of the District of Columbia Subcommittee, I do not think there is anyone who can question the fact what our committee has done more in advancing home rule has rejected more controls, restrictions—undue controls, undue restrictions, many proposed not only by Members of this body but also by Members of the other body. I think we have moved a good deal away from that kind of attitude.

Indeed, we have given to the District financial responsibility. We have allowed greater budget flexibility than has been the case in many years as a result of the bipartisan effort between Senator LEAHY and the chairman and other Members of the Congress.

Mr. President, I think we have a situation that is blown far out of proportion, because let me say that I had the opportunity, Mr. President, to meet with Mr. Ed Singletary, who is chairman of the Washington Convention Center Board. He indicated to me that

the Convention Center Board had a policy, a stated policy, that was opposed to putting in rock shows, that was opposed to putting in events that would create a situation where large numbers of people would have to come into that Convention Center in a short period of time. To put it bluntly, he said the facility is not constructed to hold rock concerts and even athletic competitions that might have upward of 10,000 people coming in and coming out.

It would be unsafe.

I should like to submit a copy of a letter, and ask that it be entered into the RECORD, in which Mr. Singletary's staff points out these various factors. He points out, for example, that the center contains no dedicated parking area. He says that if you attempted in an 8-hour period of time to utilize it as a convention center, it could suffice. But in attempting to put large numbers of people into that facility in a relatively short period of time, 1 hour, that it would be impossible.

He also points out, I might add, that you are going to have a difficult time attracting a professional basketball team or even the great Georgetown University team when you have a limited capacity of about 9,000 to 10,000 people even with the purchase of the chairs that can be put on the floor.

It has been suggested that, my gosh, we are restricting Georgetown from coming in and playing. They are not going to come in and play to 10,000 people when they are putting in 17,000 and 18,000 people elsewhere. It is just economically impossible.

I suggest that when you spend tens of millions of dollars—and I was not here; Mr. Pollin has not contributed to me directly or indirectly in any way so I can say this; when this decision was made to build this facility, but I have had experience in looking at municipal operations—it is totally incompatible to have rock concerts coming in and having the kind of convention center that you want to build that will inure to the benefit of the tax structure and to the business climate of Washington, D.C.

If you want to have that kind of thing—rock concerts—and that is where the money is, let me tell you—if there is anybody in any little group, you look at those promoters and they are all licking their chops; they want to see it: "Oh, boy, you let me get in there." You will see who will be making money. You will see who will be wheeling and dealing. I do not believe that this is the place or time to even begin to entertain that.

This is a policy that the board set. They talked to me, and I said, "What is the situation? I am a newcomer to this. Explain it to me." Mr. Singletary said, "We don't want rock concerts. We think we are going to be able to book in 35 to 40 different events, business shows that run for 5 days, 10 days, a week. We cannot afford to tie this up with the rock concerts that come in."

And there might be, understanding the greed that inures to this business in terms of the rock shows and in terms of the lack of accountability, those who, in the local administration and other places, might want to see that take place. I would suggest to you that that is not going to improve the climate of doing business in the downtown area. I suggest to you that they create very real problems. The District does not need them. It would be counterproductive.

I suggest that we can strike, and I think that the substitute amendment as offered by my distinguished colleague, which I cosponsored, allows for charitable events to be held, allows for the properly and orderly use of that facility, and says that we are not going to have these kinds of events.

I am very much concerned about rock concerts. We do not need them here. That is for the quick buck artists. The taxpayer is not going to be enriched by that kind of show, absolutely not. You will pay for more police protection in this area than you will ever get in offsets. I have them in my hometown, Nassau County, with a big coliseum. They hold those rock concerts, and there they can put in 17,000 and 18,000, and there they have sufficient parking and there it is not in the middle of a downtown area. You have the kids coming in to these concerts. I want to tell you something. You are going to have them running wild down here. Is that what you want? Do you think that is going to produce a healthful effect? Do you think that is going to bring in tourists? Do you think that is going to inure to the benefit of hotels that are going to be coming in and building? It is not. They are not going to do it for rock concerts.

So, Mr. President, I think that maybe we get a little bit too overly passionate on one side or the other, but I think the compromise Senator LEAHY and I have offered, language that I believe the other body will support, is reasonable, is fair, and I hope my distinguished colleague from the great State of Missouri would see fit to maybe work with us in structuring a compromise that we can all live with, taking fair play into consideration.

I certainly have never moved in the way to unduly restrict the city or place a limitation on it. I have talked out publicly and on the record about those who seek to burden the city, place undue restrictions upon it, treat it as a foster child, decry its crime enforcement, and yet not give them practical tools to deal with the inadequacies. I do not think that is the same. I do not believe that we can say that this deprives home rule, not when this Congress has appropriated tens of millions of dollars and want to see a commercial and economic business revival in this area. We certainly have the right to see to it that there is proper care taken in the utilization of what can be a fine facility as opposed to what could be a great detriment.

The PRESIDING OFFICER. The Senator from Missouri.

Mr. EAGLETON. Mr. President, I shall be brief so we can vote on the substitute.

I listened with great interest to what the Senator from New York has to say. On the one hand, he says the D.C. Convention Center physically, from a parking point of view and from any point of view, just cannot handle a rock concert, cannot handle some of these things.

Well, if they cannot handle it, if he is correct in that judgment, why prohibit it? If, de facto, it is not structured or equipped or situated in such a way as to handle some of these events, why prohibit it de jure by Federal law?

Now, the second point he makes is that rock concerts are evil. I do not know whether they are or are not. I do not go to them. I cannot stand the music. I think it is an abomination, so perhaps they are evil.

He said, "We don't need that here," that proprietary "we" of the Senator from New York. I do not know if he physically lives in this area when he is here with us temporarily in the Senate, but "we," as if he were a citizen of the District of Columbia "we" do not need that here.

Mr. D'AMATO. I think the Senator from Missouri at least realizes, I guess, that we all have temporary residence here.

The PRESIDING OFFICER. Does the Senator from Missouri yield?

Mr. EAGLETON. I said his permanent abode is in New York and my permanent abode is in Missouri, and we are temporarily here at the sufferance of our electorate, and, God, do our electorates suffer.

But he said, "We don't need that here." So here is the kind of bill that I am willing to work on with the Senator from New York. Let us put in a Federal law, not just a Federal law for the District, but a Federal law for all 50 States, outlawing rock concerts in New York——

Mr. D'AMATO. Will the Senator from Missouri yield?

Mr. EAGLETON [continuing]. Albany, Syracuse, Rochester, Buffalo, New York City. Let us outlaw them.

Mr. D'AMATO. Will the Senator from Missouri yield?

Really, that is rather proposterous to suggest, No. 1, that I hate rock concerts. When I use "we," I am talking about a very direct link in terms of the total Federal dollars for constructing

the Convention Center, so that there is a very real relationship. I am not suggesting that the Federal Government should intrude on rock concerts and that they do not have their proper place where properly supervised, where the adequacy of space, and adequacy of parking, the adequacy of location.

I suggest to the Senator that you take very great chances in terms of attempting this. And there will be the great fast buck artists who will say, "We think we can achieve that concert irrespective of the fact that there is not adequate parking." Then we are going to have some real problems. I suggest to the Senator that Congress does have a very real say in the matter of what its investment in terms of dollars and cents will be put to; that we have an opportunity, because we are here as residents during our short term, and it is all relatively short in terms of the history of the Senate, to give to the city the proper tools to see the kind of rebirth that is so desperately needed in our city of Washington, D.C., in the inner core city, as in so many of our cities. I spoke to the Convention Center people. I did not take it on anybody's word. I spoke to them, and they said, "Senator, we do not intend that." It is fine for Mr. Singletary to say that now, but what happens when another board comes in or another administration? What happens when that rock concert group comes in and says to them, "Look, we have an opportunity here that we can put in 9,000 people. We are going to make a lot of money," and so forth. I do not think it is the proper use.

If you can say it is a proper use, fine. If they have proper facilities, fine. If there are proper safeguards, fine. But that is not the case.

I think we have a responsibility in terms of the utilization of taxpayers' dollars, facilities we pay for, that the people of the United States pay for. I do not think it makes much sense to spend the kind of money necessary, $98 million, to allow it to be used for rock concerts. I do not believe that. I do not want to say I am against them. I am not. If you like that, fine. But you do not hold rock concerts in a building that the taxpayers spend $98 million for, when the purpose and intent of the authorizing legislation was to have a place where conventions and business shows could come and help provide the economic stimulation that would have long-term business growth and development.

I do not think the citizens of the United States particularly want to come into the District, into a downtown area, and run into rock shows. I do not think we are ever going to turn around the economic climate, the development, and hope to bring prosperity to the Nation's Capital, if we do not see that there are proper safeguards. That is what we are talking about—proper safeguards.

So I do not see the connection between whether I do or do not like rock concerts or whether we should outlaw them. But I do suggest that it would be most inappropriate and it would be counterproductive to the best interests of the District, the people, and the investment of moneys by this Congress.

The PRESIDING OFFICER. The time of the proponents of the substitute has expired.

The opponents have 2 minutes and 56 seconds.

Mr. EAGLETON. Mr. President, if the Senator from New York examines the convention facilities in his home State—and there are all kinds of convention facilities in the State of New York, not only in the Big Apple but also in all the "little apples" in New York—he will find that no convention facility in the State of New York has any kind of restriction remotely analogous to what is contained in the Leahy-D'Amato substitute. They just are not there. Yet, in our great wisdom in the U.S. Senate, we are going to decide what is best for the residents of the District of Columbia.

If these innocent tourists who come into town and stay at the Mayflower, the Madison, the Four Seasons, and of the posh residences are going to somehow be annihilated and assaulted as a result of some rock concert that may be held in the D.C. Convention Center, let us protect innocent people out in the suburbs, too. I live in the suburbs; I need to be protected from this evil. Let us outlaw rock concerts at the Capital Centre. That would be fair. We can have a tradeoff on that.

We can pass a Federal law that we do not like rock, saying that we have to protect innocent bystanders anywhere in the greater metropolitan area. I live in suburbia, and I want to be just as much protected as that poor millionaire staying at the Four Seasons. I believe in the equal protection clause.

Mr. President, I ask for the yeas and nays on the Leahy-D'Amato substitute.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The yeas and nays were ordered.

Mr. EAGLETON. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the substitute offered by the Senator from Vermont and the Senator from New York. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Arizona (Mr. GOLDWATER), the Senator from Utah (Mr. HATCH), and the Senator from Florida (Mrs. HAWKINS) are necessarily absent.

I further announce that, if present and voting, the Senator from Utah (Mr. HATCH) would vote "nay."

Mr. CRANSTON. I announce that the Senator from Ohio (Mr. GLENN), the Senator from Hawaii (Mr. INOUYE), and the Senator from Arkansas (Mr. PRYOR) are necessarily absent.

The PRESIDING OFFICER (Mr. KASTEN). Are there any other Senators who desire to vote?

The result was announced—yeas 40, nays 54, as follows:

[Rollcall Vote No. 396 Leg.]

YEAS—40

Abdnor	Kasten	Quayle
Andrews	Laxalt	Randolph
Boschwitz	Leahy	Sarbanes
Bumpers	Long	Sasser
Burdick	Mathias	Schmitt
Chiles	Matsunaga	Stafford
Cochran	Mattingly	Stennis
Cohen	McClure	Stevens
D'Amato	Metzenbaum	Thurmond
DeConcini	Moynihan	Tower
East	Murkowski	Warner
Jackson	Packwood	Weicker
Jepsen	Percy	
Johnston	Pressler	

NAYS—54

Armstrong	Domenici	Levin
Baker	Durenberger	Lugar
Baucus	Eagleton	Melcher
Bentsen	Exon	Mitchell
Biden	Ford	Nickles
Boren	Garn	Nunn
Bradley	Gorton	Pell
Brady	Grassley	Proxmire
Byrd, Harry F., Jr.	Hart	Riegle
Byrd, Robert C.	Hatfield	Roth
Cannon	Hayakawa	Rudman
Chafee	Heflin	Simpson
Cranston	Heinz	Specter
Danforth	Helms	Symms
Denton	Hollings	Tsongas
Dixon	Huddleston	Wallop
Dodd	Humphrey	Zorinsky
Dole	Kassebaum	
	Kennedy	

NOT VOTING—6

Glenn	Hatch	Inouye
Goldwater	Hawkins	Pryor

So the Leahy-D'Amato amendment (UP No. 1417) was rejected.

Mr. LEAHY. May we have order, Mr. President?

The PRESIDING OFFICER. The Senate will be in order. The Senate will be in order. Senators in the well will cease discussion. The Senate will be in order.

The Senator from Vermont.

Mr. LEAHY. Mr. President, I think the arguments have been made. I am sorry that the Senate is reversing, in reality, the action it took several years ago. But certainly it is something which the Senate should work its will on and has.

I would hope also, I might say, that the arguments made opposed to the Leahy-D'Amato amendment were, among others, or inter alia, that without any restrictions the Convention Center would make far more money and it would be greatly aided in its financial stability.

I hope that each year when the report comes to the Congress, as required, on their operation that for the sake of the Federal Treasury, and certainly for the sake of the local treasury, that those predictions will prove accurate. I think they will not, but I sincerely hope that they will.

Mr. President, may I have order?

The PRESIDING OFFICER. The Senate will be in order.

Mr. LEAHY. Certainly I will not introduce any other amendments, nor will I interpose further objections to the striking of these restrictions. I hope that the fears that I have heard suggested, not only by myself but others, do not materialize and that it will turn out that we have done the wise thing here today.

Mr. EAGLETON addressed the Chair.

Mr. D'AMATO. Mr. President, if I might ask my distinguished colleague from Missouri to yield me 30 seconds.

Mr. EAGLETON. Yes.

The PRESIDING OFFICER. The Senator from New York.

Mr. D'AMATO. Mr. President, I agree with the concerns of my colleague, Senator LEAHY. I hope that our concerns, about the proper use and utilization of this facility, are all proven to be wrong. I hope that the city and those who will be responsible and are responsible for its management adhere to the highest kinds of utilization, because I think it would be tragic if that were not the case and it would be so counterproductive.

But I do not intend to oppose the motion to strike. I yield back to the Senator from Missouri so he can make that motion.

The PRESIDING OFFICER. The Senator from Missouri.

Mr. EAGLETON. Mr. President, if I heard the Senator from Vermont correctly, he inferred that I am guaranteeing that the D.C. Convention Center will at all times be profitable. I have not made such a guarantee. I cannot make such a guarantee. The track record of convention centers throughout this country is that a few make some money and others lose. I am talking about the direct operations of the Convention Center. However, they do create revenues ancillary to the operation of the facility itself.

I can make one categorical promise to the Senate. With these restrictions removed, gross revenues of the Convention Center will increase. Were these restrictions to remain, the gross revenues of the Convention Center would be substantially reduced. Fundamental commonsense says as much.

Mr. President, I move the adoption of the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment (UP No. 1416) was agreed to.

Mr. EAGLETON. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. KENNEDY. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. D'AMATO. Mr. President, I yield back the remainder of my time.

Mr. LEAHY. Mr. President, I yield back the remainder of my time. But before doing so, I would like the record to note, before we close the record on this, that I wish to compliment the professional staff—Mr. Tim Leeth, Mr. Jim Cubie, Mr. Lula Joyce, and Miss Jane McMullan—for their fine and, I might say, indispensable work on this bill.

With that, I am ready to yield back the remainder of my time.

● Mr. DOMENICI. Mr. President, I commend the distinguished chairman of the subcommittee (Mr. D'AMATO), and the ranking member (Mr. LEAHY), along with the members of the Appropriations Committee, for reporting the District of Columbia appropriation bill within the subcommittee's spending and credit crosswalk allocations under the fiscal year 1983 first budget resolution.

Mr. President, I support the bill as reported.

The reported bill provides $0.5 billion in new budget authority for fiscal year 1983. Including prior-year outlays, fiscal year 1983 outlays associated with the reported bill would be $0.6 billion. These amounts are approximately $0.1 billion in budget authority and $50 million in outlays below the subcommittee's allocation under the first budget resolution. They are also below the President's budget request.

New direct loan obligations for fiscal year 1983 associated with the bill are estimated to be $0.1 billion. This is consistent with both the subcommittee's credit allocation under the first budget resolution and the President's request.

Mr. President, I ask that two tables showing the relationship of the reported bill to the congressional spending and credit budgets and the President's budget requests be printed in the RECORD at the conclusion of my remarks.

The tables referred to follow:

ATTACHMENT 1.—DISTRICT OF COLUMBIA SUBCOMMITTEE, SPENDING TOTALS

[In billions of dollars]

	Fiscal year 1983	
	Budget authority	Outlays
Outlays from prior-year budget authority and other actions completed		0.04
S. 2917, as reported in the Senate	0.5	.5
Total for District of Columbia Subcommittee	.5	.6
First Budget Resolution 302(b) allocation	.6	.6
House level (H.R. 7144)	.5	.5
President's request	.6	.6

ATTACHMENT 1.—DISTRICT OF COLUMBIA SUBCOMMITTEE, SPENDING TOTALS—Continued

[In billions of dollars]

	Fiscal year 1983	
	Budget authority	Outlays
Subcommittee total compared to:		
First Budget Resolution 302(b) allocation level	−.1	
House level		
President's request		

ATTACHMENT 2.—DISTRICT OF COLUMBIA SUBCOMMITTEE, CREDIT TOTALS

[In billions of dollars]

	Fiscal year 1983	
	New direct loan obligations	New primary loan guarantee commitments
S. 2917, as reported in Senate, with direct loan obligations resulting from obligations resulting from prior-year commitments and other actions completed	0.1	
Total for District of Columbia Subcommittee	.1	
First Budget Resolution 9(b)(2) allocation	.1

The PRESIDING OFFICER. If there be no further amendment to be proposed, the question is on the third reading of the bill.

The bill was ordered to a third reading and was read the third time.

The PRESIDING OFFICER. The question is on final passage.

Mr. HARRY F. BYRD, JR., addressed the Chair.

The PRESIDING OFFICER. The Senator from Virginia.

Mr. HARRY F. BYRD, JR. Mr. President, it already cost more in operating expenses to operate the city of Washington, D.C., than any other city in the United States. From page 5 of the committee report, we learn that the operating expenses under this legislation will total just a shade under $2 billion for fiscal year 1983. That is an increase of $245 million over fiscal year 1982. It represents a 14-percent increase in operating expenses.

If the Senate passes this legislation, as it undoubtedly will, but with one vote against it, it will sanction a 14-percent increase in operating expenses.

Mr. President, have the yeas and nays been ordered?

The PRESIDING OFFICER. The yeas and nays have not been ordered.

Mr. HARRY F. BYRD, JR. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall the bill pass?

The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Arizona (Mr. GOLDWATER), the Senator from Utah (Mr. HATCH), the Senator from Illinois (Mr. PERCY, and the Senator from Connecticut (Mr. WEICKER) are necessarily absent.

I further announce that, if present and voting, the Senator from Utah (Mr. HATCH) would vote "yea."

Mr. CRANSTON. I announce that the Senator from Ohio (Mr. GLENN), the Senator from Hawaii (Mr. INOUYE), and the Senator from Arizona (Mr. PRYOR) are necessarily absent.

The PRESIDING OFFICER. Are there any other Senators in the Chamber wishing to vote?

The result was announced yeas—71, nays 22, as follows:

[Roll Call Vote No. 397 Leg.]

YEAS—71

Abdnor	Domenici	Matsunaga
Andrews	Durenberger	Mattingly
Baker	Eagleton	McClure
Baucus	Exon	Melcher
Bentsen	Ford	Metzenbaum
Biden	Garn	Mitchell
Boren	Gorton	Moynihan
Boschwitz	Hart	Murkowski
Bradley	Hatfield	Nunn
Brady	Hawkins	Packwood
Bumpers	Hayakawa	Pell
Burdick	Heinz	Randolph
Byrd, Robert C.	Hollings	Riegle
Cannon	Huddleston	Roth
Chafee	Humphrey	Rudman
Chiles	Jackson	Sarbanes
Cochran	Johnston	Sasser
Cohen	Kassebaum	Schmitt
Cranston	Kennedy	Simpson
D'Amato	Leahy	Stafford
Danforth	Levin	Stevens
Denton	Long	Thurmond
Dixon	Lugar	Tsongas
Dodd	Mathias	

NAYS—22

Armstrong	Helms	Specter
Byrd, Harry F., Jr.	Jepsen	Stennis
	Kasten	Symms
DeConcini	Laxalt	Tower
Dole	Nickles	Wallop
East	Pressler	Warner
Grassley	Proxmire	Zorinsky
Heflin	Quayle	

NOT VOTING—7

Glenn	Inouye	Weicker
Goldwater	Percy	
Hatch	Pryor	

So the bill (H.R. 7144), as amended, was passed.

Mr. D'AMATO. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. ARMSTRONG. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. D'AMATO. Mr. President, I move that the Senate insist upon its amendments and request a conference with the House of Representatives thereon, and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to, and the Presiding Officer (Mr. KASTEN) appointed Mr. D'AMATO, Mr. SPECTER, Mr. WEICKER, Mr. HATFIELD, Mr. LEAHY, Mr. BUMPERS, and Mr. PROXMIRE conferees on the part of the Senate.

BUDGET WAIVER FOR RADIO MARTI

The PRESIDING OFFICER. The question recurs on the motion to waive section 402 of the Budget Act. Under the previous order, the Senator from Nebraska (Mr. ZORINSKY) is recognized, but before the Senator begins the Senate will be in order. The Senate will be order.

The Senator from Nebraska.

Mr. ZORINSKY. Mr. President, I should now like to continue my statement by reading a statement into the RECORD by Mr. Jim R. Eddens made before the Committee on Foreign Relations of the U.S. Senate on S. 1853, radio broadcasting to Cuba. The text is as follows:

Mr. Chairman and members of the committee, my name is Jim Eddens. I am Vice President and General Manager of Radio Station WOW, Omaha, Nebraska. I appear before this Committee as a representative of one of the 200 AM stations that has been or will be affected by Cuban interference.

According to a study done by the National Association of Broadcasters, Station WOW will lose interference-free coverage from its present 2.9 millivolt per meter down to 5.01 millivolts per meter. This is an approximately 49 percent loss of our nighttime and pre-dawn interference free area. The WOW signal will be reduced in area from 19,300 square miles to 9,700 square miles.

Like Station WHO in Des Moines, we furnish large amounts of news, market reports and farm information to a nighttime and to a pre-sunrise area covering portions of five states. As recently as last week, we received a listening report from a man in Minnesota in which he mentioned Cuban interference to our signal. Even though this report was from beyond our normal interference-free area, it shows the Cuban station is already there and operating at some significant power. Having read the response prepared for this Committee as well as other current information, it is my strong opinion that Radio Marti will do nothing but aggrevate an already serious interference problem to commercial broadcasters.

Station WOW is owned and operated by Meredith Corporation, whose corporate headquarters are at Des Moines, Iowa. Meredith Corporation is a publicly owned communications corporation which publishes Better Homes and Gardens, Successful Farming, Metropolitan Home and Sail magazines and is active in a wide range of printing, publishing and home service activities. In addition to Station WOW, Meredith Corporation is the license of sister Station KEZO (FM), Omaha, and Stations WGST-AM and WPCH-FM, Atlanta, Georgia, KCMO(AM) and KCEZ(FM), Kansas City, Missouri. Meredith is also the licensee of television broadcast stations at Syracuse, New York, Bay City-Saginaw-Flint, Michigan, Pittsburgh, Pennsylvania and Kansas City, Missouri, and is a minority owner of a television station at Orlando, Florida.

I wish to begin my statement by saying that I fully understand that the issue of Radio Marti involves questions of the foreign policy and, ultimately, the security of the United States, which I do not think myself competent to address. My purpose in coming before you today is to emphasize that, in addition to those issues, there are other issues presented by this proposal that are significant in terms of the public interest. I hope that my testimony here will help this Committee by drawing attention to domestic matters of importance which might not receive adequate attention.

In the earlier hearings before this Committee and in the House of Representatives, the basic facts regarding the potential impact of the Radio Marti proposal on our domestic broadcast industry have been established. The selection of the frequency 1040 kiloHertz for the high powered transmission facility in the Florida Keys will present a threat to the nighttime skywave service area of Class I-A Clear Channel Station WHO, Des Moines, Iowa. With adequate directional antenna facilities, the Radio Marti transmitter can provide adequate protection to that service. The greater threat to Station WHO comes not from Radio Marti, itself, but from the likely efforts of Cuba to jam Radio Marti's transmission. Cuba has been reported to have used various jamming techniques against United States stations in the past, and may be expected to resort to similar measures against Radio Marti, at least on an intermittent basis, in the future. Given the amount of power which will be necessary effectively to jam Radio Marti's signal and the direction in which that power must be transmitted, interference to Station WHO is predictable.

It is important for this Committee to realize that this issue affects more than Station WHO or only Clear Channel stations and secondary nighttime skywave services in the United States. It affects a wide range of AM broadcast services throughout the country. In fact, to put it more accurately, the possible impact of Radio Marti on our relations with Cuba has the potential of adversely affecting the quality of domestic AM radio service to residents throughout the United States.

The larger threat to AM stations in the United States is not the result of the Radio Marti proposal or the prospect of Cuban jamming. That threat comes from the proposals of Cuba to expand its use of the AM band in a manner which goes far beyond what may reasonably be considered necessary to serve Cuba's domestic needs. In the context of the negotiations of the Region 2 Medium Wave Broadcast Agreement concluded last year, Cuba proposed a large number of new stations and major changes in existing stations, some with powers from three to ten times higher than the highest power permitted stations in the United States. If implemented, those proposals will create havoc among United States AM broadcast stations and the public which they serve.

Mr. President, I ask unanimous consent to yield the floor to the distinguished Senator from Nebraska (Mr. EXON) for the purpose of debate, without losing my right to the floor and without this being considered the end of the speech for the purpose of the two-speech rule, and I ask that I be recognized at the conclusion of Senator EXON's remarks.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The Senator from Nebraska (Mr. EXON) is recognized.

Mr. EXON. I thank my friend and colleague from Nebraska.

Mr. President, the last time I was on my feet, I asked that the following remarks that I intended to enter into this debate later be an extension of my previous remarks, which I think is still in order. When I conclude my remarks, I will again ask unanimous consent that my remarks not be counted under the two-speech rule.

Mr. President, once again I stand on the floor for this exercise that we continue to go through. I suppose what we have to do is to keep sending the message, very loud and very clear, to the powers that be that there remain those of us who believe that Radio Marti is an ill-advised action for the U.S. Senate to take now.

Therefore, I want to emphasize once again that whatever time is necessary to defeat this measure in this session of the Senate will have the support of this Senator, along with support of many others.

To emphasize that point, Mr. President, I might say that I telephoned Santa Claus yesterday and told him that the way things were looking, I would not be home for Christmas but would be here on the floor of the U.S. Senate. I hope that message, which Santa Claus understood, is understood by those who have the authority to take this bill down, if they so desire. If not, we will have to continue with this charade.

Mr. President, I should like at this time to read into the RECORD several matters of pertinent interest on this bill. I will be quoting extensively from a prepared response at the request of the Senate Committee on Foreign Relations regarding Radio Marti which was prepared by the Congressional Research Service.

Mr. President, may we have order in the Senate?

The PRESIDING OFFICER. The Senator is correct. The Senate is not in order.

Mr. EXON. I thank the Chair.

Mr. President, I should like at this time to read into the RECORD a telegram that was addressed to me by the Nebraska Broadcasters Association:

NEBRASKA BROADCASTERS ASSOCIATION,
Beatrice, Nebr., August 6, 1982.

Hon. J. JAMES EXON,
Dirksen Senate Building,
Washington, D.C.

Resolution because the development of the Radio Marti concept would create a state of a great difficulty for radio reception in the United States and inasmuch as the funding for such a project would come at a time when the world economic structure is depressed and further the Marti concept is such that it will make massive retaliation by the Cuban Government a reality in our broadcasting spectrum therefore be it resolved that the Nebraska Broadcasters Association oppose the passage of H.R. 5427 and S. 1853 and we as broadcasters make our individual and collective positions known to our legislators in the Federal Capital and a copy of this resolution be placed in the United States Postal Service to our 3 Congress persons and the 2 United States Senators.

Respectfully submitted,

CAL COLEMAN,
President.

Mr. President, turning, if I could, now to some of the material that I indicated earlier I would be quoting extensively from, the Congressional Research Service article, on page CRS 81 in that research paper, appendix II, Congressional Budget Office Cost Estimate: One of the things that I think that the Members of the Senate should understand that evidently the Members of the House of Representatives did not when they passed this bill was the costs that will occur to the taxpayers of the United States. The costs that are cited here are the known and established costs, and as I have said at some length in my previous remarks on this subject, no one knows what the true costs could be, if the U.S. Government is involved in lawsuits with broadcasters.

Mr. President, at this time I wish to yield back to my colleague from Nebraska and I ask unanimous consent that these remarks not be considered as the end of my speech for the purpose of the two-speech rule.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I ask unanimous consent that it be in order for the Senator from Nebraska to yield to me under the same terms and conditions in respect to not losing his right to the floor, this interruption not appearing as an interruption in his speech for the purpose of the rules of the Senate on this matter.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ZORINSKY. And that I be rerecognized when the leadership returns to this.

Mr. BAKER. Let me make that request.

Mr. President, it is my intention, with the concurrence of the minority leader, in a moment, if there is no further business to be transacted, to ask the Senate to go over until tomorrow in recess.

I ask unanimous consent that when the Senate reconvenes tomorrow and after the period for the transaction of routine morning business, if ordered, the Senator from Nebraska be first recognized to continue his presentation on the conditions previously outlined by him.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDERS FOR WEDNESDAY

ORDER FOR RECESS UNTIL TOMORROW AT 9:15 A.M.

Mr. BAKER. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until 9:15 a.m. on tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR THE RECOGNITION OF CERTAIN SENATORS ON TOMORROW

Mr. BAKER. Mr. President, I ask unanimous consent that after the recognition of the two leaders under the standing order that special orders of 15 minutes each be awarded to the following Senators: Senators BAKER, STEVENS, THURMOND, and TOWER.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I might explain to my colleagues that the hour aggregated by this special orders will be used for the purpose of paying tribute to those Senators who are retiring at the end of the 97th Congress.

It is anticipated that on tomorrow the distinguished President pro tempore, Senator THURMOND, will be in control of that time, that Senators who wish to speak at that time may consult with him or, of course, with the leadership on the Democratic side and there shall be no difficulty at all in arranging the schedule of presentations at that time.

It is also anticipated that the RECORD may be kept open beyond that hour's period so that Members may insert statements or extend their remarks.

ORDER KEEPING THE RECORD OPEN UNTIL 6 P.M. ON TOMORROW

Mr. BAKER. Mr. President, I ask unanimous consent that for the purpose of making statements in respect to retiring Senators the RECORD tomorrow may remain open until 6 p.m.

The PRESIDING OFFICER (Mr. DURENBERGER). Without objection, it is so ordered.

ORDER FOR PERIOD FOR TRANSACTION OF ROUTINE MORNING BUSINESS ON TOMORROW

Mr. BAKER. Mr. President, I ask unanimous consent that after the execution of the special orders just provided for there be a brief period for the transaction of routine morning business not to exceed 10 minutes in length with statements limited therein to 2 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE CALENDAR NOMINATIONS

Mr. BAKER. Mr. President, as I announced yesterday and again today, tomorrow is Executive Calendar nominations day, and Senators are urged to be present in the Chamber if they have names on that calendar that they are especially concerned with.

It is the intention of the leadership on this side to proceed with that calendar in a methodical way and to try to dispose of as much business as we can in the course of that day.

Senators should be reminded, as I have announced in caucus, that in order to accomplish this it is necessary to move through the list notwithstanding that notations of holds on this side may have been entered. So if there is a hold or someone wants to particularly protect his position on a nomination, I urge and encourage Senators to be in the Chamber at the time of the call of that calendar.

SENATE AGENDA

Mr. President, also during the day tomorrow it is my hope that we can proceed to the consideration of the Criminal Justice Assistance Act. S. 2411. That is not on the list of items that I had read on Monday or repeated on Tuesday. I had thought that that matter would be cleared and ready for action tonight by unanimous consent. I continue to hope that we can get that up tomorrow, but I will confer with the distinguished Senator from Pennsylvania (Mr. SPECTER), and the minority leader, and others, to see if it is possible to do so.

If it is possible to do so, it would be my hope that we can do that as the first order of business after the conclusion of the time for transaction of routine morning business.

Mr. President, that will require unanimous consent, which I will now put in that under the circumstances when we resume tomorrow at the conclusion of the time for the transaction of routine morning business, the motion to proceed to the consideration of the budget waiver in respect to the resolution on Radio Marti will recur as the pending business. Is that not correct?

The PRESIDING OFFICER. The Senator is correct.

Mr. BAKER. I thank the Chair.

Mr. President, it has been my hope that we could do the bankruptcy bill, S. 2000, today. Indeed it was on the list for Tuesday. For a variety of reasons it appeared that it would not be productive to ask the Senator to proceed to that measure late this evening. I hope that Senators will make a diligent effort to clear that for action, perhaps even by unanimous consent, or at least on some sort of time limitation during the day tomorrow.

So tomorrow, after the tributes to departing Senators, after a brief time for the transaction of routine morning business, it is hoped that we may go to the Criminal Justice Assistance Act. The Radio Marti motion will recur as the pending business, absent unanimous consent or other action to the contrary taken by the Senate.

it is hoped as well that during the day tomorrow we can reach S. 2000. The burden of our effort tomorrow for a good part of the day will be to try to consider as much of the executive calendar on nominations as possible.

Mr. ROBERT C. BYRD. Mr. President, will the distinguished majority leader yield for a question?

Mr. BAKER. I yield.

Mr. ROBERT C. BYRD. Mr. President, what is the program for the week beyond tomorrow as the majority leader now sees it?

Mr. BAKER. Yes; today and Monday I announced that any night might be a late night and that Senators should be on notice of the possibility of a Saturday session.

I am inclined now to think that we probably will not have a Saturday session for one very good reason, I suppose, and that is that I am advised by our friends and colleagues in the House of Representatives, in the other body, that it is not likely that they will be able to take up the continuing resolution making appropriations for those agencies and departments for which regular appropriations bills have not been passed until at least Monday or Tuesday of next

If that is the case, I do not know of any particular reason why I should ask the Senate to remain in session on Saturday.

There is, of course, the possibility that if we run into a procedural problem, such as a filibuster on a motion to proceed to the consideration of the highway bill, or a similar matter, it might be necessary to ask the Senate to be in on Saturday, but I wish to amend my previous announcement to say that absent such a contingency I do not plan to ask the Senate to remain in on next Saturday.

Mr. ROBERT C. BYRD. I thank the Senator.

ROUTINE MORNING BUSINESS

Mr. BAKER. Mr. President, the Senator from California (Mr. HAYAKAWA) wishes to address the Senate for a period of time in respect to the anniversary date of Pearl Harbor.

I ask unanimous consent, Mr. President, that there now be a period for the transaction of routine morning business in which Senators may speak, and that during that period no business be transacted by the Senate except for the recognition of the Senator from California (Mr. HAYAKAWA) for the purpose of making such a presentation; and that at the close of that presentation by the distinguished Senator from California the Senate then stand in recess pursuant to the order just entered until the hour of 9:15 a.m. tomorrow.

Mr. ROBERT C. BYRD. Mr. President, I have no objection.

The PRESIDING OFFICER. Without objection it is so ordered.

RECOGNITION OF THE ALASKA DISTRICT OFFICE OF SMALL BUSINESS ADMINISTRATION

Mr. STEVENS. Mr. President, today I am pleased to share with my colleagues a news article concerning a Federal agency in Alaska that is doing an exemplary job for Alaskan businesses. That agency is the Small Business Administration, and the Alaska district office is overseen by Frank Cox, a dynamic Alaskan who has done a fine job in working on behalf of Alaska's small businesses.

Recently, several members of the President's Advisory Committee on Small and Minority Business Ownership made a factfinding trip to Alaska. Mr. Cox accompanied the members throughout the State, and from the communications I received from the Committee, they were very impressed not only with Alaska but also with the excellent job that the SBA is performing in my home State.

Mr. President, I ask unanimous consent that the article entitled "A Dynamite Agency of the Federal Government" from the November 11, 1982, issue of the Anchorage Times be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Anchorage Times, Nov. 11, 1982]

A DYNAMITE AGENCY OF THE FEDERAL GOVERNMENT

(By Robert R. Richards)

Over in the Federal Office Building there is a small agency comprised of 20 people which probably accomplishes more positive results for the State of Alaska per person than any other municipal, state or federal government agency in Alaska.

I am referring to the Anchorage District Office of the Small Business Administration headed up by Frank Cox. Mr. Cox is one of those rare public officials who has a deep appreciation of the private sector and a clear understanding of the government's role in contributing to the effective functioning of the private enterprise system.

The present portfolio of the Anchorage District Office of the SBA presently consists of 2,333 loans totalling in excess of $150 million. SBA-guaranteed loans provide financing for more than 20 percent of all Alaska businesses.

The SBA has been a major factor in providing capital for business expansion in this state. Since 1975 the office has provided financial assistance through loan guarantees and direct loans to more than 1,600 Alaska business firms amounting to nearly $180 million. These firms, of course, in turn have provided a growing private sector employment base. Assuming that each of these firms provide employment income for five people, each with an average taxable income of $20,000 per year, we see this generates an annual payroll of $160 million—quite a contribution to the Alaska economy.

Less than 100 of the 1,800 loans SBA has guaranteed or made since 1975 have been placed in liquidation. This amounts to approximately 6/10ths of 1 percent of the loans outstanding—an impressive record particularly in light of the fact that these

loans are generally the higher risk type of loans. This is partially a reflection of the effectiveness with which SBA works with businesses in trouble. Mr. Cox's staff endeavors to assist them with their financial challenges prior to the problem becoming irreparable.

Another program of the SBA which is the brainchild of Mr. Cox is the "AIDA" secondary market program which has been in existence about one year. Simply stated, under this program the Alaska Industrial Development Authority becomes a secondary purchaser of the guaranteed portion of the SBA guaranteed loan at the precommitted rate based on Moody's AA bond rates. This lower rate is passed on to the borrower with a servicing fee for the participating lender. This stroke of genius is a marvelous testimony to the magnificent benefits that can accrue with cooperation between the federal government, the state government and the private sector.

The benefits of this program are obvious, SBA gets quality loans. Participating lenders get an excellent yield on their exposure and can leverage their funds. AIDA gets an excellent no-risk return with minimal administrative costs. Most important, the borrowers get lower interest rates on their loans.

During fiscal year 1982 SBA will put approximately $55,000,000 in these guaranteed participating loans on its books. This is very near the loan volume of the SBA's Seattle, Portland, Boise and Spokane offices combined. The economic impact of these more than 300 business loans on private sector employment and on the tax base is obvious. Additionally, this program requires no immediate expenditure of federal funds. Loaned funds come from the private sector and the Alaska Industrial Development Authority.

The Anchorage District Office has one management assistance officer and an assistant district director for management assistance who provide business consulting services as well as initiating and coordinating management training programs. Over the past five years the SBA management assistance program has completed 7,600 management counseling sessions. Further, SBA has taken a leading role in initiating, designing, arranging and implementing practical management seminars and courses with community colleges, Chambers of Commerce and a myriad of professional associations throughout Alaska.

On a per capital basis it is estimated that the Anchorage District Office of the SBA provides more than five times as much management training as the national average. During the past five years the SBA co-sponsored 295 small business courses and seminars with a total attendance of nearly 15,000 persons.

The effectiveness of the SBA's programs in Alaska in providing funds and management assistance to a multitude of small businesses throughout the state is testimony to the marvelous benefits that accrue from cooperation between the public sector and enterprise view each other as adversaries; but when enlightened public officials are creatively committed to genuinely fulfilling the mission of their agencies and when private business leaders and bankers creativity and constructively relate to government agencies, impressive positive results can accrue.

FORTY ONE YEARS AFTER PEARL HARBOR

Mr. WARNER. Mr. President, today, December 7, is the anniversary of the attack on Pearl Harbor.

That tragic event precipitated the loss of almost 300,000 of our finest young men and women who gave their lives in the cause of freedom. Over 670,000 were wounded, and enormous quantities of our precious resources were lost forever.

My intent today is not to reflect upon Pearl Harbor, but to focus on the time immediately preceding that eventful date. Clearly, there are many differences between the conditions of today and those of over 41 years ago. However, there are many dramatic similarities too. The period before December 7, 1941, was a time of severe budgetary constraints. Our Nation was sharply divided on the question of defense expenditures in the face of legitimate social needs.

Registration and the authority to draft passed the U.S. House of Representatives by a single vote. While our Armed Forces grew at a rate of over 10 percent in the year before the war, the gap between the capabilities of our forces and those of our adversaries grew wider each day. And the credibility of our forces as a deterrent decreased correspondingly.

Wars were being fought in far-off lands. Rumors of war were discussed in the Halls and Chambers of this great body. Reports of events which occurred in China and other far-off lands were disbelieved by many.

Forty-one years later, our world is again faced with similar conditions. At home our Federal budget is stretched to meet both social and military needs. The peace of nations is threatened by the military adventures of the Soviet Union and their allies. And many discount or disregard altogether the comparisons of American deterrent capability versus Soviet military strength.

Over the past 2 years I have urged my colleagues to increase the questionable deterrent we have against the horror of chemical war. Many of my colleagues were unconvinced by the evidence offered to establish that the Soviets and their surrogates were illegally using chemicals against defenseless opponents.

Now new startling evidence has been found. In recent weeks the Department of State has displayed Soviet gas masks obtained in Afghanistan which were contaminated with trichothecene (tri-co-the-seen) mycotoxins—the deadly "yellow rain." Special report No. 104, entitled "Chemical warfare in Southeast Asia and Afghanistan: An Update," has just been released by the Department of State.

Mr. President, I ask unanimous consent that excerpts of this report be printed in the RECORD. I urge my colleagues to read this compelling evidence and begin reconsideration of our deterrent capabilities.

Let us all work together to avoid any contingency which could lead to an event more destructive than that which began on this day 41 years ago.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

CHEMICAL WARFARE IN SOUTHEAST ASIA AND AFGHANISTAN: AN UPDATE

(Report from Secretary of State George P. Shultz, November 1982)

UPDATED FINDINGS

Based on a thorough analysis of this new information, we are able to conclude the following:

Reports of chemical attacks from February through October 1982 indicate that Soviet forces continue their selective use of chemicals and toxins against the resistance in Afghanistan. Moreover, new evidence collected in 1982 on Soviet and Afghan Government forces' use of chemical weapons from 1979 through 1981 reinforces the previous judgment that lethal chemical agents were used on the Afghan resistance. Physical samples from Afghanistan also provide new evidence of mycotoxin use.

Vietnamese and Lao troops, under direct Soviet supervision, have continued to use lethal and incapacitating chemical agents and toxins against the H'Mong resistance in Laos through at least June 1982.

Vietnamese forces have continued to use lethal and incapacitating chemical agents and toxins against resistance forces in Kampuchea through at least June 1982.

Trichothecene toxins were found in the urine, blood, and tissue of victims of "yellow rain" attacks in Laos and Kampuchea and in samples of residue collected after attacks.

We continue to find that a common factor in the evidence is Soviet involvement in the use of these weapons in all three countries. Continued analysis of prior data and newly acquired information about Soviet mycotoxin research and development, chemical warfare training in Vietnam, the presence of Soviet chemical warfare advisers in Laos and Vietnam, and the presence of the same unusual trichothecene toxins in samples collected from all three countries reinforce our earlier conclusion about the complicity of the Soviet Union and about its extent.

INTRODUCTION

Our March study showed that casualties and deaths resulted from chemical attacks in Southeast Asia and Afghanistan and that trichothecene toxins were used in both Laos and Kampuchea. The new evidence shows that these attacks are continuing in all three countries and that trichothecene toxins have been used in Afghanistan as well.

The same rigorous analytical processes employed in our March study, and outlined in detail there, were followed to arrive at the judgments contained in this update. In light of the widespread publicity given the March report, special efforts were made by U.S. Government analysts to preclude being led astray by any possible false reports that might be generated for propaganda or other purposes and to eliminate the possibility of making erroneous judgments about the chemical or toxin agents involved because of tampering or improper handling. Every report has been carefully checked.

The evidence in the March study was based on a broad range of data, including

testimony by physicians, refugee workers, journalists, and others. Although some of the new reports are anecdotal, we have been able to corroborate most of them by other sources and sample analysis. Moreover, personal testimony tends to add credence to other accounts which, taken together, form a coherent picture. The material presented in this report represents only a relatively small amount of the total accumulated evidence. This additional information is examined in greater detail in the annexes. Improved sample collection procedures, a better quality of medical histories and physical examinations, documentation including photographs of lesions and hospital charts from Southeast Asia, and interviews by trained personnel have reinforced our earlier conclusions and led to new discoveries.

As international concern about this subject has increased, based on the development of evidence from many countries, independent analyses have been initiated by foreign chemical warfare experts, physicians, journalists, and independent nongovernmental scientists and laboratories. Analysis in the United States have found this research very helpful both in supporting their own conclusions and, more importantly, in expanding on them.

SUMMARY OF EVIDENCE

Afghanistan

Evidence indicates that the Soviets have continued the selective use of toxic agents in Afghanistan as late as October 1982. For the first time we have obtained convincing evidence of the use of mycotoxins by Soviet forces through analyses of two contaminated Soviet gas masks acquired from Afghanistan. Analysis and quantification of material taken from the outside surface of one mask have shown the presence of trichothecene mycotoxin. Analysis of a hose from a second Soviet mask showed the presence of several mycotoxins. In addition, a vegetation sample from Afghanistan shows preliminary evidence of the presence of mycotoxins. (See Annex A.)

Our suspicions that mycotoxins have been used in Afghanistan have now been confirmed. Reports during 1980 and 1981 described a yellow-brown mist being delivered in attacks which caused blistering, nausea, vomiting, and other symptoms similar to those described by "yellow rain" victims in Southeast Asia. Because of limited access to survivors who still exhibited symptoms, as well as great difficulties in collecting environmental and other physical samples from attack sites, we were unable to conclude with certainty in the March 22 report that mycotoxins were being used in Afghanistan. We have now concluded that trichothecene mycotoxins have been used by Soviet forces in Afghanistan since at least 1980.

A number of reports indicate that chemical attacks are continuing in 1982. While we cannot substantiate every detail, the pieces of evidence in these reports add up to a consistent picture. For example, a physician in a facility treating casualties among the *mujahidin* (resistance fighters) has reported that he treated 15 *mujahidin* for red skin lesions that he said were caused by Soviet chemical attacks in Qandahar Province in May-June 1982. Three *mujahidin* died within 12 hours of one attack in the general area of Maharijat south of Qandahar. The *mujahidin* claimed that Soviet helicopters fired rockets that emitted black, yellow, and white gases on impact. The physician said that the surviving victims failed to respond to conventional medical treatment.

We have received reports that on September 20, 1982, Soviet soldiers poisoned underground waterways in Lowgar Province south of Kabul where the *mujahidin* were hiding. According to a *mujahidin* commander in Pakistan, a similar event occurred in the same province on September 13, 1982, resulting in the deaths of 60 adults and 13 children. These two independent accounts described a Soviet armored vehicle pumping a yellow gas through a hose into the waterways.[1]

According to the accounts of the September 1982 attacks, the victims' bodies decomposed rapidly, and the flesh peeled away when attempts were made to move the bodies. Since 1979, *mujahidin* resistance leaders, refugees, journalists, and Afghan defectors have described chemical attacks causing almost identical symptoms. Most reports have described the skin as being blue-black after death. Although such symptoms seem bizarre, the large number of reports from a variety of sources since 1979 suggests that they cannot be dismissed (see our March 22 report, p. 16).

In 1982, a Soviet soldier who defected to the *mujahidin* said in an interview with a British journalist that a Soviet toxic agent, termed "100 percent lethal," causes the flesh to become very soft. The Soviet defector stated that the Soviets maintained stores of "picric acid" (probably chloropicrin, a potentially lethal tear gas), the "100 percent lethal" agent, and an incapacitating agent near the cities of Qonduz and Kabul. The defector also reported that:

Unidentified toxic agents had been used in June 1982 on the highway between Termez and the Salang Pass north of Kabul;

The "100 percent lethal" agent was delivered by rockets; and

"Picric acid" and an incapacitating agent were delivered by air-dropped canisters.

The defector stated that the Soviets have been preoccupied with protecting the roads and that chemicals were sprayed by planes along the areas adjacent to highways. Chemical grenades reportedly have been used, but the data are inadequate to allow us to hypothesize about the contents, although some symptoms are indicative of mycotoxins.

The reports of rapid skin decomposition as quickly as 1-3 hours after death continue to concern us. There is no recognized class of chemical or biological toxin agents we know of that could affect bodies in such a way. If we assume occasional inaccuracies in reporting by journalists and survivors of attacks, it is possible that phosgene or phosgene oxime could cause such effects after 3-6 hours but with much less softening of tissues than is consistent with stories of "fingers being punched through the skin and limbs falling off." The reported medical effects of other toxic agent attacks are consistent with use of the nerve agent tabun. We have information that both phosgene oxime and tabun are stored by the Soviets in Afghanistan.

The British journalist, who interviewed the Soviet defector, also reported on two attacks described to him by the *mujahidin*, which have not yet been confirmed. One was an attack in the spring of 1982 on Kaiba, where Soviet soldiers reportedly shot victims already rendered unconscious by a gas; the other was in the summer of 1982 near Herat where Soviet troops reportedly loaded the bodies from a gas attack onto a truck and removed them. Reliable information indicates that the Soviets used chemical bombs against *mujahidin* forces in late September 1982 and in early October 1982 in Baghlan Province.

Our earlier findings are reinforced by several reports received this year about earlier attacks not covered in our March report:

According to a former Afghan Army officer, in September 1981 a Soviet helicopter sprayed a yellow mist in Paktia Province (Sheikn Amir) causing 16 deaths. The survivors had bloody noses and tears; extensive bleeding was reported in those who died. The Afghan officer described a similar attack in Nangarhar Province during the same month in which four persons were killed.

In early December 1981, according to interviews with survivors, 15 refugees attempting to escape to Pakistan were attacked by a helicopter using gas; four or five people were killed (the youngest and the eldest), while the rest became unconscious for 5-6 hours. The attack occurred about 60 kilometers northwest of Jalalabad.

According to a Soviet soldier who served in Afghanistan in 1980 and personally observed the use of chemical weapons, the Soviets dispersed chemicals from fighter-bombers and assault helicopters. He said that an aircraft or helicopter first would drop a container and then, on a second run, drop a bomb, resulting in a mixture of two different chemicals that killed everything within the contaminated area. We believe that the soldier may have been describing the delivery of two separate chemical agents, an occurrence described by other eyewitnesses.

An Afghan veterinarian recently has described an incident in May 1979 in which 20 people and a number of sheep were killed near Qandahar. Soviet lab technicians explained that the incident resulted from anthrax, but the doctor knew that the explanation did not fit the effects observed. Local Afghans told the veterinarian that Soviet vehicles had been in the area spraying a yellow/white powder before the incident.

In June 1980, an airport official described seeing 200-300 gas containers painted in greens and browns at Qandahar Airport. The containers averaged 35-40 inches high and 26-30 inches in diameter. A subordinate reported three types of gases in the containers: one causing burning in the throat as well as suffocation; one causing what looked like smallpox and blistering; and one making victims tired and sleepy and unable to run or fight. Further, the subordinate stated that the containers were placed in special casings that were dropped from aircraft and exploded on impact, emitting a large cloud of smoke, usually yellow but sometimes other colors. He said he had heard mujahidin describe these gas attacks and had himself seen animals that had been killed by the gases. We lend credence to this report because we know from other evidence that chemicals are stored at Qandahar Airport, which is an important staging area for Soviet military operations.

Finally, information received this year revealed that a Soviet adviser inspecting sites for housing Soviet troops before the Afghan invasion indicated that Soviet chemical defense forces entering Afghanistan would bring in extensive stores of toxic materials. The adviser indicated that a proposed garrison in Kabul would be inappropriate for the

[1] We know from other sources that Soviet chemical agent delivery methods include this technique, as reported, for example, by a Cuban emigre trained by the Soviets in the use of chemical weapons.

Soviet chemical defense unit because the materials it transported could devastate the city if an accident occurred.

Laos

H'Mong refugees, recounting details of toxic agent attacks and exhibiting severe medical symptoms from exposure to the agents, fled to Thailand every month from January through June 1982. They brought out more samples contaminated by a yellow, sticky substance described as a "yellow rain" dropped by aircraft and helicopters on their villages and crops. We have preliminary reports on attacks as recent as October 1982. We now know that the yellow rain contains trichthecene toxins and other substances that cause victims to experience vomiting, bleeding, blistering, severe skin lesions, and other lingering signs and symtoms observed by qualified physicians. Experts agree that these people were exposed to a toxic agent and that no indigenous natural disease, plant, or chemical caused these unique physical effects.[2]

Laboratory analyses of blood samples from these victims and studies on experimental animals have shown that trichothecene toxins are retained in the body for much longer periods of time than previously thought. Scientific research has shown that the multiple-phase distribution pattern in animals includes a secondary half-life of up to 30 days. We believe that the severe skin lesions observed on victims by doctors are also relevant. Victims whose blood proved on analysis to have high levels of trichothecene mycotoxins exhibit such skin lesions.

Descriptions of the 1982 attacks have not changed significantly from descriptions of earlier attacks. Usually the H'Mong state that aircraft or helicopters spray a yellow rain-like material on their villages and crops. In some reports the symptoms are similar to those described in our March 22 study, and we attribute them to the use of trichothecene toxins. However, in many cases there was no bleeding, only abdominal pains and prolonged illness. These symptoms, described in previous years, suggest that another agent or combination of agents is still being used. The explanation is complicated because different symptoms are ascribed to men, women, children, and animals. It is possible that different agents, lower concentrations of the same agents, or climatic conditions have affected the efficacy of the agents.

Medical personnel in Lao refugee camps in Thailand were much better organized in 1982 to screen victims than in past years. Doctors now routinely use extensive questionnaires and conduct comprehensive medical examinations, including some onsite, preliminary blood analysis. Skilled paramedical personnel oversee preparation of blood and serum samples for proper transport and the shipment to the United States or other countries for chemical analysis. Some patients with active symptoms are now being monitored extensively over time.

A number of blood samples have been collected from Laos for analysis in the United States. All biological specimens were drawn by qualified medical personnel, and samples were refrigerated until analyzed in the United States. Analysis of these samples shows that trichothecene mycotoxins continue to be used against H'Mong villages. In addition to blood and urine specimens from victims exposed to chemical warfare, we have collected additional physical samples this year. These physical samples consist of more residue of yellow rain containing mycotoxins from the same attacks that yielded human biological specimens positive for these same toxins. (See Annex A.)

The number of reported attacks in Laos in 1982 did not differ significantly from the frequencies reported for comparable periods in the years 1977 through 1981. Reported fatalities per attack during 1981 and 1983 showed an apparent decrease, suggesting the possibility that less lethal toxic agents, or lower concentrations of the same agents, are now being used. This apparent decrease, however, was not statistically significant and could have been caused by a number of other factors, including the following:

Due to emigration and the high number of fatalities since at least 1976, the H'Mong were living in smaller, more scattered communities.

H'Mong survivors still in Laos were warier and quicker to take cover and to use rediментary protective measures at the first sign of attack.

The H'Mong were not taking time to count victims—this is supported by the existence of very few reports that indicate the precise number of people affected by a toxic agent attack.

As stated in the March report, the Soviet Union maintains in Laos significant numbers of advisers who provide maintenance assistance, technical support, and training in both conventional and chemical warfare. A former Lao transport pilot who defected early this summer has described the aerial movement, under Soviet supervision, of toxic agents within Laos.

Kampuchea

Most reports of toxic attacks in Kampuchea for the period 1978–June 1982 come from Democratic Kampuchean (DK) sources, including interviews with DK military personnel. Evidence from other sources confirmed most of these reports. In 1982, most reported attacks occurred near the Thai border, making it easier to obtain samples and other direct evidence of toxic agent use.

In the first 6 months of 1982, the number of reported toxic agent attacks in Kampuchea was about half the number reported during the same periods in 1980 and 1981. The number of reported deaths per attack also decreased, but data were insufficient to determine if this decrease was statistically significant. We also have preliminary reports on attacks through early November 1982.

In February and March 1982, several attacks occurred just across the Kampuchean border in Thailand. Analysis of samples collected from the attacks was performed in Canada, Thailand, and the United States. Although differing sampling techniques give rise to significant sampling error and lead to slightly different analytical results, both the U.S. and Thai analysts, using different analytical techniques, found trichothecene mycotoxins in their samples.[3] The Canadian team investigating these attacks has published a detailed medical assessment of the victims' symptoms; it concluded that illness had in fact occurred and was caused by a toxic agent, although preliminary tests for trichothecenes proved inconclusive in the Canadian sample.

Blood and urine samples from Kampuchean victims of a toxic agent artillery attack on February 13, 1982, contained trichothecene toxins (Annex A). In addition, post-mortem tissue from a victim of this same attack confirmed the presence of trichothecene toxins (Annex B). Analysis of additional samples showing the presence of trichothecenes taken from other attacks is also found in Annex A.

The Vietnamese conducted toxic agent attacks this year against another resistance group, the Kampuchean People's National Liberation Forces. On several occasions in March-May 1982, the resistance camp at Sokh Sann was hit with toxic artillery shells and bombs. Samples of contaminated vegetation and yellow residue from these attacks are now being analyzed. Attacks occurred in Kampuchea through June 1982, providing new samples; qualitative tests indicate that the presence of trichothecenes is probable. The results of confirmatory analyses are pending.

Several Vietnamese military defectors from Kampuchea have provided valuable information in 1981 and 1982 on chemical weapons use and on the Vietnamese chemical warfare program and have reported that some types of agents are supplied by the Soviet Union. Information from other sources also confirms our earlier view that the Vietnamese possess toxic agent munitions and are equipping their own troops with additional protective equipment.

TABLE 1.—AFGHANISTAN: REPORTED ATTACKS, 1982

Date	Village location	Method of attack	Form of material	Persons killed	Persons taken ill
Early Feb	North of Shindand	Aircraft	Yellow substance	4	?
Feb. 4, 5	South of Shindand	Helicopter	Yellow substance	0	?

[3] It was thought initially that a harmless yellow powder had been dropped on Thai villages as part of a disinformation campaign attempting to discredit U.S. sample analysis results. Within days of such an attack, the Thai Ministry of Health announced that only ground-up flowers had been found. However, Thai officials later stated that further analysis showed traces of toxin and that the earlier Health Ministry announcement was based on incomplete investigation.

ANNEX A

ANALYSIS OF SAMPLES FOR CHEMICAL WARFARE AGENTS AND TOXINS

The identity of the agents and toxins being used in Laos, Kampuchea, and Afghanistan cannot be determined without collection and analysis of at least one of the following: environmental or physical samples contaminated with agent, the munitions used to deliver agents, or biological specimens from attack victims.

The likelihood of detection of chemical agents and toxins in contaminated samples depends on a number of factors. These include the persistency of the agent; the ambient temperature; rainfall; wind conditions; the media on which the toxic agent was deposited; and the time, care, and packaging of the sample from collection to laboratory analysis. Many standard chemical warfare agents and toxins disappear from the environment within a few minutes to several hours after being dispersed. These include, for example, the nerve agents sarin and tabun, the blood agents hydrogen cyanide and cyanogen chloride, the choking agents phosgene and diphosgene, and the urticant phosgene oxime. Other standard agents—such as the nerve agents VX and thickened soman and the blistering agents sulfur mustard, nitrogen mustard, and lewisite—may persist for several days to weeks depending on weather conditions. The trichothecene toxins are stable under laboratory conditions but degrade in field samples due to metabolism by micro-organisms contained in the sample. To maximize the chances of detection, sample collections should be made as rapidly as possible after a toxic agent assault; with many agents this means minutes to hours. Given the situation in Southeast Asia and Afghanistan, this usually has not been possible. Although numerous samples were collected, few held any realistic prospects for yielding results. However, when immediately collected and properly handled and using the advanced technology now available, trichothecenes may be detected in both physical and biological materials up to several months after the attack.

Samples have been collected from Southeast Asia since mid-1979 and from Afghanistan since May 1980. To date, more than 350 individual samples—of greatly varying types and utility for analytical purposes—have been collected and analyzed for the presence of traditional chemical agents. About 100 additional samples are pending completion of analysis. All environmental and nonmedical samples were submitted to the U.S. Army Chemical Systems Laboratory for analysis for traditionally recognized chemical warfare agents and other toxic materials. Tissue specimens and body fluids from attack victims were submitted to the Armed Forces Medical Intelligence Center. Under the sponsorship of that organization, the biomedical specimens were analyzed for the presence of trichothecene mycotoxins and other toxins by Dr. Chester Mirocha, Uni-

versity of Minnesota; Dr. Joseph Rosen, Rutgers University; and Dr. Tim Phillips, Texas A&M University.

To date, biomedical samples (blood, urine, and/or tissue) from 33 alleged victims have been screened. Specimens from 16 of these individuals show the presence of trichothecene mycotoxins. In addition, six environmental samples from alleged attack sites have been analyzed by Dr. Mirocha. Five show the presence of unusually high concentrations and combinations of trichothecene mycotoxins.

EVIDENCE OF CHEMICAL AND TOXIN AGENT USE IN SOUTHEAST ASIA AND AFGHANISTAN, 1982

Sample	Result
Laos:	
Blood	Trichothecene toxin.
Blood (post-mortem).	Trichothecene toxin.
Yellow residue	Trichothecene toxin.
Vegetation	Trichothecene/aflatoxin B1.
Kampuchea/Thailand:	
Blood	Trichothecene toxin.
Urine	Trichothecene toxin.
Tissue (autopsy)	Trichothecene aflatoxin B1.
Yellow residue	Trichothecene toxin.
Vegetation	Trichothecene toxin.
Water	Trichothecene toxin.
Water	Cyanide.
Afghanistan:	
Gas mask (2 sets)	Trichothecene toxin.
Vegetation	Trichothecene toxin.

Details concerning samples analyzed since the March report—including the circumstances of their collection, analysis, and the results—are provided in this annex. Results of analysis of earlier samples were included in our March 22, 1982 report.

POSITIVE SAMPLE RESULTS

Afghanistan

One-quarter of the external surface of a Soviet gas mask, obtained near Kabul in September 1981, was recently processed for analysis, employing techniques not previously used, and showed the presence of T-2 toxin. This analysis has been verified by two other laboratories. Similar analysis of material from the hose connections of another Soviet gas mask removed from a dead Soviet soldier in December 1981 in Afghanistan is indicative of the presence of the trichothecene toxins, T-2, DAS, verricarol, and another type of mycotoxin—zearalenone. It is believed that these protective masks were worn during operations in which a toxin agent was used.

Preliminary analysis of a third sample acquired in February 1982 also indicates the presence of trichothecenes.

Laos

(1) Blood samples were drawn from an ill H'Mong couple on March 21, 1982, by a physician in the Ban Vinai refugee camp. The victims were exposed to toxin agent attacks on November 11, 1981, and January 4, 1982. They remained ill and under treatment on March 21, 1982, when blood samples were obtained. During the November 1981 attack, an aircraft sprayed a yellowish agent. Although no one died in the village, symptoms such as bloody diarrhea were experienced by most of those exposed. In the January 1982 attack, a greenish chemical was sprayed from an airplane. Vomiting with blood, bloody diarrhea, blurred vision, chest pain, eye irritation, and skin rash were reported. Lingering effects included rash, pain in the joints, and fatigue. The blood samples were analyzed for three trichothecene toxins: DAS, T-2 and HT-2. The blood sample from the male was found to contain 13.5 ppb T-2 toxin. The female was negative for all toxins analyzed.

(2) Three blood samples were drawn by a U.S. physician on April 17, 1982, from three H'Mong refugees: Bloc Her, an 8-year-old boy; Tong Her, a 6-year-old boy; and Xia Sue Xiong, a young girl. They were among a group exposed to a toxic agent attack in late March 1982 in Laos. The agent used was described as being yellow to reddish brown. It was sticky and dried to a powder. Bloc Her had been severely ill with bloody diarrhea and coughing of blood. Xia Sue Xiong was suffering from bloody diarrhea and abdominal pain. The blood samples were analyzed for three trichothecene toxins: DAS, T-2, and HT-2.

TRICHOTHECENE TOXIN ANALYSIS

Victim	DAS	T-2	HT-2
Bloc Her	Negative	Negative	Negative
Tong Her	Negative	110 ppb	296 ppb.
Xia Sue Xiong	Negative	46 ppb	Negative.

ppb = parts per billion.

(3) Post-mortem blood samples were taken from a 25-year-old H'Mong refugee who had been admitted earlier to a refugee hospital at Ban Vinai, Thailand. Just before death he had suffered from a massive gastrointestinal hemorrhage. He had claimed exposure to a toxic agent attack sometime earlier in Laos. The blood was drawn in the hospital on April 17, 1982, and analyzed for three trichothecene toxins: DAS, T-2, and HT-2.

TRICHOTHECENE TOXIN ANALYSIS

Specimen type	DAS	T-2	HT-2
Heparinized blood	Negative	15ppb	19 ppb.

(4) Blood was drawn on April 6, 1982, from Neng Xiong, a H'Mong refugee in Thailand. She was suffering from the effects from a toxic agent attack that occurred in Phou Bia, Laos, on March 25, 1982. The entire population of the village (40 families) suffered from vomiting, fever, backaches, headaches, and chest pain after a helicopter dropped a yellowish agent. Many villagers also developed swollen eyes. It was reported that one woman and several animals died. Neng Xiong's blood was analyzed for three trichothecene toxins: DAS, T-2, and HT-2.

TRICHOTHECENE TOXIN ANALYSIS

Specimen type	DAS	T-2	HT-2
Heparinized blood	Negative	100 ppb	8 ppb.
Nonheparinized blood.	Negative	33 ppb	34 ppb.

(5) A H'Mong refugee reported being subjected to a toxic agent attack on March 17, 1982, in Phou Bia, Laos. The agent, which "looked like yellow rain," was sprayed by a helicopter at low altitude. The sticky yellow spots dried to a powder in 3-4 hours. Immediately after the attack, the victim developed stomach and chest pains and vomited. Vomiting with blood began later and continued over the next 24 hours. Other symptoms included headache, shortness of breath, dizziness, eye irritation, and vision disturbances. The refugee also developed a rash and blisters. Blood samples were drawn by a physician at Ban Vinai refugee hospital in Thailand on March 31, 1982. The samples were anaylzed for three trichothecene toxins: DAS, T-2, and HT-2.

TRICHOTHECENE TOXIN ANALYSIS

Specimen types	DAS	T-2	HT-2
Heparinized blood	Negative	19 ppb	Negative.
Non-Heparinized blood.	Negative	3 ppb	2 ppb.

(6) Results of analysis of two environmental samples from attack sites in Laos were reported in our March 22 report and are not repeated here. An additional set of environmental samples taken from an allegedly contaminated area in Laos near Phu He was obtained for analysis. Although symptoms were manifested in individuals collecting and handling the sample, no trichothecenes were detected upon analysis.

Kampuchea/Thailand

(1) On February 13, 1982, at least 100 Kampuchean soldiers were subjected to an artillery-delivered toxic attack by Vietnamese forces and became ill. The attack took place near the village of Tuol Chrey in an area north of Khao Din, about 300 meters from the Thai-Kampuchean border. One individual subsequently died (see autopsy results, Annex B). Reported symptoms included burning eyes, blurred vision, shortness of breath, chest pains, vomiting, and vertigo. Some victims also trembled and generally felt weak. Blood and urine samples were taken from a number of victims at various times after the attack as well as from a control group of individuals living under similar conditions but not subject to the toxic agent attack. Blood and urine samples from the control group were negative for all analyzed toxic agents, including trichothecene toxins.

On February 14, 1982, 1 day after the attack, blood samples were taken from two victims: Pen Nom and Prek Reth. On February 15, a urine sample was taken from Pen Nom, while on February 16, a urine sample was taken from Prek Reth. Both blood and urine samples were analyzed for the presence of the trichothecene mycotoxins T-2 and HT-2.

TRICHOTHECENE TOXIN ANALYSIS

Victim	Specimen	T-2	HT-2
Prek Reth	Blood	18 ppb	22 ppb
		Negative	Negative.
Pen Nom	Blood	11 ppb	10 ppb
		Trace	18 ppb.

On March 4, 1982, 19 days after the incident, some victims still showed effects of the attack and were being treated in Nong Pru hospital in Kampuchea. Further blood samples were drawn at that time from Prek Reth and five additional victims.

Trichothecene toxin analysis

Victim	T-2 Toxin
Prek Reth	Negative.
Kin Ving	7 ppb.
Mau Sereth	Negative.

Seng Nem ..... Negative.
Ching Soeum ..... Negative.
Chem Ron ..... 3 ppb.

Analysis of tissue samples from a victim of the February 13 attack is described in Annex B.

(2) On March 5, 1982, a small Vietnamese aircraft sprayed a white powder in an area near Pailin, Kampuchea. On March 6, 1982, 10 of a group of 15 Kampucheans were unable to continue walking due to illness after passing through the area. Symptoms included nausea, vomiting, shortness of breath, blurred vision, diarrhea, bloody discharge from the nose, and burning sensation in the chest and abdomen. A second attack occurred on March 7, 1982, when some of the same Kampucheans were subjected to Vietnamese toxic artillery shelling. The agent produced nausea, dry mouth, and blurred vision and also caused loss of consciousness and muscle twitching. Despite medical treatment, a number of the victims died.

Samples were taken from three survivors exposed to the contaminated area on March 6 and 7. Blood and urine were taken on March 13, 1982.

TRICHOTHECENE TOXIN ANALYSIS

Victim	Specimen [1]	DAS	T-2	HT-2
Neung Hon	Urine	Negative	5 ppb	2 ppb.
	Blood	Negative	7 ppb	Negative.
Chan Saran	Urine	Negative	4 ppb	1 ppb.
	Blood	Negative	Negative	8 ppb.
Bun Thoeum	Urine	Negative	22 ppb	7 ppb.
	Blood	Negative	Negative	Negative.

[1] Blood samples was heparinized.

(3) A sample of contaminated vegetation was obtained following spraying by a Vietnamese aircraft in Pong Nam Ron District near the Thai-Kampuchean border on February 19, 1982. Analysis of this sample for known chemical agents was negative. However, the trichothecene toxin T-2 was present at a level of 86 ppb. DAS was also present at 30 ppb. The sample was of insufficient size to analyze accurately for the toxins nivalenol and deoxynivalenol.

ANNEX B

AUTOPSY RESULTS OF A CHEMICAL WARFARE ATTACK VICTIM IN KAMPUCHEA

Chan Mann was one of several victims of a February 13, 1982, toxic agent attack in the area of Khao Din. The victim, being treated at Nong Pru Hospital, reportedly made a brief recovery on March 12 and 13, followed by a relapse when he became anuric, feverish, restless, and slightly jaundiced. On March 17, he lapsed into a coma and died. A urinary catheter was inserted approximately 4 hours before death, but only minimal blood-tinged urine was obtained. Shortly before death the victim vomited blood. Kampuchean physicians performed a necropsy. Tissue sections of heart, esophagus/stomach, liver, kidney, and lung were taken and fixed in formaldehyde. Tissue samples were given to both U.S. and Canadian officials for analysis.

The samples delivered to the United States were submitted to several U.S. laboratories for gross, microscopic, histopathological, and chemical-toxicological analysis.

RESULTS OF ANALYSIS OF TISSUE SAMPLES FOR DAS, T-2, AND HT-2 [1]

Material	Amount (g)	Toxins detected		
		DAS [2]	T-2	HT-2
Heart	7.9		([3])	1 ppm.
Stomach	13.5		25 ppb	4 ppm.
Liver	9.5			
Kidney	10.4	3 ppm [4]	7 ppb	
Lung	4.5		9 ppb	
Intestine	5.3		88 ppb	10 ppb.

[1] DAS (Diacetoxyscirpenol), a trichothecene toxin; T-2, a trichothecene toxin; HT-2, a metabolic product of T-2.

[2] DAS was used as internal standard—i.e., DAS was added to each tissue sample as a standard to check accuracy of analysis. Only the kidney had a concentration of DAS greater than the amount added.

[3] Toxins were not detected. Concentration of DAS was no greater than the added internal standard.

[4] Endogenous DAS in sample detected in concentration greater than the standard.

Note: Tissues were analyzed for trichothecene toxins by Dr. C.J. Mirocha, University of Minnesota. A parallel analysis performed by Dr. J. Rosen, Rutgers University, also revealed the presence of high levels of trichothecene toxins.

A high incidence of natural aflatoxin contamination of food in Southeast Asia has been well documented. Linderfelser and coworkers (1974) have shown that aflatoxin and T-2 toxin in combination have a synergistic effect and, therefore, it was of interest to determine the extent of aflatoxin in tissue of this individual.

RESULTS OF ANALYSIS OF SAMPLES FOR AFLATOXIN

Material	Weight of sample (g)	Sample	
		Actual (ng/g) [1]	Adjusted [2] (ng/g)
Stomach	3.04	19.8	22.5
Liver	3.00	20.2	23.2
Kidney	7.50	15.3	17.4
Intestine	3.02	11.2	12.7

[1] Nanograms per gram.

[2] Values adjusted on basis of 88 percent recovery—that portion of aflatoxin found when a known amount is added to the sample.

Note: Aflatoxin analyses were conducted by Dr. Phillips, Texas A&M University.

Levels of aflatoxin detected in the tissues were so high that it seemed prudent to investigate the possibility that this individual exposure to aflatoxin was not due to a natural contamination but may have been related to the chemical attack. To this end, portions of the sample of yellow rain from Laos previously shown to contain 143 ppm of T-2 toxin and 27 ppm of DAS were submitted to Dr. Mirocha and Dr. Phillips for analysis for aflatoxin B1. Independent thin-layer chromatography and high-performance liquid chromatography analyses were negative for aflatoxin, supporting a hypothesis that this toxin is not always a component of a yellow rain sample and that the victim's exposure to aflatoxin may have been due to contamination of the food source. It does not, however, rule out the possibility that aflatoxin is a component of some yellow rain attacks. Preliminary analysis of some more recent yellow rain samples indicates the presence of aflatoxin in these tissues is important since the high incidence of exposure to natural outbreaks of aflatoxin contamination in Southeast Asia may induce a greater susceptibility to trichothecenes in this population.

Portions of each tissue sample were submitted to Dr. Charles Stahl, University of Tennessee Medical School, for histopathological examination. A summary of the pathology found included: hemorrhage into the heart tissue with evidence of cell destruction and inflammation, cirrhosis of the liver, hemorrhage and cellular destruction of kidney tubules, hemorrhage in the bronchi, and congestion and destruction of the lung. The details of these results and similar findings by other pathologists are consistent with results and similar findings by other pathologists are consistent with results of analysis of animals exposed to trichothecenes.

No single post-mortem finding proves cause and effect of toxin exposure and death, but these data taken together provide objective evidence that:

Reports from witnesses of yellow rain attacks are valid and that bleeding sometimes occurs in the lung, stomach, intestine, and kidney or bladder.

Persons already debilitated by disease or exposure to other toxins have a greater risk of death from trichothecene toxicosis.

Microscopic examination shows that tissue damage occurs in humans after moderate-to-heavy exposure to trichothecenes. The damage is similar to that found in experimental animals.

Microscopic damage persists for 1 month or longer.

Trichothecenes are known to cause long-term damage to rapidly dividing tissue. These toxins accumulate and persist at least in the organs that were examined.

Aflatoxin found in the tissues may be foodborne and is not necessarily a component of the yellow rain substance. However, aflatoxins and trichothecene toxins act synergistically, and they could be components of a toxic crude extract mixture. Emerging data from several sources lend credibility to such a hypothesis; therefore, investigation seems warranted.

ANNEX C

DISCUSSION OF ANALYTICAL FINDINGS [4]

The finding of T-2 toxin and HT-2 toxin in blood, urine, and tissue samples from yellow rain victims is highly significant in view of the fact that no trichothecenes could be detected in similar samples from the control population who were not exposed to yellow rain. The finding of such high levels of trichothecenes weeks after exposure is surprising and raises questions concerning the distribution, metabolism, and excretion of these toxins as well as their long-term effects.

Only limited research concerned with elimination rates of the trichothecenes has been conducted. Ueno, et al., 1971, reported that orally administered fusarenon-x was rapidly distributed to the tissues and reached peak levels by 3 hours after dosing. The kidney was believed to be the major organ of excretion. Matsumoto, et al., 1978, conducted studies with T-2 toxin which led him to conclude that the liver and biliary system were the major organs of T-2 excretion. Chi, et al., 1978, administered oral doses of T-2 to broiler chickens. Peak tissue levels were reached by 4 hours after dosing, and the liver contained the greatest amount of toxin. By 12 hours after dosing, however, the muscle, skin, and bile contained the highest amounts of detectable toxin. By 48 hours, 82% of the adminstered dose had been excreted. Robinson, et al., 1979, showed that T-2 toxin was excreted into cow milk at levels up to 160 ppb after daily administration of 0.6 mg/kg doses.

Studies concerned with metabolism of the trichothecenes have also been limited in

[4] Based on excerpts from a paper by Dr. C. J. Mirocha and Dr. S. Watson, presented at an international symposium on mycotoxins in Vienna on Sept. 1, 1982.

number. Yoshizawa, et al., 1980, reported that in rat liver *in vitro* studies with the S-9 fraction of rat liver homogenates, HT-2 made up 50% of the metabolic products. Other metabolites included TMR-2 (19%), TMR-2 (2%), and T-2 tetraol (4%). In *in vivo* studies, HT-2 was one of the major products eliminated in the excreta of chickens (Yoshizawa, et al., 1980) as well as urine, feces, milk, and blood of dairy cattle (Yoshizawa, et al., 1981).

The finding of T-2 toxin and HT-2 in the blood and tissue of humans weeks after their exposure to the toxins would seem to indicate that enough toxin remains bound in body tissues to allow detection by sensitive instrumentation. Trichothecenes have been shown to bind to ribosomal proteins (Ueno, 1975) and to react with sulfhydryl containing compounds such as glutahione (Foster, et al., 1975) and with proteins such as albumin (Chu, et al., 1979). It would appear that although most of the toxin would normally be expected to be excreted within 48 hours after exposure, small amounts of the toxin and its metabolites remain bound to body tissues for much longer periods. The size of the dose administered and the route of exposure may have a significant effect on the proportion bound, since a sudden, rapidly absorbed, massive dose may overload normal excretion and detoxification mechanisms, resulting in greater tissue binding of the toxin. Similar apparent long-term storage of mycotoxins has been reported previously for aflatoxin B. Although most of the administered dose of aflatoxin is rapidly metabolized, Shank, et al., 1971, demonstrated in studies of monkeys that unmetabolized aflatoxin B could be detected up to 6 days after administration of a sublethal dose.

Additional significant findings lie in the trichothecenes found in the leaf samples (T-2, DON, nivalenol) and yellow powder (T-2, DAS). The concentrations found and their combination are not normally found in nature and it would appear that these mycotoxins found their way into the environment by the intervention of man. The most compelling evidence is the presence of T-2 and DAS in the yellow powder. Both toxins are infrequently found in nature and rarely occur together. In our experience copious producers of T-2 toxin *(F. Tricinctum)* do not produce DAS and, conversely, good producers of DAS (*F. reoseum* 'Gibbosum') do not produce T-2. This is also supported by our experience that a good producer of DON does not produce T-2 or DAS but could produce nivalenol. Thus, we have more than just the quantity of toxins produced to explain, but also the kinds that respective species and their isolates produce. Theoretically, it is possible to genetically manipulate or select an isolate that would produce copious amounts of two or more of these toxicants, but this would require a sophisticated research effort and sophisticated technology based on experience.

It is difficult to explain the presence of trichothecenes on leaf surfaces. Fusarium is not a leaf pathogen, and so we would not expect it to colonize leaves indiscriminately. Fusarium does colonize the roots and vascular tissue (causes wilt diseases) of some plants, and it would have to produce the toxins *in situ* and translocate them to the leaves. This has never been demonstrated in the pathogenesis of Fusarium-infected plants. If a pathogen like *F. oxysporum* f. *lycopersici*, pathogenic to tomatoes, were to produce trichothecenes and translocate them to the leaves, one would not expect such high concentrations and combinations of toxins. Moreover, we are not certain that pathogenic isolates of the latter produce trichothecenes during pathogenesis. It is a well known plant pathological principle that production of toxins by pathogens in laboratory culture does not signify that these toxins also are produced in the host.

Apart from the controversy of the trichothecenes occurring on the leaves, it is difficult to imagine a reasonable explanation for the appearance of T-2 and DAS in the yellow powder. To those who claim that they dropped onto the soil and rocks from overhanging leaves, this is contrary to any known facts about trichothecene occurrence or distribution. The burden of proof remains with those alleging such an unlikely hypothesis.

The finding of T-2 toxin, diacetoxyscirpenol, deoxynivalenol, zearalenone, and *Fusarium* pigments in leaves, water, yellow powder, and fragments originating at sites of yellow rain attacks in Southeast Asia and their absence in background samples (leaves, corn, rice, water, soil) from areas not exposed to yellow rain strongly implicates their use as warfare agents. Moreover, the finding of T-2 toxin and HT-2 toxin (a metabolite of T-2 toxin in animals) in the blood, urine, and tissue of victims of these attacks provides unequivocal evidence of their use as weapons.

Details of the experimental procedures used in these analyses were presented at the Society of Toxicology meeting in Louisville, Kentucky, on August 16, 1982; at an international mycotoxin symposium in Vienna, on September 1, 1982; and at the Association of Analytical Chemistry meeting in Washington, D.C., on October 28, 1982.

Two scientific manuscripts describing those analyses have been submitted for publication in refered journals and other studies pertaining to nongovernmental analyses are in press.

ELIMINATION OF RELIGIOUS INTOLERANCE

Mr. ARMSTRONG. Mr. President, a few days ago, the distinguished Senator from Wisconsin (Mr. KASTEN), who is serving as our representative to the United Nations 37th session of the General Assembly made an extraordinarily interesting and thought-provoking address before the Third Committee on Item 84, Elimination of All Forms of Religious Intolerance.

Mr. President, I urge my colleagues to carefully study the remarks of the Senator from Wisconsin. I ask unanimous consent that they be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR ROBERT W. KASTEN, JR.

Mr. Chairman, last year, following almost two decades of consideration, study and discussion, the General Assembly adopted the Declaration on the Elimination of All Forms of Intolerance and Discrimination based on Religion or Belief.

The Declaration locates the freedom of thought, conscience, religion and belief in the "dignity and equality inherent in all human beings." Freedom of religion, thought, conscience and belief, according to the Declaration, is not a favor that states may grant or withhold at their pleasure, or use as a reward or a punishment. It is a right of all humanity which exists independent of and prior to the prerogatives of states.

The Declaration prescribes that states take "effective measures to prevent or eliminate discrimination on the grounds of religion or belief," and that they "make all efforts to enact or rescind legislation where necessary to prohibit discrimination and to take all appropriate measures to combat intolerance." The state's role in setting standards for religious practices must be defined in law, according to the Declaration, and it is to be exercised only to the degree "necessary to protect public safety, order, health or morals or the fundamental rights and freedoms of others." Considerations such as the truth or falsity of religious claims are not among the items listed in this clause of the Declaration, nor are considerations of state convenience or views on political and social questions.

By adopting this Declaration, we have not solved the problem of religious intolerance. Many specific and glaring cases of religious intolerance and discrimination continue to exist.

For example, the treatment today of the Baha'i in Iran embodies in a particularly brutal way the classic form of religious intolerance which says that what is different must be wrong and must, therefore, be suppressed.

The present Iranian Government seems determined to destroy the Baha'i religion in Iran. The houses of worship of the Baha'i have been closed and destroyed. Their books and writings are burned when found. Baha'i marriages are not recognized as legal, and the children of such marriages are considered illegitimate. The pensions of retired government workers who are Baha'is have been stopped, and in May 1979, Baha'is employed by the Iranian Government were told they must renounce their faith or face dismissal. In September 1979, provincial governments were instructed not to license Baha'i shopkeepers or merchants. Elders of the Baha'i faith have been abducted, some to be publicly executed, others to join the thousands of the "disappeared."

Mr. Chairman, this is an example of the intolerance enforced by an undemocratic government controlled by the dominant religion. This has been a prevalent form of religious discrimination over the centuries, but the modern era has witnessed a new and especially virulent form of state-enforced intolerance. The rise of totalitarian governments, seeking to control and organize all aspects of life, culture and society, has been accompanied by intolerance of all religions. Religions are seen as competitors for influence, affection or obedience, and therefore, as institutions which must be destroyed. Such political systems are based on what Pope John Paul II this month called "secularized ideologies that go as far as to negate God and limit religious liberty."

One example is Vietnam where all three principal religions—Buddhism, Christianity, and Islam—are treated with great hostility. Catholic priests and nuns and Protestant ministers are subject to continual police surveillance, and according to the English Catholic newpaper, The Tablet, some 200 Catholic priests are in prison at the present time. Islamic schools have been closed and the traditional pilgrimage to Mecca has been forbidden. Large numbers of Buddhist monks have been sent to re-education

camps. The An Quang Buddhist sect, which ironically was suspected by the former Thieu Government of having pro-Communist sympathies, has suffered rigorous persecution by the Hanoi Government, according to An Quang monks who have managed to escape to Thailand.

Some of the most clear-cut violations of the Declarations on Elimination of Religious Intolerance take place in Albania. Let me quote from the 1980 Amnesty International Report:

"In 1967, Albania was officially proclaimed the first atheist state in the world and churches and mosques were closed or demolished. Religious leaders of the Roman Catholic, Orthodox and Moslem faiths were prohibited from exercising their functions and persecuted. Many are reported to have been sentenced to long terms of imprisonment or banishment for attempting to exercise their right to freedom of conscience."

Article 55 of the Albanian Constitution flatly prohibits religious organizations and religious activity, and the Albanian Penal Code make such activity punishable by three to ten years' imprisonment. Albanian law thus openly and completely contradicts the Declaration on the Elimination of Religious Intolerance. Article 4, Section 2 of the Declaration demands that all states shall either enact or, where necessary, rescind legislation in order to prohibit religious intolerance and discrimination. The Albanian Government thus has a clear moral obligation to remove the legislation which prohibits the full exercise of religion in Albania.

Nicaragua also applies a stringent political test to religious activity. There, Interior Minister Tomas Borge has stated, "the future of religious sects in Nicaragua will depend upon their attitude henceforth toward the revolution."

But the people of Nicaragua are deeply religious and the confrontation between the Nicaraguan Government and the Catholic Church has been a source of growing dismay and consternation. Archbishop Obando y Bravo, who was banned by the government from saying mass on television, has said that the Sandinistas are afraid of the church and its large following. "They would like us to accept their Marxism," he has said, "and walk shoulder to shoulder with them. They want us to be their apologists."

The government has repeatedly closed down the church's radio station and sponsored stone-throwing, chain-wielding mobs—called turbas—which harass priests and occupy church premises. Such acts have profoundly alienated the population. As a parishioner from San Marcos recently told the Wall Street Journal, "when they attack the church and our priests, they are attacking us, and we don't stand for it."

The United Nations and the world community should not stand for it either.

The world pioneer in the suppression of religion, Mr. Chairman, is the Soviet Union. Although Article 52 of the Soviet Constitution guarantees freedom of religion, and provides for the separation of church and state, the practice followed in the Soviet Union is best described in the following quote from the works of Stalin:

"The Party cannot be neutral toward religion and it conducts anti-religion propaganda against all and every religious prejudice."

Religion is seen as preaching a transcendent view of man and the world which Soviet authorities reject, since this view is innately opposed to their efforts to make the individual completely subservient to the state. There are also specific churches and religions—for example, the Catholic Church in Lithuania or the Islamic Religion in the Central Asian Republics of the USSR—that are seen as the carriers of a nationalist spirit which works against Russian domination. Such churches and religions are marked for special measures—overt suppression, as in the case of the Catholic Church in Lithuania, or a more subtle form of corruption and subversion from within, as in the case of Islam in the Central Asian Republics.

The Jewish minority in the Soviet Union experiences discrimination and denial of basic human rights not only on religious grounds but on racial and ethnic grounds as well. Soviet Jews who attempt to teach their religion to young people can be charged with criminal activity and sent to the Gulag. Those who reproduce religious writings may lose their jobs and often face arrest as well. Jewish parents, like Protestant or Catholic or Orthodox parents, may be deprived of their children if the children receive religious instruction outside the home.

In addition to these persecutions, common to all who practice a religion in the Soviet Union, Jews are subject to a range of discrimination and hostility which is reserved especially for them. State and party newspapers and periodicals have published an enormous volume of anti-Semitic hate literature which reworks the themes of The Protocols of the Elders of Zion, the anti-Semitic tract—first published in Russia in 1905. It alleges a Jewish world conspiracy and inspired the propaganda and violence of the Black Hundreds in Russia at the turn of the century and later of the Nazis in Germany.

Mr. Chairman, the U.S. delegation is fortunate to have in its possession a letter to a member of the delegation, dated November 5, 1982, which gives a vivid, moving picture of the nature of religious persecution in the Soviet Union. The letter is from Natalia Solzhenitsyn, the wife of the Nobel Laureate. Mrs. Solzhenitsyn calls our attention to a remarkable document, the "Report of the Council for Religious Affairs to Members of the Central Committee of the CPSU," which demonstrates that the Council, a party-governmental organization, controls the Russian Orthodox Church on all levels, from the Patriarch down to the clerk who sells candles. It also demonstrates that the Council demands from priests not merely civic loyality to the authorities, but a maximal passivity which perverts the very meaning of their service.

Mrs. Solzhenitsyn's letter is most significant, however, as a personal testimony. What follows is quoted from that letter:

"I would like to list for you," she writes, "those violations of religious freedom (and only those) which I and my family personally experienced, as rank-and-file members of the Orthodox Church.

"The number of churches in the USSR is far below the population's needs. Consequently, during services the churches are always crowded and stuffy, with the result that older people faint. In Moscow and all across the country there are many churches which are used as warehouses or offices, and some simply remain empty, but the authorities have refused believers' requests that they be allowed to use them for services. (Naturally, the believers were ready to assume all expenses.)

"It is impossible to purchase a copy of the Bible, the New Testament, prayer books, or any sort of religious or theological literature. There are no bookstores where these items are sold. The publishing house of the Moscow Patriarchate prints religious books, but they are issued in such miniscule quantities that a lay person cannot hope to acquire even a church calendar which lists church holidays and gospel readings. Only three or four calendars are issued to each parish, which usually contains thousands of people.

"I bought my copy of the New Testament from an old and very poor woman when I was a student at Moscow University, having given her my entire month's allowance. The thirst for Bibles and New Testaments is very great, not only among believers, but also among young atheists, all of whom are forced to take courses in 'scientific atheism' in all institutions of higher learning. Many of these people would themselves like to read the holy scriptures, which are constantly derided and made fun of, not only at these courses, but everywhere. However, I would like to repeat that these books are available only on the 'black market' and nowhere else.

"There is a lack of priests in the country. In order to have the opportunity to give confession, people must wait for hours, and even then it is often impossible to have a personal confession. Parishioners must then take part in 'collective confessions,' which do not satisfy most believers.

"Priests are forbidden to conduct private services outside of churches, and if a person is ill or is dying and is unable to go to church, then he may die without communion. For a believer, this can be tragic.

"Sermons are rarely given in churches. The Council for Religious Affairs exerts great pressure on priests, urging them not to give sermons. Religious meetings held outside church walls are forbidden as are any other meetings held by Soviet citizens which the authorities cannot control. Thus, people are practically left without any form of spiritual guidance, which is particularly felt by the youth.

"Soviet schools educate children in the spirit of generating hostility toward religion and they follow this policy with great militancy. Practically every school lesson and surely every school book, be it on history, literature, physics, or biology, contains angry attacks on religion and on Jesus Christ, formulated in extremely crude terms.

"Practically 100 percent of the children must join the 'Pioneers,' which is a children's communist organization under the jurisdiction of the Komsomol (Communist Youth League), which in turn is under the direction of the CPSU. The charter of the Pioneers contains a point which obliges a pioneer to actively combat belief in God and root out religion as a 'bourgeois vestige.'

"When my older son became nine years old (the required age for joining the Pioneers), he openly announced in School that he believed in God, that he attended church, and that he is ready to join the Pioneers only if he were relieved from fulfilling this particular point in the charter. A struggle began which lasted more than two years, up to the very time of our expulsion from the USSR. My son and I were constantly summoned by the school principal and were pressured into believing that he would be setting a bad example, that we are deeply confused, etc. A teacher who worked at the school for 25 years told me that this was the first such case that he had encountered.

"At the same time, however, other school children wearing their Pioneer neckties often came up to my son, pressed his hand,

and told him that they too believed in God, but that if they were to announce this openly, their parents would be fired from their jobs, and they were afraid. By that time our family had already become so completely 'damned' in the eyes of the Soviet authorities, that we no longer had anything to lose, while other families had good reasons for being afraid to confess their faith openly. I knew many Moscow families where the parents lost their jobs or were demoted after a denunciation from the Council for Religious Affairs was sent to the place of their employment, stating that they had baptized their child. And this did not happen during the legendary 1920's, but in the 1960's and 1970's. Thus, the authorities' pronouncements regarding 'freedom of conscience' are empty words.

"Religion cannot be taught even within the confines of church walls. In private homes it is also forbidden to create groups of more than three children for the study of religion. This means that in practice, Russian children are left without religious books and teachers, and are deprived of the opportunity to learn of the thousand-year-old faith of their forefathers. That is monstrous.

"In Moscow many of my friends and I copied (by hand or typewriter) church texts, explanations, and parables for our children.

"Everything is also done in order that children not participate in the liturgical life of the Church. For instance, children do not have the right to sing in church choirs, although in all countries of the world, during all ages, in all religions, children have sung in choirs during church services.

"Often children are forcibly stopped from attending Easter midnight service. I myself had to tear away my five-year-old son from the arms of the 'druzhinniki' (auxiliary police), who pulled him away from me, in order that he should not enter the church.

"Of course, there are many other difficult problems relating to the status of our church. The number of candidates who are accepted into theological seminaries are far below the number of people who want to attend, and this is done in order to deprive the people of their priests by artificial means. Almost all monasteries have been closed, and those priests who have dared to be true 'fathers' to their parishioners have been persecuted and arrested. There is much, much more, which bears witness to the essential facts that the communist regime is engaged in a struggle against God.

"At the present time church statistics are never published, but I will cite a few figures from the previously mentioned Report to the Central Committee and compare them with official church statistics for the year 1907.

"In 1907 there were 51,413 churches in Russia. As of 1975, there were 7,062.

"In 1907, there were 622 monastaries for men and 17,583 monks. As of 1970, there were 6 monastaries for men and 290 monks.

"In 1907 there were 218 monastaries for women and 52,972 nuns. As of 1970, there were 10 monastaries for women and 985 nuns.

"In 1907 there were 20,113 chapels and 19,659 church libraries. Chapels and church libraries are not mentioned in the Report to the Central Committee for the simple reason that now they don't exist anymore in the USSR."

Those are facts provided to us by Mrs. Solzhenitsyn.

Mr. Chairman, the United States would like to call to the special attention of the Third Committee the case of Zoya Krakhmalnikova, a famous literary critic and essayist in the Soviet Union, who was arrested in Moscow on the night of August 3-4 of this year, and taken to Lefortovo Prison. This woman did not participate in anything which may be described as political; she was arrested for engaging in purely religious-educational activity.

Krakhmalnikova has been, since 1976, the editor and compiler of a samizdat Christian reader called Nadezhda, which means 'hope' in Russian. Nadezhda contained texts written by church fathers, beginning with the first centuries of Christianity, along with excerpts from the work of famous Orthodox theologians, materials on the Christain tradition in literature, testimony from contemporaries describing their conversion to religion, articles on culture, etc. The writings published in Nadezhda were purely religious, and without political content of any type.

In his appeal issued on the occasion of Zoya Krakhmalnikova's arrest, Archbishop Anthony of Geneva and Western Europe wrote the following:

"In 1978 we blessed the publishing of this collection, which was so needed by the faithful. . . . We would like to draw everyone's attention to the fact that the Nadezhda collections do not contain any other materials besides those that are strictly religious."

During the course of the past six years the authorities had never warned Krakhmalnikova that her work on Nadezhda was illegal or undesirable. Her arrest represents a blatant case of religious persecution.

Such persecution will not snuff out the fire of religious belief. If anything, it will compel people to hold more firmly to their beliefs, which are a source of spiritual sustenance in the dark world of totalitarianism.

Every day on Victory Square in Warsaw the people come to lay flowers in the form of a giant cross, and every night the authorities sweep it away. Every day and every night this ritual is repeated—the people demonstrating in the light of the day their undying faith, and the regime, furtively and in the dark of night, trying unsuccessfully to erase the symbol of their belief.

It will not work, Mr. Chairman—not in Poland nor in the Soviet Union nor in any country where the authorities seek to destroy the human soul for the greater glory of the State. The human soul will endure, Mr. Chairman. Indeed, it will prevail.

DECADE OF DISABLED PERSONS, 1983-92

Mr. ARMSTRONG. Mr. President, in the United States the program of the 1981 International Year of Disabled Persons (IYDP) and the 1982 National Year of Disabled Persons stimulated important new activity to help improve the lives of our Nation's 35 million individuals with disabling conditions. No one anticipated that serious problems of disability would be solved in a year or two. Because we must continue to make progress in this area of human concern, I am especially pleased that the United Nations has now declared the Decade of Disabled Persons—1983-92.

Designations of years and decades, in themselves, do nothing. However, they help provide a climate and an opportunity which can be seized by organizations, governments at all levels, and concerned individuals to further objectives and programs. During the IYDP, the United States established a series of long-term goals of and for disabled persons. The decade declaration, together with the U.N.'s companion World Program of Action, provide a framework for continuing progress toward the long-term goals of and for disabled Americans.

In these days of fiscal restraint, when all Americans are being asked to do more for themselves and to look to Government less, it is especially important that we encourage those institutions and organizations which foster self-reliance and voluntary action. For this reason, I have been honored to serve as one of the congressional sponsors of the national office on disability. This permanent, private sector organization grew out of the International Year of Disabled Persons and is continuing the nationwide community partnership program developed in that observance. The program includes more than a thousand communities and hundreds of national organizations. The national office on disability is spearheading the decade observance in this country, in cooperation with many hundreds of organizations, Government agencies, corporations, and all who can contribute. This is an exemplary private sector initiative.

I soon will sponsor a resolution on the Decade of Disabled Persons in cooperation with my colleagues in the Senate. I was privileged to introduce the Senate resolution designating 1982 as the National Year of Disabled Persons. Thanks to the work of the National Office on Disability and many other groups, this "Year" has served as a bridge between the IYDP and the decade, which was declared last Friday by the U.N. General Assembly.

Following the General Assembly vote on the Decade of Disabled Persons, one individual was called on to respond to the U.N. initiatives, speaking on behalf of the world's half billion disabled persons, as well as the United States. In his statement, Mr. Alan Reich, president of the National Office on Disability, urged the United Nations and the world community to continue progress in this important area of human concern.

Mr. President, I ask unanimous consent that Mr. Reich's statement before the U.N. General Assembly be included in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY ALAN A. REICH

Mr. President and distinguished delegates: Thanks to you, fully one-half billion disabled persons of the world now can look forward to a brighter future. The UN, by proclaiming the 1981 International Year of Disabled Persons, aroused the hopes and aspi-

rations of this significant segment of humanity. The continuing vision and leadership of the member nations, Secretary-General Perez de Cuellar, the UN Secretariat, the agencies of the UN system, and the Center for Social Development and Humanitarian Affairs, will have radiating impact reaching people everywhere.

The resolutions you have adopted today for the World Program of Action for Disabled Persons and its implementation resolution, including the decade of Disabled Persons, are marvelous testimony to your humanitarian concern.

As a disabled person myself, I am well aware that your continuing commitment is raising the world's consciousness in the area of disability. You may not fully appreciate it, but people at the grassroots level truly do benefit from your actions. The best testimony to this effectiveness I can cite is a statement my organization, the National Office on Disability, received from one of our more than one thousand community liaisions. Ms. Lee McCoy of Mobile, Alabama wrote, "As chairman of the Mobile program, I request that as you structure your national community program, you think of the UN decade of the disabled as the frontispiece. Local communities need worldwide structures to hang their local programs on effectively. Geneva UN Program Secretariat Assembly, for example, works magic on the local level. With an international scope, working members gain in stature. The higher the source, the greater the local response. With this international base and your national plan, we have a total package to take to the community," she stated.

In the United States, as in several other nations, the year 1982 was proclaimed the National Year of Disabled Persons to continue the momentum of the IYDP. President Reagan and the United States Congress issued proclamations to help maintain the public focus on disability issues and secure the support for the programs of organizations committed to improving the lives of disabled Americans. Governors, mayors, and county officials throughout the country have provided leadership for these voluntary, self-help initiatives in States and communities. Most importantly, many thousands of citizens, both disabled and non-disabled, have joined in a partnership effort to continue what was started during the IYDP. A new era of economic restraint and budget reductions has made these local private initiatives more important than ever.

An outgrowth of the IYDP was the formation of the National Office on Disability, a permanent, private, non-governmental organization. Its purpose is to continue the momentum you have started. It is building on the solid progress achieved during the international year, supporting community level action of and for 35 million Americans with disabilities.

The continuing worldwide response to the IYDP challenge has been significant. More than 130 nations formed national commissions and carried out programs. The IYDP secretariat in Vienna, under the able direction of Assistant Secretary General Mrs. Leticia Shahani, is spearheading efforts to continue this momentum and has established a UN trust fund for disabled persons. It has great potential, especially for disabled persons in developing nations. An international organization made up entirely of disabled members, disabled persons international, has had its first meeting in Singapore. It serves as a conscience for the disabled throughout the world.

The World Program of Action, which you have adopted today, is the culmination of three years of careful work. This fine document offers great promise and opportunity for all mankind, disabled and non-disabled alike. It will enhance efforts aimed at participation of disabled persons and prevention programs, with enormous humanitarian and economic benefit.

We also are excited about your action today on the Decade of Disabled Persons. Support in the United States for the decade idea has been overwhelming. It will, indeed, help stimulate interest and awaken concern worldwide. It provides the necessary framework for national action.

But, we would not do justice to your initiative and leadership if we did not also recognize another important contribution of your work. By focusing world-wide attention on disabled people, the United Nations has opened an important area of transnational communication across political boundaries on common problems affecting all peoples. This communication will continue. It will further international cooperation and improve the climate for resolving other differences peaceably. Interactions among nations in the area of disability and the worldwide exchanges of information and people will contribute to this climate of peace and cooperation. I am reminded of the words inscribed here at the entrance of the United Nations, "Since wars begin in the minds of men, it is in the minds of men that the defenses of peace must be constructed." The decade of disabled persons is an idea born in the minds of men which is helping to build the human foundations for the structure of peace.

These two results of your actions—new commitment to improving the human condition and opening a new area of transnational communication—are inspirational testimony to the moral force of the United Nations. Voluntary response throughout the world to your challenge demonstrates the UN's tremendous capacity to stimulate purposeful action and commitment. With limited funds, the UN has fostered programs with far-reaching implications in all countries.

The IYDP success is not in what was done, but in what was started. By focusing attention over the long-term on the serious problems of disability, the United Nations has created the opportunity. But the opportunity must be seized. This is a challenge to us all.

And, let us no longer question the value of focal year and decade observances. They demonstrate that the UN can unleash tremendous human and organizational potential. As we look ahead to another signal year—the bimillennium in the year 2000—the continuing response you have aroused will be a beacon of hope. The bimillennium will inspire the setting and pursuit of high goals for improving the human condition for all mankind.

I urge you, distinguished member nation representatives and the world community, to intensify your efforts to improve the lives of the one-half billion people with disabilities. By challenging the world and by taking on this responsibility, you have become champions of the disabled. We need you as partners. We need your vision and leadership. We need your continuing concern, compassion and commitment.

You are giving us opportunity. You are inspiring hope. Let's keep up momentum. Together we can make our planet more livable!

Thank you, Mr. President.

FEDERAL OIL AND GAS ROYALTY MANAGEMENT ACT OF 1982

Mr. SASSER. Mr. President, I would like to express my support of S. 2305, the Federal Oil and Gas Royalty Management Act of 1982. I believe that it is high time we acted to end the royalty payments abuse that S. 2305 is designed to correct.

The royalty underpayments on our public lands and on the Outer Continental Shelf has been no small matter. The General Accounting Office estimated that $1 in every $10 owed in royalty payments had gone unpaid each year. Last year, this amounted to over one-half billion dollars. I believe that passage of S. 2305 will put an end to these abuses.

Mr. President, I believe that S. 2305 establishes a system of accountability for these underpayments. We can now determine who owes money to the Government, how much money is owed, and effectively set about the task of collecting it.

Mr. President, this is the essence of the mineral leasing bill, S. 2083, that I introduced just this past February.

Mr. President, I support S. 2305 because it reflects this overriding principle of equity and fair play that is vital to the collection of taxes.

Mr. President, it is my hope that the passage of this royalty management bill will put an end to the underpayments by major oil companies. We have sent a strong message to these companies that they will no longer be allowed to circumvent their mineral leases at the expense of the American people. Mr. President, I commend my colleagues for their passage of this important legislation.

TAX DEDUCTIONS FOR RECLAMATION AND RESURFACING COSTS

Mr. HEFLIN. Mr. President, this morning I submitted written testimony to the Subcommittee on Energy and Agricultural Taxation, of the Senate Committee on Finance, on S. 2642. I ask unanimous consent that a copy of my complete testimony be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

TESTIMONY TO BE PRESENTED BY U.S. SENATOR HOWELL HEFLIN BEFORE THE SUBCOMMITEE ON ENERGY AND AGRICULTURAL TAXATION, U.S. SENATE COMMITTEE ON FINANCE, DECEMBER 7, 1982, 10 A.M.

Mr. Chairman: I have been added as a cosponsor to S. 2642, the "Comprehensive Mining Reclamation Reserve Act of 1982," introduced by Senator Wallop (for himself and Senator Symms). As you are well aware by now, this is a bill to amend the Internal Revenue Code of 1954 to provide for the establishment of reserves for mining land reclamation and for the deduction of amounts added to such reserves.

Mr. Chairman, it is no secret that the tax accounting options available to the surface mining operator have been in dispute for more than 30 years. The pivotal question surrounding the controversy focuses on when to take the deduction for reclamation and resurfacing costs—in the year in which all the events fixing the fact of liability to reclaim the land occurred or the year in which the reclamation work was actually performed.

Recent case law—especially *Ohio River Collieries Co.* v. *Commissioner*, 77 T.C. NO. 103 (Dec. 31, 1981)—in my judgment, has settled the controversy. However, it is alleged that the Internal Revenue Service refuse to change its position in light of current case law. Herein lies the real reason for S. 2642.

According to the aforementioned recent case law, liability of the taxpayer/surface mining owner to reclaim the affected land becomes fixed as soon as the surface mining begins. The only remaining issue then becomes the determination of the amount of the required reclamation expense or a reasonable estimate thereof. This is where, I understand, that the Internal Revenue Service likes to flex its muscles. However, if the taxpayer/surface mining owner does its homework in the exemplary manner as the Ohio River Collieries Company, the same favorable result should ensue.

The legislation of which I am a cosponsor, S. 2642, is designed to assure the taxpayers/surface miner owners that they will be able to utilize the case-law prescribed accounting methods for computing their accrual and deduction of reclamation and resurfacing costs. By codifying these methods we should certainly settle once and for all the more than 30 year old controversy between the surface mining industry and the Internal Revenue Service.

Mr. Chairman, I urge this Committee to act favorably and promptly during the remaining days of this lame-duck session of Congress on S. 2642.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Saunders, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the Committee on Armed Services.

(The nominations received today are printed at the end of the Senate proceedings.)

DEFERRAL OF CERTAIN BUDGET AUTHORITY—MESSAGE FROM THE PRESIDENT—PM 200

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, together with accompanying papers; which, pursuant to the order of January 30, 1975, was referred jointly to the Committee on Appropriations, the Committee on the Budget, the Committee on Foreign Relations, the Committee on Armed Services, the Committee on Energy and Natural Resources, the Committee on Banking, Housing, and Urban Affairs, the Committee on Finance, the Committe on Veterans' Affairs, the Committee on Environment and Public Works, and the Committee on Commerce, Science, and Transportation:

To the Congress of the United States:

I hereby withdraw my message transmitted on December 6, 1982 (H. Doc. 97-261) under the Impoundment Control Act of 1974 by which 11 deferrals were reported, and I report herewith 13 new deferrals of fiscal year 1983 funds totaling $1,569,870,000 and three revisions to existing deferrals increasing the amounts deferred by $1,173,257,000.

The deferrals are for programs in International Security Assistance and the Departments of Defense—Military, Energy, Housing and Urban Development, Interior, and Treasury, the National Aeronautics and Space Administration, the Veterans' Administration, and the Interstate Commission on the Potomac River Basin.

The details of each deferral are contained in the attached reports.

RONALD REAGAN.

THE WHITE HOUSE, *December 7, 1982.*

ANNUAL REPORT ON IMPLEMENTATION OF THE EMERGENCY ENERGY CONSERVATION ACT—MESSAGE FROM THE PRESIDENT—PM 201

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, together with an accompanying report; which was referred to the Committee on Energy and Natural Resources:

To the Congress of the United States:

In accordance with Section 215(b) of the Emergency Energy Conservation Act of 1979 (42 U.S.C. 8515), I herewith transmit the annual report covering efforts of the Department of Energy to implement provisions of the Emergency Energy Conservation Act since its enactment on November 5, 1979.

RONALD REAGAN.

THE WHITE HOUSE, *December 7, 1982.*

MESSAGE FROM THE HOUSE

At 2:46 p.m., a message from the House of Representatives, delivered by Mr. Gregory, one of its reading clerks, announced that the House has passed the following bill, with amendments, in which it requests the concurrence of the Senate:

S. 503. An act to authorize the purchase, sale, and exchange of lands by the Devils Lake Sioux Tribe of the Devil's Lake Sioux Reservation, N. Dak., and for other purposes.

The message also announced that the House has passed the following bill, in which it requests the concurrence of the Senate:

H.R. 6211. An act to authorize appropriations for construction of certain highways in accordance with title 23, United States Code, for highway safety, for mass transportation in urban and rural areas, and for other purposes.

HOUSE BILL REFERRED

The following bill was read the first and second times by unanimous consent, and referred as indicated:

H.R. 6211. An act to authorize appropriations for construction of certain highways in accordance with title 23, United States Code, for highway safety, for mass transportation in urban and rural areas, and for other purposes; to the Committee on Finance.

EXECUTIVE AND OTHER COMMUNICATIONS

The following communications were laid before the Senate, together with accompanying papers, reports, and documents, which were referred as indicated:

EC-4587. A communication from the Clerk of the U.S. Claims Court, transmitting, pursuant to law, a copy of the court's judgment in *Lower Sioux Indian Community in Minnesota, et al.* v. *The United States*, No. 363; to the Committee on Appropriations.

EC-4588. A communication from the Director of the Defense Security Assistance Agency, transmitting, pursuant to law, a report on the Department of the Navy's proposed letter of offer to the United Kingdom for defense articles estimated to cost in excess of $50 million; to the Committee on Armed Services.

EC-4589. A communication from the President of the United States, transmitting, pursuant to law, his recommendation for the basing mode for the MX missile; to the Committee on Armed Services.

EC-4590. A communication from the Director of the Defense Security Assistance Agency, transmitting, pursuant to law, a report on the Department of the Navy's proposed letter of offer to Colombia for defense articles estimated to cost in excess of $50 million; to the Committee on Armed Services.

EC-4591. A communication from the Director of the Defense Security Assistance Agency, transmitting, pursuant to law, a report on the Department of the Air Force's proposed letter of offer to Saudi Arabia for defense articles estimated to cost in excess of $50 million; to the Committee on Armed Services.

EC-4592. A communication from the Director of the Defense Security Assistance Agency, transmitting, pursuant to law, a report on the Department of the Navy's proposed letter of offer to Saudi Arabia for defense articles estimated to cost in excess of $50 million; to the Committee on Armed Services.

EC-4593. A communication from the Director of the Defense Security Assistance

Agency, transmitting, pursuant to law, a report on the Department of the Army's proposed letter of offer to Saudi Arabia for defense articles estimated to cost in excess of $50 million; to the Committee on Armed Services.

EC-4594. A communication from the Director of the Defense Security Assistance Agency, transmitting, pursuant to law, a report on the Department of the Navy's proposed letter of offer to Korea for defense articles estimated to cost in excess of $50 million; to the Committee on Armed Services.

EC-4595. A communication from the Federal Emergency Management Agency, General Services Administration, transmitting, pursuant to law, the statistical supplement stockpile report to the Congress, dated September 30, 1982; to the Committee on Armed Services.

EC-4596. A communication from the Principal Deputy Assistant Secretary of the Navy (Shipbuilding and Logistics), transmitting, pursuant to law, a report on the conversion of the outfitting function at the Naval Supply Center, Norfolk, Va., to performance by contract; to the Committee on Armed Services.

EC-4597. A communication from the Principal Deputy Assistant Secretary of the Navy (Shipbuilding and Logistics), transmitting, pursuant to law, a report on the conversion of the physical inventory function at the Naval Supply Center, Norfolk, Va., to performance by contract; to the Committee on Armed Services.

EC-4598. A communication from the Principal Deputy Assistant Secretary of the Navy (Shipbuilding and Logistics), transmitting, pursuant to law, a report on the conversion of the POV processing function at the Naval Supply Center, Norfolk, Va., to performance by contract; to the Committee on Armed Services.

EC-4599. A communication from the Principal Deputy Assistant Secretary of the Defense (Comptroller), transmitting, pursuant to law, a listing of contract award dates for the period December 15, 1982, to February 15, 1983; to the Committee on Armed Services.

EC-4600. A communication from the Secretary of Defense, transmitting, pursuant to law, a report on civilian end strength for the Department of Defense for September 30, 1983; to the Committee on Armed Services.

EC-4601. A communication from the Secretary of the Treasury, transmitting, pursuant to law, a report on activities carried out under the Olympic Commemorative Coin Act for the period July 22 through September 30, 1982; to the Committee on Banking, Housing, and Urban Affairs.

EC-4602. A communication from the Secretary of Commerce, transmitting, pursuant to law, his conclusions on the criteria set forth on the embargo of export of pipeline technology; to the Committee on Banking, Housing, and Urban Affairs.

EC-4603. A communication from the Administrator of the national Aeronautics and Space Administration, transmitting, pursuant to law, notice of the proposed use of construction and facilities funds for the relocation of a deep space antenna; to the Committee on Commerce, Science, and Transportation.

EC-4604. A communication from the General Counsel of the Department of Energy, transmitting, pursuant to law, a notice of a meeting related to the international energy program; to the Committee on Energy and Natural Resources.

EC-4605. A communication from the Assistant Secretary of Energy (Convention and Renewable Energy), transmitting, pursuant to law, a report regarding power generation using stratified solar brine ponds as part of the Arkansas-Red River chloride control project; to the Committee on Energy and Natural Resources.

EC-4606. A communication from the Assistant Secretary of Energy for Fossil Energy, transmitting, pursuant to law, notice of a delay in the submission of the semiannual report on the alternative fuels production program; to the Committee on Energy and Natural Resources.

EC-4607. A communication from the Assistant Secretary of the Interior (Land and Water Resources), transmitting, pursuant to law, an application by the Columbia Irrigation District, Benton County, Wash., for a loan under the Small Reclamation Projects Act; to the Committee on Energy and Natural Resources.

EC-4608. A communication from the Assistant Secretary of the Interior, transmitting, pursuant to law, an application by the Fallbrook Public Utility District, San Diego County, Calif., for a loan under the Small Reclamation Projects Act; to the Committee on Energy and Natural Resources.

EC-4609. A communication from the Assistant Secretary of the Interior (Land and Water Resources), transmitting, pursuant to law, an application by the Yuba County Water Agency, Yuba County, Calif., for a loan under the Small Reclamation Projects Act; to the Committee on Energy and Natural Resources.

EC-4610. A communication from the Assistant Secretary of the Interior (Land and Water Resources), transmitting, pursuant to law, an application by the Roosevelt Irrigation District of Buckeye, Maricopa County, Ariz., for a loan under the Small Reclamation Projects Act; to the Committee on Energy and Natural Resources.

EC-4611. A communication from the Assistant Secretary of the Interior for Land and Water Resources, transmitting, pursuant to law, an application by the Ramona Municipal District, San Diego County, Calif., for an application under the Small Reclamation Projects Act; to the Committee on Energy and Natural Resources.

EC-4612. A communication from the Administrator of the General Services Administration, transmitting, pursuant to law, a proposed lease prospectus; to the Committee on Environment and Public Works.

EC-4613. A communication from the Deputy Administrator of the Veterans' Administration, transmitting, pursuant to law, the semiannual report of the Inspector General, Veterans' Administration, for the period April 1 through September 30, 1982; to the Committee on Governmental Affairs.

EC-4614. A communication from the Secretary of Transportation, transmitting, pursuant to law, the semiannual report of the Inspector General, Department of Transportation, for the period April 1 through September 30, 1982; to the Committee on Governmental Affairs.

EC-4615. A communication from the Chairman of the Council of the District of Columbia, transmitting, pursuant to law, a copy of D.C. Act 4-249, adopted by the Council on October 19, 1982; to the Committee on Governmental Affairs.

EC-4616. A communication from the Assistant Secretary of the Interior (Indian Affairs), transmitting a draft of proposed legislation to vest the Secretary of the Interior with jurisdiction over certain statute of limitations claims, and for other purposes; to the Select Committee on Indian Affairs.

EC-4617. A communication from the Commissioner of Immigration and Naturalization, transmitting, pursuant to law, a report on an order suspending deportation of John Williamson; to the Committee on the Judiciary.

EC-4618. A communication from the Secretary of Education, transmitting, pursuant to law, a report on a final funding priority under the strengthening institutions program and the special needs program; to the Committee on Labor and Human Resources.

EC-4619. A communication from the Chairman of the Federal Election Commission transmitting, pursuant to law, a copy of the Commission's fiscal year 1983 pay cost supplemental appropriation request; to the Committee on Appropriations.

EC-4620. A communication from the Secretary of the Navy transmitting, pursuant to law, a report that the Navy's Harm missile program had exceeded its baseline program acquisition cost by more than 25 percent; to the Committee on Armed Services.

EC-4621. A communication from the Assistant Secretary of the Army for Installations, Logistics, and Financial Management transmitting, pursuant to law, a report on a decision made to convert the containers, tents, textiles, and tarps activity at Fort Sam Houston to performance under contract; to the Committee on Armed Services.

EC-4622. A communication from the Principal Deputy Assistant Secretary of the Navy for Shipbuilding and Logistics transmitting, pursuant to law, a report on a decision to convert the motor vehicle maintenance, refuse collection, and taxi operation functions at the Naval Shipyard, Charleston, S.C. to performance under contract; to the Committee on Armed Services.

EC-4623. A communication from the Assistant Secretary of the Army for Installations, Logistics, and Financial Management transmitting, pursuant to law, a report on a decision to convert the supply, storage, and warehousing and the logistics management office at Harry Diamond Laboratories to performance under contract; to the Committee on Armed Services.

EC-4624. A communication from the Administrator of the National Aeronautics and Space Administration transmitting, pursuant to law, a report on NASA's plan to report to the GSA as excess real property certain acreage and facilities at Plum Brook Station, Sandusky, Ohio; to the Committee on Commerce, Science, and Transportation.

EC-4625. A communication from the Vice President for Government Affairs, Amtrak, transmitting, pursuant to law, a report on the number of passengers and the on-time performance of each train operated for the month of September, 1982; to the Committee on Commerce, Science, and Transportation.

EC-4626. A communication from the Secretary of Transportation and the Chairman of the Interstate Commerce Commission transmitting, pursuant to law, a report on uniform state regulations under the Motor Carrier Act of 1980; to the Committee on Commerce, Science, and Transportation.

EC-4627. A communication from the Administrator of the National Aeronautic and Space Administration transmitting, pursuant to law, a report on certain contracts negotiated by NASA under 10 U.S.C. 2304 for the period January 1 through June 30, 1982; to the Committee on Commerce, Science, and Transportation.

EC-4628. A communication from the Assistant Secretary of Energy for Environmental Protection, Safety, and Emergency Preparedness transmitting, pursuant to law, reports on the strategic petroleum reserve drawdown plan, amendment No. 4 and the strategic petroleum drawdown and distribution report; to the Committee on Energy and Natural Resources.

EC-4629. A communication from the Director of the Minerals Management Service, Department of the Interior, transmitting, pursuant to law, a report on a refund of an excess royalty payment to Amerada Hess Corp. and Shell Oil Co.; to the Committee on Energy and Natural Resources.

EC-4630. A communication from the Director of the Minerals Management Service, Department of the Interior, transmitting, pursuant to law, a report on a refund of an excess royalty payment to Shell Oil Co. and Cities Service Co.; to the Committee on Energy and Natural Resources.

EC-4631. A communication from the Secretary of Commerce transmitting, pursuant to law, a lease prospectus for a succeeding lease on Lake Union, Seattle, Wash.; to the Committee on Environment and Public Works.

EC-4632. A communication from the Director of the Office of Management and Budget transmitting, pursuant to law, a plan for the Tehachapi watershed, California; to the Committee on Agriculture, Nutrition, and Forestry.

EC-4633. A communication from the Secretary of the Treasury transmitting, pursuant to law, the final monthly Treasury statement of receipts and outlays of the U.S. Government for fiscal year 1982; to the Committee on Finance.

EC-4634. A communication from the President of the European Parliament, Brussels, Belgium, transmitting a copy of a resolution relative to visa reciprocity between the United States and the European Community; to the Committee on Foreign Relations.

EC-4635. A communication from the Secretary of State transmitting, pursuant to law, a report on payments made during the previous month to private individuals or corporations in satisfaction of assurance agreements or payment of loan guarantees with respect to loans made and credits extended to the Polish People's Republic; to the Committee on Foreign Relations.

EC-4636. A communication from the Secretary of State transmitting, pursuant to law, a report on chemical warfare in Southeast Asia and Afghanistan: An Update; to the Committee on Foreign Relations.

EC-4637. A communication from the Deputy Assistant to the President of the United States for Management transmitting, pursuant to law, a report concerning personnel employed in the White House; to the Committee on Governmental Affairs.

EC-4638. A communication from the Chief of the Army and Air Force Exchange Service transmitting, pursuant to law, a report on the financial condition of the exchange services' pension plans for the fiscal year ended December 31, 1981; to the Committee on Governmental Affairs.

EC-4639. A communication from the Commissioner of Social Security, Baltimore, Md., transmitting, pursuant to law, a report on an altered Privacy Act system of records; to the Committee on Governmental Affairs.

EC-4640. A communication from the Inspector General of the Department of Health and Human Services transmitting, pursuant to law, the quarterly report of the Inspector General for July 1 to September 30, 1982; to the Committee on Governmental Affairs.

EC-4641. A communication from the Administrator of the Environmental Protection Agency transmitting, pursuant to law, the Semiannual Report of the Inspector General for April 1 through September 30, 1982; to the Committee on Governmental Affairs.

EC-4642. A communication from the Administrator of the National Aeronautics and Space Administration transmitting, pursuant to law, the report of the Inspector General for the period ending September 30, 1982; to the Committee on Governmental Affairs.

EC-4643. A communication from the Secretary of Health and Human Services transmitting, pursuant to law, the final report of the evaluation of ANA's training and technical assistance program; to the Select Committee on Indian Affairs.

EC-4644. A communication from the Commissioner of the Immigration and Naturalization Service transmitting, pursuant to law, copies of orders suspending deportation pursuant to section 244(a)(1) of the Immigration and Nationality Act; to the Committee on the Judiciary.

EC-4645. A communication from the Director of the Office of Management and Budget transmitting, pursuant to law, a report on OMB's 1981 activities under the Freedom of Information Act; to the Committee on the Judiciary.

EC-4646. A communication from the Secretary of Education transmitting, pursuant to law, a copy of the 1983-84 Pell Grant Program Family Contribution Schedule; to the Committee on Labor and Human Resources.

EC-4647. A communication from the Secretary of Health and Human Services transmitting, pursuant to law, the 10th report of the National Heart, Lung, and Blood Advisory Council; to the Committee on Labor and Human Resources.

EC-4648. A communication from the Secretary of Health and Human Services transmitting, pursuant to law, the Annual Report of the National Cancer Advisory Board, 1982; to the Committee on Labor and Human Resources.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. PERCY, from the Committee on Foreign Relations, without amendment:

S. 2611. A bill to amend the Peace Corps Act.

By Mr. PACKWOOD, from the Committee on Commerce, Science, and Transportation, without amendment:

S. 2944. A bill to authorize funds for the National Oceanic and Atmospheric Administration for fiscal year 1983 to carry out the provisions of the National Oceanic Pollution Planning Act of 1978.

By Mr. PACKWOOD, from the Committee on Commerce, Science, and Transportation, with an amendment in the nature of a substitute:

S. 3006. A bill to establish a program under the coordination of the Office of Science and Technology Policy for improving the use of risk analysis by those Federal agencies concerned with regulatory decisions related to the protection of human life, health, and the environment.

● Mr. PACKWOOD. Mr. President, the Senate Committee on Commerce, Science, and Transportation on Monday, December 6, 1982, ordered reported title IV of S. 3044, with an amendment in the nature of a substitute.

Title IV is an essential element of this overall administration proposal to increase highway user fees. It represents the culmination of many years of work by this committee on the issues of truck size and safety. The title is generally supported by the trucking industry, the Teamsters, the business community, and the Department of Transportation. A section-by-section analysis follows this statement but I believe it is important to highlight several provisions.

First, the bill sets Federal standards for truck length and truck width. The Federal minimum standards for truck length on the interstate and the Federal aid primary system are:

First, 48 feet for a semitrailer unit operating in a truck tractor-semitrailer combination; and

Second, 28 feet for a semitrailer operating as a "double."

States are required to allow the operation of "doubles" on the highways. The Federal standard for truck widths is 102 inches. The provisions in the bill are similar to the provisions in S. 1402 which was reported from the Senate Commerce Committee on December 14, 1981. Hearings were held on S. 1402 on September 24, 1981, and December 3, 1982 on title IV of S. 3044.

The purpose of the truck-size provision is to bring needed uniformity to the myriad of conflicting State regulations that set limitations on truck sizes allowed on the Interstate Highway System. The current patchwork pattern of State regulations creates substantial burdens on interstate commerce. Motor carriers and independent owner operators are forced to utilize equipment and perform operations that are far less efficient than those that would be possible with the type of minimum standards set forth in this legislation. The result of the new standards will be increased efficiency, reduced fuel consumption, fewer truck trips on the interstate highways, and improved safe working conditions for truck drivers.

The Secretary of Transportation, Drew Lewis, submitted evidence for the December 3, 1982, Senate Commerce Committee hearing record on title IV of S. 3044 that these provisions would save the trucking industry over $3 billion annually in transportation costs. An earlier letter submitted to Congressman GLENN ANDERSON, Democrat from California, by Charles Swinburn, Deputy Assistant Secretary for Policy and International Affairs, roughly estimated the transportation savings as a result of these truck-size provisions to be approximately $2.5 billion annually, with a cost impact on

the highway system of $254 million annually.

Further, the provision requiring States to allow trucks 102 inches in width to operate on the Federal aid system will have an important impact on productivity the trucking industry in many States including Oregon, my home State. Currently States are prohibited from authorizing trucks on the highway which are wider than 96 inches unless the State law in effect on July 1, 1956 authorized wider trucks.

The committee believed that present Federal law on truck width is too restrictive. The inefficiencies resulting from current law were made clear in testimony from truckers and shippers, particularly the forest products industry. For example, plywood, as well as other products, come in pallets which have dimensions of 4 feet by 8 feet. This means that in States where truck widths are restricted to 96 inches, one can load only one pallet in a closed van. If the van were only a few inches wider, two pallets could be loaded side by side. Obviously, if slightly wider trucks could operate on the Interstate System, productivity and fuel efficiency would be greatly increased. Further, an increase in the width of trucks to 102 inches would not negatively impact safety. Buses are currently permitted under Federal law to operate at 102 inches in width on a nationwide basis. The operation of wider trucks has been thoroughly studied by the Federal Government in 1964, 1973, and as recently as 1979 with the conclusion that 102 inch wide vehicles are as safe as 96-inch-wide vehicles. The Michigan Highway Safety Research Institute issued a study, December 1980, on the safety of double bottom tankers and recommended that the truck width be increased to 102 inches to improve the stability and rollover problems associated with trucks.

Second, the bill contains important provisions which will enhance motor carrier safety. This has been an issue of considerable concern to the committee for several years. Hearings on motor carrier safety legislation were conducted by this committee during both the 95th Congress and the 96th Congress. These hearings clearly demonstrated the need for comprehensive restructuring of regulation in the commercial motor vehicle safety area. During the 96th Congress, S. 1390—the Commercial Motor Vehicle Safety Act—introduced by my distinguished colleague, Senator PERCY, was reported out by the Commerce Committee and overwhelmingly passed the full Senate on February 20, 1980.

In title IV of S. 3044, the committee has adopted the provisions of S. 1390 with only minor modifications. These provisions, which expand upon the motor carrier safety provisions included in the administration's proposal, provide a systematic and integrated approach to remedying the present regulatory deficiencies in the commercial motor vehicle safety area.

The provisions of the committee's reported amendment to title IV:

First, give the Department of Transportation (DOT) authority to promulgate comprehensive safety rules and regulations;

Second, establish a program through which DOT can provide grants to States for enforcement of motor carrier safety regulations;

Third, expand DOT's authority to prosecute safety violations and provide for increased penalty levels; and

Fourth, provide protection for employees who report safety violations.

These provisions are an important component of the overall motor carrier safety reforms contained in S. 3044.

Third, title IV of S. 3044, as amended, authorizes the Secretary of Transportation to set lower levels of financial responsibility than currently required in section 30 of the Motor Carrier Act of 1980. The high levels of insurance required by the Motor Carrier Act were agreed to without the benefit of hearings or study. The insurance industry, small truckers, and small business all opposed section 30 of the Motor Carrier Act of 1980. The language in the staff working draft will assure protection of the public and will assure that a sensible and practical regulatory scheme is adopted. The language is supported by DOT, the insurance industry, and small business.

Fourth, title IV increases airport development spending $475,000,000 over the next 3 years, 1983-85. These levels will create an additional 12,000 jobs in both 1983 and 1984 and an additional 4,725 jobs in 1985.

I ask unanimous consent that the text of title IV of S. 3044 as reported by the Commerce Committee, and a section-by-section analysis of that title, be printed in the RECORD immediately following this statement.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

TITLE IV, S. 3044—COMMERCIAL MOTOR VEHICLE SAFETY

DEFINITIONS

SEC. 401. For purposes of this title, unless the context otherwise requires, the term—

(1) "commerce" means trade, traffic, or transportation within the jurisdiction of the United States between a place in a State and a place outside of such State, or which affects trade, traffic, or transportation between a place in a State and a place outside of such State;

(2) "commercial motor vehicle" means any self-propelled or towed vehicle used on the highways in commerce principally to transport passengers or cargo—

(A) if such vehicle has a gross vehicle weight rating of 10,000 or more pounds;

(B) if such vehicle is designed to transport more than 10 passengers, including the driver; or

(C) if such vehicle is used in the transportation of materials found by the Secretary to be hazardous for the purposes of the Hazardous Materials Transportation Act, as amended (49 U.S.C. 1801 et seq.);

(3) "employee" means—

(A) a driver of a commercial motor vehicle (including an independent contractor while in the course of personally operating a commercial motor vehicle);

(B) a mechanic;

(C) a freight handler; or

(D) any individual other than an employer;

who is employed by a commercial motor carrier and who in the course of his employment directly affects commercial motor vehicle safety, but such term does not include an employee of the United States, any State, or a political subdivision of a State who is acting within the course of such employment;

(4) "employer" means any person engaged in a business affecting commerce who owns or leases a commercial motor vehicle in connection with that business, or assigns employees to operate it in commerce, but such term does not include the United States, any State, or a political subdivision of a State;

(5) "person" means one or more individuals, partnerships, associations, corporations, business trusts, or any other organized group of individuals;

(6) "Secretary" means the Secretary of Transportation; and

(7) "State" means a State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, Guam, or the Commonwealth of the Northern Marianas.

DUTIES

SEC. 402. Each employer and employee shall comply with the safety and health rules, regulations, standards, and orders issued pursuant to this title which are applicable to his own actions and conduct.

REGULATORY AUTHORITY AND STANDARDS

SEC. 403. (a) The Secretary shall establish and revise such rules, regulations, standards, and orders as may be necessary in order to further the purpose of this title. The Secretary shall where practicable consider costs and benefits before revising existing rules, regulations, standards, and orders or before promulgating new rules, regulations, standards, or orders. Such rules, regulations, standards, and orders shall be directed toward assuring that—

(1) commercial motor vehicles are safely maintained, equipped, loaded, and operated;

(2) the responsibilities imposed upon drivers of commercial motor vehicles do not impair a driver's ability to operate safely;

(3) the physical condition of drivers of commercial motor vehicles is adequate to enable them to drive safely; and

(4) the operation of commercial motor vehicles does not create deleterious effects on the physical condition of such drivers.

(b)(1) The Secretary shall promulgate any such rule or regulation within a period of 1 year after the date of commencement of any proceeding respecting such rule or regulation. If the Secretary determines that any such promulgation will not be completed within such time period, the Secretary shall immediately notify the Congress and shall furnish the reasons for the delay, information regarding the resources assigned, and the projected completion date, for any such proceeding. If such rule or regulation has

not been promulgated within 1 year after the date of the commencement of any proceeding with respect to such rule or regulation, the Secretary shall supply the Congress with current data regarding the information specified in the preceding sentence, and shall provide the Congress with such information at the end of every 60-day period thereafter during which the proceeding remains incomplete.

(2) All rules, regulations, standards, and orders issued under this section shall be promulgated in accordance with section 553 of title 5, United States Code (without regard to sections 556 and 557 of such title), except that the time periods specified in paragraph (1) of this subsection shall apply to such promulgation.

(c) The Secretary may waive in whole or in part application of any rule, regulation, standard, or order established under this section with respect to any person or class of persons if he determines that such waiver is in the public interest and is consistent with the safe operation of commercial motor vehicles. Any waiver permitted under this subsection shall be published in the Federal Register, together with the reasons for such waiver. Any final agency action taken under this section is subject to judicial review as provided in chapter 7 of title 5, United States Code.

(d)(1) The Secretary and the Director of the National Institute for Occupational Safety and Health shall, in consultation with the Secretary of Labor, undertake a study of health hazards to which employees engaged in the operation of commercial motor vehicles are exposed, and shall develop such materials and information as are necessary to enable such employees to carry out their employment in a place and manner free from recognized hazards that are causing or are likely to cause death or serious physical harm. The study shall include recommendations regarding the most appropriate method for regulating and protecting the health of operators of commercial motor vehicles. Such study shall be submitted to the Congress within 1 year after the date of enactment of this title.

(2) There are authorized to be appropriated out of the Highway Trust Fund to the Secretary for fiscal year 1984 not to exceed $1,500,000 for purposes of carrying out the provisions of this subsection.

(e) The Secretary, the Director of the National Institute for Occupational Safety and Health, and the Secretary of Labor shall coordinate their activities to insure adequate protection of the safety and health of operators of commercial motor vehicles. Such Secretaries and Director shall attempt to minimize paperwork burdens, to assure maximum coordination, and to avoid overlap or the imposition of undue burdens on persons subject to such rules, regulations, standards, and orders.

GENERAL POWERS

SEC. 404. (a) The Secretary is authorized to conduct, directly or indirectly, such research, development, demonstrations, and training activities as are considered appropriate to develop rules, regulations, standards, and orders authorized to be promulgated under section 403 of this title, to design and develop improved enforcement procedures and technologies, and to familiarize affected persons with such rules, regulations, standards, and orders.

(b) In carrying out his functions under this title, the Secretary is authorized to perform such acts including conducting investigations and inspections, compiling statistics, making reports, issuing subpenas, requiring production of documents, records, and property, taking depositions, holding hearings, prescribing recordkeeping and reporting requirements, and carrying out and contracting for such research, development, testing, evaluation, and training as he determines necessary to carry out the provisions of this title, or rules, regulations, standards, or orders issued pursuant thereto. With respect to the provisions of this title, if the Secretary approves a plan pursuant to section 411 of this title, the Secretary may delegate to a State such functions respecting the enforcement (including investigations) of the provisions of this title or rules, regulations, standards, or orders issued pursuant thereto as he determines appropriate to carry out the provisions of this title.

INSPECTIONS AND WARRANTS

SEC. 405. (a)(1) To carry out the Secretary's responsibilities under this title, agents of the Secretary are authorized to enter upon, inspect, and examine facilities, equipment, operations, and pertinent records without advance notice, in accordance with the provisions of paragraph (2) of this subsection. Any such agent of the Secretary shall display proper credentials when requested and may consult with employers and employees and their duly authorized representatives, and shall offer them a right of accompaniment.

(2)(A) A warrant under this paragraph shall be required for any entry or administrative inspection (including impoundment of motor vehicles or motor vehicle equipment) authorized by this section, except if such entry or inspection is—

(i) with the consent of the employer or agent of the employer in charge of the business, establishment, or premises;

(ii) in situations involving inspection of motor vehicles where there is reasonable cause to believe that the mobility of the motor vehicle makes it impractical to obtain a warrant;

(iii) in any other exceptional or emergency circumstance where time or opportunity to apply for a warrant is lacking;

(iv) for access to and examination of books, records, and any other documentary evidence which can be easily altered, manufactured, or falsified; and

(v) in any other situations where a warrant is not constitutionally required.

(B) Issuance and execution of administrative inspection warrants shall be as follows:

(i) Any judge of the United States or of a State court of record, or any United States magistrate, may, within his territorial jurisdiction, and upon proper oath or affirmation showing probable cause, issue warrants for the purpose of conducting administrative inspections authorized by this section and of impoundment of motor vehicles or motor vehicle equipment appropriate to such inspections. For the purposes of this section, the term "probable cause" means a valid public interest in the effective enforcement of this title, or rules, regulations, standards, or orders issued thereunder sufficient to justify administrative inspections of the area, establishment, premises, records, or motor vehicles, or contents thereof, in the circumstances specified in the application for the warrant.

(ii) A warrant shall be issued only upon an affidavit of an officer, or representative of the Secretary having knowledge of the facts alleged, sworn to before the judge or magistrate and establishing the grounds for issuing the warrant. If the judge or magistrate is satisfied that gounds for the application exist or that there is a reasonable basis for believing they exist, he shall issue a warrant identifying the area, establishment, premises, or motor vehicle to be inspected, the purpose of such inspection, and, where appropriate, the type of property to be inspected, if any. The warrant shall—

(I) identify the items or type of property to be impounded, if any;

(II) be directed to a person authorized under this section to execute it;

(III) state the grounds for its issuance and the name of the person or persons whose affidavit has been taken in support thereof;

(IV) command the person to whom it is directed to inspect the area, establishment, premises, records, or motor vehicle identified for the purpose specified, and where appropriate, shall direct the impoundment of the property specified;

(V) direct that it be served during the hours specified in it; and

(VI) designate the judge or magistrate to whom it shall be returned.

(iii) A warrant issued pursuant to this section must be executed and returned within 10 days of its date unless, upon a showing by the Secretary of a need therefor, the judge or magistrate allows additional time in the warrant. If property is impounded pursuant to a warrant, the person executing the warrant shall give the person from whom or from whose premises the property was taken a copy of the warrant and a receipt for the property taken or shall leave the copy and receipt at the place from which the property was taken. The return of the warrant shall be made promptly and shall be accompanied by a written inventory of any property taken. The inventory shall be made in the presence of the person executing the warrant and of the person from whose possession or premises the property was taken, if they are present, or in the presence of at least one credible person other than the person making such inventory, and shall be verified by the person executing the warrant. The judge or magistrate, upon request, shall deliver a copy of the inventory to the person from whom or from whose premises the property was taken and the applicant for the warrant.

(iv) The judge or magistrate who has issued a warrant under this section shall attach to the warrant a copy of the return and all papers filed in connection therewith and shall file them with the clerk of the district court of the United States for the judicial district in which the inspection was made.

DUTY TO INVESTIGATE COMPLAINTS; PROTECTION OF COMPLAINANTS

SEC. 406. (a) The Secretary shall timely investigate any nonfrivolous written complaint alleging that a material violation of any rule, regulation, standard, or order issued under this title is occurring or has occurred within the preceding 60 days. The complainant shall be timely notified of findings resulting from such investigation. The Secretary shall not be required to conduct separate investigations of duplicative complaints.

(b) Notwithstanding the provisions of section 552 of title 5, United States Code, the Secretary shall not disclose the identity of complainants unless it is determined that such disclosure is necessary to prosecute a violation. If disclosure becomes necessary, the Secretary shall take every practical measure within his authority to assure that the complainant is not subject to harassment, intimidation, disciplinary action, dis-

crimination, or financial loss as a result of such disclosure.

PENALTIES

SEC. 407. (a) If the Secretary finds that a violation of sections 402 through 417 of this title has occurred, the Secretary shall issue a written notice to the violator. Such notice shall describe with reasonable particularity the nature of the violation found and the provision which has been violated. The notice shall fix a reasonable time for abatement of the violation, specify the appropriate civil penalty, if any, and specify the actions which the Secretary proposes to be taken in order to avoid subsequent similar violations. The notice shall indicate that the violator may, within 15 days of service, notify the Secretary of his intention to contest the matter. In the event of a contested notice, the Secretary shall afford such violator an opportunity for a hearing, pursuant to section 554 of title 5, United States Code, following which the Secretary shall issue an order affirming, modifying, or vacating the notice of violation.

(b) Except as hereinafter provided, any person who is determined by the Secretary to have committed an act which is a violation of recordkeeping requirements issued by the Secretary pursuant to this title shall be liable to the United States for a civil penalty not to exceed $500 for each offense. Each day of a violation shall constitute a separate offense, except that the total of all civil penalties assessed against any violator for all offenses relating to any single recordkeeping violation shall not exceed $10,000. If the Secretary determines that a substantial health or safety violation exists or has occurred which could reasonably lead to, or has resulted in, serious personal injury or death, he may assess a civil penalty not to exceed $10,000 for each offense: *Provided, however,* That except for recordkeeping violations, no civil penalty provided under this title shall be assessed against an employee for violations of this title unless the employee is an operator of a commercial motor vehicle and the Secretary determines that such employee's actions constituted gross negligence or reckless disregard for safety, in which case such employee shall be liable for a civil penalty not to exceed $1,000. The amount of any civil penalty, and a reasonable time for abatement of the violation, shall by written order be determined by the Secretary, taking into account the nature, circumstances, extent, and gravity of the violation committed and, with respect to the violation, the degree of culpability, history of prior offenses, ability to pay, effect on ability to continue to do business, and such other matters as justice and public safety may require. In each case, the assessment shall be calculated to induce further compliance.

(c) The Secretary may require any violator served with a notice of violation to post a copy of such notice or statement thereof in such place or places and for such duration as the Secretary may determine appropriate to aid in the enforcement of this title.

(d) If, upon inspection or investigation, the Secretary determines that a violation, or combination of violations, poses an imminent hazard to safety, the Secretary shall order a vehicle or employee operating such vehicle out of service or order an employer to cease all or part of his commercial motor vehicle operations. In making any such order, the Secretary shall impose no restriction on any employee or employer beyond that required to abate the hazard. Subsequent to the issuance of such order, opportunity for review shall be provided in accordance with section 554 of title 5, United States Code, except that such review shall occur not later than 10 days following issuance of such order.

(e) Any person other than an employee who knowingly and willfully violates any provision of this title or who knowingly and willfully makes any false statement or representation required under this title shall, upon conviction, be subject for each offense to a fine not to exceed $25,000 or imprisonment for a term not to exceed 1 year, or both: *Provided, however,* That if such violator is an employee he shall only be subject to penalty if while operating a commercial motor vehicle his activities have led or could have led to death or serious injury, in which case he shall be liable, upon conviction, for a fine not to exceed $2,500.

(f) The Secretary shall promulgate regulations establishing penalty schedules designed to induce timely compliance for persons failing to comply with the requirements set forth in notices and orders.

(g) Any aggrieved person who, after a hearing, is adversely affected by a final order issued under this section may, within 30 days, petition for review of the order in the United States court of appeals in the circuit wherein the violation is alleged to have occurred or where he had his principal place of business or residence, or in the United States Court of Appeals for the District of Columbia Circuit. Review of the order shall be based on a determination of whether the Secretary's findings and conclusions were supported by substantial evidence, or otherwise not in accordance with law. No objection that has not been urged before the Secretary shall be considered by the court, unless reasonable grounds existed for failure or neglect to do so. The commencement of proceedings under this subsection shall not, unless ordered by the court, operate as a stay of the order of the Secretary.

(h) The Secretary may obtain enforcement, including injunctive relief, of any penalties or orders issued under this section by applying to the United States district court for the district where the violation occurred or where the cited party has his principal place of business or residence. In addition to granting enforcement, the district court may assess an appropriate penalty for noncompliance and award such further relief as justice and public safety may require.

(i) All penalties and fines imposed under this section shall be deposited into the Treasury as miscellaneous receipts.

(j) In any action brought under this section, subpenas for witnesses who are required to attend a United States district court may run into any other district.

(k) In any proceeding for criminal contempt for violation of an injunction or restraining order issued under this section, trial shall be by the court, or, upon demand of the accused, by a jury, conducted in accordance with the provisions of rule 42(b) of the Federal Rules of Criminal Procedure.

REPRESENTATION BEFORE THE COURTS

SEC. 408. Except as provided in section 518(a) of title 28, United States Code, relating to litigation before the Supreme Court, the General Counsel of the Department of Transportation may appear for and represent the Secretary in all proceedings and in any civil litigation brought under this title. Prior to making any such appearance and representation, the General Counsel of the Department of Transportation shall consult with and inform the Attorney General of the United States of his activities pursuant to this section.

PROTECTION OF EMPLOYEES

SEC. 409. (a) No person shall discharge, discipline, or in any manner discriminate against any employee with respect to the employee's compensation, terms, conditions, or privileges of employment because such employee (or any person acting pursuant to a request of the employee) has filed any complaint or instituted or caused to be instituted any proceeding under or related to this title or other authorities of the Secretary relating to commercial motor vehicle safety, or has testified or is about to testify in any such proceeding, or because such employee has exercised, on behalf of himself or others, any right afforded by this title.

(b) No person shall discharge, discipline, or in any manner discriminate against an employee with respect to the employee's compensation, terms, conditions, or privileges of employment for refusing to operate a vehicle when such operation constitutes a violation of any Federal rules, regulations, standards, or orders applicable to commercial motor vehicle safety or health, or because of the employee's reasonable apprehension of serious injury to himself or the public due to the unsafe condition of such equipment. The unsafe conditions causing the employee's apprehension of injury must be of such nature that a reasonable person, under the circumstances then confronting the employee, would conclude that there is a bona fide danger of an accident, injury, or serious impairment of health, resulting from the unsafe condition. In order to qualify for protection under this subsection, the employee must have sought from his employer, and have been unable to obtain, correction of the unsafe condition.

(c)(1) Any employee who believes he has been discharged, disciplined, or otherwise discriminated against by any person in violation of subsection (a) or (b) of this section may, within 180 days after such alleged violation occurs, file (or have filed by any person on the employee's behalf) a complaint with the Secretary of Labor alleging such discharge, discipline, or discrimination. Upon receipt of such a complaint, the Secretary of Labor shall notify the person named in the complaint of the filing of the complaint.

2(A) Within 60 days of receipt of a complaint filed under paragraph (1) of this subsection, the Secretary of Labor shall conduct an investigation and determine whether there is reasonable cause to believe that the complaint has merit and notify the complainant and the person alleged to have committed a violation of this section of his findings. Where the Secretary of Labor has concluded that there is reasonable cause to believe that a violation has occurred, he shall accompany his findings with a proposed order providing the relief prescribed by subparagraph (B) of this paragraph. Thereafter, either the person alleged to have committed the violation or the complainant may, within 30 days, file objections to the proposed order and request a hearing on the record. Such hearings shall be expeditiously conducted. Where a hearing is not timely requested, the proposed order shall be deemed a final order which is not subject to judicial review. Upon the conclusion of such hearing, the Secretary of Labor shall issue a final order within 120 days. In the interim, such proceedings may be terminated at any time on the basis of a settlement

agreement entered into by the Secretary of Labor, the complainant, and the person alleged to have committed the violation.

(B) If, in response to a complaint filed under paragraph (1) of this subsection, the Secretary of Labor determines that a violation of subsection (a) or (b) of this section has occurred, the Secretary of Labor shall order (i) the person who committed such violation to take affirmative action to abate the violation, (ii) such person to reinstate the complainant to the complainant's former position together with the compensation (including back pay), terms, conditions, and privileges of the complainant's employment, (iii) compensatory damages, and (iv) where appropriate, exemplary damages. If such an order is issued, the Secretary of Labor, at the request of the complainant, may assess against the person against whom the order is issued a sum equal to the aggregate amount of all costs and expenses (including attorney's fees) reasonably incurred, as determined by the Secretary of Labor, by the complainant for, or in connection with, the bringing of the complaint upon which the order was issued.

(d)(1) Any person adversely affected or aggrieved by an order issued after a hearing under subsection (c) of this section may obtain review of the order in the United States Court of Appeals for the circuit in which the violation, with respect to which the order was issued, allegedly occurred, or the circuit in which such person resided on the date of such violation. The petition for review must be filed within 60 days from the issuance of the Secretary of Labor's order. Such review shall be in accordance with the provisions of chapter 7 of title 5, United States Code, and shall be heard and decided expeditiously.

(2) An order of the Secretary of Labor, with respect to which review could have been obtained under this section, shall not be subject to judicial review in any criminal or other civil proceeding.

(e) Whenever a person has failed to comply with an order issued under subsection (c)(2) of this section, the Secretary of Labor shall file a civil action in the United States district court for the district in which the violation was found to occur in order to enforce such order. In actions brought under this subsection, the district courts shall have jurisdiction to grant all appropriated relief, including injunctive relief, reinstatement, and compensatory and exemplary damages. Civil actions brought under this subsection shall be heard and decided expeditiously.

GRANTS TO STATES

SEC. 410. Under the terms and conditions of this title, and subject to the availability of funds, the Secretary is authorized to make grants to States for the development or implementation of programs for the enforcement of Federal rules, regulations, standards, and orders applicable to commercial motor vehicle safety and compatible State rules, regulations, standards, and orders.

STATE ENFORCEMENT

SEC. 411. (a)(1) The Secretary shall formulate procedures for any State to submit a plan whereby the State agrees to adopt, and to assume responsibility for enforcing, rules, regulations, standards, and orders in compliance with this title. Such plan shall be approved by the Secretary if, in his judgment, the plan is adequate to promote the objectives of this title, and the plan—

(A) designates the State motor vehicle safety agency responsible for administering the plan throughout the State;

(B) contains satisfactory assurances that such agency has or will have the legal authority, resources, and qualified personnel necessary for the enforcement of such rules, regulations, standards, and orders;

(C) gives satisfactory assurances that such State will devote adequate funds to the administration of such plan and enforcement of such rules, regulations, standards, and orders;

(D) provides a right of entry and inspection sufficient to enforce the provisions of this title;

(E) provides civil penalty procedures, rights, and remedies comparable to those set forth in section 407 of this title;

(F) provides that all reports required pursuant to this title be submitted to the State agency, and that such agency make available upon request to the Secretary all such reports;

(G) provides that such State agency will adopt such uniform reporting requirements and use such uniform forms for recordkeeping, inspections, and investigations as may be established and required by the Secretary; and

(H) requires registrants of commercial motor vehicles to make a declaration of knowledge of applicable Federal and State safety rules, regulations, standards, and orders.

(2) If a plan submitted under paragraph (1) of this subsection is rejected, the Secretary shall provide the State a written explanation of his action and shall permit the State to modify and resubmit its proposed plan for approval, in accordance with the procedures formulated in such paragraph.

(b) The Secretary shall, on the basis of reports submitted by the State agency, and on his own inspections, make a continuing evaluation of the manner in which each State with a plan approved under this section is carrying out such plan. Whenever the Secretary finds, after affording due notice and opportunity for comment, that a State plan previously approved is not being followed or that it has become inadequate to assure the enforcement of rules, regulations, standards, or orders issued under this title, he shall notify the State of withdrawal of approval of such plan. Upon receipt of such notice, such plan shall cease to be in effect. Any State aggrieved by a determination of the Secretary pursuant to this subsection may seek judicial review pursuant to chapter 7 of title 5, United States Code. The State may, however, retain jurisdiction in any case commenced before the withdrawal of the plan whenever the issues involved do not directly relate to the reasons for the withdrawal of approval of the plan.

(c) The Secretary shall not approve any plan under this section which does not provide that the aggregate expenditure of funds of the State and political subdivisions thereof, exclusive of Federal funds, for commercial motor vehicle safety programs will be maintained at a level which does not fall below the average level of such expenditures for its last 2 full fiscal years preceding the date of enactment of this title.

STATE REGULATIONS

SEC. 412. (a) Except as may otherwise be provided in this or any other law, any State agency may adopt additional or more stringent safety rules, regulations, standards, or orders for commercial motor vehicle safety if such rules, regulations, standards, or orders are not inconsistent with the Federal rules, regulations, standards, and orders issued under this title.

(b) Nothing in this title shall affect existing hour-of-service regulations of any State applying to commercial motor vehicle operations occuring wholly within that State, unless the Secretary affirmatively finds upon review of a State's hours-of-service regulations that such regulations (1) materially diminish commercial motor vehicle safety or the health and safety of employees, (2) are not required by compelling local conditions, or (3) unduly burden interstate commerce. If the Secretary makes such an affirmative determination, he may require such State to adopt Federal hours-of-service regulations.

FEDERAL SHARE OF COSTS

SEC. 413. By grants authorized under this title, the Secretary shall reimburse any State an amount not to exceed 80 percent of the costs incurred by that State in that fiscal year in the development and implementation of programs to enforce commercial motor vehicle rules, regulations, standards, or orders adopted pursuant to this title. The funds of the State and political subdivisions thereof which are required to be expended under section 411(c) of this title shall not be considered to be part of the non-Federal share. The Secretary is authorized to allocate, among the States whose applications for grants have been approved, those amounts appropriated for grants to support such programs pursuant to such criteria as may be established.

AUTHORIZATIONS

SEC. 414. To carry out the purposes of sections 410 and 411 of this title, there is authorized to be appropriated out of the Highway Trust Fund not to exceed $10,000,000 in the fiscal year ending September 30, 1984, not to exceed $20,000,000 in the fiscal year ending September 30, 1985, not to exceed $30,000,000 in the fiscal year ending September 30, 1986, not to exceed $40,000,000 in the fiscal year ending September 30, 1987, and not to exceed $50,000,000 in the fiscal year ending September 30, 1988. Appropriated funds authorized by this section shall be used to reimburse to States the Federal pro rata share of costs incurred. Grants made pursuant to the authority of this title shall be for periods not to exceed 1 fiscal year, ending at the end of a fiscal year.

ANNUAL REPORT

SEC. 415. As part of the Secretary's annual report to the Congress required by section 12 of the Department of Transportation Act (49 U.S.C. 1658), the Secretary shall make a written report to the Congress concerning his efforts and his current plans to upgrade the safety and health of operators of commercial motor vehicles. The report shall include, but not be limited to, an evaluation of commercial motor vehicle safety or health programs of the Department of Transportation, an outline of problem areas and appropriate steps to alleviate them, and recommendations for closer coordination and cooperation among agencies of the Federal Government and between the Federal Government and the States to enforce the rules, regulations, standards, and orders issued pursuant to this title.

APPLICABILITY

SEC. 416. Nothing in this title shall apply to the operation of any vehicles engaged in farming activities and logging operations as defined by the Secretary.

COMMERCIAL MOTOR VEHICLE SAFETY ADVISORY COMMITTEE

SEC. 417. (a)(1) Not later than 12 months after the date of enactment of this title, the Secretary shall establish a Commercial Motor Vehicle Safety Advisory Committee and appoint the initial members of the Committee. The Committee shall be composed of the Secretary and 15 members, each of whom shall be experienced in the safety regulation of commercial motor vehicles or technically qualified by training, experience or knowledge to evaluate commercial motor vehicle rules or regulations. The Committee shall be appointed by the Secretary, after consultation with public and private agencies and organizations concerned with commercial motor vehicle safety. Members shall include representatives of State governments, the motor carrier industry, shippers, union drivers and independent owner-operators, and the public.

(2) A Chairman shall be selected by a majority of the members of the Committee.

(3) Each member appointed by the Secretary shall hold office for a term of 3 years, except that (A) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term; (B) the terms of office of members first taking office after the date of enactment of this title shall expire as follows: Five at the end of 1 year after the date such Committee members are appointed by the Secretary; five at the end of 2 years after the date such Committee members are appointed by the Secretary; and five at the end of 3 years after the date such Committee members are appointed, and designated by the Secretary at the time of appointment; and (C) the term of any member shall be extended until the date on which the successor's appointment is effective. None of the members appointed by the Secretary who has served a 3-year term, other than Federal officers or employees, shall be eligible for reappointment within 1 year following the end of his preceding term.

(4) Members of the Committee other than Federal employees may be compensated at a rate to be fixed by the Secretary, but not to exceed the daily equivalent of the maximum annual rate of basic pay then currently payable under the General Schedule under section 5332 of title 5, United States Code, for each day (including traveltime) when engaged in the actual duties of the Committee. All members, while away from their homes or regular places of business, may be allowed travel expenses, including per diem in lieu of subsistence as authorized by section 5703 of title 5, United States Code, for persons in the Government service employed intermittently. Payments under this section shall not render members of the Committee employees or officials of the United States for any purpose.

(b) The Advisory Committee shall advise, consult with, and make recommendations to the Secretary on matters relating to the activities and functions of the Department in the field of commercial motor vehicle safety. The Committee is authorized to review research projects or programs submitted to or recommended by it in the field of commercial motor vehicle safety and recommend to the Secretary any such projects which it believes show promise of making valuable contributions to human knowledge with respect to the cause and prevention of commercial motor vehicle accidents. The Committee is also authorized to review, prior to issuance, rules, regulations, standards, and orders proposed to be issued by order of the Secretary under the provisions of this title and to make recommendations thereon. Such recommendations shall be published in connection with the Secretary's determination or order.

(c) The Committee shall meet with the Secretary (or his designee) at least once every year.

(d) There are authorized to be appropriated for each of the fiscal years ending on September 30, 1984, 1985 and 1986 not to exceed $125,000 for purposes of carrying out the provisions of this section.

AUTHORIZATION OF APPROPRIATIONS

SEC. 418. For the purposes of carrying out the provisions of title 23, United States Code, the following sums are hereby authorized to be appropriated out of the Highway Trust Fund:

(1) for carrying out sections 307(a) and 403 of title 23, United States Code (relating to highway safety research and development) by the Federal Highway Administration, $13,000,000 per fiscal year for each of the fiscal years ending September 30, 1985, September 30, 1986, September 30, 1987, and September 30, 1988;

(2) for carrying out section 402 of title 23, United States Code (relating to highway safety programs) by the National Highway Traffic Safety Administration, $100,000,000 per fiscal year for each of the fiscal years ending September 30, 1985, September 30, 1986, September 30, 1987, and September 30, 1988; and

(3) for carrying out section 403 of title 23, United States Code (relating to highway safety research and development) by the National Highway Traffic Safety Administration, $31,000,000 per fiscal year for each of the fiscal years ending September 30, 1985, September 30, 1986, September 30, 1987, and September 30, 1988.

APPORTIONMENT

SEC. 419. (a) Section 401 of title 23, United States Code, is amended by striking the second sentence.

(b) Section 402(c) of title 23, United States Code, is amended by striking ", except that the apportionments to the Virgin Islands, Guam, and American Samoa shall not be less than one-third of 1 per centum of the total apportionment".

NATIONAL UNIFORM STATE REGULATION

SEC. 420. (a) There is established in the Department of Transportation a working group, composed of the Secretary (or an official of the Department appointed by the Secretary) and not to exceed 51 members to be appointed by the Secretary. The Secretary shall select the Chairman of the Committee from among the Committee members. The appointed members shall be selected from among representatives of various State governments concerned with vehicle registration, fuel tax, and third structure tax requirements of States. The term of members shall not exceed 18 months.

(b)(1) The working group shall devise, consult with, and make recommendations to, the Secretary regarding uniform State regulations of interstate motor carriers. The working group is authorized to develop and recommend to the Secretary standards for uniform State regulation of interstate motor carriers in regard to vehicle registration, fuel tax, and third structure tax requirements. These standards shall include:

(A) standardized procedures and forms;

(B) base State certification;

(C) single State unit for filings, applications, and permits;

(D) payment to the base State of fees and taxes due other States;

(E) equitable distribution of revenues; and

(F) a limit on fees paid for identification stickers, plates or other indicia.

Such standards shall not define or include the amounts of any State registration fees, fuel taxes, or third structure taxes.

(2) The working group shall also:

(A) define an approach to resolve any discrepancies in States' implementation of standards ultimately promulgated by the Secretary;

(B) identify permanent bodies to develop and recommend future modification to such standards; and

(C) consult with public and private interests contributing to, affected by, or concerned with State motor carrier requirements during the development of the standards.

(c) Members of the working group who are not officers or employees of the United States shall, while attending meetings or conferences of such working group or otherwise engaged in the business of such working group, be entitled to receive compensation at a rate fixed by the Secretary, but not exceeding $100 per diem, including travel time. While away from their homes or regular places of business, members of the working group may be allowed travel expenses, including per diem in lieu of subsistence, as authorized in section 5703 of title 5, United States Code, for persons in the Government service employed intermittently. Payments under this subsection shall not render members of the working group employees or officials of the United States for any purpose.

(d) The recommendations required by subsection (b) of this section shall be submitted to the Secretary within 18 months of the date of enactment of this title.

(e) The Secretary may initiate rulemaking after the Secretary has received such recommendations in order to implement those recommendations found acceptable and in compliance with the criteria defined in subsection (b)(1) of this section.

(f) If the working group fails to make such recommendations within 18 months after the date of enactment of this title, the Secretary may develop such standards and initiate rulemaking to promulgate regulations implementing those standards.

MINIMUM FINANCIAL RESPONSIBILITY FOR MOTOR CARRIERS

SEC. 421. (a) Section 30(a)(2) of the Motor Carrier Act of 1980 (Public Law 96-296; 94 Stat. 820) is amended to read as follows:

"(2) The minimum level of financial responsibility established by the Secretary under paragraph (1) of this subsection for any vehicle shall not be less than $750,000, except that the Secretary may by regulation reduce such amount for any class of vehicles or operations if the Secretary finds that such reduction will not adversely affect public safety and will prevent a serious disruption in transportation service.".

(b) Section 30(b) of the Motor Carrier Act of 1980 (Public Law 96-296; 94 Stat. 821) is amended to read as follows:

"(b)(1) The Secretary shall establish regulations to require minimum levels of financial responsibility sufficient to satisfy liability amounts (to be determined by the Secretary) covering public liability, property damage, and environmental restoration for the transportation of hazardous materials (as defined by the Secretary), oil or hazard-

ous substances (as defined by the Administrator of the Environmental Protection Agency), or hazardous wastes (as defined by the Administrator of the Environmental Protection Agency) by motor vehicle in interstate commerce, foreign commerce, or intrastate commerce.

"(2) The minimum level of financial responsibility established by the Secretary under paragraph (1) of this subsection for any vehicle transporting in interstate commerce, foreign commerce, or intrastate commerce—

"(A) hazardous substances (as defined by the Administrator of the Environmental Protection Agency), in cargo tanks, portable tanks, or hopper-type vehicles, with capacities in excess of 3,500 water gallons;

"(B) in bulk Glass A and B explosives, poison gas, liquefied compressed gas, or compressed gas; or

"(C) a large quantity of radioactive materials;

shall not be less than $5,000,000, except that the Secretary may by regulation reduce such amount for any class of vehicles or operations if the Secretary finds that such reduction will not adversely affect public safety and will prevent a serious disruption in transportation service.

"(3) The minimum level of financial responsibility established by the Secretary under paragraph (1) of this subsection for any vehicles transporting in interstate, foreign, or intrastate commerce any material, oil, substance, or waste not subject to the provisions of paragraph (2) of this subsection shall not be less than $1,000,000, except that—

"(A) the Secretary may by regulation reduce such amount for any class of vehicles or operations if the Secretary finds that such reduction will not adversely affect public safety and will prevent a serious disruption in transportation service;

"(B) in the case of any class of vehicles transporting any such material, oil, substance, or waste in intrastate commerce other than in bulk, the Secretary, by regulation, may reduce such amount if the Secretary finds that such reduction will not adversely affect public safety; and

"(C) in the case of any class of vehicles transporting any such material, oil, substance, or waste in interstate commerce in quantities less than those requiring placarding under the Department of Transportation's hazardous materials regulations, the Secretary may by regulation reduce such amount if the Secretary finds that such reduction will not adversely affect public safety.

"(4) If, at the end of the one-year period beginning on the date of enactment of this Act, the Secretary has not established regulations to require minimum levels of financial responsibility as required by paragraph (1) of this subsection for any class of transportation of hazardous materials, oil, hazardous substances, or hazardous wastes by motor vehicle in interstate, foreign or intrastate commerce, the levels of financial responsibility for such class of transportation shall be the $5,000,000 amount set forth in paragraph (2) of this subsection or the $1,000,000 amount set forth in paragraph (3) of this subsection, as the case may be, until such time as the Secretary, by regulation, changes such amount under this subsection.".

(c) Section 30(f) of the Motor Carrier Act of 1980 (Public Law 96-296; 94 Stat. 823) is amended to read as follows:

"(f) This section shall not apply to motor vehicles having a gross vehicle weight rating (GVWR) less than 10,000 pounds, if such vehicles are not used to transport any quantity of Class A or B explosives, any quantity of poison gas, or a large quantity of radioactive materials in interstate or foreign commerce.".

COMMERCIAL MOTOR VEHICLE LENGTH LIMITATION

SEC. 422. (a) No State shall establish, maintain, or enforce any regulation of commerce which imposes at vehicle length limitation of less than 48 feet on the length of the semitrailer unit operating in a truck tractor-semitrailer combination, and of less than 28 feet on the length of any semitrailer or trailer operating in a truck tractor-semitrailer-trailer combination, on any segment of the National System of Interstate and Defense Highways or any other qualifying Federal-aid highway as designated by the Secretary, except with respect to such qualifying Federal-aid highways designated pursuant to subsection (e) of this section.

(b) Length limitations established, maintained, or enforced by the States under subsection (a) of this section shall apply solely to the semitrailer or trailer(s) and not to a truck tractor. No State shall establish, maintain, or enforce any regulation of commerce which imposes an overall length limitation on commercial motor vehicles operating in truck-tractor semitrailer or truck tractor semitrailer, trailer combinations. No State shall establish, maintain, or enforce any regulation of commerce which has the effect of prohibiting the use of trailers or semitrailers of such dimensions as those that were in actual and lawful use in such State on December 1, 1982. No state shall establish, maintain, or enforce any regulation of commerce which has the effect of prohibiting the use of existing trailers or semitrailers, of up to 28½ feet in length, in a truck tractor-semitrailer-trailer combination if those trailers or semitrailers were actually and lawfully operating on December 1, 1982 within a 65-foot overall length limit in any State.

(c) No State shall prohibit commercial motor vehicle combinations consisting of a truck tractor and two trailing units on any segment of the National System of Interstate and Defense Highways, or any other qualifying Federal-aid highway as designated by the Secretary, except with respect to such qualifying Federal-aid highway as designated by the Secretary, except with respect to such qualifying Federal-aid highways designated pursuant to subsection (e) of this section.

(d) The Secretary is authorized to establish rules to implement the provisions of this section, and to make such determinations as are necessary to accommodate specialized equipment (including, but not limited to, automobile transporters) subject to subsections (a) and (b) of this section.

(e) Subsections (a) and (c) of this section shall not apply to qualifying Federal-aid highways or segments of highways which are:

(1) designated by any State, in conformity with guidelines promulgated by the Secretary setting forth those specific factors that would significantly and adversely affect public safety on any such highways or segments of highways where subsections (a) or (c) of this section would otherwise be applicable; or

(2) specifically designated by the Secretary on the basis that public safety would be significantly and adversely affected if subsections (a) or (c) of this section were applicable to such specific highways or segments of highways.

(f) For the purposes of this section, "truck tractor" shall be defined as the noncargo carrying power unit that operates in combination with a semitrailer or trailer, except that a truck tractor and semitrailer engaged in the transportation of automobiles may transport motor vehicles on part of the power unit.

(g) The provisions of this section shall take effect 180 days after the date of enactment of this title.

COMMERCIAL MOTOR VEHICLE WIDTH REGULATION

SEC. 423. Notwithstanding any other provision of law, a State (other than the State of Hawaii) shall permit trucks of combinations thereof having a width of not more than 102 inches to operate over interstate highways, National Defense Highways, or any other qualifying Federal-aid highway as designated by the Secretary, with traffic lanes designed to be a width of 12 feet or more.

SAFETY-RELATED DEVICES

SEC. 424. The length and width limitations described in sections 422 and 423 of this title shall be exclusive of safety-related appendages, such as rear view mirrors, turn signal lamps, marker lamps, steps and handholds for entry and egress, flexible fender extensions, mudflaps and splash and spray suppressant devices load-induced tire bulge, energy conservation devices or designs, refrigeration units or air compressors, which the Secretary may interpret as necessary for safe and efficient operation of commercial motor vehicles.

ACCESS TO THE INTERSTATE SYSTEM

SEC. 425. No State may enact or enforce any law denying reasonable access to commercial motor vehicles subject to this title to and from the Interstate Highway System, Defense Highways, and any other qualifying Federal-aid highway as designated by the Secretary to the Federal-aid primary system and loading and unloading terminals and facilities for food, fuel, repairs, and rest.

ENFORCEMENT

SEC. 426. The Secretary, or, on the request of the Secretary, the Attorney General of the United States, is authorized and directed to institute any civil action for injunctive relief as may be appropriate to assure compliance with the provisions of this title. Such action may be instituted in any district court of the United States in any State where such relief is required to assure compliance with the terms of this title. In any action under this section, the court shall, upon a proper showing, issue a temporary restraining order or preliminary or permanent injunction. In any such action, the court may also issue a mandatory injunction commanding any State or person to comply with any applicable provision of this title or any rule issued under authority of this title.

SPLASH AND SPRAY SUPPRESSANT DEVICES

SEC. 427. (a) The Congress declares that visibility on wet roadways on the Interstate System should be improved by reducing, by a practicable and reliable means, splash and spray from truck tractors, semitrailers, and trailers.

(b) The Secretary shall—

(1) within one year after the date of the enactment of this title, establish minimum standards with respect to the performance and installation of splash and spray sup-

pression devices for use on truck tractors, semitrailers, or trailers;

(2) within two years after the date of the enactment of this title, require that all new truck tractors, semitrailers, and trailers operated on the Interstate System be equipped with any splash and spray suppression device which satisfies the standards established pursuant to paragraph (1) of this subsection; and

(3) within five years after the date of the enactment of this title, require that all truck trailers, semitrailers, and trailers operated on the Interestate System be equipped with any splash and spray suppression device which satisfies the standards established pursuant to paragraph (1) of this subsection.

(c) For the purposes of this section, the term—

(1) "truck tractor" means the noncargo carrying power unit that operates in combination with a semitrailer or trailer(s);

(2) "semitrailer" and "trailer" mean any semitrailer or trailer, respectively, with respect to which section 422 of this title applies; and

(3) "Interstate System" has the same meaning provided in section 101 of title 23, United States Code.

REPORT REGARDING LONGER COMBINATION COMMERCIAL MOTOR VEHICLES

SEC. 428. (a) Within 1 year after the date of enactment of this title, the Secretary, after consultation with the transportation officials and Governors of the several States and after an opportunity for public comment, shall submit to Congress a detailed report on the potential benefits and costs if any, to shippers, receivers, operators of commercial motor vehicles, and the general public, that reasonably may be anticipated from the establishment of a National intercity truck route network for the operation of a special class of longer combination commercial motor vehicles.

(b) For the purposes of this section, the term—

(1) "longer combination commercial motor vehicles" means multiple-trailer combinations consisting of (A) truck tractor-semitrailer-full trailer, and (B) truck tractor-semitrailer-full trailer-full trailer combinations with an overall length not in excess of 110 feet; and

(2) "National intercity truck route network" means a network consisting of a number of controlled-access, interconnecting segments of the National System of Interstate and Defense Highways and other highways of comparable design and traffic capacity including, but not limited to, all such highways where the operation of longer combination commercial motor vehicles is authorized on the date of enactment of this section.

(c) The detailed report mandated by this section shall include, but need not be limited to, the following—

(1) a specific plan for the establishment of a National intercity truck route network, including the designation of those specific highway segments which would be required to connect the major distribution centers and markets for long-haul intercity freight service, except that the Secretary shall not include in the plan any highway segment which, because of design limitations or other factors, cannot accommodate the safe operation of longer combination commercial motor vehicles;

(2) an analysis of the intercity motor freight volume that reasonably can be anticipated to be transported by longer combination commercial motor vehicles over the National intercity truck route network if such network is established by Congress;

(3) an analysis of the fuel savings that reasonably can be anticipated in the transportation of freight by commercial motor vehicle if such network is established by Congress;

(4) an analysis of the productivity gains that reasonably can be anticipated to be achieved in the transportation of freight by commercial motor vehicle if such network is established by Congress;

(5) an analysis of the fuel conservation and productivity gains historically achieved by operators of longer combination commercial motor vehicles; and

(6) an analysis of the safety record of longer combination commercial motor vehicle operations that have been conducted prior to the date of enactment of this section.

(d) In making the findings and determinations required by subsection (c) of this section, and in making the detailed report to Congress required by this section, the Secretary shall assume that the longer combination commercial motor vehicles operating on the National intercity truck route network, if and when established by Congress, would be subject to the single- and tandem-axle weight limits imposed by section 127 of title 23, United States Code. The Secretary shall further assume that the overall gross weight of such vehicles on a group of two or more consecutive axles shall be limited by the formula set forth in such section, and only by such formula.

(e) In making the detailed report to Congress required by this section, the Secretary shall assume that longer combination commercial motor vehicles operating on the National intercity truck route network will have reasonable access to terminals, combination breakup areas, and food and fuel facilities consistent with safe operations of such vehicles.

DEMONSTRATION PROJECT

SEC. 429. (a) The Secretary is authorized to carry out a demonstration project in the vicinity of East Baton Rouge, Louisiana, for the purpose of demonstrating the efficacy of reducing traffic congestion in the immediate vicinity of a partial-diamond, partial-cloverleaf interchange which connects an east-west highway on the Interstate System and a four lane highway not on such system by providing a direct access ramp to, and a travel lane on, the Interstate highway and by eliminating a crossover which is used for access to the Interstate highway.

(b) There is authorized to be appropriated to carry out this section, out of the Highway Trust Fund, not to exceed in the aggregate $5,000,000 for the fiscal years beginning after September 30, 1982.

(c) Funds authorized by this section shall be available for obligation in the same manner and to the same extent as if such funds were apportioned under chapter 1 of title 23, United States Code, except that the Federal share of the cost of any project under this section shall be 100 per centum of the total cost of such project, and such funds shall remain available until expended.

AIRPORT AND AIRWAY DEVELOPMENT PROGRAM

SEC. 430. (a) Section 507(a)(3) of the Airport and Airway Improvement Act of 1982 (Public Law 97-248; 96 Stat. 671) is amended by redesignating the existing paragraph as subparagraph (A) and adding at the end thereof the following new subparagraph:

"(B) The amounts apportioned to the discretionary fund pursuant to subparagraph (A) of this paragraph shall be increased by apportioning from the Trust Fund additional aggregate amounts of $200,000,000 for fiscal year 1983; $400,000,000 for the fiscal years ending before October 1, 1984; and $475,000,000 for the fiscal years ending before October 1, 1985. Such additional amounts shall be distributed by the Secretary in the same manner as funds apportioned pursuant to subparagraph (A), except that (i) such additional amounts may only be distributed for projects involving new construction begun after the date of enactment of this subparagraph and not to liquidate obligations arising from construction begun before such date; (ii) the Secretary shall give preference to those projects which would increase the safety or capacity of the airport receiving such additional amounts; and (iii) such additional amounts shall not be subject to the limitations set forth in section 508(d) of this title. For the purposes of the provisions of this title (other than sections 507, and 508(d)), and all amendments made to other laws by this title, such additional amounts shall be considered to be funds authorized by or made available under section 505. If any Act of Congress has the effect of limiting or reducing the amount authorized or available to be obligated for any fiscal year for the purposes of section 505, the Secretary shall implement such limitation or reduction by reducing the amount of discretionary funds distributed in that fiscal year pursuant to this subparagraph prior to reducing any other apportionment under this section. In no event may the Secretary reduce any other apportionment under this section in order to comply with any such Congressional limitation or reduction unless all of the discretionary funds available for distribution in such fiscal year pursuant to this subparagraph have been eliminiated.".

(b) Section 505(a) of such Act is amended by striking "$3,772,500,000" and inserting in lieu thereof "$3,660,000,000", and by striking "$4,789,700,000" and inserting in lieu thereof "$4,564,700,000".

(c) The first sentence of section 506(c)(2) of such Act is amended by striking everything after "section 505" and inserting in lieu thereof "(including funds made available under section 507(a)(3)(B)) for that fiscal year multiplied by a factor equal to 1.83 in the case of fiscal year 1983; 1.25 in the case of fiscal year 1984; 1.28 in the case of fiscal year 1985; 1.44 in the case of fiscal year 1986; and 1.51 in the case of fiscal year 1987.".

(d) The second sentence of section 507(a)(1)(E) of such Act is amended by inserting ", after complying with the provisions of subparagraph (3)(B) of this subsection," immediately after "the Secretary".

(e) Section 9502(d)(1)(A) of the Internal Revenue Code of 1954 is amended by striking "the Airport and Airway Improvement Act of 1982", the second time it appears therein, and inserting in lieu thereof "the Surface Transportation Act of 1982".

STATE RECREATIONAL BOATING AND REFORESTATION

SEC. 431. (a) The Federal Boat Safety Act of 1971 Public Law 92-75; 85 Stat. 213) is amended as follows:

(1) By inserting "contract with, and" immediately after "The Secretary may" in the second sentence of section 25(a)(46) U.S.C. 1474(a)) and in section 26(a) (46 U.S.C. 1475(a)) immediately after "promulgate, may".

(2) In section 26(b) and (c)(46) U.S.C. 1475(b) and (c)):

(A) by striking "appropriated" and inserting "authorized to be expended"; and

(B) by adding at the end thereof the following: "His action in doing so shall be deemed a contractual obligation of the United States for the payment of the proportional share of the cost of implementing the program.".

(3) In section 26(d)(46 U.S.C. 1475(d))—

(A) by striking "appropriated" in the third and fourth sentences and inserting in lieu thereof "authorized to be expended";

(B) by inserting immediately after the third sentence the following: "Approval of those elements of a combined program shall be deemed a contractual obligation of the United States for the payment of the proportional share of the cost of implementing State recreational boating safety programs pursuant to this Act."; and

(C) by adding at the end thereof the following: "Approval of those elements of a combined program shall be deemed a contractual obligation of the United States for the payment of the proportional share of the cost of implementing State recreational boating facilities programs pursuant to this Act.".

(4) In section 30 (46 U.S.C. 1479) by striking the section heading and all that follows thereafter and inserting in lieu thereof the following:

"AUTHORIZATION OF CONTRACT SPENDING AUTHORITY FOR STATE RECREATIONAL BOATING SAFETY AND FACILITIES IMPROVEMENT PROGRAMS

"SEC. 30. For the purposes of providing financial assistance for State recreational boating safety and facilities improvement programs, the Secretary is authorized to expend, subject to such amounts as are provided in appropriations Acts for liquidation of contract authority, an amount equal to the revenues accuring each fiscal year from the taxes under section 4041(b) of the Internal Revenue Code of 1954 with respect to special motor fuels used as fuel in motor boats and under section 4081 of such Code with respect to gasoline used as fuel in motor boats. Of the funds available for allocation and distribution for recreational boating safety and facilities improvement programs, one-third shall be allocated for recreational boating safety programs and two-thirds shall be allocated for recreational boating facilities improvement programs beginning with fiscal year 1983. Any funds authorized to be expended for State recreational and boating safety improvement programs shall remain available until expended and shall be deemed to have been expended only if a sum equal to the total amounts authorized to be expended under this section for the fiscal year in question and all previous fiscal years have been obligated. Any funds that were previously obligated but are released by payment of a final voucher or modification of a program acceptance shall be credited to the balance of unobligated funds and shall be immediately available for expenditure.".

(b) Section 209(f)(5) of the Highway Revenue act of 1956 (23 U.S.C. 120, note) is repealed.

(c) Sections 303 (d) and (e) of the Act of October 14, 1980 (16 U.S.C. 1606a(d) and (e)), are amended to read as follows:

"(d) During each of the fiscal years 1983, 1984, and 1985, the Secretary of Agriculture shall expend all amounts available in the Trust Fund (including any amounts not expended in previous fiscal years) for:

"(1) reforestation and timber stand improvement as set forth in the Congressional policy in section 3(d) of the Forest and Rangeland Renewable Resources Planning Act of 1974 (16 U.S.C. 1601(d)); and

"(2) administrative costs of the Federal Government properly allocable to the activities described in paragraph (1).

In no event may the Secretary expend less than $104,000,000 out of the Trust Fund in fiscal year 1983 for the purposes of this subsection.

"(e) It is the intent of Congress that the Secretary shall expend all of the funds available in the Trust Fund in each fiscal year. Any such funds which are not expended in a given fiscal year shall remain available for expenditure without fiscal year limitation; except that any funds not expended prior to October 1, 1985, shall, no later than April 30, 1986, be distributed to the States for use in State forestry programs pursuant to the formula set forth in the Act of May 23, 1908 (16 U.S.C. 500, Public Law 60-136).".

AMENDMENT TO SALTONSTALL-KENNEDY ACT

SEC. 432. Section 2(e) of the Act of August 11, 1939, commonly referred to as the Saltonstall-Kennedy Act (15 U.S.C. 713c-3(e)), is amended to read as follows:

"(e) ALLOCATION OF FUND MONEYS.—(1) All moneys in the fund shall be used only to promote United States fisheries in accordance with the provisions of this section. With respect to any fiscal year, the sum of all unexpended moneys carried over into that fiscal year and all moneys transferred to the fund under subsection (b) or any other provision of law with respect to that fiscal year, shall be allocated as follows:

"(A) the Secretary shall use no less than 60 percent of such funds to make direct industry assistance grants to develop new United States fisheries and to expand domestic and foreign markets for United States fishery products pursuant to subsection (c) of this section; and

"(B) the Secretary may not use more than 40 percent of such funds to finance the operations of the National Marine Fisheries Service, including, but not limited to, fisheries research laboratories, market development, quality control, export promotion, import research, administration of this section, and related programs to promote the development of United States fisheries.

"(2) It is the intent of the Congress that the Secretary should, consistent with the number of meritorious applications received with respect to any fiscal year, obligate or expend all of the funds described in paragraph (1). Any such funds which are not expended in a given fiscal year shall remain available for expenditure under this section without fiscal year limitations.".

THE MERCHANT MARINE ACT, 1936

SEC. 433. Section 1103(f) of the Merchant Marine Act, 1936 (46 U.S.C. 1273(f)), is amended by adding at the end thereof the following new sentence: "No additional limitations may be imposed on new commitments to guarantee loans for any fiscal year, except in such amounts as established in advance in annual authorization Acts.".

SECTION-BY-SECTION ANALYSIS: TITLE IV—COMMERCIAL MOTOR VEHICLE SAFETY, S. 3044, "SURFACE TRANSPORTATION ACT OF 1982"

DEFINITIONS

Section 401.—This section defines certain terms used in Title IV (except where the context otherwise requires).

One of the most significant of the definitions is section 401(1), "commerce". At present, the Secretary of Transportation is empowered to regulate commercial motor vehicle safety primarily with regard to vehicles that cross State lines or national boundaries or perform the intrastate portion of a continuous interstate movement. This class of vehicles is operated primarily by the approximately 17,000 carriers who must obtain operating authority from the Interstate Commerce Commission (ICC) plus the approximately 140,000 private and exempt interstate carriers. This definition would authorize the Secretary to promulgate regulations regarding the safety of commercial motor vehicle operations both in and affecting interstate and foreign commerce.

The definition of "commercial motor vehicle", section 401(2), includes vehicles used on the highways in commerce which are (1) 10,000 pounds gross vehicle weight rating or more or (2) designed to transport more than 10 passengers, including the driver, or (3) used in the transportation of hazardous materials (found to be hazardous by the Secretary for purposes of the Hazardous Materials Transportation Act (40 U.S.C. 1801 et seq.). The 10,000 pound limit is proposed to focus enforcement efforts and because small vans and pick-up trucks are more analogous to automobiles than to medium and heavy commercial vehicles, and can best be regulated under State automobile licensing, inspection, and traffic surveillance procedures. However, all vehicles designed to transport 10 or more persons would also be covered to assure the highest levels of safety in this particularly important transportation area. Also vehicles transporting hazardous materials would be covered because of the potentially greater safety dangers in this area.

The definition of "employee," section 401(3) includes any individual other than an employer who is employed by a commercial motor carrier and directly affects commercial motor vehicle safety, such as (a) a driver of a commercial motor vehicle (including for purposes of this title any independent contractor while in the course of personally operating a commercial motor vehicle); (b) a mechanic; or (c) a freight handler.

An employer is defined in section 401(4) as any person engaged in a business affecting commerce who owns or leases a commercial motor vehicle in connection with that business, or assigns employees to operate it in commerce.

The definition of employee includes mechanics and freight handlers who are employed by a commercial motor carrier and in the course of their employment directly affect commercial motor vehicle safety. For example, in loading a truck it is important for highway safety that the load be balanced. Also, a mechanic who repairs commercial motor vehicles has a direct effect on commercial motor vehicle safety and should be subject to the rules, regulations, standards, or orders issued under this title by the Secretary of Transportation. On the other hand, mechanics or freight handlers are not subject to these provisions when repairing or loading a motor vehicle not covered by this title nor with respect to those aspects of their activities that do not directly affect commercial motor vehicle safety.

The Department of Labor continues its authority and this act does not amend or modify the Occupational Safety and Health Act or the National Labor Relations Act.

Whether to treat independent owner-operators as employers or employees posed a unique problem to the drafters. An independent owner-operator owns his own truck and drives it. He also may own several other trucks and have several drivers working for him. There was no question that the commercial motor vehicles he drives and his driving should be subject to the same safety rules as other commercial motor vehicles on the highway. All commercial motor vehicles if improperly maintained or operated pose a significant threat to the public safety.

It was decided that where an independent owner-operator has the primary responsibility for the maintenance and operation of his commercial motor vehicle or vehicles he should be considered an employer and be subject to the penalty provisions for employers. This is appropriate because the owner-operator does have primary control over the vehicle, yet the Committee was sensitive to the fact that the financial status of certain owner-operators is closer to that of employees who are subject to much lower penalties. Therefore, in the actual language of section 407 relating to penalties and the report language accompanying the section the Committee makes clear that in determining the amount of the penalty financial status, among other factors, is to be taken into account. This should protect the owner-operator from unreasonable penalties for violations of the title.

This section also defines the terms "person", "Secretary", and "State".

DUTIES

Section 402.—This section requires each employee and employer to comply with the safety and health rules, regulations, standards, and orders issued pursuant to this title.

REGULATORY AUTHORITY AND STANDARDS

Section 403.—Section 403(a) requires the Secretary of Transportation to establish and revise rules, regulations, standards, and orders as may be necessary to further the purpose of this title and to provide that they shall be directed to assuring that (1) commercial motor vehicles are safely maintained, equipped, loaded, and operated; (2) the responsibilites imposed on a driver do not impair his ability to operate the vehicle safely; (3) the physical condition of drivers is adequate to enable them to drive safely; and (4) the operation of commercial motor vehicles does not create deleterious effects on the physical condition of such drivers.

The Secretary is required to consider, where practicable, costs and benefits of such rules, regulation, standards, and orders. In requiring the Secretary to consider costs and benefits, where practicable, in the course of regulatory activities, the Committee realizes that many aspects of safety and health regulation do not lend themselves to cost-benefit analysis. While the benefits of a particular rule or regulation may be substantial, they may not be practicably quantifiable. The relative costs and benefits reasonably expected to result from a proposed safety or health rule warrant the consideration of the Secretary where practicabe; but the Committee does not intend such requirement to have the effect of precluding, preventing, or suspending the promulgation or revision of rules, regulations, standards or orders due to difficulty in establishing specific, quantified cost or benefit data.

Section 403(b) requires the Secretary of Transportation to promulgate rules or regulations within 1 year after commencing a proceeding. If this is not possible, the Secretary is required to keep the Congress informed of the reaons for the delay and the efforts and progress being made to complete the proceeding. The purpose of this section is to provide incentives to the Department of Transportation to promulgate rules and regulations in a timely manner.

Section 403(b) also requires that all rules, regulations, standards and orders issued under this section be promulgated in accordance with section 553 of title 5, United States Code (without regard to sections 556 and 557 of that title), except that the time periods specified in section 403(a) apply to such promulgation.

Section 403(c) allows the Secretary to waive the application of any rule, regulation, standard, or order if such waiver is in the public interest and is consistent with the safe operation of commercial motor vehicles. This provision should be used with extreme care, and this waiver provision should only be used if the Secretary has developed sufficient information to provide adequate assurance that such waiver will not adversely affect the safe operation of commercial motor vehicles. It should not be enough to exempt a group merely because it is a small part of the commercial motor vehicle industry.

Section 403(d) directs the Secretary of Transportation and Director of the National Institute for Occupational Safety and Health (NIOSH), in consultation with the Secretary of Labor, to conduct a study of health hazards to which employees engaged in the operation of commercial motor vehicles are exposed and to develop recommendations regarding the most appropriate method for regulating and protecting the health of operators of commercial motor vehicles. This section authorizes an appropriation of $1.5 million out of the Highway Trust Fund for fiscal 1984 to conduct this study.

Subsection (e) requires the Secretary of Transportation, the Director of the National Institute for Occupational Safety and Health, and the Secretary of Labor to coordinate their activities to ensure adequate protection of the safety and health of operators of commercial motor vehicles.

In the context of this section, it is important to note the respective roles of the Departments of Transportation and Labor. The Secretary of Transportation, for example, in protecting the public from unsafe commercial motor vehicles, and assuring that commercial motor vehicles are safely maintained, equipped, loaded, and operated, is responsible for the manner in which brakes are repaired, the manner in which a load is distributed in a vehicle, the disign and equipment of the vehicle, and related matters insofar as failure to observe his regulations would adversely affect the safety of the public or the health and safety of operators of commercial motor vehicles. The Secretary of Transportation is not responsible for protecting employees from asbestos fibers, and toxic fumes involved in the course of properly repairing a brake, nor for the protection of employees from slippery walking surfaces or for inadequately braked fork-lift trucks. These activities continue to be the responsibility of the Department of Labor.

It is the intent of the Committee that nothing in section 403 of the bill alter this state of affairs which has developed under existing provisions of law.

At the same time, the Committee believes that both Departments must focus more attention upon the hazards that commercial motor vehicle drivers face in the course of their work. As efforts to permanently reduce or eliminate specified health hazards may ultimately require changes in commercial motor vehicle design, which is generally the expertise of the Secretary of Transportation, this bill therefore directs the Secretary of Transportation and the Director of the National Institute for Occupational Safety and Health, in consultation with the Secretary of Labor, to conduct a study of safety and health hazards to drivers. By doing this, the two regulatory authorities will have the information necessary to determine the extent to which they should utilize their respective expertise to deal with these problems. Section 403(e) does not provide additional or new regulatory authority to the Secretary of Labor or the Director of the National Institute for Occupational Safety and Health. The DOT Secretary is mandated under this act the authority to assure the protection of safety and health of operators while operating commercial motor vehicles. This section requires the Secretaries and the Director to make every attempt to avoid overlap or duplication of activities and to coordinate their efforts. The Committee intends, in the exercise of its regular oversight authority, to follow further developments in this area of concern.

GENERAL POWERS

Section 404.—This section provides the Secretary of Transportation with broad administrative powers to assist in the implementation of this title. Section 404(b) includes provision for the Secretary to delegate enforcement functions, as he determines appropriate, under this title to a State with a plan approved under section 411 of this title.

INSPECTIONS AND WARRANTS

Section 405.—Section 405 authorizes the conditions under which the Secretary of Transportation can carry out inspections or searches. Employers and employees and their duly designated representatives shall be offered a right of accompaniment.

Specifically, section 405(a)(2)(A) provides that an administrative warrant shall be required for any entry or administrative inspection unless the entry of inspection is: (1) with the consent of the employer, employee, or agent of the employer in charge of the business, establishment, or premises; (2) in situations where there is reasonable cause to believe that the mobility of the motor vehicle makes it impractical to obtain a warrant; (3) in any other exceptional or emergency circumstance where time or opportunity to apply for a warrant is lacking; (4) for access to and examination of books, records, and any other documentary evidence which can be easily altered, manufactured, or falsified; or (5) in any other situations where a warrant is not constitutionally required.

Section 405(a)(2)(B) provides for the issuance and execution of administrative inspection warrants. Any judge of the United States or of a State court of record, or any United States magistrate, may within his territorial jurisdiction, and upon proper oath or affirmation showing probable cause, issue warrants to conduct administrative inspections and to impound motor vehicles or their equipment. This section also sets forth in detail the circumstances under which a warrant shall be issued and the contents of the warrant. Details of the execution and return are also set forth in detail.

DUTY TO INVESTIGATE COMPLAINTS, PROTECTION OF COMPLAINANTS

Section 106.—This section requires the Secretary of Transportation to investigate nonfrivolous written complaints alleging a material violation of the title. The Secretary is also required to take steps to protect the identity of persons complaining of safety violations.

PENALTIES

Section 407.—This section sets forth the penalties available to the Secretary of Transportation in enforcing violations of sections 402 through 417 of this title. The section provides for both civil and criminal penalties, subsections (b) and (e), injunctive relief, subsection (h), and imminent hazard authority, subsection (d).

Subsection (a) sets out the procedure for the Secretary to follow if he finds that a violation under this title has occurred.

Subsection (b) provides for a civil penalty of up to $500 for a recordkeeping violation. The total of all recordkeeping offenses relating to any single recordkeeping violation shall not exceed $10,000. If the Secretary determines that a substantial health or safety violation exists or has occurred which could reasonably lead to or has resulted in serious personal injury or death, he may assess a civil penalty of up to $10,000 for each offense. However, no civil penalty, except recordkeeping penalties, may be assessed against an employee unless the employee is the operator of a commercial motor vehicle and the Secretary of Transportation determines that the employee's actions constituted gross negligence or reckless disregard for safety, in which case such employee shall be liable for a civil penalty up to $1,000. In assessing civil penalties the Secretary is to take into account the nature, circumstances, extent, and gravity of the violation and the degree of culpability, history of prior offenses, ability to pay, and effect on ability to continue to do business of the violator. The assessment is to be calculated to induce further compliance.

The Committee felt that an employee who is operating a commercial motor vehicle in a grossly negligent manner or with reckless disregard for safety and in violation of this title should be subject to a civil penalty. At the same time the Committee recognized the fact that employees and employers enjoy a different financial status. The level of penalty necessary to provide a deterrent to an employer could have the effect of financially bankrupting an employee. The different levels of penalties for employers and employees are designed, therefore, to create adequate incentives to assure compliance with the act. As stated in the section-by-section analysis under the definition of employee and employer, the independent owner operator posed a unique problem for the drafters. For the purposes of this title only an owner-operator while in the course of personally operating a commercial motor vehicle for a commercial motor carrier is considered an employee for penalty purposes. When the owner-operator is not acting in such capacity, for purposes of this title he shall be treated as an employer. However, the Secretary, in assessing a civil penalty, is directed to take into account, among other criteria, the ability to pay and effect on ability to do business.

Subsection (c) authorizes the Secretary to require a violator to post a copy of a notice of violation or a statement thereof.

Subsection (d) authorizes the Secretary to place a vehicle out of operation or to order an employer to cease all or part of his commercial motor vehicle operations if the Secretary determines that an imminent hazard to safety exists.

Subsection (e) provides for criminal penalties for employers and employees who are operating a commercial motor vehicle who knowingly or willfully violate the act. Penalties for an employer are a fine of up to $25,000 and/or imprisonment not to exceed 1 year. An employee is subject to a $2,500 fine. The Committee felt this was sufficient deterrent for the employee because he would also be subject to employer sanctions and State laws.

Subsection (f) requires the Secretary to promulgate regulations establishing penalty schedules designed to induce timely compliance for those failing to comply promptly with the requirements set forth in notices and orders.

Subsection (g) establishes a procedure whereby any aggrieved person who, after a hearing is adversely affected by a final order issued by the Secretary, may petition for review of the order in the U.S. Court of Appeals.

Subsection (h) authorizes the Secretary to obtain enforcement of any penalty or order under this section by applying to the United States District Court. In addition, to granting enforcement, the District Court may assess a penalty for noncompliance.

Subsection (i) provides that penalties and fines imposed shall be deposited into the Treasury as miscellaneous receipts.

Subsection (j) provides subpenas for witnesses who are required to attend a District Court may run into any District.

Subsection (k) provides procedures for proceedings for criminal contempt in accordance with the Federal Rules of Criminal Procedure.

REPRESENTATION BEFORE THE COURTS

Section 408.—The section authorizes the General Counsel of the Department of Transportation to appear for and represent the Secretary in all proceedings and in any civil, litigation brought under this title, except as otherwise provided.

PROTECTION OF EMPLOYEES

Section 409.—Subsection (a) of section 409 prohibits any person from disciplining, discriminating against, or discharging an employee for filing a complaint or excercising a right afforded by this title or other authorities of the Secretary of Transportation concerning commercial motor vehicle safety.

Subsection (b) provides for protection of an employee who refuses to operate an unsafe vehicle. In order to qualify for protection under this subsection, the employee must have sought from his employer and have been unable to obtain, correction of the unsafe condition. The employee's refusal to operate the vehicle must be of such nature that a reasonable person, under the circumstances then confronting the employee, would conclude that there is a bona fide danger of an accident, injury or serious impairment of health, resulting from the unsafe condition. In providing protection of employees in section 409, it is intended to assure that employees are not forced to drive unsafe vehicles or commit unsafe acts. It is not intended to promote refusal of employees to operate when violations occur en route that do not adversely affect safety or health.

Subsection (c) provides the procedure an employee may follow if the employee believes he has been discriminated against, disciplined or discharged in violation of subsection (a) or (b). An employee may file a complaint, within 180 days after the alleged violation occurs with the Secretary of Labor. The Secretary of Labor is then required to conduct an investigation within 60 days of receipt of a complaint and report his findings and conclusions to the affected parties. If the Secretary of Labor determines that there is reasonable cause to believe that the complaint has merit, he shall notify the complainant and the person alleged to have committed the violation. Thereafter, either the person alleged to have committed the violation or the complainant may, within 30 days file objections to the proposed order and request a hearing on the record. Where a hearing is not timely requested, the Secretary shall issue a final order not subject to judicial review. Where a hearing is requested, it is to be expeditiously conducted with a final order issued within 120 days after conclusion of the hearing. If, in response to a complaint, the Secretary of Labor determines that a violation of subsection (a) or (b) has occurred, he shall order (1) the person who committed such violation to take affirmative action to abate the violation, (2) such person to reinstate the complainant to the complainant's former position, (3) compensatory damages, and (4) where appropriate, exemplary damages. If such an order is issued, the Secretary of Labor may assess against the person against whom the order is issued a sum equal to the aggregate amount of all costs and expenses reasonably incurred by the complainant for, or in connection with, the bringing of the complaint.

Subsection (d) allows any person adversely affected by a subsection (c) order to obtain review of the order in the United States Court of Appeals.

Subsection (e) authorizes the Secretary of Labor to obtain enforcement of its order in the United States District Courts.

The section was considered necessary to encourage "whistle-blowing" by employees. Enforcement of commercial motor vehicle safety laws and regulations is possible only through an effort on the part of employers, employees, State safety agencies, and the Department of Transportation. Therefore, the Committee considered it necessary to specifically provide protection for those employees who are discharged or discriminated against for exercising their rights and responsibilities under this title.

The Committee determined that employees with reasonable complaints should be able in the first instance to seek timely consideration of their complaints from a Federal agency rather than a court. Redress through the court system is a very expensive and time-consuming process. It was believed that timely agency review of employee complaints would result in a fairer resolution of employer/employee disputes. In addition, the Committee believes that section 409 provides one more incentive to employers to comply with rules, regulation standards and orders issued under the title.

The Department of Labor was designated the agency responsible for review of employee complaints. The Department of Labor has responsibility for similar employee protection provisions in the Toxic Substances Control Act and other environmental and safety legislation and was deemed to be the agency most appropriate for handling complaints relating to employer/employee labor relations. While the Department of Transportation has expertise for developing commercial motor vehicle safety regulations, The Committee believes that the Department of Transportation should

focus its effort on commercial motor vehicle safety and health regulations rather than employer/employee labor relations The Committee believes it is extremely important for the Department of Labor to act expeditiously in this area.

GRANT TO STATES

Section 410.—This section authorizes the Secretary to make grants to the States for the development or implementation of programs to enforce Federal and compatible State commercial motor vehicle safety laws and regulations.

This provision is considered to be very important to achieving the purposes of this title. There are millions of commercial motor vehicles traveling on our Nation's highways. It is impossible and in fact not desirable to have a Federal force large enough to be solely responsible for the enforcement of the commercial motor vehicle safety and health rules and regulations.

The drafters of this legislation realize that the State highway safety agencies must have a major responsibility for enforcement if the purposes of this act are to be achieved. While the States already play a significant enforcement role, the Committee is aware that the States would need increased financial assistance if State programs were to be improved and expanded. The purpose of sections 410, 411, 412, 413, and 414 are to assist the States in meeting the goals of this legislation.

STATE ENFORCEMENT

Section 411.—Subsection (a) of section 411 requires the Secretary of Transportation to formulate procedures for a State to submit a plan whereby the State agrees to adopt and assume responsibility for enforcing rules, regulations, standards, and orders in compliance with this title.

Subsection (b) requires the Secretary to make a continuing evaluation of the manner in which each State with an approved plan is carrying out the plan or enforcing the rules, regulations, standards, or orders under this title. A State whose approved plan is withdrawn by the Secretary may seek judicial review.

Subsection (c) provides that no State plan shall be approved which does not provide for funding for commercial motor vehicle safety programs at a level which does not fall below the average level of such expenditures by the State for the last 2 fiscal years preceding the date of enactment of this act.

STATE REGULATIONS

Section 412.—Generally, subsection (a) of section 112 allows a State to adopt additional or more stringent commercial motor vehicle safety rules if the rules do not create a burden on commerce or are not inconsistent with the Federal rules, regulations, standards, or orders issued under this title.

Subsection (b) states that this act shall not affect existing State hours-of-service regulations applying to commercial motor vehicles operations occurring wholly within the State unless the Secretary of Transportation finds upon review of a State's hours-of-service regulations that such State regulation materially diminishes commercial motor vehicle safety or health, is not required by compelling local conditions, or unduly burdens interstate commerce.

FEDERAL SHARE OF COSTS

Section 413.—This section authorizes the Secretary to reimburse a State for up to 80 percent of costs incurred by the State in the development and implementation of programs to enforce commercial motor vehicle safety laws and regulations.

AUTHORIZATIONS

Section 414.—This section authorizes appropriations out of the Highway Trust Fund not to exceed $10 million in fiscal 1984, $20 million in fiscal 1985, $30 million in fiscal 1986, $40 million in fiscal 1987, and $50 million in fiscal 1988 to reimburse to States the Federal pro rata share of costs incurred under sections 410 and 411 of this title.

ANNUAL REPORT

Section 415.—Section 415 requires the Secretary of Transportation to annually report to Congress concerning his efforts and plans to upgrade the safety and health of operators of commercial motor vehicles.

APPLICABILITY

Section 416.—This section exempts from this title the operation of any vehicles engaged in farming activities and logging operations as defined by the Secretary.

The primary purpose of this legislation is to reduce the deaths and personal injuries due to commercial motor vehicle operations. For this reason, the Committee believed it was necessary and logical to include within the scope of this title many motor vehicles not covered under present law. On the other hand, it is not the intent of the Committee to cover commercial motor vehicle operations which do not affect highway safety. For this reason certain farming and logging operations were exempted from the title. For example, logging operations may include mechanical and manual activities, used to move forest growth in a variety of forms from the forest origin point to a facility converting the forest growth to consumer or industrial products or energy. Generally, the movement of forest growth on a highway vehicle begins in the forest, may be subject to intermediate activities such as scaling, bucking, debarking, chipping, or reloading, and ends when unloaded at the conversion facility. Any such logging operation which merely crosses the highway, travels short distances on the highways, and has only a minimal effect on highway safety should not be subject to the provisions of the act. The Secretary of Transportation is responsible for determining which logging or farming operations do not have an impact on highway safety and should be exempt from the act.

COMMERCIAL MOTOR VEHICLE SAFETY ADVISORY COMMITTEE

Section 417.—This section establishes a Commerical Motor Vehicle Safety advisory Committee with the Secretary of Transportation and 15 members appointed by the Secretary. The Advisory Committee is to advise, consult with and make recommendations to the Secretary on matters relating to the activities and functions of the Department of Transportation in the field of commercial motor vehicle safety. An appropriation of not to exceed $125,000 for each of fiscal years 1984, 1985, and 1986 is authorized for carrying out this section.

This committee is patterned after the Highway Safety Act. Such a committee is expected to be very helpful in improving communications, among the many parties interested in and affected by rules and regulations adopted under this title. Other similar safety advisory committees have proved beneficial to assuring more sensible and effective safety rules and regulations.

AUTHORIZATION OF APPROPRIATIONS

Section 418.—This section authorizes appropriations from the Highway Trust Fund of $13 million for each of fiscal years 1985 through 1988 for Federal Highway Administration safety research and development programs.

This section also authorizes appropriations for each of fiscal years 1985 through 1988 of $100 million from the Highway Trust Fund for National Highway Traffic Safety Administration (NHTSA) highway safety progrsms and $31 million for each of these fiscal years for NHTSA highway safety research and development.

APPORTIONMENT

Section 419.—Subsection 419(a) strikes the definition of "State" in section 401 of title 23, United States Code, dealing with expenditures for carrying out safety programs.

Subsection 419(b) amends section 402 of title 23, United States Code, regarding the annual highway safety apportionment by striking exceptions relating to the Virgin Islands, Guam, and American Samoa.

Section 420.—National uniform State regulation.

Section 19 of the Motor Carrier Act of 1980, Pub. L. 96-296, requires the Department of Transportation and the Interstate Commerce Commission to develop legislative or other recommendations to provide a more efficient and equitable system of State motor carrier regulations. After soliciting public comments, both written and oral, a final report detailing the various inconsistencies between State regulations in these areas has been prepared.

This section provides that a working group be established to review the various State licensing and State taxing requirements of interstate motor carriers by highway. This working group will recommend standards to the Secretary of Transportation. The Secretary may then initiate a rulemaking action to adopt or otherwise implement these standards. As a minimum such standards are to include: (1) standardized procedures and forms; (2) base State certification; (3) a single State unit for filings, applications, and permits; (4) payment of fees and taxes to the base State; (5) equitable distribution of revenues; (6) a common basis for taxation in each area of requirements; and (7) reasonable limits on fees paid for identification stickers, plates or other indicia.

Subsection (a) establishes a working group.

Subsection (b) defines the responsibilities of the working group. The working group is to develop uniform State procedural standards for vehicle registration, fuel tax, and third structural tax requirements.

Subsection (c) provides for the expenses to be paid to the members of the working group.

Subsection (d) provides that after the working group has completed its work, it must submit recommended standards to the Secretary, Department of Transportation, within 18 months of the date of enactment of this Act.

Subsection (e) provides that the Secretary may initate rulemaking to implement the recommended standards found acceptable.

Subsection (f) provides that, if the working group fails to act, the Secretary may develop such standards and initiate rulemaking. The Secretary may act in any area or on any subject on which this working group fails to act after 18 months.

This section authorizes Federal preemption of certain State procedures, e.g., the manner in which States collect fuel taxes; administer vehicle registration.

Section 421.—Minimum financial responsibility for motor carriers.

This section amends the financial responsibility requirements contained in section 30 for motor carriers of property.

Subsection (a) would remove the limitation on the levels of financial responsibility for motor carriers of property established by the Secretary and allow the Secretary to determine appropriate levels through public rulemaking action.

Subsection (c) would do three things: (1) complement the proposed amendment to Section 30(b)(1) and subject motor vehicles transporting certain specified hazardous materials, substances, or wastes in foreign commerce to the financial responsibility provisions of Section 30; (2) change the language of subsection (c) to be consistent with the Department's hazardous materials regulations; and (3) remove the limitations on the levels of financial responsibility established by the Secretary, and allow the Secretary to determine future appropriate levels through public rulemaking action.

Subsection (d) would also do three things: (1) complement the proposed amendment to Section 30(b)(1) and subject motor vehicles transporting other hazardous materials, substances, or wastes in foreign commerce to the financial responsibility provisions of Section 30; (2) remove the limitations on the levels of financial responsibility established by the Secretary and allow the Secretary to determine future appropriate levels required through public rulemaking action; and (3) effectively exempt many more small businesses from the financial responsibility requirements of Section 30 without compromising highway safety.

Subsection (e) would also do two things: (1) complement the proposed amendment to Section 30(b)(1) and subject motor vehicles transporting any hazardous materials, substances, and wastes in foreign commerce to the financial responsibility provisions of Section 30; and (2) remove the limitation on the limits established by the Secretary and allow the Secretary to determine future appropriate levels required through public rulemaking action.

Subsection (f) amends the 10,000 pound GVWR exemption to Section 30. It would exclude from the 10,000 pound GVWR exemption those vehicles transporting any quantity of radioactive materials in interstate or foreign commerce.

Section 422.—Commercial motor vehicle length limitation.

Subsection (a) prohibits States from imposing trailer limitations if less than 48 feet for trailers in a "single" combination or 28 feet for "double" combinations on any segment of the interstate system or Federal-aid highways except with respect to such qualifying Federal-aid highways designated pursuant to subsection (e).

Subsection (b) assures that State regulation may not apply to the length of truck tractors or the overall length of singles and doubles. (The bill is neutral with respect to State regulation of "triples" or straight trucks involving no combinations.) States are prohibited from imposing regulations that have the effect of being more restrictive than those in force on December 1, 1982. Existing trailers or semitrailers of up to twenty eight and a half feet in length, in the truck tractor-semitrailer-trailer combination are allowed to continue to operate in Commerce if actually operating on December 1, 1982 within a 65 foot overall length limit in any State.

Subsection (c) prohibits States from precluding "double" combination units from the interstate and federal-aid highway system—except with respect to such qualifying Federal-aid highways designated pursuant to subsection (e) of this section.

Subsection (d) gives the Secretary of Transportation the authority to establish guidelines for the implementation of the provisions of the section and to make such determinations as are necessary to accommodate specialized equipment. The bill notes, by example, the situation of automobile haulers where the cargo-carrying unit extends over the cab. A strict interpretation of trailer size limitations could jeopardize what has become a standard and perfectly safe vehicle configuration. The Secretary should also be guided by the desire of Congress to assure that no existing regulations are made more restrictive.

Subsection (e) authorizes the Secretary of Transportation and the States to restrict the application of the federal standards for length on Federal-aid highways if the application of such standards to specific Federal-aid highways would adversely affect the public safety.

Subsection (f) defines "truck tractor" as the non-cargo carrying power unit that operates in combination with a semi-trailer or trailer(s).

Subsection (g) provides that the provisions of the section take effect six months after the enactment of the bill. This will allow time for the States to adjust their regulations, if necessary.

Section. 423.—Commercial motor vehicle width regulations.

States are required to allow commercial motor vehicles to operate on highways at a width of 102 inches provided the traffic laws are designed to be a width of 12 feet or more.

Section. 424.—Safety related services.

This provision provides that the limits described in sections 422 and 423 are exclusive of a number of fuel conservation and safety devices listed.

Section. 425.—Access to the Interstate System.

This provides that no State may deny reasonable access to and from the interstate and federal aid system and terminals and facilities for food, fuel, repairs, and rest.

Section. 426.—Enforcement.

This provision allows the Secretary of Transportation to seek injunctive relief to require compliance with the provisions of the act.

Section. 427.—Splash and spray suppressant devices.

The Secretary of Transportation is required to set standards for the use of splash and spray suppressant devices for tractors, semi-trailers, and trailers.

Section. 428.—Report regarding longer combination commercial motor vehicles.

The Secretary of Transportation is required to study and report on the potential benefits and costs that may result from the establishment of a National intercity truck route network for the operation of a special class of longer-combination commercial motor vehicles.

Section. 429.—Demonstration project.

This section authorizes a demonstration project for East Baton Rouge, Louisiana.

Section 430.—Airport and Airway Development Program.

This section increases airport development spending $475 million over the next 3 years, 1983-1985. This is accomplished by shifting $112.5 million from both 1986 and 1987 and distributing the funds in 1983, 1984 and 1985. Also, an additional $250 million is drawn from the Aviation Trust Fund surplus and is allocated in 1983, 1984 and 1985. The result of this is to increase the authorized level in 1983 by $200 million; 1984 by $200 million and 1985 by $75 million.

	Currently authorized levels	Proposed changes	Actual change
1983	$600,000,000	$800,000,000	[1] 200,000,000
1984	793,500,000	993,500,000	[1] 200,000,000
1985	912,000,000	987,000,000	[1] 75,000,000
1986	1,017,000,000	904,500,000	[2] 112,500,000
1987	1,017,200,000	904,700,000	[2] 112,500,000

[1] Increase.
[2] Decrease.

These levels would create an additional 12,000 jobs in both 1983 and 1984 and an additional 4,725 jobs in 1985.

The additional funds shall be discretionary funds and they shall be spent for new construction.

The Secretary may, in no event, reduce any other apportionment or entitlement of the Airport and Airway Improvement Act of 1982.

Section 431.—Recreational Boating and Reforestation Trust Fund Amendment.

Subsection (a) amends P.L. 96-451 to provide the Secretary of Transportation authority to contract with the States to implement and administer a national recreational boating safety and facilities improvement program. A contractual obligation of the United States to distribute motorboat gasoline fuel tax revenues to the States is created when the Secretary of Transportation approves specified elements of the State program.

The formula for distribution is unchanged from current law. The current limitation on amounts which may be held in the Trust Fund is removed, so that all motorboat gasoline fuel tax revenues are transferred into the Fund.

Subsection (b) would require the expenditure of funds collected in the Reforestation Trust Fund created by P.L. 96-451. This is accomplished by repealing the current legal prerequisites to expenditure of the funds by the Secretary of Agriculture. In no case may the Secretary spend, in F.Y. 1983, less than the $104,000,000 now held in Trust Fund. Any funds remaining in the Trust Fund at the end of F.Y. 1985 are to be distributed to the States for use in State forestry programs.

Section 432.—Amendment to Saltonstall-Kennedy Act.

This section would require that all money in the Saltonstall-Kennedy Fund be used in support of the United States fishing industry. Specifically, up to 40 percent of the Fund could be used to support activities within the National Marine Fisheries Service as long as those activities were related to fisheries development.

At least 60 percent of the Fund would have to go directly for industry grants. Since the Fund is currently collecting approximately $28 million per year, at least $17 million would have to go for grants, and the rest could go to the National Marine Fisheries Service fisheries development programs.

Attached to the amendment is an excerpt from a Department of Commerce study of fisheries development potential in the United States. It shows that a strong industry/government development effort could create 43,000 new jobs by the year 1990.

Section 433.—The Merchant Marine Act, 1936.

The section provides that no ceiling shall be placed on the Title XI loan guarantee program other than a ceiling imposed by authorizing legislation. The Committee is proposing no such ceiling.●

THE SCHMITT-RITTER RISK ANALYSIS AND DEMONSTRATION ACT OF 1982 (S. 3006)

● Mr. SCHMITT. Mr. President, the Schmitt-Ritter Risk Analysis and Demonstration Act of 1982 will establish a program under the coordination of the Office of Science and Technology Policy for improving the use of risk analysis by those Federal agencies concerned with the regulatory decisions related to the protection of human life, health, and the environment. This will improve the scientific basis on which risk assessments are made. This act is a necessary step on the road to a better and more balanced use of risk assessment by the Federal Government.

The legislation authorizes a 30-month program, under the direction of the Office of Science and Technology Policy (OSTP), to coordinate and evaluate the use of risk assessments by Federal regulatory agencies.

Presently there are a number of Federal regulatory agencies which are grappling with the meaning, role, and application of risk analysis in the fulfillment of their missions. These efforts are generally little coordinated, so that the presumptions, criteria, and standards which are applied vary widely. Congress has provided little overall guidance on how risks are to be identified or analyzed. Participating agencies include: The Food and Drug Administration, the Environmental Protection Agency, the Occupational Safety and Health Administration, the Food Safety and Inspection Service of the Department of Agriculture, and the Consumer Product Safety Commission. OSTP will also organize a number of demonstration projects involving different methods of risk assessment.

No new budget authority is required by the bill. At the end of the program OSTP is to submit to the Congress a report with its findings, analysis of Federal agencies' risk analysis procedures or capabilities, and recommendations for future legislative and administrative initiatives.

Mr. President, I urge the Senate to act on this legislation favorably, as the House of Representatives has already done on related legislation, H.R. 6159, sponsored by Congressman RITTER.

Mr. President, I ask unanimous consent that a section-by-section analysis be printed in the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

SECTION-BY-SECTION ANALYSIS

Section 1. Designates the short title of the Act as the "Schmitt-Ritter Risk Analysis Research and Demonstration Act of 1982."

Section 2. Sets forth Congresssional findings and declarations.

Section 3. States the Act's purpose, which is to develop a coordinated research and demonstration program for risk analysis. Such a program would assess the current role of risk analysis in Federal regulatory decisionmaking, define criteria and standards to further its development and use, identify areas of research required to improve existing methodologies, and promote public awareness of the nature of regulated risks and the means of their quantification.

Section 4. Sets forth definitions of risk, risk assessment, risk evaluation, comparative risk-analysis, Administrator, Office, Director, and Federal regulatory agencies for the purposes of this Act.

Section 5. Describes the program objectives and assigns coordinating, planning, and implementation roles to the Office of Science and Technology Policy and OMB's Office of Information and Regulatory Affairs. Basically, the program will improve techniques for measuring, gathering and evaluating data necessary to complete risk assessments and evaluations, and will establish procedures for the sharing of risk analysis knowledge among and between Federal agencies and private sector entities. This section also describes the requirements for a program plan report to be submitted to the Congress in 12 months following enactment.

Section 6. Stipulates that Federal regulatory agencies shall recommend to OSTP research required to meet the Act's objectives.

Section 7. Specifies that prototypical risk analysis studies shall be undertaken by the relevant Federal agencies, and defines what these studies are intended to accomplish.

Section 8. Directs the Administrator as defined in Sec. 4 to submit a report to the Congress within 30 months following the Act's enactment into law that will include (1) a summary and critical review of agencies' risk analysis procedures or capabilities as evidenced by the prototype studies to be performed under Sec. 7; (2) recommendations for legislative or nonlegislative changes for furthering the objectives of the Act; and (3) recommendations for improving the transfer of risk-related research and information, and for improving the public's appreciation of risk and regulatory decisions.●

REAUTHORIZATION OF THE NATIONAL OCEAN POLLUTION PLANNING ACT OF 1978 (S. 2941)

● Mr. SCHMITT. Mr. President S. 2941 authorizes funds for the National Oceanic and Atmospheric Administration (NOAA) to carry out the provisions of the National Ocean Pollution Planning Act (NOPPA). Under this act, NOAA is given responsibility for coordinating long-term ocean pollution research among the Federal agencies and for producing a 5-year research plan. NOAA also is responsible under the act for the dissemination of ocean pollution data to the public, Government agencies and other interested parties.

NOPPA requires that national needs and problems relating to ocean pollution be identified and compared with the inventory of current Federal research in this area.

It provides for a forum for agencies who make decisions on needs and priorities in ocean pollution research. Their recommendations will have to comply with the 5-year plan. In this way, NOPPA will lead to a solid and yet effective national program in long-term ocean pollution research.

It is very important that this program be continued and therefore, I ask your unanimous support for the passage of this bill.●

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. McCLURE, from the Committee on Energy and Natural Resources:

Donald P. Hodel, of Oregon, to be Secretary of Energy, to which position he was appointed during the recess of the Senate; and

Martha O. Hesse, of Illinois, to be an Assistant Secretary of Energy (Management and Administration), to which position she was appointed during the recess of the Senate.

(The above nominations were reported from the Committee on Energy and Natural Resources with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. ROTH, from the Committee on Governmental Affairs:

Henry R. Folsom, of Delaware, to be a Commissioner of the Postal Rate Commission for the term expiring October 14, 1988.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mr. ROBERT C. BYRD (for himself and Mr. RANDOLPH):

S. 3081. A bill to modify the judicial districts of West Virginia, and for other purposes; to the Committee on the Judiciary.

By Mr. FORD (by request):

S. 3082. A bill to amend the Internal Revenue Code of 1954 to exempt from rules relating to foreign conventions all conventions, and so on, held on cruise ships when cruises on such ships originate and terminate in United States ports; to the Committee on Finance.

By Mr. D'AMATO:

S. 3083. A bill to amend the Internal Revenue Code of 1954 to lower the limitation on defined benefit plans established for policemen and firemen; to the Committee on Finance.

By Mr. NICKLES:

S. 3084. A bill to establish a cap on the pay of certain Federal officers and employees for the fiscal year 1983; to the Committee on Governmental Affairs.

By Mr. GRASSLEY:

S. 3085. A bill to amend the 1954 Internal Revenue Code to allow a tax deduction for charitable contributions to fraternal organizations for the purpose of constructing and maintaining their buildings; to the Committee on Finance.

By Mr. MATHIAS:

S. 3086. A bill for the relief of certain Government physicians who were paid basic pay, performance awards, and physicians comparability allowances in aggregate amounts exceeding the limitation set forth in section 5383(b) of title 5, United States Code; to the Committee on Governmental Affairs.

By Mr. MATHIAS:

S.J. Res. 270. Joint resolution to designate 1983 as the Bicentennial of Air and Space Flight; considered and passed.

SUBMISSION OF CONCURRENT AND SENATE RESOLUTIONS

The following concurrent resolutions and Senate resolutions were read, and referred (or acted upon), as indicated:

By Mr. PACKWOOD, from the Committee on Commerce, Science, and Transportation:

S. Res. 502. An original resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 2941; to the Committee on the Budget.

By Mr. STEVENS (for himself, Mr. BAKER, Mr. ROBERT C. BYRD, Mr. CRANSTON, Mr. PACKWOOD, Mr. CANNON, Mr. MATHIAS, Mr. FORD, and Mr. INOUYE):

S. Res. 503. Resolution to establish the United States Senate Productivity Award; to the Committee on Commerce, Science, and Transportation and the Committee on Rules and Administration, jointly.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. ROBERT C. BYRD (for himself and Mr. RANDOLPH):

S. 3081. A bill to modify the judicial districts of West Virginia, and for other purposes; to the Committee on the Judiciary.

(The remarks of Mr. ROBERT C. BYRD on this legislation appear earlier in today's RECORD.)

By Mr. D'AMATO:

S. 3083. A bill to amend the Internal Revenue Code of 1954 to lower the limitation on defined benefit plans established for policemen and firemen; to the Committee on Finance.

POLICE AND FIREMEN'S PENSION PLANS

● Mr. D'AMATO. Mr. President, I am today introducing legislation to correct an inequity in section 235(e) of the Tax Equity and Fiscal Responsibility Act of 1982. This provision requires that pension payments under qualified defined benefit plans be limited to $75,000, actuarily reduced for those who retire before age 55. This actuarial reduction limits a pension for someone who retires at age 40 to $26,741. Procedural safeguards are included in this section for those who retire due to disability and for those whose benefits are the result of collective bargaining.

Unfortunately, the 32,000 police officers and firefighters covered under the New York State qualified pension plan are unprotected by these safeguards. Benefits have been set without collective bargaining since 1974. Twenty-three thousand members of this plan are eligible to retire at half pay after 20 years of service. A recent analysis by the deputy comptroller of New York State revealed that there are currently 1,100 active members of the plan—3.4 percent of the total membership—whose retirement benefits would exceed allowable limits should they choose early retirement. The first of these individuals is eligible for retirement in a few months.

This places my State in an extremely unenviable provision. To pay the full benefits due these police officers and firefighters would violate the 1982 tax law. This, of course, could lead to the disqualification, by the Internal Revenue Service, of the entire New York State pension plan. On the other hand, to limit pension benefits to the amounts specified in TEFRA, and thus deny retirees the payments which they have anticipated and to which they are entitled, would violate article 5, section 7 of the State constitution. Neither of these options is satisfactory.

The solution to this dilemma which I am today proposing would provide our Nation's police officers and firefighters with a slightly higher early retirement benefit than that allowed under TEFRA. This would be done by applying normal age 62 retirement benefit limitations to police officers and firefighters at age 55. Actuarial reduction for early retirement would still be required. Thus, the maximum allowable benefits at age 40, following 20 years of service, would become $32,089. It is only fair that those public servants who lay their lives on the line for us every day of the year should not be denied the full retirement benefits which they have earned and on which they have based their plans for the future.

This change, which would cost the Federal Government nothing, should be given the highest priority. The new pension limits take effect in New York on April 1, 1983. We should not risk the disqualification of an entire State qualified pension plan.

Mr. President, I ask unanimous consent that this legislation be printed in the RECORD in full following my statement.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 3083

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. LIMITATION ON BENEFITS UNDER POLICE AND FIREMEN'S PENSION PLANS.

Paragraph (2) of section 415(b) of the Internal Revenue Code of 1954 (relating to annual benefit) is amended by adding at the end thereof the following new subparagraphs:

"(F) Special limitation for qualified police or firemen's pension plans.—In applying subparagraph (C) with respect to a participant in a qualified police or firemen's plan, "55" shall be substituted for "62" each place it appears.

"(G) Qualified police or firemen's plan defined.—For purposes of this paragraph, the term 'qualified police or firemen's plan' means a defined benefit plan—

"(i) which is maintained by a State, or political subdivision thereof, for the benefit of all full-time employees of any police department or fire department that is organized and operated by such State or political subdivision to provide police protection, firefighting services, or emergency medical services for any area within the jurisdiction of such State or political subdivision,

"(ii) under which benefits are determined solely by reference to the length of service of the employee in—

"(I) such a police or fire department, or

"(II) the armed forces of the United States, and

"(iii) which requires, as a condition of participation of any employee in the plan, that the sum of—

"(I) the number of years such employee was employed on a full-time basis by such State or political subdivision in such a police or fire department, plus

"(II) the number of years such employee served in the armed forces of the United States (to the extent such years are taken into account under the plan), equals or exceeds 20 years.

SEC. 2. EFFECTIVE DATE.

The amendment made by section 1 shall take effect as if it had been included in section 235 of the Tax Equity and Fiscal Responsibility Act of 1982.●

By Mr. NICKLES:

S. 3084. A bill to establish a cap on the pay of certain Federal officers and employees for the fiscal year 1983; to the Committee on Governmental Affairs.

EXTENSION OF CONGRESSIONAL PAY CAP

● Mr. NICKLES. Mr. President, I am introducing a bill which will continue the present pay cap contained in House Joint Resolution 599, making continuing appropriations through December 17, 1982.

I join with other of my colleagues in introducing legislation designed to extend the present pay cap or restructure the method of approval of pay recommendations for Members of Congress. This bill I am introducing is an original bill to cap certain Federal pay, however, I intend to offer this same bill as an amendment to the next continuing resolution in the event that measure does not contain such a provision.

While this bill extends the current pay cap, another bill, S. 3050, introduced by Senators HELMS and THURMOND would remove the automatic pay

increase mechanism currently in the law. Extending the pay cap and not changing the underlying law regarding automatic pay increases postpones but does not solve the problem. For that reason, I have cosponsored S. 3050 sponsored by my colleagues HELMS and THURMOND which would correct this problem.

The last pay raise granted to Members of Congress was 5.5 percent in 1979. Since that time increases in congressional pay have come under sharp criticsm from within and without of Congress. This criticism is justifiably raised * * * while Federal spending escalates beyond control, those persons responsible, that is Members of Congress, should be leaders in the cause for fiscal austerity.

I believe that Congress is now establishing itself as opposed to pay increases under the present economic conditions, as is evidenced by the number of bills introduced in response to the present situation. Let us put an end to this constant potential for public criticism and unnecessary waste of congressional time and resources and reform the method of determining congressional pay raises.

When Members of Congress begin to act more fiscally responsible to control Federal spending and reduce deficits only then should Members even consider any upward adjustment of compensation.●

By Mr. GRASSLEY:

S. 3085. A bill to amend the 1954 Internal Revenue Code to allow a tax deduction for charitable contributions to fraternal organizations for the purpose of constructing and maintaining their buildings; to the Committee on Finance.

CONTRIBUTIONS TO FRATERNAL ORGANIZATION CONSTRUCTION AND MAINTENANCE

● Mr. GRASSLEY. Mr. President, I am introucing legislation today which would amend the 1954 Internal Revenue Code to allow a tax deduction for charitable contributions to fraternal organizations for the purpose of constructing and maintaining their buildings.

A fraternal organization is defined in Internal Revenue Code section 501(c)(10), as a domestic fraternal beneficiary association which does not provide for the payment of life, sick, accident, or other benefits to its members, and devotes its net earnings exclusively to religious, charitable, scientific, literary, education, and fraternal purposes.

Fraternal organizations throughout our Nation are responsible for many community services which would otherwise not be undertaken. I feel, as does President Reagan, that the solution to the majority of the problems facing our country today can be found at the local level, where the problems can be quickly recognized and addressed in a timely manner. Fraternal organizations, such as the Knights of Columbus, the Masons, and the Shriners, to name but a few, provide many of the resources needed to assist localities in addressing community needs. Some of the community services provided by fraternal organizations, and funded by charitable contributions, include: youth programs, hospitals, health research laboratories, homes for the aged, widows, and orphans, scholarships, relief for the underprivileged, museums, and libraries. The combined contributions of fraternal organizations to community charitable enterprises surpass $1.5 million per day.

Because deductible contributions to fraternal organizations for the purpose of constructing and maintaining their meeting halls are not permitted, these assembly halls have been allowed to deteriorate. In many rural communities, meeting halls are in such poor condition that the appearance of the facilities discourages new members from joining these worthwhile organizations. In larger cities, the population has moved away from the downtown area to the suburbs; hence, members of fraternal organizations often do not have a place to meet within a reasonable driving distance. It is a matter of pride to these community-oriented fraternities to have their own meeting hall in which to congregate. By passing this bill, we will provide incentives for the construction and maintenance of fraternal lodges, thus encouraging continued support of their efforts and encouraging new membership.

By providing this incentive, new building and restoration projects would be initiated. This would create many jobs for skilled laborers, both in rural and urban localities where there are presently many, many unemployed workers just waiting for a chance to do productive work. This, in turn, would reduce the number of individuals receiving unemployment benefits and increase revenues to the Treasury. This bill would also encourage charitable contributions which enable many of the community service projects to be undertaken.

In conclusion, this bill would provide the incentive for the construction and maintenance of fraternal meeting halls. This would, in turn, create many needed jobs in the construction industry. It is important that we find the solution to the social ills facing our Nation today—we can accomplish this by encouraging community service and charitable projects at the local level. Fraternal organizations provide these badly needed services and should be encouraged to continue to do so. I urge my colleagues to join me in this effort.●

By Mr. MATHIAS:

S. 3086. A bill for the relief of certain Government physicians who were paid basic pay, performance awards, and physicians comparability allowances in aggregate amounts exceeding the limitation set forth in section 5383(b) of title 5, United States Code; to the Committee on Governmental Affairs.

LIMITED WAIVER OF THE PAY FOR 13 MEDICAL OFFICERS, PHS, SES

● Mr. MATHIAS. Mr. President, from time to time, the best intentions of Congress become counterproductive. The Federal Physicians Comparability Allowance (PCA) and the Senior Executive Service (SES) bonuses, added by the Civil Service Reform Act of 1978, both were enacted to enhance the recruitment and retention of highly qualified individuals for Government service. Because the current law prohibits a Federal employee from receiving more than the Executive Schedule Level I pay, some employees are being asked to pay back part of the SES bonuses which they have received. The consequence will be to penalize the very individuals who have received awards for exemplary service.

Mr. President, today I am introducing legislation providing for a limited waiver of the executive level pay cap of $69,630 for 13 Public Health Service, Senior Executive Service, Medical Officers. The waiver is effective for the (current) fiscal year 1982 dollar limitation.

The current law (5 U.S.C. 5383(b)) prohibits a Federal employee from receiving more than the Executive Schedule Level I pay. These 13 medical officers have been awarded total compensation that exceeds that statutory limit because, in addition to their base pay, each was awarded a Senior Executive Service performance bonus for meritorious service during fiscal year 1981 and each received a $10,000 per annum physicians comparability allowance. Congress raised the SES pay ceiling on January 1, 1982, thereby raising the base pay from $50,112.50 to $58,500, while retaining the executive level pay cap of $69,630.

The PCA was negotiated under the established civil service laws and the SES bonuses were paid before Congress raised the SES pay cap. The raising of the SES pay cap, without a commensurate raising of the Executive Schedule Level I pay limit, left these 13 doctors in an unusual situation, which they have no power to remedy. They have been asked to return part of their SES bonuses to bring their fiscal year 1982 pay within the Executive Schedule Level I limit. Overpayments range from $1,455 to $5,988.

The effect of the pay cap limitation is clear. Rather than creating incentives and boosting morale, as the bonus and award programs were in-

tended by law to do, this action is lowering morale and lessening whatever useful effects might have been gained for the Public Health Service.

I know of no other Federal employees who have been asked to repay any part of their SES bonuses to the Government.

Mr. President, it is my understanding that identical legislation by our retiring colleague, Representative RICHARD BOLLING, will be introduced in the other body. Both bills will correct an inequity and allow these dedicated civil servants to retain the full bonus amounts awarded to them for their exemplary performance and service to their country. I urge its favorable consideration by my colleagues in both Houses.●

ADDITIONAL COSPONSORS

At the request of Mr. EXON, the name of the Senator from New Jersey (Mr. BRADLEY) was added as a cosponsor of S. 1256, a bill to regulate interstate commerce by protecting the rights of consumers, dealers, and end-users.

S. 1695

At the request of Mr. SYMMS, the names of the Senator from Iowa (Mr. GRASSLEY), the Senator from Colorado (Mr. ARMSTRONG), the Senator from Alabama (Mr. HEFLIN), the Senator from Colorado (Mr. HART), the Senator from Idaho (Mr. MCCLURE), the Senator from Arizona (Mr. GOLDWATER), the Senator from Florida (Mrs. HAWKINS), and the Senator from North Carolina (Mr. HELMS) were added as cosponsors of S. 1695, a bill to repeal the Generation Skipping Transfer Tax.

S. 2247

At the request of Mr. PACKWOOD, the names of the Senator from Connecticut (Mr. WEICKER), and the Senator from Minnesota (Mr. DURENBERGER) were added as cosponsors of S. 2247, a bill to amend the Tariff Schedules of the United States to permit the duty-free entry of certain footwear for use in the Special Olympics program.

S. 2300

At the request of Mr. FORD, the name of the Senator from Connecticut (Mr. DODD) was added as a cosponsor of S. 2300, a bill to establish domestic content requirements for motor vehicles sold in the United States, and for other purposes.

S. 2985

At the request of Mr. CANNON, the name of the Senator from Hawaii (Mr. INOUYE) was added as a cosponsor of S. 2985, a bill to amend the Internal Revenue Code of 1954 to provide that debts shall accrue only in certain circumstances.

S. 3047

At the request of Mr. KASTEN, the names of the Senator from North Carolina (Mr. HELMS), and the Senator from Iowa (Mr. JEPSEN) were added as cosponsors of S. 3047, a bill to repeal the withholding of tax from interest and dividends and to require statements to be filed by the taxpayer with respect to interest, dividends, and patronage dividends.

S. 3048

At the request of Mr. THURMOND, the names of the Senator from Arizona (Mr. DECONCINI), and the Senator from Mississippi (Mr. STENNIS) were added as cosponsors of S. 3048, a bill to amend title 18, United States Code, to combat, deter, and punish individuals who adulterate or otherwise tamper with food, drug, cosmetic, and other products with intent to cause personal injury, death, or other harm.

At the request of Mr. BIDEN, the name of the Senator from Kentucky (Mr. HUDDLESTON) was added as a cosponsor of S. 3048, supra.

At the request of Mr. THURMOND, the names of the Senator from New Mexico (Mr. DOMENICI), the Senator from Mississippi (Mr. COCHRAN), the Senator from Connecticut (Mr. WEICKER), the Senator from Wyoming (Mr. SIMPSON), and the Senator from Massachusetts (Mr. KENNEDY) were added as cosponsors of S. 3048, supra.

S. 3053

At the request of Mr. D'AMATO, the name of the Senator from Hawaii (Mr. INOUYE), and the Senator from Oregon (Mr. HATFIELD) were added as cosponsors of S. 3053, a bill to amend the Agriculture Act of 1949 to modify the dairy price support program.

S. 3060

At the request of Mr. HATFIELD, the name of the Senator from Connecticut (Mr. WEICKER) was added as a cosponsor of S. 3060, a bill to amend section 7(b) of the Wild and Scenic Rivers Act.

S. 3066

At the request of Mr. GLENN, the names of the Senator from Hawaii (Mr. INOUYE), and the Senator from Nebraska (Mr. EXON) were added as cosponsors of S. 3066, a bill with regard to Presidential certifications on conditions in El Salvador.

S. 3078

At the request of Mr. LAXALT, the name of the Senator from Nevada (Mr. CANNON) was withdrawn as a cosponsor of S. 3078, a bill to amend the Internal Revenue Code of 1954 to exempt from the windfall profit tax certain charitable organizations which provide assistance to patients.

SENATE JOINT RESOLUTION 254

At the request of Mr. JEPSEN, the names of the Senator from Washington (Mr. GORTON), the Senator from Iowa (Mr. GRASSLEY), and the Senator from South Dakota (Mr. ABDNOR) were added as cosponsors of Senate Joint Resolution 254, a joint resolution designating September 22, 1983, as "American Business Women's Day."

SENATE JOINT RESOLUTION 263

At the request of Mr. THURMOND, the names of the Senator from Iowa (Mr. JEPSEN), and the Senator from North Dakota (Mr. ANDREWS) were added as cosponsors of Senate Joint Resolution 263, a joint resolution to authorize the President to issue a proclamation designating the week beginning on March 13, 1983, as "National Surveyors Week."

SENATE JOINT RESOLUTION 265

At the request of Mr. DENTON, the names of the Senator from Mississippi (Mr. STENNIS), the Senator from Virginia (Mr. WARNER) the Senator from Michigan (Mr. LEVIN), the Senator from New Mexico (Mr. DOMENICI), the Senator from Pennsylvania (Mr. SPECTER), the Senator from Utah (Mr. GARN), and the Senator from Florida (Mrs. HAWKINS) were added as cosponsors of Senate Joint Resolution 265, a joint resolution to authorize and request the President to proclaim 1983 as the "National Year of Voluntarism."

SENATE CONCURRENT RESOLUTION 32

At the request of Mr. MATHIAS, the name of the Senator from Virignia (Mr. WARNER) was added as a cosponsor of Senate Concurrent Resolution 32, a concurrent resolution authorizing a bust or statue of Dr. Martin Luther King, Jr., to be placed in the Capitol.

SENATE RESOLUTION 501

At the request of Mr. PERCY, the names of the Senator from Iowa (Mr. JEPSEN), the Senator from Alabama (Mr. HEFLIN), the Senator from Maine (Mr. COHEN), the Senator from Pennsylvania (Mr. SPECTER), the Senator from Arizona (Mr. DECONCINI), and the Senator from Alabama (Mr. DENTON), were added as cosponsors of Senate Resolution 501, a resolution expressing the sense of the Senate that the American people continue to protest martial law repression in Poland and wish to see it ended, remaining detainees released, and full and free dialog resumed with the church and Solidarity; and urging the President to proclaim a national day of solidarity and prayer with the Polish people on the first anniversary of the imposition of martial law.

AMENDMENT NO. 3639

At the request of Mr. PRESSLER, the name of the Senator from New York (Mr. D'AMATO) was added as a cosponsor of amendment No. 3639.

SENATE RESOLUTION 502—BUDGET WAIVER

Mr. PACKWOOD, from the Committee on Commerce, Science, and Transportation, reported the following original resolution, which was referred to the Committee on the Budget:

S. RES. 502

Resolved, That pursuant to section 402(c) of the Congressional Budget Act of 1974, the provisions of section 402(a) of such Act are waived with respect to the consideration of S. 2941. Such waiver is necessary because S. 2941 authorizes the enactment of new budget authority which would first become available in fiscal year 1983 and such bill was not reported on or before May 15, 1982, as required by section 402(a) of the Congressional Budget Act of 1974 for such authorizations. S. 2941 would authorize $3,873,000 for fiscal year 1983 to permit the National Oceanic and Atmospheric Administration to continue ocean pollution research under the National Ocean Pollution Planning Act of 1978. An identical authorization is contained in S. 2605, the National Oceanic and Atmospheric Administration Authorization Act, which was reported out of Committee on May 11, 1982. Unfortunately no action has been taken on S. 2605 on the Senate floor for reasons totally unrelated to the authorization for ocean pollution research. Therefore the Committee on Commerce, Science, and Transportation has decided to report this authorization as a separate bill so that this vital work may continue. The amount of the authorization is the same as the request for this program in the President's budget.

SENATE RESOLUTION 503—ESTABLISHING THE U.S. SENATE PRODUCTIVITY AWARD

Mr. STEVENS (for himself, Mr. BAKER, Mr. ROBERT C. BYRD, Mr. CRANSTON, Mr. PACKWOOD, Mr. CANNON, Mr. MATHIAS, Mr. FORD, and Mr. INOUYE) submitted the following resolution, which was referred jointly by unanimous consent to the Committee on Commerce, Science, and Transportation and the Committee on Rules and Administration:

S. RES. 503

Whereas the economic productivity of the United States has drastically fallen from its traditional rate;

Whereas the economic productivity rates of other nations in economic competition with the United States are higher than the traditional productivity rate of the United States;

Whereas the American people suffer from the national decline in productivity which contributes to high unemployment as foreign industries with greater productivity capture many markets which were once served by American industries;

Whereas the average household of the American worker would have received over $5,000 more in 1982 if the traditional productivity rate of the Nation had been maintained;

Whereas economic preeminence of the United States will continue to fall, industry by industry, unless the productivity rate is increased;

Whereas an essential first step to the restoration of the productivity rate is an understanding by the public of the seriousness of the problem and the specific practices needed for a solution; and

Whereas a cost effective way to facilitate such an understanding is for each United States Senator to present an annual United States Senate Productivity Award in his State and for the news media to utilize the event to communicate information to the public regarding productivity improvement: Now, therefore, be it

Resolved, That (a) the United States Senate Productivity Award is established.

(b) Beginning with calendar year 1983 and each year thereafter, each Senator may be participation in the award program select a recipient of the award pursuant to the guidelines established by the Committee on Commerce, Science, and Transportation of the Senate.

SEC. 2. The Committee on Commerce, Science, and Transportation of the Senate shall—

(a) establish guidelines for the selection of recipients and the awarding of medallions to such recipients; and

(b) enter into a contract for the design and striking of suitable medallions for the purposes of this resolution.

SEC. 3. Expenses necessary and not in excess of $100,000 per year to carry out the provisions of this resolution shall be paid from the contingent fund of the Senate upon vouchers approved by the Chairman of the Committee on Commerce, Science, and Transportation of the Senate.

AMENDMENTS SUBMITTED FOR PRINTING

CALIFORNIA UTILITY ACT

AMENDMENTS NO. 4969 THROUGH 4976

(Ordered to be printed and lie on the table.)

Mr. ARMSTRONG submitted eight amendments intended to be proposed by him to the act (H.R. 1524) to amend the Internal Revenue Code of 1954 to provide that certain procedures and adjustments shall be treated as inconsistent with the normalization method of treating public utility property.

SURFACE TRANSPORTATION ASSISTANCE ACT OF 1982

AMENDMENT NO. 4977

(Ordered to be printed and lie on the table.)

Mr. PACKWOOD submitted an amendment intended to be proposed by him to the act (H.R. 6211) to authorize appropriations for construction of certain highways in accordance with title 23, United States Code, for highway safety, for mass transportation in urban and rural areas, and for other purposes.

NOTICES OF HEARINGS

SUBCOMMITTEE ON PUBLIC LANDS AND RESERVED WATER

Mr. WALLOP. Mr. President, I would like to announce for the information of the Senate and the public the scheduling of a public hearing before the Subcommittee on Public Lands and Reserved Water to consider S. 2811, to extend the restriction of water resources project construction for 1 year on the Tuolumne River, California; and S. 3060, to amend section 7(b) of the Wild and Scenic Rivers Act.

The hearing will be held on Tuesday, December 14, beginning at 2 p.m. in room 3110 of the Dirksen Senate Office Building.

Those wishing to testify or who wish to submit written statements for the hearing record should write to the Subcommittee on Public Lands and Reserved Water, room 3104, Dirksen Senate Office Building, Washington, D.C., 20510, or call Mr. Tony Bevinetto of the subcommittee staff at 202-224-5161.

Witnesses will be limited and may be arranged in panels. Witnesses are requested to provide the subcommittee with 25 copies of their written testimony 24 hours before the hearing, as required by the rules of the committee and are requested to limit their oral testimony to 5 minutes.

For further information regarding this hearing, please contact Mr. Bevinetto at the number listed above.

SUBCOMMITTEE ON TAXATION AND DEBT MANAGEMENT

Mr. PACKWOOD. Mr. President, the Subcommittee on Taxation and Debt Management of the Senate Finance Committee will hold a hearing at 9:30 a.m. on December 10, 1982. Three bills have been scheduled for the hearing: S. 2647, introduced by Senator MATSUNAGA; S. 2987 and S. 3064, introduced by Senator ROTH. A summary of the bills follows.

The purpose of this statement is to briefly explain the issues raised by these bills. This may help you chart the progress of tax legislation before the subcommittee. It also helps assure greater public awareness of tax amendments coming before hearings.

S. 2647, introduced by Senators MATSUNAGA and INOUYE. S. 2647 would amend the Internal Revenue Code to allow a deduction for the expenses of business conventions conducted on cruise ships registered in the United States, plying exclusively between American ports.

S. 2987, introduced by Senator ROTH. S. 2987 would create a general exemption from the Federal motor vehicle excise tax for bloodmobiles, vehicles used exclusively in the collection and transportation of blood. Currently, only bloodmobiles operated by the American National Red Cross are exempt from the tax.

S. 3064, introduced by Senator ROTH. S. 3064 would extend for an additional 4 years the temporary rule of current law that no amount is includible in income by reason of the discharge of certain student loans. The existing rule, which expires on December 31, 1982, applies to loans discharged in connection with the borrower's agreement to work in certain geographical areas, or for certain classes of employers.

AUTHORITY FOR COMMITTEES TO MEET

COMMITTEE ON ENVIRONMENT AND PUBLIC WORKS

Mr. BAKER. Mr. President, I ask unanimous consent that the Committee on Environment and Public Works be authorized to meet during the session of the Senate on Tuesday, December 7, at 10 a.m., to mark up S. 3043, the Federal-Aid Highway Improvement Act of 1982.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I ask unanimous consent that the Committee on Environment and Public Works be authorized to meet during the session of the Senate on Wednesday, December 8, at 10 a.m., to mark up S. 3043, the Federal-Aid Highway Improvement Act of 1982.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON RULES AND ADMINISTRATION

Mr. MATHIAS. Mr. President, I ask unanimous consent that the Committee on Rules and Administration be authorized to meet during the session of the Senate on Wednesday, December 8, 1982, in order to receive testimony from Senators and from officials of the electronics industry on computer and communication systems and services for the 1980's.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON THE JUDICIARY

Mr. BAKER. Mr. President, I ask unanimous consent that the Committee on the Judiciary be authorized to meet during the session of the Senate on Wednesday, December 8, 1982, in order to receive testimony concerning the following nominations:

U.S. DISTRICT COURT JUDGES

Judge John W. Bissel, of New Jersey, to be U.S. District Judge for the District of New Jersey.

Judge Sam H. Bell of Ohio, to be U.S. District Judge for the Northern District of Ohio.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON PRODUCTIVITY AND COMPETITION

Mr. BAKER. Mr. President, I ask unanimous consent that the Subcommittee on Productivity and Competition of the Small Business Committee be authorized to meet during the session of the Senate at 2 p.m., Wednesday, December 8, to hold a hearing on economic problems facing small and independent businesses in the forest products industry.

The PRESIDING OFFICER. Without objection, it is so ordered.

SELECT COMMITTEE ON INTELLIGENCE

Mr. BAKER. Mr. President, I ask unanimous consent that the Committee on Intelligence be authorized to meet during the session of the Senate on Wednesday, December 8, at 10 a.m., to receive a briefing on intelligence.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I ask unanimous consent that the Select Committee on Intelligence be authorized to meet during the session of the Senate on Thursday, December 9, at 10 a.m., to receive a briefing on intelligence.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON RULES AND ADMINISTRATION

Mr. BAKER. Mr. President, I ask unanimous consent that the Committee on Rules and Administration be authorized to meet during the session of the Senate on Thursday, December 9, at 9:30 a.m., to hold a business meeting to discuss pending legislative and administrative business.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL STATEMENTS

A DAY OF SORROW

● Mr. HEINZ. Mr. President, I take this opportunity to share an interesting proclamation that came to my attention during the recess. I received the following statement from the Congress of Russian Americans, commemorating, as a "Day of Sorrow," the 65th anniversary of the Russian Revolution. I ask that this statement be included in the RECORD at this point.

The statement follows:

A DAY OF SORROW

On the 65th anniversary of the "October Revolution", we, as Russian-Americans, wish to remind the Free World that on November 7, 1917 the Bolshevik Communist Party deprived the peoples of Russia of their liberty.

Since that day the Soviet government under the leadership of its Communist Party has continually perpetrated crimes that are an affront to humanity. Among them:

The creation of an Orewellian state founded on a basis of human fear and ignorance and maintained by a ruthless military police;

The "reedification" of the Russian peoples, a policy inaugurated by the heinous murder of the royal family and pursued in the hopes of stripping the Russian peoples of their heritage and thereby creating the ideal human cipher, Homo Sovieticus;

The desecration and destruction of over 50,000 churches and monasteries;

The forcible collectivization of peasants, an act which resulted in the death by starvation of seven million people;

The exploitation of workers and the reduction of peasants to the status of government serfs;

The abandonment of Soviet P.O.W.'s (branded "traitors" by the Soviet regime) in Nazi war camps, resulting in the death of 4,650,000 native sons by starvation and disease;

The forceable repatriation of Soviet citizens remaining in Western European countries after the war and the subsequent imprisonment of these citizens in concentration camps;

The extermination of tens of millions of people in concentration camps and prisons;

The mental and physical torture of countless millions without regard to human rights or dignities;

The military suppression of any popular uprisings within the Soviet Union or any of its satellite nations, particularly Hungary, Czechoslovakia, and Poland;

The creation, through the wanton exploitation of natural resources and environment, of an aggressive military machine which continues to grow at the expense of the people's needs and aspirations;

The suppression of the freedoms of religion, thought, speech and the press and the persecution of individuals for their religious convictions and their beliefs in basic human rights.

No document can enumerate the countless crimes perpetrated by the Soviet government against its peoples. Only the tears of an anguished and suffering people can serve to measure these atrocities. To these tears we direct our hopes, our prayers, and our actions.

The 7th of November, the day of pompous Soviet celebrations, parades and deceitful proclamations about the "struggle for peace" and about the "joyous life" of Soviet citizens, we designate as a Day of Sorrow and Irreconcilability.

This Day of Sorrow and Irreconcilability has been faithfully observed by Russian-Americans and by all Free Russians for the past six decades. Throughout all these years Russians free in mind and spirit have continually attempted to warn the Free World of the threatening Communist danger, but to no avail.

Once again, we appeal to the government of the United States of America to proclaim this day as a Day of Sorrow and Irreconcilability and we invite the citizens of this country to join us in prayers for those who perished at the hands of Communism and for the deliverance of those presently living under the yoke of Communism.●

YURI ANDROPOV

● Mr. SYMMS. Mr. President, I submit for the RECORD the November 22, 1982, Jack Anderson column commenting on the Soviet Union's disinformation campaign to portray the new Soviet Premier, Yuri Andropov, as a moderate who is kindly disposed to the West.

While Mr. Anderson has never been one of my supporters, in fact he has been one of my detractors, I do want to compliment him on his ability to analyze the type and origin of information being fed to the Western media concerning Mr. Andropov.

It has been amazing to me that both the establishment media and the so-called underground media have so blindly accepted the Soviet Union's descriptions of Mr. Andropov as fact, and that they then accept the premise that because Mr. Andropov allegedly likes some aspects of Western culture, he is kindly disposed to our economic and political systems.

A cursory review of Mr. Andropov's career and a slight glance at the groups in the Soviet Union who are his strongest supporters suggests that

he is perhaps anything but pro-West. Why the media generally ignores these indicators is a question that every thinking individual should ask. However, it does portray an image of the Western media as being a group that generally accepts the "party line" without question.

[From the Washington Post, Nov. 22, 1982]

ANDROPOV RISE COULD SPELL END OF DETENTE

(By Jack Anderson)

Despite the Kremlin's not-so-subtle disinformation campaign to paint Yuri Andropov as a moderate, or even a liberal, the new boss of the Soviet Union is a hard-liner whose elevation means rough times ahead for the long-suffering Russian people and the rest of the world.

Actually, anyone who thinks a man who ran the KGB for 15 years could be a liberal must also believe in the Tooth Fairy. The KGB is a combination CIA, the FBI and the Bureau of Prisons—but without any legal restraints. The head jailer is now in charge of the entire country.

For years, our intelligence agencies mistakenly thought that no one with a KGB background could hope to rise to the top of the Kremlin. At most, they believed, Andropov would have veto power over any would-be successor to Leonid Brezhnev.

As I reported three years ago, the CIA evaluated Andropov's position this way: "Any serious contender for the job of general secretary must ensure that he has the tacit approval of the security organ if not its active support." Within the last year, however, Western intelligence began to rethink its assessment of Andropov's chances. In fact, as early as last May, I reported my intelligence sources' hunch that Andropov would be the one to grab the brass ring.

The CIA may have been slow to consider the possibility that Andropov would be Brezhnev's successor, but it was never under any illusions about the nature of the beast. In November 1979, sources told my associate Bob Sherman that Andropov is "an astute, ruthless party bureaucrat whose cold and calculating attitude" fit him well for his job as KGB boss.

What this means for Soviet-U.S. relations is that detente is dead. As long as Andropov is in charge at the Kremlin, the United States can expect a tough Soviet policy on all fronts. The man who supervised the crushing of the Hungarian uprising as Soviet ambassador in 1956 can hardly be expected to be lenient on Poland or other restive satellites.

The big question now is how long Andropov will remain in charge. I've seen secret CIA reports on his health; he is far from robust.

At 68, Andropov is a relative stripling by the standards of the Soviet gerontocracy. But he has serious health problems. In 1966, he suffered a heart attack, and in the mid-1970s he required surgery so major that he spent 10 weeks in the hospital, according to the CIA.

Power, as ex-secretary of state Henry A. Kissinger fondly believed, may be the ultimate aphrodisiac; it may also be the ultimate tonic. Brezhnev was in frail health for years, yet he never relinquished his grip on the Soviet power apparatus. Andropov can be expected to be every bit as tenacious now.

In the Byzantine atmosphere of the Kremlin, no one can relax in the top job. The other old men Andropov beat out will not give up easily.

But Andropov still has the ace in the hole: the loyalty of the KGB. The men who run the Gulag Archipelago now have one of their own in control, and they're not likely to abdicate their newly enhanced power and prestige.●

BOB DOLE—THE FAITH TO ENDURE

● Mr. MENTZENBAUM. Mr. President, all of us in the Senate know the senior Senator from Kansas as an accomplished legislator, a formidable chairman, and one of this body's real leaders. But, Mr. President, an article that appears in this month's edition of the Washingtonian shows us another BOB DOLE—the young man whose courage and determination through years of pain and disappointment brought him back from the devastating war wounds he suffered in Italy in the spring of 1945.

Mr. President, this article, written by Noel C. Koch, illustrates beautifully the spirit and strength of character that all of us who know him have come to associate with Senator DOLE. I ask that the article be printed in its entirety at this point in the RECORD.

The article follows:

THE FAITH TO ENDURE

(By Noel C. Koch)

Gerald Ford intended to waste no time launching his 1976 presidential campaign. It would begin that weekend in Russell, Kansas, hometown of his vice-presidential running mate. Bob Dole.

Russell is almost the geographical center of the continental United States. Socially, economically, culturally, and politically, Russell is dead-center.

The Ford-Dole gathering was held on the lawn of the courthouse, and featured hot dogs and soft drinks. No beer.

Dole got up to face his townspeople

He stepped to the microphone to an outpouring of pride and affection. As the crowd settled, he began to speak.

The words began with the studied protocol of the Senate-seasoned orator, but the sound was the harsh, flat, atonal assault of the American prairie.

A local farmer in the crowd was telling a reporter about the town and when Dole was young and how children were given mustard sandwiches for dinner because that's all there was. . . . "And the dust blew in and filled the creek and sifted in the windows and nothing would grow. We'd wrap the babies' faces with wet towels because people were dying of dust pneumonia. Nobody had anything here and Bob Dole was a poor boy, too."

The Dust Bowl years were mostly forgotten now, called back in stark beauty in photographs by people like Margaret Bourke-White, a piece of history in coffee-table books. Now the poor were in the cities. And so were the votes. But the people who had lived through it remembered. They remembered that they got through it mostly on their own, not because of the government but in spite of it. It shaped their politics.

Jimmy Carter had cried poverty throughout the land in the primary campaigns. Bob Dole never would. He had known poverty. "Everybody in Russell's been broke at least once. It's something we all remember." The farmer said.

But being poor wasn't what was on Dole's mind as he looked out at the people who knew him.

"I can recall when I needed help, the people of Russell helped. . . ." His voice halted, resumed, faltered, and stopped. Dole's left hand moved to his forehead, the fingers splayed as if to shield his eyes from the sun. There was a silence, and his fingers came down squeezing into his eyes, and his shoulders began to quiver. The hard-nosed conservative senator, the Republic hatchetman, was crying, first silently, then audibly. And as the sound of his human self carried, the President of the United States rose and the people of Russell, Kansas, rose and began to applaud, the sound sheltering and protecting, lifting him yet once more, with no undue concern, and certainly not in pity, but out of a long habit of love.

Recovering his composure, Dole whispered, "It was a long time ago." April 14, 1945. One might select any of a number of dates to say how long ago it was. The doctor might chose the day he told Dole that he could no longer play basketball. Dole's mother might pick the day he came home. Dole himself might choose the first time someone, thinking him to be unconscious, said that he was going to die. Perhaps when a man says, "It was a long time ago," he means to be vague.

Those who knew him on April 14, 1945, could also contribute dates. Ollie Manninen fought that day and he speaks about the common experience, but he does not say that he won a Silver Star on April 14. Still, there is something his modesty will not contain, that he wants to tell. At the end of the conversation he stalls, and then shyly works it in: "There was another thing I wanted to mention. I had the honor to represent the United States at the Olympics in 1948. I was a cross-country runner."

He doesn't mean that you should know that he is a man of achievement. No, he means he loves America, and tried to prove worthy of her.

There was another Olympian there that April day of 1945. Devereaux Jennings would go to the 1948 Winter Games at St. Moritz as a downhill racer. The probability of having two Olympians in one Army Division is not great, yet there were two just in that Company, for this was an unusual group of men. There were scions of great families, an over-representation of America's ruling class, and there were other champions. Torger Tokle, the national ski-jumping champion, was there. Al Nencioni remembers passing his body. "He was in the 86th and we passed through them on the second day, going along the saddle toward Torracio. That was woods in there, and they got a lot of tree bursts. Somebody said, 'That's Torger Tokle over there.' We walked right past him. We carried bodies out of those woods for hours."

Nencioni does not say that he got a concussion on April 14, 1945. You get it out of the record. If you pry you will learn he refused to be sent home from the evacuation hospital, but jumped on a passing truck and found his way back to his unit. He prefers to talk about the unit, the men. He has his points of personal pride, however. As though it was a mistake to have taken it from the folder of documents and pictures he has beside him, he advances and then pulls back a photograph of himself and his wife. They are standing with Senator Hubert Humphrey and FBI chief J. Edgar

Hoover. Nencioni is a retired FBI agent. "I wrote the J. Edgar Hoover March," he says. "The Marine Band used to play it when he was around. I didn't want anybody to know I wrote it, though." But he is proud of it. And he remembers the way people from Graves Registration would throw the bodies on the trucks. "I thought they'd just lay them up there, but they didn't. It made me sick," and he clears his throat. He clears his throat a lot when he talks about the war.

And there is Stanley Kuschick, repository of the tribal memory. When others' memories fuzz, they tell you to ask Kuschick, he'll know. Kuschick knows not just what they did and where, or who got hit and with what, but the smell and the sound of it. He knows how wars are run. Kuschick is as old as working every day for 30 years without vacation will make a man.

"I had a football scholarship to Villanova after the war. But you need the killer instinct to play good football. After the war, I didn't have it anymore. I couldn't pretend after everything I saw. I used my GI bill to learn how to farm."

The spring offensive, "Operation Craftsman," is scheduled to begin on April 12, 1945. Since February, efforts have been under way, initiated by Germans, to bring about the surrender of German forces in Italy. Soldiers in the field are unaware of this. So is Hitler. As the intrigue goes forward, so does the war. The Allies mean to destroy the German forces in Italy, and to have their surrender without condition as agreed upon by Roosevelt, Churchill, and Stalin. German forces in Italy are dwindling, they can no longer be reinforced, and their commander, Generaloberst Heinrich Gottfried von Vietinghoff, has no illusions about what confronts him. He cables the German Armed Forces High Command to say, "If the Supreme Command of the Armed Forces continues to maintain its intention of keeping the Anglo-Americans as far and as long as possible from the border of the Reich, its aim can only be achieved if we defeat the known intentions of our enemies, the annihilation of the German armies. This can be done only if we avoid decisive battles by retreating, if necessary, to our prepared Ticino-Po defense positions."

Other German generals have made similar requests. Friedrich von Paulus, commander of the German 6th Army, had done so in the fall of 1942. Hitler's enraged answer was "Stand and fight." So von Pauus stood and fought at Stalingrad, and before the spring of 1943 his 300,000-man army no longer existed.

Von Vietinghoff's answer comes three days later: "All further proposals for a change in the present war strategy will be discontinued. The Führer expects now, as before, the utmost steadfastness in the fulfillment of your present mission, to defend every inch of the north Italian areas entrusted to your command." The signature is Generaloberst Alfred Jodl's, but the order is Adolf Hitler's.

A military historian says that the spring offensive scheduled for April 12 was delayed by fog, which prevented planes from flying. The troops remember that on April 12 Franklin Delano Roosevelt died, and some say it was this that delayed the offensive. The emotional impact of Roosevelt's death was great. But it was fog that caused the offensive to be rescheduled for April 14 at 0600.

At that hour, heavy weather continues to shroud Allied-held airfields, and the American commanders, like golfers on a weekend, fidget and curse. At 0800 the fog begins to lift, and one hour later begins the most intensive bombing of German positions yet undertaken in the Mediterranean Theater. Heavy bombers are followed by fighter-bombers, and by artillery, more than 2,000 pieces firing for more than half an hour. What could not be seen for fog now cannot be seen for dust and smoke, and under its cover the spring offensive begins against heavily fortified German positions, against men of whom "the Führer expects now, as before, the utmost steadfastness. . . ." For those who might not be galvanized by their Führer's expectations, there is an additional encouragement. The troops are told that the 10th US Mountain Division does not take prisoners. The unit has become legendary. It is the only unit that, having taken a position, has never lost it. The ground they take, they keep.

It is not so cold in the mountains as it has been, but not so warm that you can smell the bodies you pass.

The noise of the shelling continues, speckled closer in with the rattle of smaller arms. Here in this ravine there is a small silence. If birds or animals were there, they have fled, frightened, perhaps knowing something you don't.

Over the top of the ravine is a clearing. Across it, curving down and away to the right, are hedgerows—so thick a tank cannot traverse them. You cannot approach the hedgerows from the left for there is a minefield there, nor skirt the clearing to your right for that is the responsibility of the 3rd Platoon. You are to move across the clearing.

Second Lieutenant Robert Dole leads the 2nd Platoon of "I" Company of the 3rd Battalion of the 85th Infantry Mountain Regiment of the US Army's 10th Mountain Division.

He has scouts in the clearing, and now he takes a squad of men along with his radio operator and moves over the top of the ravine and into the clearing. It bears the marks of the bombing and shelling. Dole's men, both for caution and for the silence they do not understand, will move toward these shell holes, going from one to the next, clinging to some little security.

The hedgerow is low, and beyond it the land climbs quickly up the objective, Hill 913, so that the clearing is exposed to the rising land.

There is a stuttering of automatic-Weapons fire into the clearing and mortar rounds from Hill 913, killing one or two whose names the others no longer remember. Dole has called for covering fire, and it spatters into and across the hedgerows, but it does not stop the stuttering or the mortars or save the radioman who has moved to his comrade and is hit almost within his reach. The rest of the squad has scrambled into the craters and some are wounded. But Dole is not. He bellies out into the fire to get his radiomen, not knowing that it no longer matters how many more times he may be hit.

On the right, the 3rd Platoon is moving. There is a farmhouse on the flank of 913, and Sergeant Sanford Rague has gone to it, negotiating a minefield along the way. He is hit from the farmhouse as he comes beneath its windows and plops a grenade inside. So now Rague is bleeding on the far side of a minefield, and a private named Smith whom no one previously suspected of ruthlessness takes two German prisoners and orders them across the minefield. German prisoners are often cocky, knowing they are out of battle and safe while their captors must still face death. These prisoners are not cocky. They plead. "Nein, nein. Minen! Minen!" as though the American does not understand what he is asking them to do. Smith makes it clear that he will shoot them, so they begin across the minefield and both explode mines and are killed. Smith takes a ladder, lays it on the two German bodies, totters across, and retrieves Rague.

There is a sniper 50 yards to the front, midway up the hill, and Sergeant Bill Skinner of the weapons platoon takes a mortar up in front of the hedgerow and fires it. He is shot in the forehead, but his round drops on the sniper. Al Nencioni goes forward to peek at his friend, Skinner, and knows that he is dead. "Their snipers were good. There were a lot of head shots. That was a bad day. It was worse than Belvedere." Asked why the beginning of the spring offensive was worse than the taking of Mount Belvedere, he says that they lost more men on this day. "But it wasn't that. Belvedere was at night. You couldn't see what happened to your friends so much at night."

Now Nencioni has one more hour to see what is happening to his friends. Then a large mortar round will go off a little to close to him.

Company "I" is to take Hill 913 and continue three miles beyond it. By nightfall they will have gone only a thousand yards, but they will have reached the summit. The resistance is everything the Führer could have hoped, except successful. Nor is it unusual that day for the men of this American unit to have to be driven forward by the curses and kicks and rifle butts and bayonets of their noncommissioned officers. "We thought, the way they wiped that mountain, we wouldn't have any resistance at all," Nencioni says, recalling the bombing and artillery fire. "But they were there, dug in." The 10th Division that day will take more casualties than all other Allied forces in Italy combined, and men will become inured to it. Dev Jennings will catch a few hours of sleep that night wrapped in a mattress cover, and wake up screaming as men from Graves Registration begin to haul him up to be numbered, one notched dog tag between his front teeth, his mouth kicked shut upon it, the other tag sent up for the records.

In his shell hole Dole has administered morphine to his radioman because it is all he can do. Overhead the firing from the hill stops. When it begins again, if it begins again, it may find them in their shell holes. No one believes lightning doesn't strike twice in the same place. So now Dole comes up again, out into the clearing, moving on the unseen positions.

The iron rain begins, and something—a mortar round perhaps, one medical record says an explosive shell, Nencioni thinks it could have been a bullet, and so does Kuschick; you think these things can be determined with precision, but they can't—something full of orange-brown-black noise explodes Dole's right shoulder.

Behind them, the 2nd Platoon continues to pour fire across the hedgerow and into the hill. Kuschick, second in command as platoon sergeant, now has a problem. They have been ordered to leave their wounded to await the medics who come behind. It is a practical order to conserve manpower in a unit that takes so many casualties that if one man is left to guard and comfort another who has been wounded, then there

might be none left to move forward. Kuschick decides to disobey this order.

"The Lieutenant was gray, the way they got before they died. I couldn't just leave him there to die by himself. We gave him some morphine, and I told Arthur McBryar to stay with him. You know, we weren't supposed to have morphine. But the Germans would shoot our medics. They didn't care about the Geneva Convention. So we had to make do a lot. When we came across a dead medic, we'd take his morphine. Then when our guys got hit, we could help them a little. You dipped your finger in his blood and put an 'M' on his forehead, because we had to leave them and when somebody got to them to take care of them they'd see the 'M' and not give him more morphine. So he wouldn't overdose, see?

"So we gave the Lieutenant the morphine and left McBryar. I figured McBryar wouldn't have to wait long."

The Allied invasion of Italy had begun on September 3, 1943. Its objectives were not entirely military, but political as well, involving the prestige of the British Empire, then defended by Winston Churchill. Supreme Allied Commander Dwight Eisenhower agreed that Italy should be invaded (Army Chief of Staff George Marshall did not), but he could have contented himself with taking the strategic airfields at Foggia, just north of the heel of the Italian boot, then using Allied airpower against southern Europe.

Churchill had a different idea. Planning for the cross-channel invasion of Normandy was in full swing, and the United States was determined that no men or equipment should be diverted for a major Italian campaign. Churchill was equally determined that British forces in the Mediterranean were not going to sit out the last half of 1943 and the first of 1944 waiting for the attack on France. The plan to go into Naples, called "Avalanche," went forward.

On September 3, a combined U.S.-British force landed at Reggio on the toe of Italy. On that same day an armistice covertly negotiated with the new Italian government was signed. Five days later another combined forced steamed toward Salerno on the coast south of Naples, and the armistice was announced. That the Allies were no longer at war with the nation that they now invaded was no more than a mournful coincidence. Germany prepared to reinforce Italy and to take the deposed Mussolini and re-establish him as the head of the Fascist government. This was done as the Allies were trying to fight their way our of the Salerno beachhead. On the 15th, the Germany General Kesselring pulled back and Salerno was secured. The Allies were irrevocably on Italian soil.

On October 8, 1943, Churchill cabled Roosevelt: ". . . we cannot yet tell whether it is in October or November that we can occupy Rome; but it is certain that we shall not come in contact with the main German forces at the top of the leg till December, or even later. . . ."

It was even later, for Hitler resolved to stand south of Rome and charge dearly for any inch of ground, so that the Allied conquest of Rome did not come until June 5, 1944, and by then its luster had been dimmed by its terrible cost. There was more to come.

As the price of Italy went up, Private Robert Joseph Dole, 17179287, was being factored into the U.S. military establishment. On December 14, 1942, his parents, Doran and Bina Dole, swore before a notary in Russell, Kansas, that they "the undersigned, being the father and mother of Robert Joseph Dole, a minor, an applicant for enlistment in the United States Army, do hereby give our consent to his enlistment therein." The next day he was enlisted at Lawrence, Kansas. He was finally called to active duty on June 1, 1943. The records show that he was a trainee in the Army Medical Corps from June until November of 1943, and that he was then placed in the Army Specialized Training Program for engineering studies until March of 1944. This took him to Brooklyn College, where he compiled a short academic record. The medical and engineering training completed, Dole now became a gunner in an anti-tank company of the 290th Infantry at Fort Breckenridge, Kentucky. At Breckenridge, on June 15, Dole applied for Officer Candidate School.

He was sent to Fort Benning for officer training. The physical required showed that he was a large, healthy 20-year-old: six feet two inches tall, 186 pounds.

During the same period, the 87th Infantry Mountain Regiment was being shot at on the Aleutian Island of Kiska, where it was landed along with some 30,000 other men with the mission of retrieving this bit of American soil from the 6,000 Japanese forces planted there. Before they arrived, the Japanese were quietly evacuated and the fresh, frightened American troops went ashore, spread out in a dense fog. They began firing at any noise, killing and wounding a number of their own people.

This inglorious episode was not consistent with the expectations of those who had labored to make mountain troops a part of the US armed forces. Chief among those was Charles Minot Dole (not related to Robert Dole), a skiing enthusiast who had founded the National Ski Patrol System. In 1940. "Minnie" Dole and some of his friends had suggested that a German attack on America could come from the Northeast and encounter no US forces trained to fight in winter weather or mountainous terrain.

The Secretary of War was offered the services of the National Ski Association in preparing to defend the Northeast. He was not interested. But winter sports were still largely the province of the rich, and the rich were well-connected.

Soon the National Ski Patrol found itself advising the military on how to equip and train troops for the kind of role they might have to perform in the northeastern United States, or in the mountains of Europe.

In November 1941, the 1st Battalion, 87th Infantry Mountain Regiment, was activated at Fort Harris, Washington. The Army now had a paper unit, but they hadn't the personnel to man it. So the National Ski Association became the recruiting agency for the 87th Infantry Mountain Regiment. They were a discriminating agency. Those wishing to join up had to provide letters of recommendation. The result was that the 87th and its spawn, the 85th and 86th Infantry Mountain Regiments—one day to be the 10th Mountain Division—were composed of men rarely found in the Army. Many were graduates of Ivy League schools.

Through the summer and winter of 1943, the mountain regiments trained while wars in the Atlantic and Pacific went forward. The one exception was the embarrassing adventure of the 87th on Kiska. It began to appear that those who had opposed the formation of the elite unit—and there were many, for the military has a traditional hostility to elite units—had had their revenge. The mountain men might be good, and they might be valuable. But no one would ever know because they had never been tested.

Then came Monte Cassino. Mountain troops, George Marshall realized, would have been valuable at Monte Cassino.

In October, Marshall toured the European Theater of Operations and chanced upon a colleague, General George P. Hays, commanding the 2nd Division's artillery in the Ardennes Forest. Marshall thought the job beneath Hays, whose military exploits had included winning a Congressional Medal of Honor in World War I by dancing his horse through a German artillery barrage, calmly identifying targets for his own gunners. Marshall brought Hays back to the States and put him in charge of the mountain regiments, now coalesced into the 10th Mountain Division. In November the Division received orders to go to Italy.

While the 10th was sailing for Italy, Bob Dole was already there, assigned to the 24th Replacement Depot as a pool officer. Winter action was limited, and so were Dole's duties.

"I thought that Replacement Depot was the best duty you could have. I remember going into Rome. They had a big sports school in Rome. I figured the best way to get out of that Army over there was to get in the sports school." Dole laughs, almost wistfully. "Never could figure out how to do it. All those athletes running around the Coliseum there in Rome, getting in shape for the games. . . ." His voice trails off. Dole has no problem admitting that he never went in search of something dangerous to do.

On February 25, 1945, he was assigned to "I" Company, 3rd Battalion, 85th Mountain Regiment. The unit morning report recording this routine personnel action gives an account of the day: "Company in defense. Weather fair and warm. General thawing out. Morale very good."

One week earlier, the 10th Mountain Division had assaulted and taken Riva Ridge and Monte Belvedere-Monte Torracio Ridge, opening the way for an attack on Bologna and the Po Valley. The Allies had attempted this three times before. On one occasion, Belvedere had been held for three days, but the Germans took it back. The 10th Mountain took it and kept it, against the fortifications and firepower of the Germans on the heights, against the Germans' desperate knowledge of what could pour through this bottleneck. A radio message from Hays catches the urgency with which he drove his troops: "Recall 6 to Rebate 5: General does not want to hear of anyone stopping. Send patrol over to break through and to hell with this business of being surrounded."

The Division took more than 900 casualties, 203 dead. When it was over, the reputation of the 10th Mountain division was made.

At the time Dole joined it, "I" Company was in defensive positions. Dole had not been there when the unit was blooded. To the men of the 2nd Platoon he was just another lieutenant, and the division was quickly using up lieutenants.

"When he got up there, we'd been pretty busy and we were dirty. I don't know what he thought of us," Kuschick says. "We were both about the same age, but I had not shaved, had a beard, and I must have looked older or something, because he was very respectful. He asked questions and he listened. A lot of them didn't listen."

Al Nencioni says: "At first, he looked like a sissy. He didn't wear a helmet, he wore one of those cloth hats to keep his head warm. And I remember he didn't blouse his pant over his boots. I don't know why—just wrapped them tight around his legs and laced his boots around them. He looked funny. A lot of guys who looked like sissies had more guts than the others, though—the John Wayne types. And he always listened to the sergeants."

"We had two battles going," Kuschick says. "One with the Germans and one with the officers. A lot of them weren't worth much. Dole was the best combat leader the platoon had. If he had to take a farmhouse, he went right for it. Never told somebody else to do it. He stayed in front."

On March 18, Dole took a pat ol out to try to capture some Germans. It is the first record of Dole in action. They came under fire, and he, along with three of his men, was lightly wounded by grenade fragments. These may not have been German grenade fragments.

"I think one of ours might have bounced off a tree and rolled back." Dole says. "Sometimes it was like a shooting gallery in the dark. You didn't know where the stuff was coming from or whose it was."

On April 14, the spring offensive began. Dole was hit less than one hour after it began.

Whatever justifies the recollection that he was the best combat leader the 2nd Platoon had remains locked in the memories of men who shared an experience a long time ago. Inevitably, a war wound invests the bearer with an aura of heroism; yet being wounded is almost always an accident. Why people get medals for it is a mystery. Heroism involves choices, and Dole perceived no choice between leading his men and not leading them. For six weeks he was in the war and showed himself worthy of one of the best units and was hit. He seems to have met the high expectations of those he led. What it meant to him then or now is not clear.

He returned to Italy years later to try to find the hill where he was on April 14, 1945, but the land was strange to him. In recent years he has attended an occasional reunion of men from the 10th Mountain Division, but he doesn't remember many, nor does he maintain contact with them. The unit's archivist, Andy Hastings, say, "For a long time Bob didn't identify himself with us. He just felt like he didn't belong." There is nothing that would lead one to believe now that he shares with them a sense of belonging. Out of it all, it is this that most sets Dole apart from his comrades. Read Henry's exhortation at Agincourt to them, and they will understand it in their stomachs. Every generation of soldiers has its St. Crispin's Day. Tennyson's "Ulysses" will touch the same scars that these men intentionally keep open so as never to forget. Men may pray for peace and brotherhood, but they will settle for the brotherhood they've known at war. They are grateful to have known it.

For Bob Dole, it was just bad luck. He did not begin with these men; he came to them by chance, and long afterward he suffered for it. While Manninen and Jennings were competing for Olympic medals in 1948, Dole was being released from a hospital, and even that was not the end of it.

Dole had lain in the shell hole with McBryar for what seemed like an eternity. The medics who should have come to help him had themselves been hit by German fire, and it was nine hours before Dole arrived by litter at the 15th Evacuation Hospital, where the consensus was that he would die. Whatever had hit him had damaged his spine: "The patient had immediate paralysis complete of all four extremities."

Two days later he was transferred to the 70th General Hospital in Casablanca.

The letters began to come in to the little house at 1035 Maple Street, Russell, Kansas. Because Dole could not use his hands, the letters were written for him.

"APRIL 25, 1945.

"DEAR MOM AND DAD: Just writing to let you know I'm feeling O.K. I can move my legs now but I'm still having a little trouble with my left arm. I have a broken bone in my right arm and two in the shoulder. I guess some German thought I was a good target.

"Write and let me know all the news. Tell me how Kenny is getting along in the Army. Tell everyone hello and to write. I'll let you hear from me as often as possible. Please don't worry about me. I may be home for my birthday

"Love,

"BOB.

"APRIL 27, 1945.

"DEAR MOM AND DAD: I'm feeling pretty good today. I'm just a little nervous and restless, but I'll be okay before long. I'm getting so I can move my right arm a little and I can also move my legs. I seem to be improving every day and there isn't any reason why I shouldn't be as good as new before long.

"Send me something to read and something to eat.

"Love,

"BOB.

"APRIL 27, 1945.

"HELLO, MR. AND MRS. DOLE: I'm sure you know that Robert is unable to write so I tried to write him a note. He told me what to write. I know you are worrying about Robert but I wouldn't worry too much because there isn't any doubt in my mind at all but what he will be just as good a man when he gets well as he was before he was hurt.

"Just thank God it wasn't any worse than it was. That's the way I feel about it. In case you want to know who I am, my name is John Booth of Bethany, Mo. Robert was my Platoon Leader. He is a fine fellow. I'll write again for him. (A sniper shot me in the foot. I can't walk very well but it won't be long until I can.)

" As always,

"JOHN.

"MAY 23, 1945.

"DEAR MOM AND DAD: I haven't written in a couple of weeks, primarily because I thought I'd be home by this time. I'm in a different hospital now and I should be going home soon. Am feeling much better than I was when my last letter was written. My legs are better and my left arm seems to be improving steadily.

"The cast I'm in is none too comfortable but as soon as I reach home, it will be taken off. There is a possibility that I will be sent to Winter General Hospital in Topeka.

"Love,

"BOB.

"P.S. I don't know who wrote this."

The war in Europe ended May 8, 1945. On June 12, Dole was admitted to Winter General Hospital in Topeka, Kansas. Shortly, the Doles arranged a leave for their son and brought him home on the train. His townspeople were there to see him borne down among them on a stretcher.

Dole was now 22 years old, having been born in Russell on July 20, 1923, eldest of the four children of Doran R. and Bina Dole. Doran Dole ran a cream-and-egg business, and sold feed and other rural sundries. Mrs. Dole sold Singer sewing machines and vacuum cleaners. The children sold Cloverine Salve and the *Salina Journal,* mowed lawns, and had chores. The proceeds helped to pay for their schoolbooks and clothing. In a place where constancy was a necessary virture, Doran Dole gained a homey fame by missing one day of work in 40 years.

The boys were active in the Boy Scouts, the family active in the Methodist Church. All four children attended Russell Elementary School. Dole's third-grade teacher remembered him: "Bobby Dole was unforgettable. He had big, brown eyes—warm and sensitive. When I looked into the room, across the little faces, I was always aware of Bobby. He studied his lessons and he enjoyed coming up with the answers to questions. He stood by his desk like a little soldier."

Even in his youth there was a fidelity to duty. A family story recalls an occasion when Bina Dole was ill. "Dad was in charge of us kids," said Dole's sister, Gloria. "One morning he popped out of bed without looking at the clock and immediately went about waking everyone up. We protested, but Dad would hear none of that.

"Then, while we were sitting at the table waiting for breakfast—and none of us hungry—Dad sent Bob to the drugstore to get something for him.

"After Bob left, Dad finally looked at the clock and saw it was only 3 a.m. When Bob didn't come back right away, Dad sent the rest of us back to bed and went down to the drugstore. There was Bob, sitting in the darkened door of the drugstore half-asleep, determined to wait until it opened."

Dole went to work there at Dawson's Drugstore when he was twelve. He worked after school, evenings, Saturdays, and Sundays after church. The Dawsons had three sons, all quick-witted and outgoing, and Dole recalled, "Many customers who traded there came just to be 'insulted' by the Dawson brothers. It was natural that I would pick up some of this." He bought the family a $26 bicycle for $2 and services to the store owner. It took a year to pay it off.

As he grew older he developed a passion for sports, and he trained hard. His work at the drugstore enabled him to meet the local doctors, and he developed an ambition for a medical career.

In high school he became president of Hi-Y and a member of the National Honor Society. His last summer in high school he worked for the Kaw Pipeline Company, and his body hardened further. Before he left the drugstore he'd met the son of Kansas University's basketball coach, Phog Allen. Allen was told of the young man who ran everywhere he went, training all the time, lifting weights, doing calisthenics, winning letters three years running in football, basketball, and track, and making the all-confernce teams.

Dole enrolled at Kansas Unviersity as a pre-medical student, played football and basketball, and in track nearly broke the indoor record for the quarter-mile. But there was a war, and Dole had already joined the reserves. Finally, he asked to be placed on active duty.

Now the strapping boy who had brought the trophies home to Russell was home again, and there were few who had the voice to give him welcome. He weighed 120 pounds, excluding his cast.

The "instrumentality of war" that broke him had entered his right shoulder, fracturing the clavicle, which is the collarbone, the scapula, which is the large shoulder bone behind the collarbone, the humerus, which is the upper arm, and penetrated to the fourth cervical vertebra. The bony top of this vertebra was fractured, and the vertebra tilted out of line, shocking the spinal cord, paralyzing all four extremities, and taking away normal bowel and bladder functions.

Dole went back to Winter General with a few additional pounds and improved color. Soon he lay near death. His mother was told he might have a few hours to live. His temperature reached an improbable 108.7 degrees.

The loss of bladder function, notwithstanding catheterization, results in kidney infection and kidney stones: "Extensive workup was done and it was found that the right kidney was markedly infected and contained a large number of stones. This necessitated removal of the kidney on 11 July 1945. The patient had an uneventful recovery from his kidney condition. By September 1945, the patient had regained function of his bladder and bowels as well as function in both lower extremities with some improvement in the left upper extremity."

Autumn, and to be able to stand alone was a great achievement. Bina Dole had taken an apartment close by the hospital and helped him each day. "Bob had learned to walk as a baby when he was between ten and eleven months old. At Winter General I watched a nurse get him up out of bed. He walked the same way—tentatively, but with the determination to learn."

He had begun to smoke, and she held his cigarettes for him because his arms didn't work. He was still given slight chance of recovery, and occasionally acknowledged this. And if he lived, what? "To be completely helpless has a marked effect on anyone," he says. "I couldn't feed myself for almost a year, or do anything with my hands."

By late fall he could take a few steps and move his left arm. He could manipulate his left hand a little. In November he was transferred to Percy Jones General Hospital in Battle Creek, Michigan, away from his home and parents and friends. But his progress encouraged him to hope again.

Most of his time was spent on his back. When a patient is incapacitated, bedded for long periods, the blood slows in the body. This slowing leads to clotting.

Early on December 21 he awoke with a savage pain in the left side of his chest. It was diagnosed as a pulmonary infarct—an obstruction in the lung. The obstruction was a blood clot. He was treated with dicumarol, an anti-clotting agent that made him, temporarily, hemophilic. And because he wanted to be told, the doctors admitted again that it was uncertain he would live.

The dicumarol was continued. There was no other treatment available at the time. For long periods Dole's body was packed with ice. The year ended, the days oozed into weeks, and the weeks saw January out and February come, and the physical skills Dole had sought to restore were sliding away again.

On February 12 the dicumarol was discontinued, and on February 13 there was a chill and the pain returned. The dicumarol was begun again along with penicillin, but on the 14th there was a second chill and coughing. The medication wasn't working anymore. The penicillin was not hitting all the cocci that threatened his life. His parents had come to Percy Jones, knowing that the doctors didn't know how to save their son.

There was a chance, however: an experimental drug called streptomycin. There was no guarantee that it would work and no real assurance what it might do. The Doles signed a release.

The streptomycin did work. On March 6, Dole was permitted to sit up in a chair for a few moments.

Now Dole started again. Each day he could sit up a little longer. Then he could stand. Finally, he walked. The ability honed back at Dawson's Drugstore—jiving, joking—came back more quickly than his other skills, and because he made the doctors and nurses laugh, it was thought that he might have a good effect on others. So they wheeled him around to a ward with men paralyzed from the waist down. They had heard of the streptomycin guinea pig; he was proof that you didn't have to die even if you were supposed to.

He laughed at himself and he laughed at them and they laughed at each other.

If Uncle Sam had things a little better organized he'd figure out how to dismantle us and put the good parts together. Throw the other junk away.

Yeah. Except everybody's got good heads. Too many heads and not enough bodies for them.

If I had a head as ugly as yours, I'd be glad to sacrifice it.

Listen to you guys. Two hogs arguing who's prettiest. . . .

How about running down the machine and get me some Luckies?

You go, my feet are tired.

Can't. They see me skippin' down there they pull my disability and put me back on active duty. I am a paraplegic!

Shut up, I'm a Sosnowski.

I'd rather be a paraplegic. . . .

I'll tell you something, pal.

Yeah?

I am going to walk.

Keep saying it.

This war went on. Dole stayed in it. He made them laugh, lifted them up.

His industriousness reasserted itself, and for a while he took up selling automobiles in the hospital. Oldsmobile had a specially equipped car with controls on the steering wheel. He hustled it with the paraplegics. He was not successful.

Inspiration comes and goes. Dole's spirit helped others, and so helped him, but the end was difficult to see and there were periods of despondence.

"It's strange what can happen to a man after he's been lying around a hospital for a couple of years," Dole says. "The realities of life seem to fade away. You lose your energy, you stop caring, it's too much trouble to do anything. Sometimes you just want to lie there and let others wait on you.

"People who love you can help, though."

Each day in the hospital he went through the same therapy, the exercises to strengthen his legs, to strengthen his left arm, to restore as much articulation as possible to his hands, to learn to do things for himself again, to eat, to dress, to write.

In the wards at Percy Jones was a Dr. Bill Eilert, injured by a mortar blowback on Okinawa. Eilert had heard of a man named Kelikian in Chicago who performed the kind of surgery that might help restore Dole's right shoulder and arm, and thought Dole ought to see him.

Dr. Kelikian is an Armenian immigrant. He came to America and enrolled at the University of Chicago while working as an elevator operator there. He went on to become one of the nation's leading neurosurgeons. His brother was killed in Italy. Kelikian agreed to operate on Dole for nothing. "I do what I can for the country," the doctor says, "both out of gratitude and out of respect. Dole epitomized America to me. He had the faith to endure. . . ."

Before the operations, Dole went home again to Russell.

This time he came standing up. The first day he got out his old track shoes and circled the block. Every day he worked to increase his speed. In his basement he set up a gym. His friends came to wonder at him. When he toppled over, he got up by himself. He would have no help. Wherever he went he carried a rubber ball to squeeze his left hand back to strength, though he had almost no feeling in those fingers. His right hand still would not work properly. They cast a device in lead to fit his arm and fixed it with rubber bands to hold his fingers open, and covered it with felt from the pool hall to keep it from chafing. This help he accepted.

When his townspeople learned he was going to Chicago for operations to make his shoulder and arm work better, the Russell Veterans of Foreign Wars Post got up a fund drive to help pay his way; for even without Kelikian's fee, there were transportation and other costs to cover. One person gave $100, another a nickel.

The first operation on his shoulder was done on June 3, 1947, another on August 4, and the last on November 5. Part of the scapula was removed, and muscles in Dole's neck were connected to his arm. The arm had been ankylosed, or fused, at the elbow, and the paralysis of nerves in the shoulder was relieved by the operation in Chicago. When Kelikian was finished with him, Dole was getting about 40 percent use of his right arm, and the doctor estimated that this should increase to 70 percent in time. No, he wouldn't play basketball again.

What he could do was still uncertain, but he had set his mind to one thing, and this he confided to his brother Ken. "I'm going to get those years back," he said.

Epilogue: Robert Dole went back to college, at the University of Arizona, and then received a law degree in 1952 from Washburn Municipal University in Topeka. He was elected to the Kansas House of Representatives in 1950, and was Russell County Attorney until he was elected to the US Congress in 1960. In 1968 he was elected to the United States Senate, and in 1976 he was the Republican candidate for Vice President. He now serves as chairman of the Senate Finance Committee.●

VISIT OF STUDENTS, PARENTS, AND FACULTY OF JOSEPH B. CAVALLARO JUNIOR HIGH SCHOOL

● Mr. D'AMATO. Mr. President, I am pleased to note the visit by students, parents, and faculty of the Joseph B. Cavallaro Junior High School of Brooklyn, N.Y., to our Nation's Capitol. These students, who have expressed an interest in journalism, are to be commended for their production of a comprehensive guide to Washington, D.C. This informative book provides a detailed profile of the many

historic monuments and buildings in this city.

I request that the name of each of the participants in this ambitious project be recorded in the RECORD.

The list of names follows:

Noah Beltran, Lonnie Goodman, Albert Cremer, Tommy Ford, Tong Ting Fatt, Harry Poon, Diane De Meo, Vicki Daskalakis, Joane Hartas, Lidia Gaisi.

Regina Siano, Yolanda Hoey, Anne Maris Fasulo, Eric Wilmes, Michael Palumbo, Ronald Lumangino, Tomas Stanziale, James Barilla, Andrew Frances, Louis LiCausi.

Serafim Kouros, Jaime Castillo, Richard Ware, Charles Lee, Arnie Sand, Eric Unger, Charles Carollo, Samuel Sherr, Mr. Stanley Kuperstein, Mr. Eugene Berlin.

Mrs. Jeanette Addessi, Mr. David Silberstein, Mr. Walter Keiller, Mr. Vito LiCausi, Mr. Joe Fasulo, Mr. Richard Wilmes, Mrs. Alma Fields, Mrs. Debbie Gaisi, Mrs. Roberta De Meo, Mr. Charles Fields, Mr. Irving Berger.●

PEARL HARBOR REMEMBERED

● Mr. BIDEN. Mr. President, for a majority of Americans, Pearl Harbor is only a name, an historical incident glimpsed in old newsreels of exploding bombs and an angry President. But for those who were alive on that day 41 years ago, it is a searing memory of the death of 2,300 American servicemen and of the sacrifice which they and their families made so that our Nation might remain strong.

Only last month, in a series of moving tributes before the Vietnam War Memorial—tributes either spontaneous and personal or organized and ceremonial—we were reminded of the private grief and of the deep sense of dignity born of commitment and sacrifice which many experienced in combat but which the rest of us can only imagine.

Pearl Harbor and the conflict which followed it burned into the national memory the physical and emotional suffering which all wars engender. For veterans and the families of veterans, images of lost loved ones remain as part of an immediate, everyday experience. Those who gave their lives live on in the hearts of those who knew them. From the highest to the most humble, they were all of equal honor.

The veterans of the Second World War, like those of World War I, Korea, and Vietnam, deserves our deepest gratitude and our support. We owe to them what we are today, for they fought to safeguard our freedoms and make possible a hopeful future.

And for those who died in battle on this day in 1941, we commemorate their valor. In the words of the poet Stephen Spender:

Born of the sun they traveled a short while towards the sun,
And left the vivid air signed with their honor.●

"ON THE ISSUE OF LIMITED RESOURCES:" SENATOR STEVE SYMMS

● Mr. SYMMS. Mr. President, the prophets of doom and gloom are many. In widely published studies such as "Limits to Growth" and "Global 2000," a dark picture is painted of a future which has exhausted the world's food and resources. Advocates of a "no-growth" philosophy warn that we must lower our sights and prepare for a declining standard of living. They say that Americans and others in the industrialized Western World have been "selfish," and have been using more than "their share" of the world's minerals, energy and food, despite the fact that the industrialized countries are using those resources to produce nearly every product available.

Nevertheless, I have always sharply disagreed with this fatalistic and limited assessment of our capabilities and our resources. If economic growth has slowed in recent days, it has not been because of a lack of resources, or overpopulation, but because of self-imposed social limits such as the demands of environmentalists and ecologists and the increasing burden of taxation and Government regulation. The explanation of these new trends lies in a profound change in value systems in affluent countries, countries which have both the technology and the wealth required to satisfy their new values. If economic growth were to stop or slow drastically, it would mainly be the result of various social limits. Indeed, it is difficult to think of any intellectual change in the second half of the 20th century that is likely to have greater consequences on material growth than these noneconomic factors. During the last decade we have been confronted with an entire literature of pessimism. All of the books reflect a startling loss of confidence in the traditional premises and values of economics progress, specifically the acceptance of material advancement as a sign of intellectual and moral growth. As a result, as shift has occurred in public places. The new policies often encourage an unwise distortion of market forces for nonmarket purposes, and generally urge an interference with and undermining of the social patterns that once supported economic growth.

Two out of three Americans polled in recent years believe that their grandchildren will not live as well as they do. If America is to change course, it is important to reestablish an ideology of progress. Ideologies are important in themselves. They emphasize values and attitudes; they contain a theory of the past, help shape responses to current issues, often providing the energy and motivation needed to make those responses effective.

There is no reason for there not to be continued economic growth and progress. There will be great expansion of non-OPEC sources of gaseous and liquid fuels from conventional and unconventional sources. There will be a technological revolution, and new opportunities in space. Our recent problems have been artifically created by Government policy: For the past 10 years, U.S. energy policies have been misguided, inappropriate, and counterproductive. Presidents Nixon, Ford, and Carter all agreed that the energy crisis threatened the basic security of the United States, yet all of them pursued policies which increased dependency on foreign oil. In 1970, the United States imported 24 percent of its oil; in 1979, it imported 45 percent. Throughout the decade the Government kept the price of domestic oil and gas artificially low—that is, below world market prices—thereby greatly reducing incentives both to conserve and to explore and develop new domestic sources and alternatives. At a time when the world price of oil was about $14 a barrel, the United States kept the average domestic price to about $9 even though that price reduction was not reflected in the cost to the consumers—the group who the Government was supposedly trying to help through regulating the price. The consumer always ended up paying the world market price for oil.

A new era of prosperity can be ours if we restore the proper incentive structure of the marketplace. For example, the deregulation of the energy industry and of society and industry in general. The basic standard for Government intervention should be that the burden of proof of need of intervention should be on the Government. Unless it makes a very good case, it should not be involved.

Over the next 20 years, if we pursue proper economic policies the national income will double. The policies of the Reagan administration are pointing the country in the proper direction for economic revival. It is up to all of us to continue on a course which will turn this country around.●

CLINCH RIVER—DOE IMPUTING ITS OWN INTEREST

● Mr. HUMPHREY. Mr. President, yesterday and last Tuesday I entered material into the RECORD detailing how much the Clinch River breeder reactor project will cost American taxpayers to operate and maintain after it is built. Today, however, I would like to return to just how much the project will cost to construct.

The Department of Energy (DOE) now claims that the project will only cost $3.6 billion to complete. The General Accounting Office (GAO), on the other hand, claims that this estimate

is unrealistic, specifically, that DOE's estimate does not include the cost of financing construction. This expense, known as imputed interest, is quite high. GAO estimates that it will add $3.9 billion to the project's final cost.

When the GAO came out with this estimate in September, however, DOE in Washington complained that it was unfair, that imputed interest should not be included in calculating Clinch River's costs since it was a research and development facility.

That was in September when it was in DOE's interest to exclude imputed interest in their cost estimates. Earlier in the year when DOE was attempting to fast-track a limited work authorization license from the Nuclear Regulatory Commission (NRC) for Clinch River site preparation work, DOE then argued that it was important to fast-track Clinch River's construction to avoid additional imputed interest costs.

This point, moreover, was not just made in passing. In a separate submission dated February 23, 1982, DOE's own private accounting consultant, Arthur Andersen & Co., defended DOE's use of the imputed interest argument.

Throughout the summer at NRC proceedings, DOE repeated this argument for fast-tracking the licensing of the project. Indeed, it repeated the argument so many times that initially it was caught off guard when the GAO came out with its September finding of $3.9 billion in imputed interest costs. Thus, Percy Brewington, Clinch River's acting project director, first answered reporters' questions about the GAO finding by arguing that limiting the high cost of borrowing money—imputed interest—was one of the reasons for pushing ahead with the project. As he explained to the Knoxville Journal, interest should be considered in any examination of the cost of the breeder.

DOE, of course, now argues that we ought not to include imputed interest. It certainly is not a cost to them. It is, however, a major cost to the American taxpayer who must pay interest on the loans the Government must take to retire the national debt. GAO understands this. Every utility when it borrows money is forced to recognize this. And even DOE recognizes this when it is in its interest to do so.

We are fortunate that DOE makes many of its arguments publicly. We have copies of Arthur Andersen & Co.'s submission to the NRC and of Percy Brewington's comments in the Knoxville Journal.

I ask that the text of both of these documents be entered into the RECORD.

The documents follow:

BREEDER COST $8.9 BILLION IN NEW FORECAST

(By Joe Krakoviak)

The General Accounting Office has released a pair of reports that indicate eventual cost of the Clinch River Breeder Reactor project could be as high as $8.9 billion—$5.3 billion more than the latest estimate by the Department of Energy.

The GAO estimate follows by a week two other estimates made by both sides of the experimental nuclear program to produce electricity with a process that breeds more plutonium fuel than it uses.

GAO did not give exact estimates in its reports, instead describing situations not considered in the DOE estimate and giving a range of possible costs.

Breeder officials, however, said most of the added costs should not be considered as part of the estimate.

Main expenses GAO focused on were imputed interest, up to $3.9 billion over the life of the project, and the value of plutonium, perhaps as high as $1.2 billion.

GAO said Congress should be aware that interest costs associated with the project could amount to as much as $3.9 billion.

Admitting that inclusion of the costs of borrowing money from private sources isn't done with any federal project, GAO said nevertheless the figure should be considered. Percy Brewington, acting project director, agreed that interest should be considered in any examination of the cost of the breeder.

He also suggested that if the GAO insisted on considering the time value of money, the agency should also be concerned about finishing the project and protecting the $1.3 billion already spent.

One report said the eventual plutonium cost would be much higher than the $10 million figure the DOE used. Quoting DOE officials, GAO said the real value of the 6.2 million grams of plutonium would range from $143 million to $1.2 billion—depending on how much plutonium came from existing defense stockpiles and how much from reprocessing plants.

John Wagoner, a DOE employee and deputy project director, said the plutonium would not actually cost anything, since it would eventually be returned. And because of the "breeding" of plutonium, the payback would include any fuel created during the program.

"The Congress (during original budgeting in the early 1970s) understood that all the plutonium would come from existing defense stockpiles and then be returned," Wagoner said.

The other report said DOE underestimated the actual cost of the project in three main areas other than plutonium: implicit interest expense, the estimated revenue from selling electricity generated during testing and the allowance for construction contingencies.

GAO said DOE disregarded projections by Tennessee Valley Authority of the utility's power demands and payments for extra electricity over the five-year life of the test to overestimate by $53 million—$680 million rather than $627 million—eventual income which would be used to reduce the project's cost.

Brewington said any predictions are "really very speculative," but that he has confidence in the project's estimate.

The report also faulted DOE's estimate of the average production capacity—the percentage of usage at full operation—of the plant. GAO said the 75 percent figure used was more than the 63 percent average compiled from statistics of the 72 commerical nuclear plants—resulting in an overage of $120 million.

Brewington called the figure "reasonable," adding that the present estimate was up to 82 percent capacity. He said the breeder reactor wasn't impacted by changes in sister plants as with commerical reactors, it benefited from more reliable design techniques, and it refueled only half as often.

GAO questioned DOE's allowance for construction contingencies, about 9.2 percent out of a $973 million cost.

ARTHUR ANDERSEN & CO.,
Washington, D.C., February 23, 1982.

U.S. NUCLEAR REGULATORY COMMISSION,
Washington, D.C.

GENTLEMEN: This is to respond to the Commissioners' request that I provide (1) comments I might have on the Applicants' submissions, and (2) an analysis of the increased interest costs that would be incurred as a result of a one-year delay of the Clinch River Breeder Reactor Plant Project.

My comments on the Applicants' submission fall within three categories of delay cost.

a. Inflation;

b. Personnel retention, deferral of revenue and a permanent stretch-out of the construction period of one year;

c. Interest on the present capital investment.

A. As to inflation.—Inflation has been reflected in the construction costs because it causes actual incurred costs to increase. To assume no inflation would be unrealistic and would cause capital planning and budgets to be unreal. The rate of 8% per annum seems reasonable for planning purposes.

B. As to personnel retention, deferral of revenue and deferral of capital expenditures.—The parties agree that there are delay costs associated with maintaining the managerial personnel during the period of delay. Applicants have calculated the cost of maintaining this personnel at $41.8 million per year. When appropriately discounted, the total cost is $38 million per year.[1]

As to the deferral of revenue, a one-year delay will cost the Project between $5.9 million and $20 million per year in 1982 dollars per the record in this case. Intervenors base the $20 million on the avoided cost of power from coal generation. We understand that, if the avoided cost were based on petroleum generation, the cost of deferral of revenue would increase by a large factor. We have noted that the $5.9 million is understated because it is for a five-year period of time rather than for the estimated service-life of the plant. Because of this, the $20 million cost of deferred revenue shou''d be a more realistic basis for measuring the cost incurred as a result of the delay.

As to the permanent stretch-out of the construction period by one year, the Applicants' exhibit shows that the cost would be a "saving" of $30 million on a present-worth

[1] The discount calculations are attached as exhibits 3, 4 and 5. At the Feb. 16, 1982, Commission meeting, applicants estimated that the effect of discounting would be to decrease management costs by about $11 million. A more precise analysis by the applicant shows that this effect is significantly less. In particular, it was not necessary to discount Project Office or Stone & Webster management costs. The costs for both of these groups were already discounted in calculating the anticipated savings due to delay.

basis and a cost of over $136 million with inflation of 8 percent per year.

The above three cost matters, which were deployed by the Applicant, are summarized in millions of dollars.

[Dollars in millions]

	High	Low
Increased cost of personnel	$38	$38
Lost revenue	20	20
Subtotal	58	58
Inflation, gross	136	.....
Inflation, discounted	.....	(30)
Total cost	194	28

C. Interest on the present $1.1 billion capital investment.—Interest is a cost of doing business that arises from the fact that capital must be raised and committed to each project. It must then be serviced during each time period from its formation and commitment to the project through the completed service-life of the project.

It is often described as a real cost because it is a hard-core, unavoidable cost just like engineering, construction materials, construction labor, manufactured components and configurations of purchased equipment and the many other elements comprising the total cost of a new facility.

A possible delay of Clinch River has raised the question of the costs of a one-year delay. Our experience with delays due to material shortages, labor strikes, fires, explosions, accidents and regulatory processes illustrate that the cost of interest is an inescapable part of delay costs.

In the event of a one-year delay in the construction of Clinch River, interest will be incurred for one extra year. This is so because capital (money) is a commodity with real value. It can be exchanged for other items of value, loaned to another party or invested to produce a return to its owner. The use of capital resources over a period of time causes a cost to be incurred. During any period of a project delay in construction, the capital or interest costs continue to accumulate. Such costs are measured by dollars of capital required, the timing of capital requirements, the rate or cost at which the capital is available and the length of the period of time to completion of the project. In short, the cost of money is incurred from the beginning of construction to the time of placement of the project into continuous demonstration or revenue producing service, the purpose of the project in the first instance.

Accounting Standard No. 34 of the Financial Accounting Standards Board states:

"The historical cost of acquiring an asset includes the costs necessarily incurred to bring it to the condition and location necessary for its intended use. *If an asset requires a period of time in which to carry out the activities necessary to bring it to that condition and location, the interest cost incurred during that period as a result of expenditures for the asset is a part of the historical cost of acquiring the asset.*" (Emphasis added.)

The accompanying Exhibit I demonstrates the incremental cost that would be incurred as a result of a one-year increment in the time period of constructing a plant. In the example, we assume a project in which $100 million are expended annually in each year of a 20-year construction schedule and an 11 percent interest rate. In comparing the no delay and one-year delay cases, the cost of delay is measured by the capital funds spent to the time of the delay, the period of delay and the capital cost rate.

This Exhibit shows that:

In 1982, $145 million of interest cost would be incurred while the plant activity is idle.

1995 is the year when extra or avoidable interest cost is paid under the delay.

The $145 million incurred in 1982 due to the delay would be worth $563 million at the end of the construction period if the delay would be avoided. In other words, that real economic saving would pay the last five to six years of construction costs.

The example which I described in my previous presentation before the Commission also illustrates this concept. The example I refer to is the person that is constructing his own home using construction financing. He is his own general contractor and at 75 percent completion, an electrical installation approval must be secured before additional work can proceed. The approval process is delayed for six months and construction cannot proceed. The true economic fact to the person building his home is that his costs have increased. He had to carry the accumulated cost on the 75 percent completed home because he borrowed from the bank, had already expended the funds, and had to pay interest for the six-month delay period.

Exhibit II applies this concept specifically to the Clinch River Breeder Reactor Plant Project and shows the true future cost impact upon the project. As shown in that Exhibit, interest is accrued for an extra year in the delay case, and, thus, a one-year delay will result in additional interest on expended capital of $737.4 million. Discounted to present value, the cost of delay in 1982 is approximately $190 million.

Accordingly, I believe that the Applicants' conclusion is correct. Interest on expended capital is a real and substantial cost to the project, including that interest that would result from any delay in construction.

Very truly yours,

JERRY E. WALKER.●

ORDER FOR RECESS FROM WEDNESDAY UNTIL 9:30 A.M. THURSDAY

Mr. BAKER. Mr. President, I ask unanimous consent that when the Senate completes its business on Wednesday it stand in recess until the hour of 9:30 a.m. on Thursday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, are we in morning business now, may I inquire of the Chair?

The PRESIDING OFFICER. The Senate is in morning business.

Mr. BAKER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I made a request a moment ago which the Chair granted that no business be transacted during this period except to hear the presentation of the distinguished Senator from California.

I amend that so that no business will be transacted except for that presentation and the introduction of a resolution for referral by the distinguished assistant majority leader.

The PRESIDING OFFICER. Without objection, it is so ordered.

CREATION OF A U.S. SENATE PRODUCTIVITY AWARD

Mr. STEVENS. Mr. President, I send a resolution to the desk and ask unanimous consent that it be jointly referred to the Committee on Commerce, Science, and Transportation, and to the Committee on Rules and Administration.

The resolution I am introducing would create a U.S. Senate Productivity Award, and is being cosponsored by Senators BAKER, ROBERT C. BYRD, CRANSTON, PACKWOOD, CANNON, MATHIAS, FORD, and INOUYE. The cosponsors constitute the Senate leadership and the chairmen and ranking minority members of the pertinent committees. The sponsorship reflects the importance of this issue to our economy and Nation.

America's productivity rate has fallen drastically in the last few years. More productive foreign industries are able to target American industries and jobs and defeat them at will. The effects can be seen in each of our States. The drop in productivity is also very pertinent to employed America. Productivity statisticians tell us that the average American worker's household would have received over 5,000 more real dollars this year if our traditional productivity rate had not fallen.

Productivity experts agree that the single most effective step we can take in Washington to improve productivity is to make Americans across the country aware of the serious productivity problem and to educate them about the techniques that have been successful in correcting this problem. The most cost effective way to communicate this information to large numbers of Americans is for each of us to present annually a U.S. Senate Productivity Award to one of our constituents.

The National Association of Broadcasters' productivity council has agreed to work closely with each of us in the announcement of the productivity award, the announcement of our award selection committee, and later, the presentation of the award. Through the broadcast and print media's coverage of this process, productivity-improving techniques will reach a maximum number of our constituents.

This award will bring successful productivity practices to the attention of thousands of others who could also

implement them. Other nations have found this kind of information sharing of productivity practices to contribute greatly to their nation's productivity improvement. Such information sharing among organizations in this country is already underway; the award will greatly accelerate that process.

Other such awards have proven to be very effective—Japan's Deming Award, named after the American who took productivity to Japan; the President's E Award for achievement in exports; and the Queen's Award for export and technology in Great Britain.

The presentation of this award will cost no more than approximately $100,000 per year and this expense could be for only 1 year. After the award is established an effort will be made to make it self-sustaining through minor application fees.

I am hopeful that we can expeditiously enact this noncontroversial and inexpensive productivity program. Given the dimensions of the emergency in domestic productivity and international competition that we are facing, we cannot afford to wait any longer.

Mr. President, I invite any cosponsors who would be interested in joining us in this endeavor.

The PRESIDING OFFICER. The resolution will be received and jointly referred.

Mr. STEVENS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll. The bill clerk proceeded to call the roll.

Mr. HAYAKAWA. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

JAPANESE-AMERICANS

Mr. HAYAKAWA. Mr. President, I should like to remind my friends and colleagues that today is December 7, the 41st anniversary of the Japanese attack on Pearl Harbor.

Forty-one years ago today forces of the Empire of Japan attacked the United States at Pearl Harbor. Less than 3 months later President Franklin D. Roosevelt signed the Executive order that led to the relocation and detention of some 120,000 Japanese-American citizens and noncitizens in relocation centers.

In the four decades since that "day of infamy" we have destroyed our powerful adversary and built her up to be a powerful friend—so powerful that we now plead with her to restrict the export of her products.

In the four decades since the mutual hatreds of war, we have so healed ourselves that we now have a prosperous, thriving Japanese-American community which, despite its small population of about 600,000, includes not one, not two, but three U.S. Senators. The ancestors of these three men worshiped the Emperor. But these men stand in this Chamber, the heart of our democracy, and when the spirit moves them, freely criticize the President.

But one controversy has not subsided during the 41 years since Pearl Harbor. If anything, it has grown. That is the controversy over the relocation of Japanese-Americans.

In an effort to understand the issue, the Congress created a commission to investigate the events surrounding the relocation and to make any recommendations for redress. By law the commission must release its findings in a report by December 30, 1982. According to several newspaper reports, it will recommend compensation to those who were interned of up to $25,000 per person.

Whether or how we shall compensate those interned is a matter for future Congresses, of which I shall not be a Member. But as a U.S. Senator, a Japanese-American, and especially as an American, I must share my views on this most sensitive issue.

The wartime relocation of Japanese-Americans in 1942 can only be understood in the context of California history. As is well known, California has been the principal source of anti-Oriental propaganda in the United States for more than 100 years. During the Gold Rush days, by 1851, there were 25,000 Chinese in the State. It was a regular practice of miners, on a big Saturday night drunk, to raid the Chinese sections of mining towns to beat up or lynch a few Chinese just for the hell of it. Chinese were often the victims of mob violence. A mob of whites shot and hanged 20 Chinese one night in Los Angeles in 1871.

When the first transcontinental railroad, the Central Pacific, was completed, great ceremonies were held in connection with the hammering in of the Golden Spike to celebrate the occasion. Eloquent speeches were given praising the magnificent contributions of Englishmen, Irishmen, Germans, Frenchmen, and others who had contributed to the completion of the railroad. But no Chinese were invited to this event, although they above all—10,000 of them—had done the most dangerous and demanding labor to make the completion possible. The Chinese were dismissed when their work was done and set adrift without severance pay.

Anti-Chinese legislation and agitation were common throughout the latter half of the 19th century and well into the 20th. The workers discharged from the railroads drifted from town to town looking for work. In San Francisco they entered some of the skilled trades like hatmaking, cigarmaking, tailoring and so on. It is an interesting fact that the first union label was one placed on cigars to tell the customer that this cigar was made by white men and not by Chinese. That is what the union label means. That is the proud origin of the union label. In 1882 the Chinese Exclusion Act was passed after much agitation on the part of Californians, including the very influential and then-powerful Sons and Daughters of the Golden West.

The persecution of the Chinese continued into the 20th century. Chinese-American friends of mine who are now older professional men in San Francisco remember the days when, if they left the Chinese area, they were beaten up by Irish and other toughs, so they had to stay within the limits of Chinatown. Throughout this period, pamphlets and books were published attacking Orientals as a menace to white society.

The Hearst newspapers continued to lead a crusade against the "Yellow Peril." The Sacramento Bee, Fresno Bee, Modesto Bee—all of the McClatchy chain—were notorious for their anti-Oriental propaganda. I remember as a high school student in Winnipeg in the early 1920's writing a term paper on anti-Oriental agitation in California, and it was then that I learned of the McClatchy newspapers, long before I knew where Sacramento, Modesto, and Fresno were. The Hearst newspapers were no better.

The attacks upon Orientals were not limited to the popular press or to labor unions and "patriotic" societies. It was highly endorsed by many of the leading intellectuals of the time. There were such books as Lothrop Stoddard's "The Rising Tide of Color, Against White World Supremacy" (1920). Other distinguished intellectuals who wrote warning books against the Orientals were people like Madison Grant, who wrote "Passing of the Great Race, or Racial Basis of European History" (1916). There was also the distinguished labor economist of the University of Wisconsin in the 1930's, Prof. E. A. Ross. When I was a graduate student at the University of Wisconsin in the 1930's, I used to see Professor Ross at the University Club. He never spoke to me nor did I ever speak to him. I did not know then what I learned much later, namely, that he was one of the leading intellectual advocates of exclusion of Orientials from the American labor force. He was regarded as a great liberal at the time.

There was also the widely accepted doctrine of what was later to be known as "Social Darwinism," to the effect that the white race was the highest point of human evolution, and that yellow, brown, and black people represented lower stages. Indeed, white people themselves were divided into the "higher" North European—"Nordic," "Aryan"—and the "lower"

South Europeans—Slavs, Greeks, and Italians. The fact that these ideas were widely believed to be scientific is all too evident in the U.S. Immigration Act of 1924, which codified these ideas into law, and which gave high immigration quotas to British, Germans, and Scandinavians, lower quotas to Middle and South Europeans, and total exclusion to the Japanese. The Chinese had already been excluded in 1882.

Against this background of almost 100 years of successful anti-Oriental agitation throughout California, it is easy to understand that the attack on Pearl Harbor aroused in the people of California, as well as elsewhere, all the superstitious, racist fears that had been generated over the years, as well as the normal insanities of wartime. The surprise attack on Pearl Harbor was called "a stab in the back"—a typical Oriental form of behavior.

It is difficult for people who did not live through that dreadful time to reconstruct the terror and the anxiety felt by people along the entire west coast. Disaster followed upon disaster after the attack on Pearl Harbor. On that same day, December 7, 1941, Japanese forces landed on the Malay Peninsula and began their drive toward Singapore. Guam fell on December 10, Wake on December 23. On December 8 Japanese planes destroyed half the aircraft on the airfields near Manila. As enemy troops closed in, General MacArthur withdrew his forces from the Philippines and retired to Australia. On Christmas Day the British surrendered Hong Kong.

The Western World was scared stiff. The west coast of the United States, rich with naval bases, shipyards, oil fields, and aircraft factories, seemed especially vulnerable to attack.

There was talk of evacuating not just the Japanese from the west coast but everybody. Who knew what was going to happen next?

How frightening were the nightly blackouts during that bleak winter of defeat. Would Japanese carriers come to bomb the cities—San Diego, San Francisco, Los Angeles? Would submarines sneak through the Golden Gate to shell San Francisco? Would they actually mount an invasion? Who could tell?

I moved to San Francisco in 1955. You could still see along the shores of Marin County the great big remains of submarine nets that went across the Golden Gate to catch Japanese submarines in case they started sneaking through the Golden Gate. That is how serious the fear was.

War of course breeds fear of enemies within—spies, saboteurs. There were rumors that Japanese farmers in Hawaii had cut arrows in their fields to direct Japanese fighter pilots to targets at Pearl Harbor, and that west coast Japanese were equally organized to help the enemy. Such rumors were later found to be totally without foundation, but in the anxieties of the moment they were believed.

It was a field day for inflammatory journalists and newscasters: Westbrook Pegler, John B. Hughes—even Damon Runyon—on the radio every night, screaming, these alarmist broadcasts about the dangers of Japanese attack.

The columnist Henry McLemore wrote:

> Herd 'em up, pack 'em off and give 'em the inside room in the badlands . . . Let us have no patience with the enemy or with any whose veins carry his blood . . . Personally I hate the Japanese. That goes for all of them.

So both at the level of sensational journalism and at the level of the social sciences into the 1930's, the idea of white supremacy was challenged by remarkably few. In California, white supremacy took the form of anti-Orientalism. The notion that the Oriental was shifty, mysterious, and untrustworthy was built into the culture in such books as the Sax Rohmer "Dr. Fu Manchu" novels.

Most Americans have always had difficulty distinguishing between Chinese and Japanese I—must say the Chinese and Japanese have the same difficulty—although the latter were treated far more leniently than the former. The Chinese, except for diplomats and merchants, were forbidden to bring women or wives to America, so that they were essentially a society of bachelors. You can still see many of these lonely old bachelors sunning themselves in Portsmouth Square in San Francisco.

If you want to see the evidence of history still alive, and that evidence in front of your eyes, you can see these old, elderly Chinese gentlemen in old, old clothes and old hats playing chess in Portsmouth Square, all of them 75, 80, and 90 years old. They are the old bachelors who came at a time when they did not let Chinese women into the country at all. But the Japanese could bring their wives or send for picture brides, that is, brides selected from photographs, so that they developed strong family ties and a place for themselves in American society, especially through their children who learned English in the public schools and helped to Americanize their parents.

Again the popular hue and cry was backed up by reputable intellectuals. Walter Lippmann, the dean of American social commentators then and for decades thereafter, joined in the demand for mass evacuation. The idea was also supported at the time by such liberal intellectual journals as the Nation, the New Republic, and the extra-liberal but short-lived New York newspaper, PM.

On February 19, 1942, President Roosevelt signed Executive Order 9066, which set in motion the evacuation program. It applied to all Japanese, citizens and noncitizens alike, in the three Western States and a portion of Arizona. Altogether some 110,000 were relocated, of whom more that 70,000 were American citizens by birth; the remainder were not able to become citizens under the laws then prevailing.

Of course the relocation was unjust. But under the stress of wartime anxieties and hysteria and in the light of the long history of anti-Oriental agitation in California and the West, I find it difficult to imagine what else could have occurred that would not have been many times worse. If things had continued to go badly for American forces in the Pacific—and they did—what would Americans on the west coast have done to their Japanese and Japanese American neighbors as they learned of more American ships sunk, more American planes shot down, more American servicemen killed, including your husband, your boyfriend, your brothers? What would they have done? Would they have beaten their Japanese neighbors in the streets? Would they have ostracized and persecuted Japanese American children? Would mobs have descended on Little Tokyo in Los Angeles and Japan town in San Francisco to burn down shops and homes?

There was precedent for such behavior in California, especially directed against the Chinese. The Chinese started wearing lapel pins saying, "I am Chinese."

I recall a friend of mine, a Japanese American now living in Marin County, who was 11 years old when the war broke out. She and her parents were vastly relieved when they learned of their evacuation from the west coast. Most of her generation and her parents generation welcomed the evacuation as a guarantee of their personal safety.

The question is often asked why Germans and Italians were not interned and why the Japanese in Hawaii were left alone. The answer is simple. Germans and Italians were persecuted during World War I, when they were fairly recent immigrants, but there were too many of them to intern. However, "patriots" dumped garbage on the lawns of German homes, and in some east coast cities, all the German books in the public libraries were burned and courses in the German language offered in colleges and high school stopped. By the time of World War II, both Germans and Italians were a well-established and familiar part of American life. The same was true of the Japanese in Hawaii, who were more than 20 percent of the population there and well known and

trusted. Besides there were not enough ships to transport the huge Japanese populations out of the major islands.

On the west coast of the American mainland, the situation was different. The Japanese were a small fraction of the population of California, Washington, and Oregon. The immigration of Japanese was principally between the years 1900 to 1924; then it was stopped by law. Japanese males, who constituted the first immigrants, married late in life because they felt that they had to have a steady job before they could send for a bride from Japan. Hence the typical Japanese American family consisted of a father 20 years older than the mother, and the average age of the Nisei, as the American-born Japanese were called, at the time of Pearl Harbor was 16.

This last statistic is of great importance in accounting for the evacuation and internment.

If the average age of the American-born Japanese is 16, it means that the average white adult official in California knew little or nothing about the Japanese. He had not gone to school with Japanese children nor visited their homes. He had not had Japanese friends on baseball or debate teams. Furthermore, the Japanese parent generation spoke little English or none at all. So the ruling classes, the people in the city councils, the State assemblies, and so on, did not know who the Japanese were. They did not know anything about them. So whatever Westbrook Pegler said about them was likely to be true.

For most white Americans, especially those old enough to sit in positions of authority, the Japanese were a strange and foreign element, so almost anything could be believed about them.

For example, it was widely believed—Japanese used to send their children, after public school, to Japanese language schools. It was widely believed that the Japanese children going to Japanese language school were being taught reverence for the Emperor of Japan, that they were being indoctrinated with Japanese patriotism.

This happened to be true. That is, many of the teachers who came over in the 1930's were products of the superheated patriotism in Japan that made it possible for Pearl Harbor to happen. However, it was not possible at that time to predict that this indoctrination in emperor worship would prove to be totally ineffective.

Incidentally, our distinguished colleague DANIEL INOUYE, as a pupil in a Japanese language school in Hawaii before World War II, kicked up a strenuous protest against the use of these schools to preach Japanese nationalism—and look what happened to him. He got elected to the U.S. Senate.

The relocation centers in desert areas to which the Japanese were assigned were, indeed, dreary places. However, the governing body of the centers, the War Relocation Authority, was headed by the wise and humane Dillon Myer, a midwesterner who, before his appointment, had known almost nothing about the Japanese.

Dillon Myer, by the way, died just about a month ago at quite an advanced age. I believe he was in his nineties.

Being a firm believer in democracy and justice and knowing the people in the camps has done nothing to deserve their internment. Mr. Myer did everything possible to make life tolerable for the internees. He encouraged camp self-government, hired teachers from outside to continue the education of the children, sent WRA staff around the East and Middle West to seek college admittance for Nisei who had graduated from the camp high schools. One result was that many Nisei students who, without enforced evacuation from the west coast, might have stopped with a high school education to work in their father's shops or farms, instead went on to college, including prestigious and private institutions such as Antioch, Oberlin, and Mount Holyoke, as well as to such great public institutions as Minnesota, Michigan, Wisconsin, and Purdue.

A large number of young people—middle-aged people by this time—from very modest families got a college education which they otherwise would never have if they had not been sent to relocation camp.

The officials of the staff of the WRA with a few exceptions were deeply concerned about the injustice of the relocation program, eager to restore the Japanese Americans, especially Nisei, to normal American lives. They fanned out over the United States east of the Rockies to seek employment for them. You must understand that the Japanese Americans that were put into camps were only those who lived west of the Rockies. If you lived east of the Rockies—Salt Lake City, Denver, Chicago—they left you alone, because you were not considered to be a military danger. I was living in Chicago, thank goodness.

They fanned out over the United States east of the Rockies to seek employment for the internees. Everywhere the Japanese Americans went, they impressed their employers by their industry and loyalty, so that more were summoned from the camps—scientists, teachers, mechanics, food processors, agricultural workers. By the time the order excluding Japanese from the west coast was rescinded on January 2, 1945, half the internees had found new jobs and homes in mid-America and the East.

I emphasize this last point because the relocation centers were not "concentration camps." The younger generation of Japanese Americans love to call them concentration camps. Unlike the Nazis, who made the term "concentration camp" a symbol of the ultimate in man's inhumanity to man, the WRA officials worked hard to release their internees not to be sent to gas chambers but to freedom, to useful jobs on the outside world and to get their B.A. at Oberlin College.

By 1945, there were almost 2,500 Nisei and Issei in Chicago, a city that was most hospitable to Japanese, and I myself found relatives I did not know existed. Other Midwest and Eastern cities acquired Japanese populations they did not know before the war: Minneapolis, Cleveland, Cincinnati, New York, Madison, Wis., Des Moines, St. Louis, and so on. And those who remained in camp in most cases did so voluntarily. These were the older people, afraid of the outside world, with the Nation still at war with Japan.

I point out these facts to emphasize the point that to call relocation centers concentration camps, as is all too commonly done, is semantic inflation of the most dishonest kind, an attempt to equate the actions of the U.S. Government with the genocidal actions of the Nazis against the Jews during the Hitler regime. As am American I protest this calamity against the Nation I am proud to have served as an educator and even prouder to serve as a legislator.

Now, the relocation center at Tule Lake, Calif., was different from the others. It was there that those who resisted the evacuation and internment, including a Japanese veteran of the U.S. Army in World War I, a Nisei who renounced American citizenship in protest against the relocation, and other angry people were sent to isolate them from those who patiently accepted their internment. There were frequent distrubances at Tule Lake.

The trouble-free lives at all the relocation centers other than Tule Lake can be contributed to a cultural trait of the Japanese, clearly seen in the Issei, that is, the older generation of immigrants, but almost unheard of in their American-born grandchildren, and that is the concept of gaman, which means endurance. Gaman is to endure with patience and dignity, especialy dignity, hardships, misfortunes or injustices, especially those about which nothing can be done.

I am sure there are some Americans who will be enraged at the suggestion that anyone was happy in a relocation camp. But with the concept of gaman, you learn to make the best of a tough situation, endure with patience and dignity the situation you are in and make the best of it.

89-059 O-86-34 (Pt. 21)

The people in the relocation camps were shopkeepers, market gardeners, farmers, laborers, all in relatively humble occupations, finding themselves with 3 years of leisure on their hands.

As one elderly gentleman said recently, "That was the first time in my life that I didn't have to get up at 4 o'clock in the morning to milk the cows."

Finding themselves with some leisure in their lives, they went in for art. There was a tremendous artistic output. They turned out little masterpieces of sculpture, flower arrangements, and ceramics and painting, later memorialized in a scholarly volume entitled "Beauty Behind Barbed Wire" by Allen Hendershott Eaton, 1952.

How else can one account for the elderly Japanese farmers and grocers who gathered around a bridge table to go over the nagauta, a traditional, long narrative song, and the music from the kabuki, which is the Japanese equivalent of opera?

For many older Japanese, the relocation turned out to be a 3-year release from unremitting work on farms and vegetable markets and fishing boats, and they used this leisure to recover and relive the glories of their traditional culture.

Now I come to the most important part of the story. It is the story of the Nisei, the children of the older generation I have just been talking about.

It was a great humiliation for the Nisei of the 100th battalion of the Hawaii National Guard to be sent to Camp McCoy, Wis., where they were trained with wooden guns.

SPARK MATSUNAGA, now a U.S. Senator from Hawaii, was in that unit. He writes:

> We wrote home of our great desire for combat duty to prove our loyalty to the United States. It was not known to us then that our letters were being censored by higher authority. We learned subsequently that because of the tenor of our letters, the War Department decided to give us our chance. Our guns were returned to us, and we were told that we were going to be prepared for combat duty * * *. Grown men leaped with joy.

On January 28, 1943, the War Department announced that Nisei would be accepted as a special combat unit. They volunteered in the thousands both from Hawaii and from the relocation camps. They were united with the 100th Battalion as the 442d Regimental Combat Team at Camp Shelby, Miss.

The 100th Battalion first saw action at Salerno, Italy, in September 1943, and took heavy casualties. The 442d landed in Italy in June 1944, at once gained a reputation as an assault force, and accomplished the famous rescue of the "lost battalion" of the 36th (Texas) Division at an enormous cost in blood. Fighting in seven major campaigns, the men of the 442d suffered 9,486 casualties and won more than 18,000 individual decorations for valor.

Another 3,700 Nisei served in combat areas in the Pacific as translators and interpreters. The Japanese military, believing their language to be too difficult for foreigners to master, were careless about security. They did not count on Nisei on every battlefront reading captured documents and passing information on to Allied commanders. Kibei, Nisei born in America but educated in Japan and originally the object of special distrust, turned out to be especially helpful in this respect.

They were born in America. They were American citizens, but they were educated in Japan. They could read Japanese very well, so they were very, very good for intelligence work.

In short, the Nisei covered themselves with honor and made life in America better for themselves, their parents, who a few years after the war won the right to be naturalized, and their children. I remember vividly the returning Nisei veterans I saw in Chicago soon after V-E Day. Short of stature as they were, they walked proudly, infantry combat citations on their chests, conscious that they were home—in their own country. Chicago, known throughout the war for its hospitality to servicemen, outdid itself when the Nisei returned. They had earned that welcome.

The relocation was a heart-breaking experience for Japanese Americans as well as a serious economic loss for those who had spent decades of labor on their farms and businesses. But most seriously it was an affront. America was saying to them, "You are not to be trusted. You are Japs. We doubt your loyalty."

The Nisei, although very much Americanized, are in some respects profoundly Japanese. An imputation of disloyalty, being an affront, was also a challenge. A powerful Japanese motivation is "giri to one's name"—the duty to keep one's reputation—and one's family's—unblemished. Giri is also duty to one's community, one's employers, to one's nation. The Nisei's nation was the United States. One accused of disloyalty is dutybound to remove that disgrace by demonstrating himself to be loyal beyond all expectation.

This is a basic reason the Nisei volunteered in such numbers and fought so well. More than 33,000 Nisei served in the war—a remarkable number out of a total Japanese American population—Hawaii and mainland combined—of little more than 200,000. They had a fierce pride in their reputation as a group.

The Nisei were also motivated by "giri to one's name." Those who found jobs outside the camps were exemplary workers, as if to prove something not only about themselves but about their entire group. Japanese Americans, young and old alike, accepted the mass relocation with dignity and maturity, making the best of a humiliating situation. In so doing, they exhibited the finest resources of their ancient background culture.

The prewar theory of white supremacy was completely discredited by the crushing defeat of Hitler and Hitlerism. The prejudice against Japanese in America was all but wiped out by the courage and the sacrifice of Nisei service men in Italy and the Pacific. Then in the 1960's came the civil rights movement, which further discredited doctrines of racial superiority and inferiority. We live today in a totally different era, in which the prevailing racialist theories of the 1930's and earlier are seen as historical curiosities.

The Nisei, with their courage, and their parents, by their industry, have won for Japanese Americans the admiration and respect of all Americans. Japanese Americans have an average level of education higher than any other ethnic group, including whites. They have a higher representation in the learned professions—medicine, law, engineering, computer science—than other ethnic groups—and in this respect they are doing as well as another group famous for their respect for learning—namely, the Jews. The per capita income of Japanese-Americans is $500 a year above the national average. And they have, with a population of less than half a million, three representatives in the U.S. Senate, while the blacks, with a population approaching 23 million, have none. What more can Japanese-Americans want? We are living today at a time when Japanese-Americans are almost a privileged class, with their notorious scholastic aptitude, their industriousness, and their team spirit in whatever occupation they find themselves.

Mr. President, I am proud to be a Japanese-American. But when a small but vocal group of Japanese-Americans calling themselves a redress committee demand a cash indemnity of $25,000 for all those who went to relocation camps during World War II, including those who were infants at the time and those who are now dead, a total of some two and three-quarters of a billion dollars—we have been seeing this in a series of articles being published in the Washington Post—my flesh crawls with shame and embarrassment.

Let me remind the Japanese American Redress Committee that we also live in a time when American industry is seriously threatened by Japanese competition—in automobiles, steel, cameras, television, and radio sets, tape recorders, and watches. I warn the Japanese Americans who demand about $3 billion of financial redress for

events of 41 years ago from which nobody is suffering today, that their efforts can only result in a backlash against both Japanese Americans and Japan. And to make such a demand at a time of the budget stringencies of the Reagan administration is unwise enough, but to make this demand against the background of their own record as America's most successful minority is simply to invite ridicule.

Let me remind the Japanese Americans that we are, as we say repeatedly in our Pledge of Allegiance, "one nation," striving to achieve "liberty and justice for all."

This means—and I say this to black Americans and Mexican Americans and all other ethnic political groups—let us stop playing ethnic politics to gain something for our own group at the expense of all others. Let us continue to think of America as "one nation, under God, indivisible" and let us act accordingly.

RECESS UNTIL 9:15 A.M. TOMORROW

The PRESIDING OFFICER. Under the previous order, the Senate will stand in recess until 9:15 a.m. tomorrow.

Thereupon, at 7:07 p.m., the Senate recessed until tomorrow, Wednesday, December 8, 1982, at 9:15 a.m.

NOMINATIONS

Executive nominations received by the Senate December 7, 1982:

DEPARTMENT OF DEFENSE

W. Paul Thayer, of Texas, to be Deputy Secretary of Defense, vice Frank C. Carlucci, resigned.

IN THE AIR FORCE

The following-named officers for permanent promotion in the U.S. Air Force, under the appropriate provisions of chapter 36, title 10, United States Code, as amended, with dates of rank to be determined by the Secretary of the Air Force.

MEDICAL CORPS

To be lieutenant colonel

Hardy, Marion J., [redacted]

MEDICAL CORPS

To be major

Connelly, Daniel P., [redacted]
Hilderbrand, Charles P., [redacted]
Joshi, Sanatkumar K., [redacted]
Lonchyna, Vassyl A., [redacted]
Morris, Francis M., [redacted]
Owens, David B., [redacted]
Stickney, Randall H., [redacted]
Thode, Henry P., III, [redacted]
Tobin, James V., [redacted]
Wheeler, Anthony H., [redacted]

IN THE AIR FORCE

The following Air National Guard of the United States officers for promotion in the Reserve of the Air Force under the provisions of section 593(a) title 10 of the United States Code, as amended:

To be lieutenant colonel

LINE OF THE AIR FORCE

Maj. Thomas F. Astaldi, [redacted]
Maj. Jerry L. Bowers, [redacted]
Maj. Shelby G. Bryant, [redacted]
Maj. Lanny A. Karns, [redacted]
Maj. Harold E. Keistler, [redacted]
Maj. Paul D. Knox, [redacted]
Maj. Krystyna Llenza, [redacted]
Maj. Thomas P. Maguire, Jr., [redacted]
Maj. Daniel B. McDuffie, [redacted]
Maj. Cecil E. Modlin, III, [redacted]
Maj. Vincent W. Patrick, [redacted]
Maj. Carl W. T. Perkins, Jr., [redacted]
Maj. John R. Rec, [redacted]
Maj. James L. Reid, [redacted]
Maj. Richard H. Santoro, [redacted]
Maj. James H. Snyder, [redacted]
Maj. Thomas J. Taber, [redacted]
Maj. Kenneth E. Wilson, [redacted]

MEDICAL CORPS

Maj. David M. Hadden, [redacted]

BIOMEDICAL SCIENCES CORPS

Maj. James R. Pope, [redacted]

IN THE NAVY

The following-named Naval Reserve Officers Training Corps candidates to be appointed permanent ensign in the line or staff corps of the U.S. Navy, subject to qualification therefor as provided by law:

Fox, Michael A.
Groover, David L.
Laszakovits, John S.
Shaffer, Brent C.

The following-named Naval Reserve officers for permanent appointment in the line or staff corps of the U.S. Navy in the permanent grade of ensign, subject to qualification therefor as provided by law:

Asbjornsen, Douglas J.
Beck, Duane E.
Berry, Michael G.
Boland, Robert M.
Booth, Donald E.
Brands, Edward P.
Campbell, Jayne E.
Fill, John F.
Grau, John R.
Harasha, Jeffrey S.
Huntoon, Richard L.
Kuebler, David P.
Kwan, Andrew W.
Lewis, Larry R.
Maschke, Marvin S.
Mezzano, Dominic
Natsuhara, Roger M.
Olmstead, Gary W.
Pannier, Stephen J.
Pfeiff, Robert L., Jr.
Pierce, Frederic S., III
Pierce, Scott E.
Reed, Mark S.
Richards, Randall G.
Rinaldi, Peter M.
Sherfey Solomon R.
Spina, James A.
Sterr, Robert K.
Turner, Timothy A.

The following U.S. Navy officers to be appointed permanent commander in the Medical Corps in the Reserve of the U.S. Navy, subject to qualification therefor as provided by law:

Cohen, Irving M.
Lwin, Tint
Taylor, John H.

The following-named ex-Naval Reserve officers to be appointed permanent commander in the Medical Corps in the Reserve of the U.S. Navy, subject to qualification therefor as provided by law:

Billig, Donal M.
Finsten, Robert M.
Persoff, Myron M.

The following-named medical college graduates to be appointed permanent commander in the Medical Corps in the Reserve of the U.S. Navy, subject to qualification therefor as provided by law:

Laborati, Juan C.
Monge, Saul

IN THE NAVY

The following-named U.S. Naval Reserve Officers, to be appointed permanent captain in the line of the U.S. Navy, subject to qualification therefor as provided by law:

U.S. NAVAL RESERVE

Captain, line, permanent

Dunbar, Richard Mills

The following-named U.S. Naval Reserve Officers, to be appointed permanent commander in the line of the U.S. Navy, subject to qualifications therefor as provided by law:

U.S. NAVAL RESERVE

Commander, line, permanent

Christian, George Frederick
Dyer, Bruce Peter
Foster, William I.
Herndon, Albert A., Jr.
Offutt, James H.
Smith, Jessie Mack

The following-named U.S. Naval Reserve Officers, to be appointed permanent lieutenant commander in the line of the U.S. Navy, subject to qualifications therefor as provided by law:

U.S. NAVAL RESERVE

Lieutenant commander, line, permanent

Barrowman, Glenn J.
Brick, James Michael
Deantonio, Robert F.
Edwards, Scott W.
Kinane, Keith W.
Newman, Don R.
Noziglia, Robert Everett, Jr.
Payne, Terry Daniel
Pittman, Alan Ralph
Reese, Michael James
Rylant, Arboth Andrew
Storer, David G.
Swenson, Wayne Fredrick

The following-named U.S. Naval Reserve Officers, to be appointed permanent lieutenant in the line of the U.S. Navy, subject to qualifications therefor as provided by law:

U.S. NAVAL RESERVE

Lieutenant, line, permanent

Ackerman, Mark Thomas
Ackman, Terry Mark

EXTENSIONS OF REMARKS

ALABAMA WILL BENEFIT MOST FROM TENN-TOM

HON. BOB EDGAR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, December 6, 1982

● Mr. EDGAR. Mr. Speaker, I would like to bring to the attention of Members an article written several years ago in the Birmingham News which I believe should be valuable in considering appropriations for the Tennessee-Tombigbee Waterway. The article makes the point that the State of Alabama will receive the lion's share of benefits from this project. Yet, Alabama has made a very minimal contribution to financing the Tenn-Tom.

When we consider the fiscal year 1983 energy and water appropriation later this year Representative Pritchard and I will offer an amendment to reduce funding for the Tenn-Tom by $100 million. In order for the project to be kept on the ambitious schedule set by the Corps of Engineers, we would suggest that the States of Alabama and Mississippi provide a reasonable non-Federal financing share toward finishing the project.

The article and a copy of an explanation of my amendment follows:

[From the Birmingham News, Nov. 29, 1978]

ALABAMA WILL PROFIT MOST FROM TENN-TOM

(By Peter Kovacs and Brett Guge)

Most of the Tennessee-Tombigbee Waterway's 232-mile length sprawls north-to-south across sparsely-populated northeast Mississippi.

But economic impact studies indicate the state that will benefit most from Tenn-Tom will be Alabama, home of the southern third of the waterway.

Whether the nation as a whole will come out in the black from Tenn-Tom is one of the major points still being argued. Opponents insist that estimates of the cost and benefits of the waterway developed by the U.S. Corps of Engineers have been misleading.

Alabama will benefit both because its state docks will handle goods hauled on the waterway through Mobile and because the project will create more jobs in Alabama than in any other state, according to William H. (Pete) Kelley, public affairs director for the Tennessee-Tombigbee Waterway Authority.

The authority, funded by Alabama, Mississippi, Florida, Kentucky and Tennessee, is headquartered in Columbus, Miss., the largest (population 30,000) city on the banks of the Tenn-Tom.

It is the principal public relations group and lobbyist for the waterway project.

The authority also coordinates state and federal agencies roles in building the waterway, Kelley says, and works "to promote development on the waterway."

Promoting development, he says, may be the authority's most important job.

"The counties that Tenn-Tom runs through (in both Mississippi and Alabama), with a couple of exceptions, are among the poorest in the country," says Kelley.

"There's a lot of unemployment, but there's even more underemployment."

For instance, he points out, Greene County in Alabama was ranked the second poorest county in the nation in the 1970 federal census.

"It has come up some since," he admits, but adds that in 1970, "not a single manufacturing plant of any kind—nothing" existed in Greene county.

"Mississippi is 50th (among states) in practically everything," says Kelley. "Alabama is 47th in per capita income. There is room for growth, and they (these two states) need some growth. And, they also need some industrial jobs."

Recent studies conducted for the Corps of Engineers indicate that, by 1986, Tenn-Tom will create 14,600 new jobs in Alabama, 3,500 of which will be in Mobile. That is the year the waterway is supposed to go into operation.

By the year 2000, the studies show, Alabama will have reaped nearly 55,000 new jobs and a total economic impact of more than $7 billion—all due to Tenn-Tom.

State and local tax money that will be generated by new jobs and businesses, at projected rates through the year 2000, total $616 million.

All of that comes for a construction cost to the state of Alabama of about $8 million.

That requires some explanation. Technically, the non-federal cost for construction of Tenn-Tom is $137 million—roughly $110 million from Mississippi and another $27 million from Alabama. The states are required to pay for replacing bridges over the proposed waterway.

The Mississippi Legislature approved a $40 million bond issue in 1976 to take care of its share of those bridge relocation expenses. It soon become apparent that was not nearly enough.

U.S. Rep. Jamie L. Whitten of Mississippi went to bat for his state. He persuaded Congress to include in the Federal Aid Highway Act a provision for federal monies to help states relocate bridges that cross federal projects.

For Whitten's provision, Congress allocated $100 million for nationwide use. Nearly all the money ended up going to Alabama and Mississippi for the Tenn-Tom project.

Alabama and Mississippi together either have spent or appear likely to spend $90 million of the original $100 million solely for relocations due to Tenn-Tom.

Mississippi has been given roughly $49 million of the total, and hopes to get $21 million more.

That, coupled with its $40 million bond issue, adds up to the $110 million in relocation costs brought on by Tenn-Tom.

Alabama, which has only three bridges to relocate (Mississippi has 10), already has authorized two bond issues—one for $10 million and one for $25 million—to pay for the work.

But with Mississippi getting federal grant money to help take care of its "state" costs of Tenn-Tom, Alabama applied for some as well.

The state now is going to spend only about $8 million of the original $10 million bond issue for bridge relocation, according to Tom Espey, assistant highway director.

The balance of roughly $20 million for Tenn-Tom bridge relocations in Alabama will come from the federal highway aid fund.

Thus, the Corps lists non-federal expenditures as $137 million, while the states of Alabama and Mississippi actually are spending only about $48 million. The rest is coming out of another federal pocket and is referred to as "grant" money.

The "grant" status means it does not have to be included in federal costs of Tenn-Tom, according to a Corps spokesman.

Espey said Alabama's remaining $27 million in bonds it had planned to sell to finance Tenn-Tom bridge relocations probably never will be sold.

"That's the way I see it at the moment," he said.

The only other state costs related to Tenn-Tom are the annual contributions by the five member states that make up the Tennessee-Tombigbee Waterway Authority.

The authority was formed in 1958 by Alabama and Mississippi, under the administrations of Govs. James E. (Big Jim) Folsom of Alabama and J. P. Coleman of Mississippi.

Tennessee, Kentucky and Florida joined later.

In the intervening years, as of Sept. 30, 1978, Alabama has spent more than $1.3 million to fund the authority; Mississippi has spent $920,000; Tennessee, $686,000; Kentucky, $58,130; and Florida, $7,693.

Mississippi can expect to gain benefits from Teen-Tom similar to Alabama's according to studies conducted by Corps-hired researchers.

The construction phase alone is forecast to produce 2,600 to 5,000 jobs at an annual wage of $12,000 to $15,000. In a 15-county area in northeast Mississippi, as many as 70,000 new residents are expected to settle because of Tenn-Tom by the year 1990.

As many as 32,000 new job are expected in those same counties by 1990. Those jobs, say Corps researchers, will increase income in the 15 counties by $740 million to $880 million.

It is easy to see how Mississippi and Alabama can benefit from Tenn-Tom. Effects on Florida. Tennessee and Kenkucky are more subtle.

Florida is expected to benefit because its own port cities will be that much closer to a waterway route to coal-producing states to the north.

Existing industries in Tennessee, studies show, could save more than $12 million annually in transportation costs by shipping or receiving about 12 million tons of goods on Tenn-Tom.

CUT $100 MILLION FROM THE TENN-TOM

In the upcoming special session of the 97th Congress, we will consider provisions of the FY 1983 Energy and Water Development Appropriations legislation. When the bill comes to the floor we intend to offer an amendment to reduce the $186 million ap-

● This "bullet" symbol identifies statements or insertions which are not spoken by the Member on the floor.

propriations request for the Tennessee-Tombigbee Waterway project by $100 million. Our amendment will still leave Tenn-Tom's funding at the highest level for construction of any Army Corps of Engineers project in the nation—$86 million. We remain unconvinced that this project has sufficient merit to command the vast expenditure of funds included in the 1983 budget request, especially in the face of federal budget deficits unprecedented in the nation's history.

Serious questions have been raised about many aspects of this project. At the outset of its funding in 1972, Congress was told the total cost of the project would be only $323 million. The Corps now estimates total costs for the currently authorized project at over $2 billion and ultimate costs to complete the waterway to Mobile Harbor at over $3 billion. These estimates were verified in a GAO study of the project last year. Other costs to the federal government, including major dredging work at Mobile Harbor attributable to the Tenn-Tom, may drive these ultimate cost figures even higher.

Both the GAO study and a study of likely coal traffic by the Congressional Research Service have seriously questioned the benefit claims of the waterway in terms of tonnage and savings to coal shippers—the foundation of the Corps' justification of the waterway. The CRS study points out that labor costs per ton of coal shipped could run as much as ten times that of shipments on the Mississippi River—the Tenn-Tom's chief competitor for barge traffic.

Another troubling aspect of the project is the minimal commitment of the states involved to this enormous undertaking. When the Tenn-Tom was originally authorized, Mississippi and Alabama were made legally responsible for all bridge construction and road relocations associated with the project. In the most recent Corps projections, these costs are estimated at $164 million or approximately 8% of the projected $2 billion cost of construction from Pickwick Lake to Demopolis. However, an amendment to the 1976 Federal Highway Act (Sec. 132, PL 94-280) allowed federal highway funds to be spent on such road and bridge costs. Thus, the federal government picked up $89.5 million of Mississippi's and Alabama's road and bridge obligations. The Appalachian Regional Commission has also spent $11.5 million on Tenn-Tom-affected county roads in Mississippi. When federal highway money is excluded from the local share of Tenn-Tom's costs, we discover that non-federal interests will carry only $74.5 million, or 3.7%, of the total project construction costs.

In an era of reduced federal support for national water development, several states have recognized the need to supplement federal efforts with increased state financing. Examples include Pennsylvania, which authorized a $300 million water development bond issue in 1982, and Washington, which authorized $75 million for water development in 1980. Other states which have recently approved bond issues for water development include: Missouri ($600 million), North Carolina ($300 million), and New Jersey ($350 million). Wyoming now holds a $24 million account for water development based on severance tax revenues.

Meanwhile, the 97th Congress has also moved towards requiring greater non-federal support for water development. For example, an amendment passed by the House on September 30, 1982 will require 20% upfront, non-federal financing for an additional authorization for the Colorado River Basin Project. As Interior Committee Chairman Udall stated at the time, "Things have changed a lot over the past few years, and those of us in the West have got to get used to the idea . . . that there must be cost-sharing."

In light of these events, it is noteworthy that the state of Alabama recently chose to invest heavily in highways, bridges, and waterway construction projects with revenues from $449 million in oil and gas revenues in Mobile Bay. None of this investment, however, is slated for use to offset the costs of the Tennessee-Tombigbee. A Mississippi State University study recently showed that Mississippi will receive $119 million in additional tax revenues from wages associated with construction of the Tenn-Tom.

With federal deficits for FY 1983 projected at well over $100 billion, we can ill-afford to spend $186 million this year on the controversial Tenn-Tom project. Tenn-Tom's share of the water development budget is nearly three times the level of the next largest Corps project. Given the lack of demonstrated urgency to complete the project, cutting the waterway's funding is an ideal way of helping to ease our desperate 1983 budget predicament. By reducing the funding level to $86 million it is hoped that local and state governments and the project's direct beneficiaries will be encouraged to step in with financing assistance if they feel it is necessary to keep the project on the ambitious schedule that the Corps has set.

We hope you will join us in support of this amendment and in an effort to set reasonable national priorities and reduce the federal deficit.

Sincerely,

JOEL PRITCHARD,
BOB EDGAR,
Members of Congress.●

GAS PRICE INCREASES MUST BE STOPPED

HON. TOM HARKIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 6, 1982

● Mr. HARKIN. Mr. Speaker, today I am cosponsoring the Temporary Natural Gas Marketing Act of 1982. This act simply requires that a gas pipeline company purchase and provide to its customers the lowest cost gas that is available. Under present industry practices, pipeline companies buy expensive gas, while refusing to use far less expensive gas. The customers are forced to pay the difference.

The pipeline companies take the more expensive gas because of contracts that they signed. The contracts require that the companies take 80, 90, or even 100 percent of the gas that is available, whether they need it or not. These same contracts have provisions which require ever-higher prices for that gas.

The result is dramatically skyrocketing gas bills. The town of Guthrie Center, for example, with 735 residential customers and a little more than 100 commercial users, now expects the price of its gas to go up by more than 32 percent in 1 year. There would be a $100 increase in the cost of gas for every man, woman, and child in the town.

Guthrie Center, a typical farming community, will see $171,000 leave the area. This is crippling to the local economy, which has been badly hurt by low-farm prices and the lowest net income for farmers since the Depression. Across Iowa, we can expect a 20-percent increase in gas prices.

The elderly who live on a fixed income will be devastated by these increases. Their heating bills are increasing to the point where they must decide between heat or food. Many will be forced to give up their homes and their independence.

On the farm, the higher prices for natural gas mean sharply higher costs to farmers. Seventy percent of the production costs of nitrogen fertilizer is for natural gas. It also means sharply higher costs for the drying of grain. In addition, two-thirds of the LP gas used on Iowa farms comes from natural gas. Those prices will also be increasing.

The price of natural gas is rapidly increasing for a number of reasons. Gas was in very short supply in the late 1970's and the producers had the advantage. The pipeline companies did not fight the unreasonable terms that were set. Whatever they paid would be passed on to the ultimate consumer at a profit. The pipeline companies took the attitude that the demand for natural gas would rise, with little regard to price. They thought that price would have a relatively small impact on residential demand, and that conservation would not be able to sharply reduce the need for gas. That was extremely poor judgment. It was, however, a judgment which would tend to increase profits. Furthermore, many pipeline companies own some of the gas wells or are major stockholders in the oil and natural gas companies. This is true of Northern Natural Gas, which supplies most of the natural gas for Iowa. Lastly, the Natural Gas Policy Act, which partially deregulated natural gas, allowed these unconscionable contracts to come into being. The act allows the gas producers to sharply raise the price of some types of gas, regardless of the availability of less expensive gas.

For all of these reasons, we now see cheap gas not being used, while expensive gas costing many times the price of the cheaper gas is still in the ground. Although the pipelines have contracts for that gas, they are not required to take it. They are taking the very expensive gas that they contracted for in the late 1970's. The people who use that gas pay the entire bill. They have no choice.

The bill being introduced today would call an end to this situation for a year. The pipeline companies would

have to use the cheapest gas available. Those who have gas to sell at higher prices could reduce their price; they could sell it to someone else who did not have less expensive gas available; or they could keep the gas in the ground.

If a pipeline company did not use the cheapest gas that was available to it, it would be subject to the fraud and abuse provisions of the law.

By next November, Congress would have the opportunity to examine the laws concerning natural gas and pass a law which is fair to all parties.●

CONCERN ABOUT H.R. 7357

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 6, 1982

● Mr. EDWARDS of California. Mr. Speaker, I continue to have grave reservations about the Immigration Reform and Control Act of 1982, H.R. 7357. My concern about this measure is shared by my California colleague in the Senate, Senator ALAN CRANSTON. I have included for the RECORD Senator CRANSTON'S recent statement on this bill.

I have been informed that the House of Representatives may strip the alien legalization provisions from the immigration bill which was passed by the Senate last summer. This action, if it happened, would be a grievous mistake.

I opposed the immigration bill in the Senate last summer because it would impose expensive, dangerous requirements that every person working in the United States have some form of authorization by the government in order to work. That is a major step toward a police state. There are no emergency conditions in our nation which would justify such an extraordinary imposition upon our people.

But the bill, as objectionable as it was, will be far more so if it is returned to the Senate without the alien legalization provisions.

There is no realistic way our government can round-up and deport the hundreds of thousands, perhaps as many as several million, of unauthorized aliens presently living in the United States. The disruption to communities, families and businesses would be catastrophic. The disorders on our borders and the severe economic dislocations which would take place in Mexico and other countries as jobless immigrants streamed home could shake the very foundations of the already unstable economies of Central America.

Undocumented workers have contributed substantially to the productivity of our economy. They have earned our acceptance. The Senate recognized this when it provided in the alien legalization provisions that those who wish to apply for permanent residence, and who have lived and worked here since 1977 would be eligible to do so. Those who have been here only recently would be eligible to apply for temporary status, should they decide to do so. This provision in the Senate bill offers a way for these people to become lawful residents should they decide to make the proper application.

A stripped down version of the bill containing only penalities against employers who hire unauthorized alien workers, would be harsh, unfair and unwise.

Unless there is some means of verifying that a worker is eligible to work in the United States, an employer is at an unfair risk if he hires someone who might turn out to be an unauthorized alien. Such a situation would lead to racial and ethnic discrimination in hiring—something we have been striving to eliminate for 18 years.

But any scheme to make the employer penalty provisions nondiscriminatory still would be unfair without legalization provisions. Persons who are unauthorized to work under the bill would be subject to deportation. If they remain in the country they would have to work underground. These persons would live in terror of immigration agents. They could be easily exploited and held in virtual peonage by unscrupulous individuals.

I am resolved to resist enactment of immigration legislation which would impose the tragedy of mass deportation and internal police terror in our communities.●

HOWARD MANKINS—AN EXEMPLARY PUBLIC SERVANT

HON. LEON E. PANETTA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 6, 1982

● Mr. PANETTA. Mr. Speaker, I would like to bring to the attention of my colleagues the retirement of one of the finest public servants I know, chairman of the San Luis Obispo County Board of Supervisors Howard Mankins.

Howard has served as a member of the county board of supervisors for 10 years. He was designated chairman during the years 1973, 1977, 1978, and 1982, and vice-chairman during 1974 and 1979. Clearly, his colleagues on the board have had as much respect for his abilities as have the voters of San Luis Obispo County.

Howard was born in 1927 in Los Berros and was raised in San Luis Obispo County on his family's ranch. His ancestors arrived in California more than a century ago, in 1876.

In addition to his work as a member of the board of supervisors, Howard has also served as treasurer to the Port San Luis Harbor District, as a member of the county revenue sharing committee, the building space committee, and the economic opportunity commission. He is active in other community organizations as well, being a charter member of the Arroyo Grande Chamber of Commerce and a member of a variety of other community and government organizations.

The people of San Luis Obispo County join me in expressing regret about Howard's retirement, and I know my colleagues will join me in wishing him the best of luck in the years ahead.●

300 CHURCH LEADERS PROTEST U.S. POLICIES IN CENTRAL AMERICA

HON. BOB EDGAR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 6, 1982

● Mr. EDGAR. Mr. Speaker, As many Members know, December 2 was the second anniversary of the brutal murder of four American churchwomen in El Salvador. The criminals in this case have not yet been sentenced, nor has a full and open investigation of the matter been forthcoming. Our attention remains focused on El Salvador and the brutalities which continue to occur in that troubled country. The Salvadoran authorities have been unable or unwilling to end these abuses and establish peace and justice in El Salvador. Meanwhile concern about American policy in the region continues to grow here at home, especially in the religious community.

As evidence of ths continuing concern, I would like to place in the RECORD an article from last Sunday's New York Times containing the latest in a series of protests against U.S. Central America policies by American Church leaders.

The article follows.

[From the New York Times, Nov. 28, 1982]

300 CHURCH LEADERS PROTEST U.S. POLICIES IN CENTRAL AMERICA

(By Charles Austin)

More than 300 religious leaders in the United States, including 22 Roman Catholic bishops, have issued a message denouncing the Reagan Administration's policies in Central America.

The message, in the form of an ecumenical pastoral letter, comes amid growing concern by American churches over United States involvement in Central America.

"As citizens of the United States we are particularly sensitive to the responsibility that our Government bears in the oppression and violence in Central America," said the letter issued Friday at a news conference in New York.

The letter was distributed by the Inter-Religious Task Force on El Salvador and Central America, supported by more than a dozen religious agencies. In addition to the Catholic bishops, heads of several major Protestant denominations and nine American rabbis signed the appeal.

VIOLATION OF RIGHTS AND DIGNITY

Noting that many churches have already protested military and economic support of governments in Central America, the letter said that "our Government is embarked on a course which we believe will only increase the bloodshed and violation of people's rights and dignity, as well as increase the danger of regional war."

It continued: "We deplore our Government's role in the militarization of Central America, including the slow but steady increase of U.S. military advisers in El Salvador, Honduras and Guatemala."

Americans, the letter said, should seek an end to all military aid and intervention in Central America, an end to covert oper-

ations by the United States Government there, negotiated political solutions to conflicts in El Salvador and between Honduras and Nicaragua, and temporary asylum for Central Americans fleeing oppression.

Bishop Rene Valero of Brooklyn, one of the signers, said he believed there was a "greater awareness among American Catholics than ever before" of the problems the church faces in Central America, partly because of the growing number of American Catholics of Hispanic background.

DISMAYED "BEYOND WORDS"

Ruth Harris, an executive with the United Methodist Church Board of Global Ministries, said that after a recent visit to Nicaragua and Costa Rica she felt "humiliated and angry" about American policy in the Caribbean. The Reagan Administration's policies in Central America "dismayed us beyond words," she said, quoting a letter a delegation of church officials wrote to farmers in Nicaragua after their visit there Nov. 10–22.

Among the signers of the letter were Bishop James Armstrong, president of the National Council of Churches; William P. Thompson, Stated Clerk of the United Presbyterian Church; Dr. Kenneth Teegarden, president of the Christian Church (Disciples of Christ); Dr. Arie Brouwer, general secretary of the Reformed Church in America; Dr. Paul Wee, general secretary of Lutheran World Ministries; Episcopal Bishop John H. Burt of Ohio and Dr. Thelma Adair, national president of Church Women United.●

TEMPORARY NATURAL GAS MARKET CORRECTION ACT OF 1982

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 6, 1982

● Mr. OBERSTAR. Mr. Speaker, members of the Northeast-Midwest Congressional Coalition today introduced emergency legislation to prevent excessive natural gas prices from crushing American consumers and the national economy this heating season.

The Temporary Natural Gas Market Correction Act of 1982 was introduced in both the House and the Senate with bipartisan sponsorship in both Houses.

The situation facing natural gas consumers, residential and commercial, is critical. Natural gas prices are defying traditional laws of supply and demand. The Nation's supplies of natural gas are up, consumption is down; but prices are expected to rise 20 to 60 percent in many areas of the country this winter. That will cost consumers an additional $13 to $20 billion in higher natural gas prices.

Our goal, very honestly, with this bill, is price relief for natural gas consumers.

The members of the Northeast-Midwest Congressional and Senate Coalitions represent the region of the country with the highest energy costs; that is why we have initiated this emergency legislation. The critical situation, however, is not limited to the region we represent. On the contrary, it is a nationwide problem which demands an immediate solution.

Consumers in our region will pay about $21 billion of the Nation's $65 billion price tag for natural gas this year. If our amendment is enacted, new gas bills could be some $7 billion lower; without it, they will pay up to $7 billion more.

We are proposing that solution even in a brief lameduck session, because, to be effective in providing financial relief for consumers, legislative action must occur now, not in March or April. Our approach is not a substitute for the development of a long-term natural gas policy. Such action must await the 98th Congress beginning next month. Rather, we have introduced legislation in response to an emergency which cannot wait for relief next year.

The contradiction of increasing supplies, declining demand, and rising prices is a consequence of take or pay provisions in contracts between pipeline companies and natural gas producers. The effect of these provisions is to require the pipeline company to use more expensive gas, rather than to use available, lower cost natural gas.

Pipeline companies signed these long-term, take or pay contracts with producers in response to shortages in the mid-1970's.

The Federal Energy Regulatory Commission, under the Natural Gas Policy Act of 1978, which I voted against, routinely allows pipelines to pass the higher costs on to gas distribution companies, and, through them, to consumers. On September 29, members of the Northeast-Midwest Congressional Coalition met with FERC Chairman Butler and asked him to take administration action to require modification of these take or pay contracts. At that meeting, Chairman Butler informed the coalition that the Commission had no statutory authority to require renegotiations. Today's legislation is an outgrowth of that meeting.

Our legislation will not only permit renegotiation of such contracts; it will require pipelines to deliver the least cost mix of gas to distribution companies by requiring them to take the maximum amount of least expensive gas they have under contract before taking expensive gas covered by take or pay provisions. A pipeline company will have the authority and legal duty to refuse high-priced gas if less expensive gas is available under existing contracts.

Pipeline companies which do not provide the least cost mix will be subject to the fraud and abuse standard of the natural gas policy act administered by the Federal Energy Regulatory Commission.

The act will take effect 15 days after enactment. It will expire on November 1, 1983. Given the timelag necessary for reduced prices to be passed through, consumers will notice reductions in the natural gas bills this winter, likely in March, with retroactive adjustments in the period beginning 15 days after enactment.

The precedent for statutory requirement of renegotiation is long established. Various Federal price regulation schemes have been upheld judicially as consitutionally valid exercises of the commerce power granted Congress by the Constitution. Courts have upheld similar congressional action in the Natural Gas Policy Act of 1978, the Emergency Petroleum Allocation Act, and the Economic Stabilization Act of 1970, under which, in 1971, then-President Nixon initiated mandatory wage and price controls, which represented significantly greater intrusion into private contractual arrangements than the limited legislation we have introduced today.

We have a good bill which attempts to address the most critical short-term energy problem facing the United States today. It is a bill which addresses national, not regional, concerns. The sponsorship is bipartisan; we expect that the support in both the House and the Senate, and hopefully in the administration, will also be bipartisan.

The list of cosponsors follows:

ORIGINAL COSPONSORS

Mr. James L. Oberstar; Mr. Robert W. Edgar; Mr. Frank Horton; Mr. Silvio O. Conte; Mr. Hamilton Fish, Jr.; Mr. Fernand J. St Germain; Mr. Doug Walgren; Ms. Barbara A. Mikulski; Ms. Mary Rose Oakar; Mr. Tom Harkin; Mr. John F. Seiberling; Mr. Dennis E. Eckart; Mr. William F. Clinger, Jr.; Mr. Edward P. Boland; Mr. Berkley Bedell; Mr. Ed Weber; Mr. Toby Roth; Mr. George C. Wortley; Mr. Parren J. Mitchell; Mr. Bruce F. Vento; Mrs. Lynn Martin; Mr. Matthew J. Rinaldo; Mr. Clarence D. Long; Mr. Steny H. Hoyer; Mr. Donald J. Pease; Mr. Matt McHugh; Mr. Larry Winn; Mrs. Cardiss Collins.

HON. JACK BRINKLEY

HON. CHARLES HATCHER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 2, 1982

● Mr. HATCHER. Mr. Speaker, I take this brief opportunity to join with my many colleagues in the Georgia delegation and the rest of the House who have risen in tribute to the Honorable JACK BRINKLEY.

Although I have been privileged to serve with JACK in this body for only the past 2 years, I have come just as others have to respect his wealth of experience and, particularly, his outstanding talents for bringing together those with divergent viewpoints in an environment which permits compromise and understanding.

It seems to me also fitting to mention on this occasion the great respect and warmth held for JACK by those whom he has served in the Congress. My district adjoins JACK's for some 150 miles and, because of this, I have been especially aware of the feelings of his constituents. There is no doubt in my mind but that, had he so chosen, JACK could have been reelected to this body for as long as he desired. This is a remarkable comment upon the great success of his career and his personal accomplishments.

Our delegation and this House will miss JACK BRINKLEY. I hope, however, that our loss will be his gain and that he and his lovely wife, Lois, have the happiest of new lives in Georgia.●

A SALUTE TO CONGRESSMAN ROBERT H. MOLLOHAN

HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 30, 1982

● Mr. STOKES. Mr. Speaker, I take this opportunity to commend and thank my distinguished colleague, the Gentleman from West Virginia, Mr. RAHALL, for reserving time for this salute to my good friend, Congressman ROBERT H. MOLLOHAN. As we all know, Mr. Speaker, BOB MOLLOHAN will be retiring at the end of the 97th Congress after having served nine terms. Today, I join with my colleagues on both sides of the aisle in commending him for the kind and quality of service he has provided in the House on behalf of the residents of West Virginia's First Congressional District.

Mr. Speaker, the citizens of West Virginia have been the primary benefactors of BOB MOLLOHAN's dedicated service, both before and after he entered the U.S. House of Representatives. It was as Director of the Works Progress Administration during the Depression that he gained an unforgettable impression of what happens to the working person when an economy fails. Later, as a member of the executive committee of the Congressional Steel Caucus, and as a member of the coal group, BOB MOLLOHAN put to use the knowledge gained earlier to avert or alleviate unemployment for West Virginians.

Not only has BOB been an exemplary legislator in the House of Representatives, but he has also performed a yeoman's job in rendering needed constituent services. Since I am aware of what an important priority this has been to BOB, it is a pleasure for me to congratulate him on a job well done. I know that his constituents will miss BOB greatly for this unequaled service and for the generosity of spirit that stood behind it.

Mr. Speaker, in my mind, Congressman MOLLOHAN has not only distinguished himself in his devotion to the needs of his constituents, but he has also made his mark as a lawmaker within the Halls of Congress. During his 18-year tenure in the House of Representatives, he has been what I call a working legislator. That is, Mr. Speaker, BOB MOLLOHAN has been a conscientious worker behind the scenes in constructing legislation that aided all Americans. BOB MOLLOHAN shunned the rhetoric often associated with the floor of the House and substituted for it long hours of work in formulating legislation considered by this body.

As a member of the House Armed Services Committee, BOB serves as a ranking member of the Investigations, Seapower and Strategic and Critical Materials, and the Research and Development Subcommittees. On the committee, Congressman MOLLOHAN gained a reputation as the resident expert in the important areas of shipbuilding and strengthening our Navy. Mr. Speaker, the important caveat here is that BOB MOLLOHAN knew of the importance of the military in this Nation but kept that need in the proper perspective, withstanding efforts to increase our military budget beyond its actual needs.

Mr. Speaker, in addition to being a respected member of the House Armed Services Committee, Congressman MOLLOHAN was one of the key members of the House Administration Committee. Because of his assignment on the committee, I had the opportunity to become better acquainted with him. As many of my colleagues remember, I was the chairman of the House Select Committee on Assassinations. As the chairman of that committee, I was in constant contact with the House Administration Committee in order to secure funds for the operation of our important investigation.

In BOB MOLLOHAN, I found not only a friend, but also a human being deeply committed to the committee's purpose of resolving some of the lingering questions surrounding the assassinations of President Kennedy and Dr. Martin Luther King, Jr. Throughout the committee's investigations, BOB MOLLOHAN was extremely supportive and worked to insure that the committee had all of the financial resources available to complete its task. I am very grateful to BOB for his understanding in this matter.

So, it is with those general and personal remarks, Mr. Speaker, that I join with Mr. RAHALL, the members of the West Virginia delegation, and my colleagues in this tribute to BOB MOLLOHAN. By his dedicated service to his constituents and by his support of just causes in the House of Representatives, he made an indelible mark on this body and the Nation. As the 98th Congress begins, and as we face a world far more uncertain than when our much-admired colleague first took office, I shall miss the quiet leadership and unassuming personality of my good friend, BOB MOLLOHAN. I take this opportunity to publicly thank BOB MOLLOHAN for his contributions to Congress, his colleagues, and Americans citizens.●

HON. JACK BRINKLEY

HON. BILL NELSON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 2, 1982

● Mr. NELSON. Mr. Speaker, it is an honor to join my friends in paying tribute to a legislator who has served his State and this institution in a manner we can all admire.

As dean of the Georgia delegation, JACK BRINKLEY has provided leadership to us all. For 16 years, the Congress has benefited from his wisdom and guidance. His efforts in military affairs especially have proven invaluable. As chairman of the Subcommittee on Military Installations and Facilities, a leader in civil defense planning, and a compassionate guardian of our veterans' interests, JACK has well represented his constituents in the State of Georgia. JACK BRINKLEY's dedication to the national interest, his distinguished service to all Americans, and his warm friendship will long be remembered by all of us who have had the privilege of working with him. We wish you much success in the new challenges ahead.●

SUPPORT THE STEEL CAUCUS "BUY AMERICAN" AMENDMENT

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 6, 1982

● Mr. OBERSTAR. Mr. Speaker, when the House later today considers H.R. 6211, the Surface Transportation Act of 1982, we will be asking the American people to assume an increased tax burden. In return, the Federal Government through the States will fund a much-needed, long overdue, major rebuilding program for the Nation's transportation infrastructure.

I am honored to be a member of the House Public Works and Transportation Committee which approved H.R. 6211 over 6 months ago. We needed the bill badly then; we need it urgently now. Regrettably, floor action has been delayed because President Reagan wanted to use the increased taxes to reduce his budget deficit, rather than to build highways and bridges; the committee said "no" and shelved the bill until the President

would change his mind—which he has done.

The issue, however, now is not recrimination over delay, but the need for expeditious action on this legislation to rebuild the Nation's highways, bridges, and mass transit systems.

H.R. 6211 is equally important because of its job-creating potential. On Friday, the Department of Labor issued unemployment statistics showing that over 12 million Americans are out of work—10.8 percent of the labor force, the highest level since the Great Depression.

This House must maximize the job-creating potential of this legislation. Those jobs, however, must be in the United States, not Japan or Western Europe. We are asking the American people to assume a significant tax increase. We will not fulfill our duty to them if we fail to insure that the jobs created through their taxes will be for American workers.

For that reason, I urge the House to adopt a vigorous buy American amendment. H.R. 6211 does improve the existing buy American provisions in the 1978 act, raising the differential from 10 to 20 percent. The provision is simply not enough.

I represent the Nation's principal iron ore producing area. Northeastern Minnesota has the second-highest unemployment rate in the United States. Unemployment in the mining sector of our ecomomy has reached 90 percent at times during this year.

That unemployment is the direct result of a general economic slump, the reduced demand for steel, and the entry into the already shrunken domestic market of subsidized, foreign steel.

By adopting an amendment requiring that the material purchased with the funds authorized and raised through H.R. 6211 be American made, we can avoid a disgraceful situation of increasing the gasoline tax, with the result of increasing consumption of foreign steel.

This amendment means jobs for the American people. It is an amendment which both labor and management in the steel industry have helped develop and now enthusiastically support.

It is not an attempt to subsidize American industry, or to protect it from fair foreign competition. Rather, it is a recognition that, in times of unprecedented unemployment in the postwar period, we cannot allow unfair foreign competition to deprive unemployed Americans of the benefits of this legislation. In view of recent decisions by the International Trade Commission and the Department of Commerce regarding dumping of steel in this country, an amendment which provides for only a 20-percent differential is completely unacceptable.

If the House fails to adopt this strong, effective provision, I am deeply concerned about the provision which the House-Senate conference will adopt. In 1978, as many Members of this House will remember, the House adopted a vigorous buy American provision in the 1978 Surface Transportation Act. Unfortunately, the conference, because of the insistence of the Senate, accepted a provision which has proven to be nothing short of pathetic.

In my own district, that weak provision of the Surface Transportation Act of 1978 allowed a Japanese steel producer to win a $7 million contract for structural steel to be used in the construction of the Arrowhead Bridge replacement, funded under the discretionary bridge replacement program.

I am somewhat reluctant to point out the obvious, but, unfortunately, the fact that foreign workers do not pay American income tax and that foreign governments do not pay unemployment benefits for American workers, is usually overlooked when we decide on the use of Federal funds for major construction initiatives. We discuss the situation; we express concern for unemployed American workers; we offer words of encouragement to the American steel industry; but our past experience has been that when the final bill is written, all that discussion and concern lead almost nowhere, because we have not backed our words up with strong protections written in law.

The unemployment rate in this country is 10.8 percent. This time, this House must insist upon a meaningful buy American provision so that when we go to conference with the Senate, we can produce provisions which will insure that subsidized, imported steel does not deprive American workers of the opportunity for meaningful employment funded by their tax dollars.

We are going to spend this money anyway. Let us make sure we spend it in the United States.●

THE FUTURE OF HOUSING: WHAT IS IN STORE FOR THE AMERICAN DREAM?

HON. LARRY E. CRAIG

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. CRAIG. Mr. Speaker, as we deliberate the problems of our economy and unemployment in these waning days of the 97th Congress, I think it would be appropriate to put the future of one of this country's largest industries into perspective. The homebuilding industry in the Nation has gone through a tramatic period and is only now beginning to show signs of recovery. Yet, it is still the industry that builds America's dreams. Mr. John Fery, chairman and chief executive officer of Boise Cascade Corp., one of the Nation's largest lumber products corporations, made some very astute observations regarding the future of this industry in a speech he made on October 29 of this year. I would like to share those observations with you today by including a copy of his text.

THE FUTURE OF HOUSING: WHAT IS IN STORE FOR THE AMERICAN DREAM?

For generations, families have wanted to buy the house of their dreams. You know what that is. The traditional, detached, single-family home with a yard, a white picket fence, located on a tree-lined street, in a wholesome suburban community. During most of the 1970's, seven of every ten families who wanted to buy that home could do so without undue financial hardship or sacrifice. Three found the cost of home ownership too high, so didn't buy.

Today those numbers are reversed. Today only three of the ten families can achieve their housing desires. The other seven walk away frustrated, having discovered that, for them, houses are unaffordable.

For now, the great American dream of home ownership has become a nightmare. Not only for home buyers, but for everyone associated with housing—home builders, realtors, thrift institutions, even my own forest products industry.

Further, everyone in this room feels the impact. The fate of housing is tied to that of the general economy, traditionally generating more than 10 percent of the gross national product. Housing has served as a bellwether for turns in the economy. When extreme events shake the housing industry, we all feel the tremor.

As a result, the magazine and newspaper articles one commonly reads about housing these days, as well as the news stories on television, are decidedly negative.

Here are some typical headlines:

"A Housing Era Ends"—Nation's Business.

"Housing's Unsheltered Future"—Fortune.

"The Great Housing Collapse"—Newsweek.

"Housing: A Boom That May Never Come"—Dun's Business Month.

My company, Boise Cascade, is a major supplier of building materials to the housing industry. So those dreary reports about home building concern us. We take them seriously. So seriously, in fact, that we recently set out to see whether the fundamental characteristics of housing had really changed so much in so short a time.

Some months ago, our senior management spent three days in an intensive shirt-sleeve session with distinguished, thoughtful authorities on various aspects of housing. We asked those housing experts to give us their best thinking on what the future holds.

That session pulled together a comprehensive body of knowledge about housing. It gave us the facts and the expert value judgments we needed to assess the arguments for and against housing's future.

The current pessimism about the future of housing revolves around three issues—the demand for housing, the method of financing housing and the affordability of housing. Some say that the so-called underlying, pent-up demand for housing is neither underlying nor pent up. Rather, it is non-existent or at least dwindling. Others say that insufficient mortgage money and the lack of acceptable, understandable mortgage instruments will preclude much home-buying activity—no matter what else happens. Still

others say that, even if there's a demand, and if mortgage money is available, the costs of house and mortgage are so high that people can no longer afford them. And included in everyone's consideration is the presence of the federal government and the question of its future role in housing.

Let's examine each of these issues.

DEMAND FOR HOUSING

First, the question of demand for housing—a concern easily dispatched.

Earlier this year, Market Opinion Research Corporation conducted surveys on the subject of home ownership for National Forest Products Association. That research shows that nearly 90 percent of Americans continue to place a very high value on home ownership. When asked about the goals and aspirations they have for themselves and their children, respondents ranked home ownership near the top of the list. While having a job was the most important, home ownership shared second place with quality health care. Further, they defined home ownership as owning a single-family home on its own lot with a lawn.

These findings shouldn't surprise us. They're simply the elements of the American dream that have existed for years. The dream hasn't died, nor even changed much.

Now add to that underlying American concept a number of demographic pressures that are building.

The U.S. population is growing—from 227 million in 1980 to 287 million forecast for the year 2000.

The post-World War II baby boom generation is forming families and will continue to do so throughout the 1980's. More than 1½ million Americans will reach home-building age each year in the 1980's—twice the rate of the 1970's.

People are living longer in the U.S.—nearly four years longer on average than just 20 years ago.

More senior citizens want to remain in their own housing units. In 1970, 16 percent of those 65 and older lived in institutions or with someone else. By 1978, only 10 percent did so.

More single heads of households want their own housing units. People stay single longer. People divorce more often. As a result, the number of people living alone has jumped from more than seven million in 1960 to nearly 18 million in 1980.

Clearly, there's a strong and growing need for housing in this country. Let's examine for a moment how that demand's been exercised and by whom.

During the late 70's, the dominant force in the housing market was the so-called upgrader. This buyer tended to have a growing family, more disposable income and was motivated partly by the investment advantage. He or she traded up from a small single-family home to a larger one. That continual, upward flow acounted for roughly 80 percent of the new housing market during those years. Builders concentrated on supplying the larger, trade-up of house—four bedrooms, 2½ baths and the like.

The upgrade market has diminished significantly, at least for now. Homes are not appreciating at the same rates they were. Homeowners are not willing to give up a reasonable mortgage rate of 7, 8, 9 or 10 percent to swallow a 15 or 16 percent rate. Those folks are sitting on the sidelines until rates come within reach, or have chosen to fix up the old homestead.

The upgraders did do one thing in those years. They left behind their old homes for first-time buyers. If it hadn't been for that housing stock created by the upgrade market, the housing needs of first-time buyers could have been largely ignored.

As prices and interest rates rose in the late 1970's, the number of first-time buyers still in the housing market dropped off considerably. In 1977 first-time buyers purchased 36 percent of all the homes sold, according to the U.S. League of Savings Associations. During 1979, that group purchased less than 18 percent of all the homes sold. In the last few years, we estimate that that number has fallen even more.

So where have the discouraged first-time buyers gone? Some are living with Mon and Dad. (How long can Mom and Dad tolerate that?) Some have doubled up. Some have accepted various multifamily options—townhouses, single-family attached, condominiums and the like. And some are renting (which, in turn, increases the pressure to build more rental units).

Besides first-time buyers, other important elements of the demand picture have also been ignored in recent years. The home buyer whose children are grown—the empty nester—wants to trade down to a smaller home. Other nontraditional buyers—single heads of households, divorcees, senior citizens—seek more modest homes. These potential buyers are standing by, temporarily frozen out of the housing market. But wanting in nonetheless.

Don't doubt it for a minute. The demand for housing is strong!

MORTGAGE FINANCING

That brings us to issue number two—financing. Even if housing demand exists, some say, there's insufficient mortgage money available and inadequate mortgage instruments in place to meet the demand. Let me tell you why I believe mortgage money sources and availabililty won't be a problem long term.

Mortgage financing is undergoing a transformation. The 30-year fixed-rate mortgage, for example, will comprise a smaller portion of the market. More affordable financing vehicles are being created and are gradually being accepted.

In just the past year, several new financing devices have emerged. Some, such as the growing-equity mortgages, are especially promising. These loans typically have a fixed interest rate, but payments increase so that the loans mature in 15 years or less.

In a period of disinflation, the idea of paying off debt quickly has obvious advantages. Some 60 percent of the families in this country now earn two paychecks. These new instruments allow those people to devote more of their income to house payments.

Just as the mortgage instruments will be different, so too the mortgage lending scene is changing. The Garn Financial Institutions Bill, hailed by many as the most significant banking legislation in nearly 50 years, was enacted a few years ago.

The Garn bill deregulates the S&Ls. They can now offer interest rates on savings deposits that will compete with those of money market mutual funds, while having the added advantage of being federally insured. The result will likely be the return of billions of dollars in deposits to the S&Ls, and probably a lowering of mortgage interest rates.

The question of sources of mortgage capital is partially addressed by the changing role of the thrift institutions. In addition, Fannie Mae estimates that the market share of mortgage companies and commercial banks will grow.

But that still may not be enough. Where else will the new money that housing needs come from?

Pension funds, with their vast and steadily growing reservoir of investable funds, will likely play a major role in the secondary market. Mortgage bankers predict that large institutional investors, such as pension funds, will buy up to 70 percent of all new mortgages by 1989.

Another concern with regard to the secondary market is the role of the federal government. It has helped create a healthy home-buying environment over the years through federally supported secondary mortgage institutions like Ginnie Mae and Fannie Mae, as well as FHA, VA and other programs.

This active role of government in housing is under scrutiny in some quarters today. The Administration wants to eliminate all off-budget federal loan guarantee programs—of which Ginnie Mae, for example, is one. I submit that Ginnie Mae is not a drain on the U.S. Treasury. Rather, it provides a financial return, as well as a valuable, needed service. This type of government involvement should continue, and I believe the Administration and Congress will come to recognize this.

In sum, I believe the problems with mortgage money sources, instruments and secondary markets are working their way toward resolution.

AFFORDABILITY

Issue number three is the most difficult—the question of affordability. Even if the demand for housing exists and mortgage money is available, some say, the cost is too high at today's prices and today's interest rates. Let me describe for you some things that are happening, that can happen and that should happen to deal effectively with the problem of affordability.

Here's a typical statistic about housing costs: In 1978, the median price of a new house was $55,700. In August this year, that price hit a record $73,200—a staggering leap. But let's not be misled by number like these.

Largely it is upgraders—the folks who can afford $73,200 and who have dominated the housing market these last several years—who are paying those "median" prices. Upgraders still represent the major share of those folks who are buying. And, builders have been tailoring their work to the large-home desires of upgraders. The median price reflect that.

I'm not suggesting that price are not high. What I am suggesting is that we can meet the needs of major segments of the market at more reasonable prices.

The single greatest cost element in a median-priced single-family home is the labor and nonwood structural materials—34 percent of the total, according to Date Resources Inc. Lumber and plywood comprise only about 12 percent. These percentages have declined slightly over time.

Another major element is the land. The cost of a developed lot, as a proportion of the total price of a house, has risen from 22.6 percent in 1979 to 25 percent this year. Land prices have steadily reflected rising inflation.

The big leap has been in overhead, construction financing and marketing costs. These have grown by nearly half—from 10.7 percent of the price of a mid-range home in 1979 to 15 percent of that price in 1982.

With these percentages growing, you may wonder which ones are dropping. That's not

difficult to figure. The builder's profit declined in the period 1979 to 1982—from 20 percent to 14 percent.

The question is how to lower those costs. Land prices are not likely to shift downward much, although the size of the lot can be reduced. And we can control other elements. We can tailor housing toward the market segments most anxious to participate—the first-time buyer, the empty nester and the single household head, as well as upgraders when they return in force.

Through the Market Opinion research study and the investigations of others, we've learned that people have apparently changed their ideas of what the ideal home is. It's smaller than it was just a few years ago. It may be attached to another unit. It may be on a smaller lot. It appears that people will accept a house that's very close to, but not exactly the same as, the traditional single-family, detached home with a lawn.

So in the housing industry, it's time to think small—less than 1,500 square feet—and think attached. Tomorrow's houses will be smaller, if home buyers choose to reduce housing costs this way. Attached housing or townhouses are growing in popularity. More homeowners will repair, remodel or expand their present homes.

As housing units get smaller, however, how space is used and what amenities are provided become critical factors. The National Association of Homebuilders tells us that buyers demand greater quality if they accept less space—more attention to detail in design, construction and energy efficiency.

As homes are modified, wood will continue to be an important ingredient. Wood is the champion insulator among all structural materials in general use. When it comes to keeping homes as warm or as cool as you like, wood is six times as efficient as brick, 15 times better than concrete or stone, 400 times better than steel and, I'm told, 1,770 times more efficient than aluminum.

In spite of the market adaptations we expect, the affordability issue may cause the number of housing starts to fall short of the two million a year we experienced in the '70s.

That may sound like bad news for the wood products business. Not so. Single-family starts may not return to their former levels, and those homes may be smaller. But we believe that other major domestic markets—multi-family construction and the repair and remodel market—will increase. And the multi-family unit will be larger. Further, world markets for wood products, especially in Japan and Europe, are growing. These expanding markets will be good for the wood business.

In addition, the forest products industry is changing. We're losing capacity as marginally efficient facilities shut down permanently. New capacity is being delayed due to capital constraints and high inherent risks. And, some industry consolidations are occurring due to companies' shortage of capital and/or raw materials. These consolidations will continue as the recession plays itself out. We expect there to be less lumber and plywood capacity in place when these hard times are over.

HIGH MORTGAGE INTEREST RATES

So, what do we know so far? We know that a substantial demand for housing is waiting to be exercised. We've seen that mortgage money can be available and that appropriate mortgage vehicles are gaining acceptance. And we understand that homes must be tailored to potential buyers and that costs must be managed to tap that demand and make homes more affordable.

But there's a major facet of affordability we haven't talked about yet—high mortgage interest rates, probably the key determinant in reestablishing housing's viability.

A good housing market with reasonable mortgage rates requires a good economic environment. And that's where the federal government comes in. A lot of people, particularly in the Reagan Administration, have concentrated—and properly so—on controlling inflation, thus bringing short- and long-term rates down over time and allowing the economy to revive. The trick is to put an end to heavy deficit spending by the federal government.

We must be prepared for the fact that it will take more time. Frankly, more time than most of us thought. But some important elements are in place for rates to gradually decline.

First, inflation is coming under control. Inflation in 1979 ran at 13.4 percent; this year it will be close to 5 percent—and seems to be holding. We are seeing a higher rate of personal savings. Consumer debt is down. And finally, interest rates are trending lower.

Of equal importance, however, is that economic improvement, like beauty, is in the eye of the beholder. The perception must grow that the federal government's deficit spending will be curtailed.

Confidence in a recovery must continue to spread. People aren't likely to make major investments in homes if they're concerned about having jobs next month, or next year. Borrowers and lenders alike must share the view that interest rates will stabilize.

Mortgage rates should then slowly decline, as the recovery spreads, reaching and holding at a more affordable level. We peg that to be in the 12 to 14 percent range.

In my judgment, a lot of pent-up housing demand will then be released—obviously more at 12 percent than at 14 percent. We already have some evidence that it will. A major developer who spoke at our Boise Cascade housing session said, and I quote: "We have a very vital housing market. People are really struggling to find a way to buy. We've had two brief breaks in interest rates in the last two years. During each one, we broke sales records for our entire company for those periods. If we get some reasonable relief in rates, we could have a very strong market." End quote.

We have a fair idea of what the markets for our products will be throughout this decade—and that's a critical piece of knowledge.

But that's not all that's necessary. Another theme has threaded its way through my remarks today, and it's this: Everyone involved in the housing business will have to give a little so that, overall, housing can recover a lot.

Home buyers must diminish their expectations, adjusting to a smaller housing unit on a smaller piece of land. Or they must be willing to devote a large share of their income to housing.

Home builders must concentrate on being more efficient.

The forest products industry must continue working toward improved productivity and efficiency in its wood products mills. Other suppliers must do likewise.

Financial institutions must work harder to market the new instruments now available.

Everyone must do a little, make do with less, work more effectively—and the result will be the revitalized housing industry so important to our nation.

Efficient builders will provide desirable, affordable homes for key segments of the home-buying population. Those homes will be financed through instruments which respond to the needs of both borrower and lender.

The American dream of home ownership is alive, waiting and will be fulfilled, once people can afford to buy. What will do the trick is an overall improvement in the economy and in consumer confidence.

In the meantime, the adaptations a changing housing market requires are taking place—on the part of home buyers, the construction industry, the mortgage finance institutions and building material suppliers.

Traditionally, the housing industry has led America out of recessions. It might not lead this time, but it will certainly follow closely. Home ownership is so woven into the fabric of our social and economic structure that it should be a benchmark of American accomplishment. It has been in the past, and I'm convinced it will be again.●

REMEMBERING JUSTICE MOODY

HON. DENNIS M. HERTEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. HERTEL. Mr. Speaker, the sudden death of Michigan Supreme Court Justice Blair Moody, Jr., this Thanksgiving weekend shocked and saddened the people of Michigan. Blair was my good friend and adviser for many years and for the past 2 years I had the privilege of representing him in the U.S. Congress.

It is always a tragedy to lose a devoted public servant but the people of the State of Michigan lost more than that; they lost a close, personal friend. Blair was able to balance the hard work in his profession and the demands in the political world with his family and homelife; he set an example that we should all follow. A charming man with a great sense of humor and an optimistic outlook, he was loved by all who were privileged to know him. Despite his busy schedule he always found time to share with his friends, enjoy his family, and participate in community activities.

Blair was born in Detroit in 1928 and raised in Washington, D.C., where his father worked as a reporter for the Detroit News. Like his father, who was later appointed to the U.S. Senate, Blair started out as a reporter, first at the Detroit News then the Washington Post before getting his law degree from the University of Michigan in 1952. Before embarking on his political career he was a partner in the Detroit law firm of Sullivan, Eames, Moody & Petrillo. He served as a Wayne County Circuit Court judge for 11 years prior to his election as a Supreme Court Justice. During his 6 years on the Supreme Court, Blair

earned the respect of his colleagues by his fair and compassionate interpretation of the law.

Blair was a devoted husband to Mary Lou and loving father of five children: Diane, Blair, Susan, Brian, and Peter.

Michigan Supreme Court Justice G. Mennan Williams delivered a moving eulogy in which he quoted Detroit News columnist Pete Waldmeir's article on Blair, "It seems cruel irony that Blair Moody's heart gave out on him. It never failed anyone else."

Mr. Speaker, before closing I would like to submit this poem that Blair wrote. I think it serves as a self portrait.

The poem follows:

You don't have to tell how you live each day—
You don't have to say if you work or you play.
A tried, true barometer serves in its place,
However you live, it will show in your face.
The false, the deceit that you bear in your heart
Will not stay inside, where it first got a start.
For sinew and blood are a thin veil of lace—
What you wear in your heart, you wear in your face.
If your life is unselfish, if for others you live
For not what you get, but how much you can give;
If you live close to God, in His infinite grace—
You don't have to tell it—it shows in your face.●

GAY RIGHTS IS A FIRST AMENDMENT ISSUE

HON. TED WEISS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. WEISS. Mr. Speaker, a significant group of Americans—lesbians and gay men—are being denied their most basic first amendment right, the right to say they exist.

Gay rights has been viewed primarily as a privacy issue in the past. Yet, it is also imperative that homosexual men and women be allowed to publicly and freely express themselves without fear of losing their jobs or homes.

Ronald Gold explored this critical issue in an article recently published in Civil Liberties. I commend it to the attention of my colleagues.

[From the Civil Liberties, November 1982]

GAY RIGHTS IS A FIRST AMENDMENT ISSUE

(By Ronald Gold)

A few years back, the National Gay Task Force surveyed 100 major corporations on their policy toward the hiring of homosexuals. A majority of those queried failed to reply, but nonetheless the results seemed encouraging. Some of the country's largest employers did respond, stating that they did not discriminate and considered their employees' sexual orientation a private matter. But a year or so later, when the Moral Majority was urging repeal of an antidiscrimination ordinance in Dade County, Florida, a gay man who'd worked as a Ronald McDonald clown decided to come out publicly, as proof that association with homosexuals causes no harm to children. McDonald's—one of the companies which said it didn't discriminate—sought and obtained an injunction against any further public statements, on the grounds that "association with homosexualty" would bring its Big Mac into public disrepute.

The standard civil libertarian view has been that gay rights is a privacy issue, but the McDonald's case illustrates as well as any other that we are dealing primarily with a First Amendment violation, in which "privacy" is defined differently for homosexuals and heterosexuals. Heterosexuals are free to show affection in public, reveal the names of the movie stars they find appealing and casually mention their spouses or dates. Lesbians and gay men have been required to be "private" at risk of their livelihoods or lives.

By the late 1960s, Jews in America had long ago stopped changing their names and bobbing their noses; blacks had stopped trying to pass or to "act white" in hopes of majority acceptance; and large numbers of women were breaking away from socially prescribed roles. But only a few brave gay people weren't part of a conspiracy to pretend they didn't exist. Then came New York City's Stonewall Riot, in which some of the brave ones resisted police harrassment of a gay bar, and suddenly significant numbers of gay people were declining to join the conspiracy and using the legal system to secure their civil rights.

Since then, quite a bit of progress has been made. There are few places nowadays in which gay people are forbidden to congregate. Two men on two women may now dance together legally (some times even when they're minority on the dance floor). The Federal Civil Service (though not the military, FBI or CIA) has adopted a nondiscrimination policy. Forty-three cities and counties and one state (Wisconsin) have antidiscrimination statutes. The courts have ruled in a variety of contexts that homosexuality isn't tantamount to bad moral character. There have even been positive rulings on First Amendment grounds.

"The Court fully recognizes," a federal district court said in a Delaware case, "that homosexuality is an extremely emotional and controversial topic and that (a gay teacher's) opinions on the subject quite likely represent a minority view. But . . . the fundamental purpose of the First Amendment is to protect from state abridgement the free expression of controversial or unpopular ideas. The decision not to renew (a teacher's) contract because of his public statements contravenes those most basic teachings of the First Amendment and cannot be tolerated."

So much for the good news. The bad news is that the New Right has seized on this progress as its prime evidence of "moral decay" and is using it as the point of its fear-provoking spear. (Most of the mailings from Richard Viguerie's right-wing propaganda mill begin with the "homosexual threat" and end with the MX missile or the Panama Canal.) As usual, the New Right is a lot clearer in defining the issue than its liberal opponents. "We're not going after their jobs," Anita Bryant once said, "as long as they do their jobs and do not want to come out of the closet."

The New Right realized something else civil libertarians weren't aware of: just as there weren't any laws to protect gay people, there also weren't any that mandated silence (laws weren't necessary when social pressures did the job). So they set to the task of framing legislation that would bring back the *status quo ante.*

Take, as a case in point, the section of the infamous Family Protection Act, pending before Congress, which provides that "no Federal funds should be available under any law to any entity for the purpose of advocating, promoting or suggesting homosexuality, male or female, as a lifestyle." This, its proponents declare, doesn't discriminate against homosexuals. It would simply prevent anybody from even "suggesting" that gay people might, on the whole, be a group of reasonably happy, healthy and law-abiding citizens. It would put every university at risk that dares to share with its students the prevailing views of the medical profession and a major segment of organized religion on the psychology and morality of being gay. It could have a devastating effect on all scholarship in the field of human sexuality; threaten schools with gay studies courses or gay groups on campus; dry up funding for gay counseling and health-care services; and end the recently won tax-deductible status of gay-related organizations.

Another section of the Family Protection Act (which was also proposed, and passed by the House of Representatives, as an amendment to the Legal Services Act) provides that no legal assistance may be offered "to promote, defend or protect homosexuality." Congressman Larry McDonald (D-GA), the framer of the amendment, said during the House debate that the purpose of the bill wasn't to prevent all indigent gay people from defending themselves against discrimination—even though he conceded it would have that effect. "If an individual openly professes his conduct and is discriminated against, we do not want him to have legal aid in his defense," he said. "If, on the other hand, he keeps his conduct to himself and does not bring it into issue then he can walk into any legal aid society as a private individual and get help." Translate "open conduct" into "free speech" and you get McDonald's drift.

A good deal of justifiable alarm has been generated by the Arkansas "creationism" law, but considerably less outcry has been raised about an Oklahoma statute that was one of the first New Right victories. It provides that teachers or teachers' aides may be fired for "public homosexual activity," which is defined as "advocating, soliciting, imposing, encouraging or promoting public or private homosexual activity in a manner that creates a substantial risk that such conduct will come to the attention of school children or school employees." At least the Arkansas bill didn't say that teachers had to stop teaching evolution. But this law, in addition to preventing teachers from engaging in political activity or speaking out on a public issue, effectively prohibits them from providing their students with any scientific information on homosexuality.

These and similar statutes are not the only areas in which the conspiracy of silence is being imposed. These days, many parents are denied custody and visitation rights not because they're gay, but because they're open about it. The immigration service no longer excludes all gay people, only those who say they are. Gay prisoners are denied parole unless they declare that they have been rehabilitated—that is, turned into heterosexuals. Gay inmates are also denied gay rights literature on the grounds that

they'd be beaten up for having it. And the currently fashionable argument is not that gay people can't be decent soldiers, firefighters or police officers, but that it would be "detrimental to good order" if people who don't like homsexuals knew there were any around. There is a concerted effort on a variety of fronts to deny gay people their most basic First Amendment right—the right to say that they exist.

The excuse for such an assault on the free interchange of ideas is a familiar one: society, the family, and particularly children, must be "protected" from a harmful point of view. And the reason that this assault has been so successful is that many people who think of themselves as civil libertarians share the New Right's fears. They don't think it's right for gay people to be discriminated against, but they too are afraid of somebody telling their children it's okay to be gay. The only way this situation can fundamentally change is when a majority of the people in this country can sincerely say to themselves, "It *is* okay to be gay—even for my children." And the only way that that can happen is when the truth about gay people is available to every child in the land.

It may seem curious that with fear of homsexuality such a hot item, not one "gay book" has been removed from school libraries or one "pro-gay" text summarily rejected by the state of Texas. (Book selections in Texas, the second largest textbook purchaser in the nation, are heavily influenced by textbook censors Mel and Norma Gabler). Actually there aren't any books about gay people in the school libraries, and no sane publisher would dare submit a rational discussion of homosexuality to the Gablers and their friends. Walt Whitman is revered as America's patriot-poet, but not one high school text—no matter how fulsome its biographies of other famous figures—reveals that Whitman was homosexual or includes any of his magnificent gay love poems. Not one civics text includes the gay movement in its discussion of civil rights. And even in the sex education courses so dear to the hearts of liberals, homosexuality is customarily ignored altogether or included only under such headings as "the misuses of sex."

It is up to civil libertarians not only to resist the efforts of the New Right to codify First Amendment restrictions into law, but to end the restrictions which have festered in our society since its beginnings. The battle for gay civil rights is not about privacy but free speech, and civil libertarians of whatever secual orientation must understand that America's 22 million gay citizens will never have their civil rights if they're not permitted to speak out and be visible.●

THE NEED FOR SOVIET STUDIES

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. HAMILTON. Mr. Speaker, I would like to call to the attention of my colleagues the following article from Time of November 29.

The U.S.S.R.'s invasion of Afghanistan in 1979 surprised most U.S. Kremlin-watchers. So did Soviet inactivity during the recent war in Lebanon. After Leonid Brezhnev's death two weeks ago, American Kremlinologists were still suggesting the names of his potential successors when Yuri Andropov was chosen.

To be sure, the inner workings of the Politburo have always been obscure to outsiders, but the uncertainty about Andropov underscores the current lack of American expertise on the Soviet Union. Even the Central Intelligence Agency admits that it is having trouble providing the kind of analysis needed by U.S. policymakers. Says a CIA spokesman: "It is becoming more difficult to recruit graduate students who have a real understanding of Soviet internal affairs." Notes Paul K. Cook, the top Kremlinologist at the State Department: "The number of well-trained senior Soviet specialists just suffices for the moment, but within five to ten years they will all be gone. The situation is severe and getting worse."

By all accounts, Soviet studies are in an alarming decline in the U.S. In 1968, 607 colleges and universities offered courses in Russian to about 41,000 students. In the fall of 1980, only 472 institutions provided Russian instruction to 24,000 students. In fact, more American college and graduate students now study Latin than Russian. Says Deming B. Brown, former director of the University of Michigan's Center for Russian and East European Studies: "We are just not turning out enough people who know the Russian language, and that suggests a dangerously condescending attitude toward the Soviet Union." At the graduate level, the decline is more startling. In 1980 about 100 doctorates were awarded in Soviet and Eastern European fields, most of them in literature and history. During the past decade, there has been an average of six dissertations a year on Soviet foreign policy by American graduate students with a working knowledge of Russian.

The Soviet approach to American studies, on the other hand, is systematic and thorough. There are more teachers of English in the U.S.S.R. than there are students of Russian in the U.S. The prestigious Institute of U.S.A. and Canada in Moscow has an estimated 300 staffers doing research on the U.S. One expert says this is more than all the combined total of Slavic faculty members at the dozen U.S. universities that lead in Soviet studies.

Soviet studies did not always have a low priority in the U.S. Immediately after World War II, with the help of the Ford Foundation, Columbia established its Russian Institute and Harvard set up the Russian Research Center to promote study in Soviet history, politics, economics and literature. In 1958, the year after the Soviets' triumphant launch of Sputnik, Congress passed the National Defense Education Act, which provided Government funds for Soviet-studies programs at such universities as Washington, Michigan, Ohio, Illinois, California (Berkeley), Indiana and Stanford. By 1970, however, Government and foundation funds began drying up. Between 1967 and 1976, federal contracts for all foreign affairs research dropped from $40 million to less than $20 million. Détente with the U.S.S.R., a national preoccupation with Viet Nam and the Middle East, and economic crises in higher education all contributed to the decline in Soviet studies.

Discouraged by the high cost of graduate education, the paucity of fellowships, and the unsteady job prospects, students are not rushing into Soviet studies. Slavic languages are not easy to learn, sources are often inaccessible, and the U.S.S.R. is unreceptive to U.S. scholars. Even after years of training, a Soviet specialist's job opportunities was and wane with the climate of détente. The CIA today reports a shortage of Soviet experts, yet it let many go in the '70s. At Harvard's Russian Research Center, Director Adam Ulam is concerned about "the general dearth of specialists" as many of his senior faculty members approach retirement. The center operates on the same $175,000 annual budget that it had in the mid-1960s, which makes it increasingly difficult to fund major research projects. Harvard's Ukrainian Research Institute has fared a little better, only because 10,000 Ukrainian Americans have supported it with gifts of more than $4 million over the past decade. Indiana University's Russian and East European Institute director Alexander Rabinowitch admits, "We're only managing to muddle through. For lack of funding we are losing quality."

There are a few signs, however, of a revitalization of Soviet studies. The Ford Foundation made grants of $7 million for this academic year, and the Rockefeller Foundation is considering a $2 million program to stimulate Soviet foreign policy studies. Columbia's Russian Institute received last month a $10 million gift from W. Averell Harriman, Ambassador to the Soviet Union from 1943 to 1946. Says Harriman: "Policy that is based on ignorance and illusion is dangerous."

There are also new stirrings of congressional concern. In September, Senators Joseph Biden of Delaware, a Democrat, and Richard Lugar of Indiana, a Republican, introduced a bill that would set up a $50 million endowment for Soviet studies. The money will come none too soon. Says Marshall D. Shulman, director of Columbia's newly named Harriman Institute for Advanced Study of the Soviet Union: "The lead time for training a first class specialist on the Soviet Union is longer than the lead time for a new missile." And the product may be more important.●

ALEX ROZSA

HON. DON RITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. RITTER. Mr. Speaker, Alex Rozsa, who was district administrator of my Lehigh Valley offices from 1979 until this past October, always wanted to be in the thick of things. You just could not keep him out of the center of the action. Wherever there was a job to be done, Alex was there—helping out people who were having problems with the Federal bureaucracy, coming up with the answers that nobody else knew, lending a sympathetic ear and giving us good advice, urging us on when we faltered and holding us back when we were about to act hastily, coming up with a joke when we needed to hear one and getting us back on course when we started to wander.

But Alex is no longer with us—he died in October—and he is truly irreplaceable. Nobody was more valuable than Alex; nobody knew more about our community and the people in it.

All of us—his family, his colleagues, his friends—will miss him very, very much.

Before joining my staff, Alex was night assistant managing editor of the Morning Call, an Allentown newspaper. This is a story that the Call wrote about Alex:

ALEX ROZSA DIES; DON RITTER'S AIDE, FORMER CALL EDITOR

Alex S. Rozsa Jr., 54 Lehigh Valley district administrator for U.S. Rep. Don Ritter and former assistant managing editor of The Morning Call, died of a heart attack at noon Wednesday after collapsing in the legislator's Bethlehem office.

Rozsa, who had a previous attack in 1976, went into cardiac arrest at 11:35 a.m. and received immediate cardioipulmonary resuscitation from staff secretary Peggy Micio, who also is a volunteer emergency technician in Wind Gap.

Micio was assisted by Bethlehem police until four paramedics took over in the 10th-floor office at the First Valley Bank Building. Receiving instructions from an emergency physician at St. Luke's Hospital via telemetry, paramedics used drugs and electric shocks in a vain 40-minute effort to save his life.

After further resuscitation efforts in the St. Luke's emergency room Rozsa was pronounced dead.

He was the husband of Joyce M. (Dujack) Rozsa and lived at 123 Miller St. Allentown.

Rozsa and other staff members were in the midst of guiding Ritter's campaign for re-election to the 15th House District seat.

A Northamption County native who knew the Lehigh Valley and community leaders well, Rozsa was regarded by Ritter as "invaluable" in assisting constitutents and solving their problems with the federal bureaucracy.

Recalling that his first two years in Congress were characterized by the usual staff adjustments problems, Ritter said, "Rozsa was a stabilizing influence and a big brother figure to all of us."

He added, "Rozsa's death is not only a terrible loss to his family. It leaves an enormous void, and I'm sitting here today without the foggiest idea of how to fill that void. He will be missed by the entire community that he served so diligently."

Rozsa was a graduate of Liberty High School, Bethleham. He rose through the editorial ranks of The Call to become wire editor, assistant city editor and city editor before being named night assistant managing editor in 1970.

Within the Call-Chronicle organization. Rozsa was known as an acerbic, demanding editor with a good nose for news and a capacity for hard work.

Said George Y. Nehrbas, editorial page editor, yesterday, "I was fortunate to have been closely associated with Alex Rozsa during his 33-years career with The Morning Call. He was a superb newspaperman and a valued friend and adviser. I share with others a deep sense of loss."

A product of the branch training system. Rozsa joined The Call's Bethlehem Bureau in 1945 and worked in the former Lansford bureau before he joined the Army in 1950 after the outbreak of the Korean War. Promoted to sergeant, he was based in Tokyo and assigned as an editor on the Pacific edition of The Stars and Stripes.

Rozsa was night production editor when he left The Call in 1978. He joined Ritter's staff in 1979, his first and only venture into politics.

Rozsa was president of the Pennsylvania Associated Press Managing Editors' Association (APMEA) 1974-1975 and headed a special monthly news coordinating effort that generated many in-depth statewide stories for the Associated Press. Among the topics were employment, urban redevelopment, coal mining and transportation.

Although he was a busy, shirt-sleeved editor, Rozsa found the time to get behind a typewriter and won writing awards conferred by the APMEA and the Pennsylvania Society of Newspaper Editors.

As a writer, Rozsa's forte was the ability to condense many facts into compact, interesting stories. His best articles were the series of exclusives that chronicled the escapades of Allentown adventurer and canoeist Fritz Sprandel, who wound up being a captive of Cuba's Fidel Castro and the subject of an international incident.

Drawing upon research compiled by two Lehighton bureau reporters, Rozsa also won recognition for an article about the residents of Coaldale living with the constant fear of seeing their homes engulfed by coal mine sudsidence.

A member of St. Thomas More Catholic Church in Salisbury Township, Rozsa was instrumental in St. Thomas receiving the Guideposts Magazine award for ecumenical programs. The prize was conferred personally in 1973 by Dr. Norman Vincent Peale, the magazine's editor.

Born in Easton, Rozsa was a son of Laura (Phillips) Mortico of New York City and the late Alex S. Rozsa, Sr.

Surviving with his widow and mother are a stepmother, Mrs. Agnes Rozsa of Easton, and a daughter Renee, at home.

A Mass of Christian Burial will be at 11 a.m., Saturday in the church, 1040 Flexer Ave. Calling hours will be 7-8:30 p.m. Friday in the J. S. Burkholder Funeral Home, 16th and Hamilton streets, Allentown.●

THE MX AND THE ARMS RACE IN SPACE

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. BROWN of California. Mr. Speaker, as we begin debate on the Department of Defense appropriations bill, it is useful to step back and consider the context of our military programs and what our defense strategy is and what it should be. I realize it is unusual for Members of the House to put themselves in this frame of reference, but at a time when there is such a divergence of views, this may be the only sound way to view the debate over individual weapons systems and arms control policies.

I would like to share one such perspective with my colleagues. It is in the form of an excellent paper written by Dr. Robert M. Bowman, a retired Air Force colonel who served in senior policy positions in the Air Force Space Division. While the thrust of his paper is about the arms race in space, the context is the United States-Soviet strategic balance and how certain new weapons systems are destabilizing, whether we have them or the Soviets have them. Dr. Bowman identifies the MX missile as one such destabilizing technology, antisatellite warfare systems as another, and Gen. Daniel Graham's high frontier approach as still another.

It is this type of perspective on the arms race which can help us understand the futility of our present policies. I commend the following paper to my colleagues.

WHY ALL THE FUSS OVER WEAPONS IN SPACE?

(By Dr. Robert M. Bowman)

INTRODUCTION

The title of this paper states a question that seems to be voiced by both peace groups on the one hand and by members of the defense community on the other. The purpose of this paper is to answer that question, hopefully to the satisfaction of both groups.

Those in peace groups, for example, those involved in the nuclear freeze movement, often ask me, "With the everpresent danger of nuclear weapons capable of destroying the planet and all life on it, why should we be concerned with weapons in space, most of which would be targeted at military systems anyway, not people? Why should we dilute our energies by diverting our attention from the menace of earthbound nuclear stockpiles?"

Members of the defense community want to know why someone like me, a member of that community for 30 years—22 in the Air Force, and 8 in industry (4 before and 4 after my military career)—is suddenly on the outside leading a battle against weapons that up until a few years ago I was responsible for developing.

It is hoped that this paper will help answer both questions.

BACKGROUND

When I was in the Air Force, we had a motto: "Peace is Our Profession." Our strategy was built around the objective of preventing a nuclear war, not fighting one. We were selective in the weapons we developed, and deployed, choosing, those which were stabilizing, and shunning those destabilizing weapons which would harm, rather than help, our ability to preserve the peace. There were always a minority in the military who would prefer to emphasize warfighting capability and who would favor any weapon which seemed to provide such capability, no matter how it clashed with our overall strategy.

Now the situation has changed. This minority has succeeded in getting the strategy changed to fit its weapons. The turning point was the MX. A dangerous, destabilizing weapon with no real utility except as a first-strike weapon, the MX forced a restructuring of policy and strategy to support its existence.

Meanwhile, our military forces had become more and more dependent on space systems—for communications, surveillance, warning, targeting, weather, navigation, and other functions in support of earth-based weapons and operations. Once policy and strategy had been changed to accommodate the MX and a protracted, limited nuclear exchange scenario adopted, military strategists realized to their horror that the space systems upon which their "war-fighting" capability depended were strictly peacetime systems, designed to support a strategy of deterrence and not survivable in a conflict

situation. The function for which they were designed was to give early and unequivocal warning of an enemy attack and to support the launching of a retaliatory strike. It was assumed that any attempt to destroy our satellites would constitute warning that an attack was either under way or imminent and would put in motion the retaliatory machinery. The obvious inability of the United States to keep a full set of satellite systems operating for more than a few hours into a nuclear war didn't seem to matter.

The peacetime nature of our space assets was reinforced by the national decision to compel the Air Force to design all its new satellites for launch on the shuttle. Over the vehement opposition of the military, the shuttle was literally crammed down the throats of program offices responsible for operational satellite systems. At the time, this was deemed necessary in order to financially justify the shuttle. Later in the development of the shuttle, the political and financial support of the air force was the only thing saving it from cancellation. Time and again, the Congress was forced to ante up more money to complete the shuttle development because of the total dependence of the Air Force upon it—a dependence thrust upon the Air Force to create just this situation. The shuttle, of course, is so vulnerable to attack, both in orbit and on the ground, and its two coastal launching sites so vulnerable that it is inconceivable that the United States could launch any new or replacement satellites once any hostilities had broken out. Two WWII submarines (or rowboats for that matter) or even two terrorists with hand grenades or mortars could totally wipe out the country's launch capability in seconds. Similarly vulnerable is our capability to communicate with the shuttle and to get data back from it or any of our other satellites. Even the new multi-billion dollar Consolidated Space Operations Center (CSOC) which the Air Force is building in Colorado Springs will be vulnerable to attack or sabotage by the most meager of forces.[1]

It is therefore ironic that at the same time as national decisions are being made which irretrevably limit our space capabilities to the peacetime tripwire role for which they had been designed, other decisions are being made to spend hundreds of billions for weapons whose only usefulness is in a protracted nuclear war, but which depend heavily on space systems not designed for that purpose.

One choice available when this dichotomy was recognized was obviously to abandon the MX and other protracted was weapons and to stick with a policy of war prevention. That choice was not made. Once a system gets so far in the pipeline, it is extremely difficult to kill (witness the B-1, rising from the ashes like a Phoenix). The choice selected was to attempt to up-grade the nation's space capabilities to give them a war-fighting capability.

Increasing the survivability of satellites by hardening them against attack was given much lip service and several millions of dollars, but very little was accomplished. Providing survivable launch capability by returning to expendable launch vehicles was considered for selected systems. But most of the effort went into a program to develop a U.S. anti-satellite (ASAT) system to match that of the Soviets. The rationale evidently was that if they're going to threaten our satellites, then we'll threaten theirs. The fact that we're much more dependent upon our satellites for command and control of strategic forces than they are did not prevent such a decision from being made.[2]

We have now developed a far more sophisticated, far more capable ASAT than that possessed by the Soviets. It is ready to begin operational testing in early 1983 [3].

In the meantime, many in the Air Force have learned to love the shuttle. While those who have satellites to launch on it still grumble about the mountain of interface requirements, redesign, red tape, schedule slips, etc., etc., the advanced planners have come up with a plethora of ideas for things to do with it that sound like they came out of Star Wars. Others, realizing the severe limitations of the shuttle in anything beyond peacetime, have dreamt up new Space Cruisers and a variety of space weaponry [4], much of which is in violation of existing treaties [5].

The darling of a few in the establishment is a proposal by General Daniel Graham (retired) for a space-based anti-ballistic missile (ABM) system. The Heritage Foundation report outlining this so-called "High Frontier" proposal [6] promises that it will end the immoral holding of civilian populations hostage to a deterrent strategy of Mutual Assured Destruction (MAD). If only that were so! Unfortunately, it is a cruel (though I believe well-intentioned) hoax, an empty promise, and a dangerous delusion.

Negotiations with the Soviet Union aimed at preventing an arms race in space were cut off by the United States at the time of Afghanistan. Now, enamored with the possibilities of high tech weaponry in space, our country is reluctant to resume those negotiations in good faith. We have spurned a proposal by the Soviets to ban all kinds of weapons in space [7]. We have proceeded with a massive militarization of NASA [8]. We have emasculated NASA's traditional capability to carry out peaceful space exploration and scientific ventures [9]. And we are flirting with the possibility of embarking on space weapons developments whose eventual cost is on the order of the entire federal debt.

This, then, is the background, very briefly, of where we are now. The question now to be addressed is, "Why does all this matter when the world is faced with destruction by nuclear weapons right here on earth? Why all the fuss over weapons in space?"

THE THREAT TO STABILIZING SYSTEMS

Of all the benefits man has derived from space in the last few decades, the greatest has been peace. The military surveillance systems of the United States and the Soviet Union have contributed immeasurably to peace by denying the element of surprise to an attacker and eliminating any advantage of a first strike. By giving each side the knowledge that they could not be taken by surprise, they have reduced the pressures for pre-emptive strikes and led to a considerable lessening of tension. Space systems provide time for analysis, confirmation, consultation, and deliberation and have made hair-trigger responses unnecessary. They have also provided the technical means of verification which have made arms control possible.

Anti-satellite (ASAT) weapons now threaten to negate this beneficial stabilizing influence.

The current ASAT capability of the Soviet Union is real, but limited. Our most important warning systems are well out of its range. But if the arms race in space continues unchecked, we could find ourselves in an extremely dangerous situation. For years, our policy was to negotiate a ban on ASAT's if at all possible. We recognized the fact that we were more secure in a world without ASAT's than with them—even if ours were superior to the Soviets'.

This truth is now being ignored. We are intent on surpassing the Soviets in the arms race in space and are therefore about to test an ASAT whose deployment (or absence thereof) will be almost impossible to verify. If we were to agree to a ban now, we would be able to tell easily whether or not the Soviets were complying with it. But once we've tested ours, there will be no way for them to know if we are abiding by a ban or not. The testing of our ASAT weapon is therefore an irreversible step which will make it very difficult to return space to the status of a sanctuary for peaceful and non-threatening military support systems.

It is always much easier to ban weapons which do not yet exist than to get rid of those which are already deployed. If we can't agree to prevent the spread of the arms race to space, what makes us think we have any hope for getting rid of nuclear weapons here on earth? The fact of the matter is that as long as there are nuclear weapons and delivery systems for them, the United States and the Soviet Union are going to need space surveillance systems to provide some measure of stability. To allow those systems to be threatened by antisatellite weapons is reckless and foolhardy.

UNFORTUNATE SYNERGY WITH FIRST-STRIKE WEAPONS

As explained above, ASAT weapons are dangerous because they threaten systems which are now supplying both powers with attack warning. Unfortunately this danger is being compounded by our unfortunate pursuit of weapons with a first-strike capability.

Some (but not all) proponents of our new war-fighting strategy have invented second-strike scenarios [10] where silo-busting capability is required, thereby justifying the MX. Others blatantly talk about situations in which the United States, in their opinion, should strike first, destroying Soviet ICBM's in their silos and Soviet command posts and hardened communications centers.[11] This so-called decapitation strike, they hope, will (in consort with a U.S. ABM system and evacuation of the cities) reduce our losses to "maybe as few as 20 million deaths".[12]

There is one minor flaw in this "optimistic" portrayal of victory. It depends on the Russians, when faced with such a capability, continuing their present policy of requiring committee approval before a nuclear strike can be ordered—a very time-consuming procedure. Clearly, if we proceed with the MX, Trident II, and Pershing II, the Soviets, with as little as four minutes warning, will have to go to an automated launch-on-warning (LOW) procedure. This puts the survival of the United States in the hands of the reliability of Russian computers. Our sophisticated and technologically advanced computer warning system has given many false alarms. One of the recent ones was not identified as false until after six minutes had elapsed. If the Russian system did no better, such a fault would bring about the annihilation of the United States.

Administration strategists have the answer to that. "Knock out their surveillance satellites prior to a nuclear attack and they won't have any warning!" [13] Once blinded, what makes such "strategists"

[1] See footnotes at end of article.

think the Soviets will just sit there and let themselves be decapitated?

Herein lies the greatest danger. Once the United States has both a first strike capability and an ASAT capability, what happens if a Soviet warning satellite is struck by a meteor or suffers a catastrophic electrical failure? Might they not reasonably assume that we have just destroyed their satellite so that they will not see the attack we are launching against them? Will they not then be likely to give the order to launch a "retaliatory attack?

The MX is dangerous to our security. The ASAT is dangerous to our security. Together, they are devastating and are very likely to destroy our security by bringing on the war neither we nor the Soviets want—and which neither we nor the Soviets can survive.

SPACE AND INDUSTRIAL CONVERSION

At the moment, defense contractors are fighting to hire people so that they can spend some of the money being thrown at them. Civilian industry, in the midst of a recession, is being stripped of its best talent. Companies are changing their line of business to cash in on the defense bonanza. The Pentagon is wallowing in money. But it may not always be so.

Sooner or later this country will have a president with the vision, the leadership, the statesmanship to meet face to face with the leadership in the Soviet Union, discuss differences, discover common interests, and end the arms race. What would happen to this country right now if peace broke out? What would happen if the bilateral nuclear freeze were suddenly adopted? No more nuclear weapon production. No more delivery systems. No MX. No B-1. No more strategic aircraft, cruise missiles, Pershings, submarines. What would happen to our defense industry? What would happen to our technology?

We should, of course, be working on this problem. We should have a conversion plan.[14] But one of the best things we could have going for us at a time like that would be a healthy civilian space program. But a healthy civilian space program requires a peaceful space environment, and that is, unfortunately, rapidly disappearing. Private industry is not going to make long-range investments in what is destined to be a war zone. Our government has already nearly halted its investment in the "exploration of peaceful uses of outer space". Technology is being hoarded by the military. The French earth observation satellite, SPOT, will have much greater resolution than our LANDSAT system[15]—not because the French technology is better than ours, but because the Department of Defense won't let American industry use the technology it has developed. So another reason why space is important and should be given attention by peace groups is because it is the key to redirecting much of our defense industry into worthwhile civilian pursuits, so that a nuclear freeze will not be accompanied by a massive disruption of industry.

SPACE AND SOVIET-UNITED STATES RELATIONS

Finally, the preservation of peace in space is important because it is an ideal environment in which to bring about true cooperation and joint ventures between the superpowers to increase interdependence, foster understanding, reduce fears, promote friendship between peoples, and gradually eliminate the threat of war.

The Soviets have a manned space station[16] and no reusable transportation system to use in getting men and materiel to and from it. We have a reusable space shuttle transportation system . . . and nowhere to go. The obvious question is, "Why don't we get together?" The Apollo-Soyuz mission proved it could be done. But that was a one-shot mission, a "Gee whiz" stunt. Its effects wore off. What we need for Shuttle-Salyut is an important continuing mission. In July, I proposed a joint U.S.-U.S.S.R. Peace Monitoring System based on the combined capabilities of Shuttle and Salyut[17]. A jointly-manned space command post with access to the surveillance data of both countries would allow us to continue to monitor each other and in addition, keep a joint eye on third parties. The system could be expanded to include other space nations, and gradually take on civilian surveillance missions. There are so many global problems crying out for global solutions—hunger, illiteracy, water shortage, energy depletion, natural disasters, deforestation, pollution. All these problems are amenable to solution by international space systems. With the combined resources of the United States and the Soviet Union, we could transform the lives of people all over the world—provided we don't kill them first. Joint missions in space on behalf of mankind hold out a real hope of breaking the cycle of fear and leading us all out of the threat of destruction. But it will not happen if space becomes an armed camp and space technology is hidden behind classification, restriction, and export control.

RECAP

I have given four reasons why it is important to preserve peace in space: (1) Space systems provide stability essential to prevent nuclear hair-trigger responses. (2) ASAT's and first-strike weapons are a deadly combination to the country possessing them. (3) Space is needed to convert high technology to civilian pursuits once peace breaks out. (4) Space is the ideal arena for cooperation between the superpowers. I would now like to address two common objections to a ban on weapons in space.

COMMON OBJECTIONS

Why ban weapons in space when they can help get rid of weapons on earth by making them obsolete? Besides, space weapons are defensive. They don't kill anybody. They just protect.

This statement usually comes from someone[18] who has heard about laser battle stations in space or some other version of a space-based ABM system, such as General Graham's. It is usually described as an impenetrable shield protecting our homeland. Unfortunately, such weapons (if they work at all) can not make nuclear weapons obsolete, are not just defensive, can kill, and can not protect us.

There are at the moment at least three versions of a space-based ABM system under consideration. Each has its own peculiar problems[19]. And some problems are shared by all. All involve very difficult technology (in spite of claims to the contrary). All would themselves be very vulnerable. All are subject to countermeasures which could be implemented at a small fraction of their cost. All would be enormously expensive (estimates range from about a hundred billion dollars for the cheapest system to about a trillion and a half). All could be completely bypassed by alternative offensive strategies. And all are destabilizing, tending to prompt the other side to make a preemptive strike before they could be completed (assuming the other side had not already implemented countermeasures). By the way, our military is already working on countermeasures capable of rendering such a system useless were the Soviets to have one. A detailed discussion of these points is beyond the scope of this paper. Suffice it to say that for every Maginot line there is a blitzkrieg capable of rendering it useless. It must also be remembered that these "defensive" space weapons could be turned against targets on earth with awesome offensive power, and that the technical problems involved with doing so are not nearly so difficult as those involved in successfully carrying out their defensive tasks.

No, the solution to the problems posed by nuclear arsenals on earth is not to be found in another massive round of the arms race, this time in space. Better to foreclose those options by treaty now, so that we can concentrate on the problems caused by the weapons we already have.

But doesn't the United States need weapons in space, where our technological advantage lies, in order to overcome the great strategic superiority of the Soviets which now exists?

The simple answer to this objection is that Soviet superiority is a myth. From the bomber gap to the missile gap to the megatonnage gap to the window of vulnerability, the American public has been besieged by distortions, exaggerations, imaginations, and outright lies.

The "window of vulnerability" refers to the fact that our Minuteman III's may be vulnerable in the mid-to-late 80's to increasingly accurate Soviet ICBM's. This is used as an excuse for the MX in order to give us a similar silo-busting capability. What is left unsaid is the fact that our landbased ICBM's constitute only about 35 percent of our retaliatory force, while similarly vulnerable Soviet missiles constitute about 96 percent of their force.[20]

Let us assume that the "window of vulnerability" is true and that the Soviets could destroy every single one of our over a thousand ICBM's in their hardened silos. They would then have to content with our B-52 fleet, which would be in the air before their missiles could land.

The aging B-52, as old as it is, has nonetheless the most modern electronics and cruise missiles, against which there is as yet no defense. But let's assume the Soviets developed a defense. Let's assume they found a way to shoot down every B-52 and every cruise missile before it reached its target. That would leave our nuclear submarines, hidden in the ocean depths.

Our scientists cannot foresee any way that the Soviets can detect and track our submerged Polaris and Trident submarines. They are expected to be immune to attack for at least the next couple of decades.[21] But let's assume that some revolutionary technological breakthrough allows the Soviets to build a system capable of seeing through the oceans and that they, in a monumental coordinated attack, destroy all our ICBM's, all our B-52's, all our cruise missiles, and all our submarines—except one.

The Russians would never conceive of being able to pull off a preemptive strike that close to perfection. But let's say they could. What retaliatory capability are we left with in that single submarine? Only enough to destroy about 160 of the largest cities in the Soviet Union.[22] Only enough to devastate everything larger than a hick town from Poland to Korea, from the North Pole to Pakistan. Only about ten times as

much destructive power as was expended by all sides in all of World War II. Should that not be deterrence enough?

With this awesome destructive capability many times over, why do we need more? Why do we need weapons in space, or even the MX, the B-1, the Pershing II, the Trident II? Why are we told that a freeze by both sides would leave us at a dangerous disadvantage?

But I have gone beyond answering questions and begun to ask them. Having stated why I feel that the issue of weapons in space is important, I should briefly address one final question—the question of what should be done about it.

What should the United States do to prevent the extension of the arms race into space?

It is recommended that the following immediate steps be taken:

(1) Announce a unilateral moratorium on the testing of ASAT weapons and on the deployment of any weapon in space pending the outcome of negotiations.

(2) Invite the Soviet Union to join us in bilateral negotiations and, under the auspices of the United Nations, multilateral negotiations aimed at an extension of the 1967 Outer Space Treaty [23] extending the Article IV ban on nuclear weapons and weapons of mass destruction to include all weapons in space and all anti-satellite weapons, whether based in space, in the air, on land, or in the sea.

(3) Invite the Soviet Union to participate in an early shuttle flight, launching a Soviet civil satellite, with a Soviet cosmonaut as mission specialist.

(4) Invite the Soviet Union to join us in a joint engineering endeavor, similar to that preceding Apollo-Soyuz, to define joint missions for Shuttle an Salyut and to define the interfaces and technical responsibilities of each side.

In addition to the above specifically space-related actions, there are several other compatible steps that could be taken and which I support:

(1) Accept an immediate mutual freeze on nuclear weapons and delivery systems as a first step toward arms reductions and the eventual elimination of nuclear armaments.

(2) Establish a U.S. Peace Academy [24] with the charter to investigate innovative ways to bring the world closer to the realization of a secure, just, and lasting peace.

(3) Charge the Department of Defense with a comprehensive re-analysis of strategic doctrine, aimed at replacing unrealistic concepts such as the winnable protracted nuclear war.

(4) Establish a high-level panel to plan the conversion of the armaments industry and to propose specific international space and other high technology programs capable of providing global solutions to global problems and of revitalizing the consumer production capabilities of the United States.

[16] The Soviet space station was on display at Unispace 82 in Vienna, August 5-21, 1982. A cutaway drawing is on page 40 of "Current NASA Space Station Planning", by Philip E. Culbertson, in Astronautics & Aeronautics, Vol. 20, No. 9, September 1982. See also "Space", by James Oberg in Omni, Vol. 5, No. 1, October, 1982, pages 22, 189.

[17] "Space Security System", by R. M. Bowman, Shadow Cabinet Foundation. This proposal was made to NASA, to the U.S. delegation to Unispace 82, and to several members of Congress. The idea was also aired at the Non-Governmental Organization Conference at Unispace 82.

[18] One example of such claims was illustrated by Phyllis Schlafly on the Donahue show August 2, 1982. The transcript is available for $2.50 from Donahue Transcript, Box 2111, Cincinnati, Ohio 45201.

[19] General Graham's original "High Frontier" proposal used High Energy Laser systems in space. The technology problems associated with such a system are many. One example is the pointing and tracking problem. The device would have to detect and track an enemy ICBM, fire a laser beam at it and maintain a direct hit long enough to burn through it (the required angular accuracy is equivalent to hitting a nickel fifteen miles away), then acquire another target, repoint, track, fire, maintain track, etc. The exercise is complicated by the requirement to repoint and fire at a new target about every second and by the fact that this extremely accurate, delicate, telescope-like device is sitting on a chemical laser whose vibrations are similar to those of a jet engine. A government-commissioned study of the space laser system by Kosta Tsipis of M.I.T. calculated that it would take 100 years and 100 billion dollars just to get the chemical fuels for the laser system into space. While this particular study is probably overly pessimistic, it does highlight some real problems. For further reading, see "A Fatal Flaw in the Concept of Space War", by William Broad, in Science, March 12, 1982, and "Laser Weapons", by Kosta Tsipis, in Scientific American, December 1981.

The laser proposal received so much flak from within the defense community that it was modified to make the laser system a follow-on to an initial system of 432 satelites orbiting at about 300 miles. Each satellite would carry, and have the capability to fire and guide to its target ICBM, 40 to 45 self-propelled carrier vehicles, each containing kill vehicles capable of destroying an ICBM or its RV. This system gets around some of the technology problems associated with the laser, but requires a laser or some other more capable system as a second layer. The flexibility of this system is so low that many alternative offensive strategies are available which could render it totally ineffective. Because the theoretical kill range limit is so much less than with the laser system, it is easier to evade the defensive system by depressing the trajectory of the offensive system. Of course, cruise missiles would be totally unaffected by these defensive systems.

The third major type of space-based ABM system attempts to achieve the advantages of the laser system without having to face the overwhelming problems of supporting and operating such a complex system in space. It does this by keeping the laser on the ground and putting mirrors in orbit to reflect the laser beams to their targets. By doing so, it gives up one of the major advantage of putting the laser in space—the absence of an atmosphere to defract or diffuse the beam. Much progress has been made in deformable mirrors which automatically correct the beam for atmospheric effects, but they are far from perfect yet. The major disadvantage of the mirror system, though, seems to be the extremely high quality required in the mirror surface, its huge size, and its vulnerability. It wouldn't take a very exotic ASAT to destroy such a system—a bucket of sand would do the trick. The slightest pitting or spoiling of the mirror surface would cause the reflected laser beam to deteriorate into a harmless beam of light.

[20] According to Herbert Scoville of the Arms Control Association, Admiral Gene La Rocque of the Center for Defense Information, and others, there is much more reason for the Soviets to be concerned about silo-busting, counterforce weapons than for us to be concerned about them. Seventy-five percent of Soviet nuclear warheads are on land-based ICBM's targeted by our systems. Another 21 percent are on submarines in targeted ports. Only 4 percent are in deployed submarines able to ride out an attack. In contrast, only 25 percent of our warheads are on land-based ICBM's and 10 percent in submarines in port. The other 65 percent are not vulnerable, being either on submerged submarines or on bombers on alert.

[21] Many military strategists, citing the invulnerability of the ballistic missile submarines, have recommended scrapping land-based ICBM's and manned bombers altogether. For an unclassified

update on our efforts to keep track of Soviet subs, see "Progress in Detecting Submarines" on page 64 of "Intelligence: Its Technological Base" by Fred Guterl, IEEE Spectrum, Vol, 19, No. 10, October, 1982.

[22] Polaris and Poseidon submarines carry 16 missiles apiece. The Trident submarines carry 24 missiles with 168 to 192 warheads with a total destructive power of about 20 megatons. If the Trident II (D-5) missile is introduced as planned by the administration, the destructive power of a single submarine will go up again. In addition, that upgrade will give our submarines a hard-target first-strike capability matching that of the MX—an unfortunate development that may spur the Soviets to try to find a way to track our submarines.

[23] The full title of the Outer Space Treaty is "Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, Including the Moon and Other Celestial Bodies." It was signed at Washington, London, and Moscow on January 27, 1967, ratified by the U.S. (Senate advice April 25, 1967, Presidential signature May 24, 1967), and went into effect on October 10, 1967. A copy of the entire treaty was entered into the Congressional Record by Senator Pressler on September 24, 1982.

[24] A proposal to establish a United States Peace Academy, originated by Senator Spark Matsunaga of Hawaii, has been co-sponsored by over half the members of the Senate. More information is available from Senator Matsunaga's office or from National Peace Academy Campaign, 110 Maryland Ave, NE, Suite 409, Washington, D.C. 20002.

PRIVATE EXPRESS STATUTES MUST BE MAINTAINED

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. CLAY. Mr. Speaker, the private express statutes give the Postal Service a monopoly over the delivery of first-class letter mail. A great debate is emerging in deadly earnest among citizens, public officials and competitors of the Postal Service about the future of these private express laws—and the frightening ramifications of eliminating them.

The rightwing Heritage Foundation says that the private express statutes should be abolished because there is no reason why there should be a publicly supported "national document delivery service." A high official in the Reagan administration challenged others to demonstrate the need for the private express statutes. Some concerned citizens, who are troubled as I am about recent postal rate increases and the declining quality of postal services, argue that private organizations could deliver letters cheaper and more effectively than the Postal Service.

Unfortunately this debate has been long on rhetoric but short on substance. As chairman of the House Subcommittee on Postal Operations and Services, I enjoy a unique vantage point—particularly since my subcommittee recently concluded exhaustive hearings on effectiveness of the Postal Reorganization Act of 1970 which established the Postal Service as a quasi-independent public corporation.

The private express statutes have their roots in our Constitution—in order to provide service to bind every corner of our Nation together—rural, suburban, inner-city communities—at uniform rates. Admittedly private profitmaking business enterprises could deliver mail to densely populated commercial areas more cheaply than the Postal Service. But who would serve the less profitable areas? How much would such profitmaking enterprises charge to send a Mother's Day card from Ocala, Fla., to Coeur d'Alene, Idaho?

Private express statutes protect the American public—not the Postal Service. Repeal of these statutes would be costly to the taxpayer, chaotic to business, and corrosive to the fabric of our democracy. Who would be responsible for forwarding mail to other parts of the country? For protecting the sanctity of our mail? For protecting us against fraudulent use of the mails? For handling the volume of foreign mail? For assuring uniformity of service? Who would want to play Russian roulette with their personal correspondence, their bills, their financial transactions?

I suspect that public concern about repeal of the private express statutes is realy an expression of frustration against rising postal rates and declining quality of Postal Service. The public reminisces about the 6-cent stamp of 1970, before the American people decided to put the Postal Service on a pay-as-you-go basis—with resultant postage increases. But how many want to talk about the $500 million postal deficit and Federal postal appropriation of $2.1 billion in 1970 contrasted with the $16 billion appropriation and estimated postal surplus of $600 million for 1982. How many of these same critics realize that if the postal monopoly were repealed tomorrow, the cost of mail delivery to various communities across the United States would add $100 billion to the national deficit by the mid-1990's?

I take a back seat to no one in seeking to improve the productivity and efficiency of the Postal Service. But, I hope that those who call for dismantling the Postal Service will take some of these facts into consideration before joining the Heritage Foundation and representatives of the Reagan administration in calling for the elimination of the private express statutes.●

A DAY OF SORROW

HON. C. W. BILL YOUNG

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. YOUNG of Florida. Mr. Speaker, on November 7, 1982, the Soviet Union celebrated the 65th anniversary of the Bolshevik Revolution—a revolution that has been marked by bloodshed and continued acts of violence. As members of the Politburo were observing Soviet military weaponry, people in Afghanistan were feeling them in action. The following remarks, as supplied to me by the Congress of Russian-Americans, better illustrates how many others felt on that 65th anniversary.

A DAY OF SORROW

On the 65th anniversary of the "October Revolution", we, as Russian-Americans, wish to remind the Free World that on November 7, 1917 the Bolshevik Communist Party deprived the peoples of Russia of their liberty.

Since that day the Soviet government under the leadership of its Communist Party has continually perpetrated crimes that are an affront to humanity. Among them:

The creation of an Orwellian state founded on a basis of human fear and ignorance and maintained by a ruthless military police;

The "reedification" of the Russian peoples, a policy inaugurated by the heinous murder of the royal family and pursued in the hopes of stripping the Russian peoples of their heritage and thereby creating the ideal human cipher, Homo Sovieticus;

The desecration and destruction of over 50,000 churches and monasteries;

The forcible collectivization of peasants, an act which resulted in the death by starvation of seven million people;

The exploitation of workers and the reduction of peasants to the status of government serfs;

The abandonment of Soviet P.O.W.'s (branded "traitors" by the Soviet regime) in Nazi war camps, resulting in the death of 4,650,000 native sons by starvation and disease;

The forceable repatriation of Soviet citizens remaining in Western European coun-

tries after the war and the subsequent imprisonment of these citizens in concentration camps;

The extermination of tens of millions of people in concentration camps and prisons;

The mental and physical torture of countless millions without regard to human rights or dignities;

The military suppression of any popular uprisings within the Soviet Union or any of its satellite nations, particularly Hungary, Czechoslovakia, and Poland;

The creation, through the wanton exploitation of natural resources and environment, of an aggressive military machine which continues to grow at the expense of the people's needs and aspirations;

The suppression of the freedoms of religion, thought, speech and the press and the persecution of individuals for their religious convictions and their beliefs in basic human rights.

No document can enumerate the countless crimes perpetrated by the Soviet government against its peoples. Only the tears of an anguished and suffering people can serve to measure these atrocities. To these tears we direct our hopes, our prayers, and our actions.

The 7th of November, the day of pompous Soviet celebrations, parades and deceitful proclamations about the "struggle for peace" and about the "joyous life" of Soviet citiens, we designate as a Day of Sorrow and Irreconcilability.

This Day of Sorrow and Irreconcilability has been faithfully observed by Russian-Americans and by all Free Russians for the past six decades. Throughout all these years Russians free in mind and spirit have continually attempted to warn the Free World of the threatening Communist danger, but to no avail.

Once again, we appeal to the government of the United States of America to proclaim this day as a Day of Sorrow and Irreconcilability and we invite the citizens of this country to join us in prayers for those who perished at the hands of Communism and for the deliverance of those presently living under the yoke of Communism.

BOARD OF DIRECTORS,
Congress of Russian Americans.●

LDC DEBT PROBLEM

HON. GREGORY W. CARMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. CARMAN. Mr. Speaker, I bring to your attention the remarks of Mr. William S. Ogden, vice chairman of the Chase Manhattan Bank in New York City, entitled, "The Nature of the Lesser Developed Country Debt Problem." As the largest contributor to the financial needs of the Third World, I think it is most important that the United States carefully review to so-called LDC debt crisis and what it means to the international financial system and to the world economy. It is a complicated issue, and I applaud Mr. Odgen's ability to reveal the nature of the problem.

THE NATURE OF THE LDC DEBT PROBLEM

(By William S. Ogden)

The most discussed financial issue of the day is the so-called LDC debt crisis. It is wholly appropriate that this problem receive such attention. Yet it is wholly inappropriate that we should be so ill served by much of the discussion of this issue thus far.

In the main, the discussion in the financial and popular press has often missed the point. The key problem is not the viability of the international banking system. The international financial system is fundamentally robust. The key problem is the potential threat to the economic and political stability of much of the Third World—and the intensification and prolongation of the current global recession.

I am not that much happier as to the comments on LDC debt issues coming from the international banking community. What has been said is true enough, but it is only a partial truth. We in the banking world have focused too much on responding to media concerns as to the fragility of the international financial system. I agree that this concern is largely misplaced. But in our irritation at the persistent misperceptions of the nature of the problem, we appear to be denying that a problem exists.

We in fact do have a problem. Its nature—and what we can do about it—is what I want to talk about today. The substance of what I want to say compresses into three points. The first point is one that my colleagues in the banking community have stated repeatedly—but is only beginning to be acknowledged in the media. It is that the current LDC problem is a liquidity problem, not a problem of insolvency.

My second point is that the LDC debt problem is not just a problem for the international banks—it is a problem for the world economy. What is ultimately at stake is the dimensions of the current global recession.

My third point is that it is well within our collective capability to prevent the present liquidity crisis from escalating into a vicious circle of economic and political dislocations that would result in a prolonged period of stagnation of the global economy. Liquidity problems are readily solvable. But they rarely solve themselves if ignored.

A LIQUIDITY RATHER THAN A SOLVENCY PROBLEM

Those are the three points I want to develop. I place great stress on the first one—that the developing countries face a liquidity problem rather than a solvency problem—both because it is fundamental to the construction of an appropriate policy response and because the tone of much of the media discussion seems to imply that LDC debt has been built to levels that simply cannot be serviced. If our time horizon extends beyond the next year or two, that simply is not true.

Undeniably, the levels are high. On the eve of the first oil price shock in 1973, the total foreign debt—public and private, long-term and short-term—of non-OPEC developing countries was slightly less than $100 billion. By the end of 1981, this total had grown to roughly $470 billion, and another $60 billion or so will be added this year. A very large proportion of this increase in debt is accounted for by commercial bank lending and, somewhat unnoticed, the number of banks involved in this lending has grown appreciably. At the end of 1973, the international banking system held 36% of the foreign debt of the non-oil LDCs. By the end of 1981, this proportion had grown to 53%—or $250 billion.

These are extremely large numbers, but they must be put into perspective. They must be compared with increases in the capacity to produce. The fact is that the buildup of developing country debt over the past eight years has been accompanied by a similarly rapid buildup of productive capacity. Relatively little of this increase in debt appears to have been used simply to sustain consumption. Most has underwritten increases in investment.

Over the period 1970-80, the share of GNP allocated to gross domestic investment in the developing economies rose, while the share accounted for by private consumption declined. This shift was particularly pronounced in what the World Bank calls the "Middle-Income" developing economies, the group of countries accounting for almost all of the increase of bank lending to LDCs.

It is thus not true that their debt buildup was used to sustain consumption levels. Nor is it true that it resulted from aggressive loan marketing by banks awash with OPEC deposits. The rapid growth of bank lending to the developing economies in the post-1973 period was the natural response of an increasingly integrated global capital market to the shifts in the global distribution of savings and investment opportunities created—to no small degree—by the oil price shock. Without this lending, the global distribution of capital would have been less efficient, and the growth of the world economy would have fallen significantly.

In saying this I do not want to imply that the level of borrowing by the LDCs has been optimal or that it could have continued growing indefinitely at the pace of recent years. The developing countries as a whole have in fact been far too slow in adjusting their growth ambitions to the realities of a world economy grappling with disinflation. The resources borrowed have not always been utilized efficiently. But the debt buildup has not been wildly imprudent.

What I have said thus far is that the rapid buildup of LDC debt has been accompanied by a similarly rapid buildup of productive capacity. What then is the difficulty? Why is there an LDC debt problem—or to use the media phrase, an LDC debt crisis?

The problem arises out of the difference between debt-service capability in the short run and long run—between the actual ability to export and the capacity to produce for export. Neither borrowers nor lenders anticipated a prolonged recession in the industrialized nations nor did, for that matter, policy makers in the industrialized nations. The fall of commodity prices and the global recession have slowed the growth of exports from the developing countries dramatically and hence temporarily reduced debt-service capacity. The slowness of inflationary expectations in financial markets to respond to disinflationary policies in the industrialized countries has resulted in unusually high real interest rates and thus temporarily increased debt-service flows.

The result has been a rapid deterioration of the conventional measures of the capacity to service public debt. The debt-service ratio for the non-oil developing economies as a whole—the ratio of interest and amortization on medium- and long-term debt to total exports of goods and services—has climbed from roughly 16% in 1980 to an estimated 25% this year. Of even greater significance, the ratio of interest payments on total foreign debt to total exports has increased from less than 8% in 1980 to a projected 14% this year. For some of the major borrowing countries, particularly in Latin America, these indexes of debt-service burden are even higher, with total foreign

interest payments running as much as 45% of total exports.

Even so, the immediate cause of the present liquidity problems of many developing countries is not the increase in gross foreign borrowing requirements resulting from the unanticipated depth and duration of the global recession. Rather, the immediate liquidity problem arises from the increasing unwillingness of the international financial community to lend. The international credit markets have created a self-fulfilling prophecy. In questioning the short-run capability of countries possessing a large foreign debt burden to service that debt, the market has engineered an abrupt, relatively synchronized reduction in the availability of new foreign credits that guarantees the impossibility of normal debt service.

A loss of market confidence is now a reality: For many countries, particularly in Latin America, important segments of the market for foreign lending have virtually disappeared—in particular, regional bank participation in international loan syndication and private placements intermediated by the investment banks. Until debt-service uncertainties are resolved, the flow of available credit will be sharply curtailed, and the resolution of those uncertainties in many instances will entail debt reschedulings that will take a significant period of time to prove their workability.

We thus have now in place each of the basic elements of a classic liquidity squeeze. We have had a rapid buildup of a stock of assets of relatively long maturity funded by the issuance of debt of significantly shorter maturity. We have had an unexpected event—the global recession—that has temporarily thrown into question the ability of the debtor to service those debts. And we have had a scramble on the part of many debt-holders to liquidate their portions of that debt.

We have a problem—a serious problem—but it is a liquidity problem not a solvency problem—unless you believe the industrialized nations are doomed to long-term stagnation. And I certainly don't. In fact, the policies we are following are essentially correct in setting the stage for long-term noninflationary growth.

THE KEY PROBLEM IS NOT THE VIABILITY OF THE INTERNATIONAL BANKS

My second point is that the key problem arising out of the current debt-service difficulties of the developing countries is not the viability of the international banks but the possibility of a significantly worsened performance of the world economy. Under different circumstances, I might even be amused at the media tendency to characterize a possible major deterioration of the world economy strictly in terms of the balance sheets of a handful of international banks.

But today I am not amused. Financial markets are inevitably founded on confidence, and uninformed speculation undermines that confidence. Media comment to the contrary, the international banks face limited risks in sovereign international lending.

This story has been told before, but it is important enough to bear retelling. There is a negligible risk of permanent default or debt denial in sovereign lending because sovereign borrowers cannot cease to exist. Permanent default implies both a long-term loss of access to international private capital markets and a sharply reduced ability to utilize the international financial service network that is essential to the ordinary conduct of foreign trade. It implies that the great bulk of the international trade of a country in permanent default must be carried out on a government-to-government barter basis. Such restrictions would enormously circumscribe the pace of economic development for a country so affected.

The negligible risk of permanent default arises out of the borrowing countries' perceptions of self-interest. There are unstated assumptions behind this conclusion that need to be made explicit, however. The most important of these assumptions is that the borrower is economically capable of servicing debt over the long run. Three circumstances come to mind in which this assumption would not hold: The physical capacity of the economy to produce is catastrophically impaired as the result of civil disorder or invasion; the relative price of that country's main export or exports falls permanently by a significant amount; or, finally, a country suffers a sudden, permanent, and serious deterioration in the quality of its economic management that dooms it to long-term economic stagnation or regression. None of these circumstances applies or is likely to apply to the major borrowing countries in Latin America or Asia. I cannot in all candor say that none of these circumstances applies to any country, but I can say that the exposure of the international banks to the handful of countries for which such risks exist is relatively small.

Another assumption underlying the conclusion that the risks of permanent default in sovereign lending are slight is that the political leadership of a country is not so committed to ideological objectives as to give little if any weight to achieving reasonable long-run performance of the economy.

Yet there are indeed risks in the present environment—risks of significant delays in reestablishing the creditworthiness of a number of borrowing countries—risks of significant delays in securing adequate rescheduling agreements and of failure to adhere to those agreements once negotiated. For the sovereign borrowers, there is a risk of a prolonged period of severely curtailed imports and a serious decline in the overall level of domestic activity. For the international banks, it is a risk of losing the freedom to manage a significant proportion of their asset portfolio and a risk of a moderate, temporary fall in earnings. This latter risk in no sense implies a risk to the viability of the banks. Even in circumstances where the proportion of assets not serviced as to principal would increase well beyond current levels, the proportion of assets not serviced as to interest would be relatively small.

This risk of significant delays in the reestablishment of the creditworthiness of the developing countries arises from two sources. The first is the difficulty in the present global environment of securing sufficient political consensus in the borrowing countries to permit the adoption of more restrictive macroeconomic policies. Such measures, although essential, are never easy, and they are doubly difficult at a time in which the prospects for export earnings are clouded both by global recession and the marked growth of protectionism in the industrialized countries. The temptation to blame the "system" and ignore one's own excesses is extremely strong.

The second major sources of risk in the prompt reestablishment of the creditworthiness of the developing countries is the difficulty—again in the present environment of global recession—of assembling adequate supplies of new credits to these countries. Let there be no presumption that the present debt difficulties of the developing economies can be resolved without the provision of further credits. Balance-of-payments deficits must be reduced sharply. But they cannot be eliminated overnight.

New credits—reduced in volume but still at significant levels—are needed. The proportion of this credit deriving from public and multilateral sources is inevitably going to increase, but relatively large flows of credit from private sources remain essential. Assembling these needed credits in an environment in which important elements of the market want to reduce exposure will be difficult. The major international banks—the institutions with firm long-term commitments to international credit markets—must necessarily take the lead. But these commitments cannot be maintained if those institutions with a peripheral interest in international markets are not patient. Reestablishing the creditworthiness of the developing countries requires the cooperation not only of the countries themselves but of a complex array of financial institutions, many of which are admittedly heavily influenced by the present tone of the discussion in the public media. That necessary degree of cooperation within the financial community is in jeopardy.

The immediate problem is thus not that the banks won't be repaid but that they may not be in a position to continue lending. Yet without significant net new lending to the developing countries, the economic adjustment required of them will be catastrophically abrupt. The economic dislocations entailed in such an adjustment would threaten a breakdown of the political consensus existing in those countries which, in turn, would delay the adoption of those policies needed to reestablish creditworthiness. The impact of such a chain of events would by no means be contained within the developing countries themselves. We are members of an increasingly interdependent global economy. U.S. exports now total nearly one-tenth of our total gross national output, and more than one-third of those exports now go to developing countries that are critically dependent on continued access to private international credit markets. The loss of a significant proportion of those export markets would add markedly to our already appreciable unemployment lines.

WE HAVE THE COLLECTIVE CAPABILITY TO CONTAIN THE PROBLEM

That is not an enviable prospect. Which leads to my final point, that it is well within our collective capability to prevent the present liquidity problems of the developing countries from escalating into a vicious circle of economic dislocations that would deepen and prolong the present global recession. I want to stress the word collective. Containing the present problem is not within the individual capability of any of the major actors—the borrowing governments, the international financial community, or the multilateral institutions and governments of the industrialized nations. But it is well within our collective capability if we each act responsibly. Let me briefly speak of what I see the responsibility of each individual actor to be.

The action required of the borrowing countries in one sense can be described simply. They must take strong measures to reduce their balance-of-payments deficits. It is inevitable that these measures will reduce economic growth—and in some cases actual-

ly lower the current level of economic activity. The present difficulties can be ascribed in large part to the failure of the borrowing countries to foresee the constraints on their feasible growth paths created by the prolonged recession in the industrialized countries. The borrowing countries must lower their growth targets. Their freedom to respond to unexpected increases in their balance-of-payments deficits by borrowing rather than by domestic adjustment no longer exists.

For some countries, this adjustment can be accomplished without the formal commitment entailed in an agreement with the International Monetary Fund. For others, whose internal and external disequilibria are more severe and whose short-term borrowing needs are commensurately larger, the discipline of such an agreement will be necessary. In this respect, I might say that I am not among those who believe either that the Fund record with respect to credit conditionality is inappropriately rigid or inappropriately lax in recent years. Speaking generally, I believe recent agreements have reflected both an understanding of what policy shifts are essential and a sensitivity to the domestic difficulties of changes in economic policy.

I have already alluded to the responsibilities of the private international financial community, and so what I have to say here will be brief. This brevity should not be construed as an index of the relative importance of the private sector's responsibility, however. It is just as critical as the responsibility of governments and multilateral organizations. The key responsibility of the private international financial community is to provide an adequate financing package to the countries with liquidity problems—not solvency problems, liquidity problems. To do so will require the cooperation of all segments of the private market. It cannot be expected that the various segments of this market will provide new credits in the proportions of recent years. The responsibility of the major international banks for new credit will be particularly heavy. But all segments of the market must cooperate. It will mean asset decisions that are difficult in an environment in which many believe that the only prudent investment is to buy Treasury Bills and keep custody.

My final remarks concern the responsibilities of the governments of the industrialized countries and the multilateral organizations. I want to be careful not to exaggerate those responsibilities. The governments of the industrialized countries have no responsibility to guarantee a reasonable rate of growth to the developing economies at a time when the attainable rates of growth of their own economies are unreasonably low. These same governments have no responsibility to protect their banks from the consequences of imprudent behavior. But they do have responsibility—have accepted the principle of responsibility—for the provision of reasonable flows of liquidity on a global basis and for the provision of lender-of-last-resort facilities for their individual national banking systems.

Let me speak to this second responsibility first. Several events of recent months have significantly increased the uncertainty within the international banking community as to how the lender-of-last-resort responsibility would be exercised. This uncertainty has been unnecessarily disruptive of ordinary international financial flows. Since the lender-of-last-resort responsibility is a responsibility to maintain liquidity rather than solvency—and since the distinction between liquidity and solvency problems is not always clear—it is quite impossible to establish rules of central bank behavior that are totally free of uncertainty. Nonetheless, in present circumstances some further clarification of those responsibilities is needed.

The second area of what I perceive to be a public responsibility—the provision of reasonable flows of global liquidity—is more troublesome. This responsibility is exercised by central banks individually or, in some cases, collectively through the Bank of International Settlements and, at the government level, through the International Monetary Fund. The Fund is the keystone institution in this regard. And there is at this moment only the beginnings of a consensus among the governments that are the IMF's chief sources of support as to what level of activity is appropriate for that institution.

Before I comment further, let me clear away some underbrush. First, in saying that the Fund has been given the key responsibility of providing reasonable flows of liquidity to its members I do not mean to imply that it is the international lender of last resort. There are certain parallels between the role of the Fund and the role of central banks, but there are also distinct differences in agreed function. The responsibility of the Fund for providing liquidity is not determined by market conditions but by predetermined limits agreed to by its members. Second, the Fund is not a development institution. Its responsibilities are limited to the provision of credit to members undergoing temporary balance-of-payments difficulties. It is not a responsibility of the Fund to provide credit either on a long-term or subsidized basis.

Having said that, I hope I will not be misunderstood in saying further that the current limitations on the financial resources of the IMF are sufficiently stringent as to threaten its ability to perform its assigned responsibilities. I recognize that there is no strict answer to the question of what level of liquidity provision by the IMF is reasonable. But I submit that there is a very good chance that, without prompt action, the funding constraints operating on the IMF will soon force it into restraints on new credits that are not reasonable.

The Fund's resources need to be enlarged. In my opinion, we need to follow two tracks in that direction. We need to agree quickly as to a relatively large increase in basic quotas. And we need to implement an emergency funding facility such as that proposed by the Reagan Administration. Without these steps, there can be no assurance that the credit program of the IMF can be maintained at a level appropriate to the current world economic environment. And without a commitment to increased levels of multilateral credit to the developing countries in trouble, the availability of credit from private sources will shrink drastically. That would spell trouble for all of us, even the banks.●

THE AMERICA THE BEAUTIFUL FUND MARATHON

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. GILMAN. Mr. Speaker, for the past several years, it has been my honor and privilege to serve as an honorary member of the board of trustees of the America the Beautiful Fund.

America the Beautiful, headquartered here in Washington, is an organization dedicated to fostering the preservation of our historic and cultural heritage through voluntarism. Although the organization may from time to time provide "seed moneys" to local volunteer groups, the major thrust of the America the Beautiful Fund has been to help with the organization of local volunteer groups from the grassroots level.

This past fall, in a successful effort to encourage the local ABF organizations, and to make new friends, the founder of the America the Beautiful Fund, Paul Bruce Dowling, conducted a coast-to-coast marathon, by bus, truck, and car.

The marathon, which took place from September 30 through October 17, was an unqualified success. Mr. Dowling was greeted with open arms throughout the 15 States that he visited.

In the course or this marathon, Mr. Dowling collected, on a large scroll, the signatures of over a thousand Americans, who subscribe to the inscription on the scroll:

We the people of America the Beautiful believe that the way this country can be saved is the way it was built—town by town, block by block, farm by farm—with creative citizen initiative. We are trying to keep America going by community improvement, solving local problems, and creating new opportunities. We believe that one of the most beautiful things about America is the spirit of public service and sharing among people everywhere, and in witness to this we have set our hands on this document.

We hope to soon be presenting this scroll to the White House.

Mr. Speaker, I am confident that all of our colleagues will join in these sterling sentiments, and join with me in saluting Mr. Dowling and the hard-working executive director of the America the Beautiful Fund, Nanine Bilski, for a job well done.

Mr. Speaker, I ask unanimous consent to have read into the RECORD two documents: First, the statement of purpose issued by the America the Beautiful Fund prior to the 1982 marathon; the second, the observations by Mr. Dowling after the conclusion of the marathon:

REACHING ACROSS AMERICA THE BEAUTIFUL

Americans back home want to exchange personal messages of friendship, sharing and belief in American values with fellow Americans coast to coast.

They are the people in towns, neighborhoods, and villages who vote, work and volunteer to keep America going by community improvement, solving local problems and creating new opportunities.

The Founder of the America the Beautiful Fund, Paul Bruce Dowling, will travel by coast to coast highway across 15 states, from California to Washington, D.C., in a 14

day marathon by bus, truck, and car, to carry the greetings of hometown Americans from state to state and back to the nation's capital.

"It's the best way to see what's going on in America," he stated, "and that's why we are trying to greet as many old friends and meet as many new friends as possible from among the nearly 5,000 local ABF community projects of the past 18 years. They represent the best American "know how" and "how to" get the job done. We need these people right now today to inspire us to get the country moving again."

Each stop along the route will be a celebration of local volunteer accomplishments and each event will be unique to that town and offer an exciting and inspiring display of the beauty of both American heritage and scenery. National Recognition Awards, Project Endorsements, Awards for Good Citizenship and Emergency Loans and "Seed Grants" will be given to projects along the way. Names of people participating in the ABF events will be collected on a scroll to be brought back to Washington as a testimony to the spirit of creative public service in America.

The travel corridor for Dowling's marathon trip is 100 miles wide along Routes U.S. 30, 40 and 50, and Interstates 64, 70 and 80 and towns along the route include Sacramento, Roseville and Placerville, California; Carson City, Nevada; Laramie and Cheyenne, Wyoming; Denver, Colorado Springs and Cascade, Colorado; Grinnell and Salina, Kansas; Independence and St. Louis, Missouri; Olney, Illinois; Evansville, Indiana; Frankfort, Kentucky; Charleston, West Virginia; and Cumberland, Maryland.

OBSERVATIONS ARRIVED AT FROM 1982 ABF MARATHON

1. Citizen initiative is a large untapped source of energy and "know how" available across the length and breadth of America.

2. Solutions to a series of community problems—economic vitality of local commerce areas, rescue of local environments and neighborhoods, public works of streets, curbs, trees, sewers, water, open spaces, landmarks and emergency human services—can grow out of efforts to mobilize local voluntary manpower and local dollar resources. Even in the poorest situations, good volunteer efforts have led to public grants/contracts or private investments.

3. Tight economic times, instead of "encouraging new starts" and new ventures, has depressed the appetite for new volunteer activities and local programs to meet current charitable needs.

4. The Administration's efforts to encourage "volunteerism" have not yet trickled down or awakened widespread response on the municipal, county, state or national level. Likewise, new initiatives on the business, corporate, foundation, large and small charitable level are needed in order to help bring into being new private initiatives, a return to the pioneering of new solutions, or even finding a cure for local economic depressions. A "call for renewal" of our national purposes (even more total in concept than the Bicentennial celebration) needs to echo forth.

5. Charitable efforts on the local level still need to be fully mobilized to meet the psychological drain on people from unemployment and no growth. Emergency funds, revolving loan funds, low budget recreation and social programs could be built up by local churches, clubs, service groups and other local non-profit groups that, because of their diversity, could stimulate a variety of local funding to serve charitable needs.

6. Young people need more employment chances. These are the people who are suffering the most in loss of incentive and encouragement to make their own personal contributions to a better life in their own home communities. Job hot lines, small business loans, youth exemption to minimum wage, and summer internships for public and private business and agency offices and school related part time jobs could correct this waste of human potential.

7. Leadership, both private and public, needs to be recognized and rewarded on a widespread, nationwide scale since people do a great many praiseworthy activities on the local scene and these often go unrecognized and unrewarded by the mass communications and mass consumption networks that often dehumanize our daily lives. Unsung heroes abound in America and their existence deserves to be celebrated more.●

INITIATIVES ON BEHALF OF DISABLED AMERICANS

HON. LARRY WINN, JR.

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. WINN. Mr. Speaker, in the United States the program of the 1981 International Year of Disabled Persons (IYDP) and the 1982 National Year of Disabled Persons stimulated important new activity to help improve the lives of our Nation's 35 million individuals with disabling conditions. No one anticipated that serious problems of disability would be solved in a year or two. Because we must continue to make progress in this area of human concern, I am especially pleased that the United Nations has now declared the Decade of Disabled Persons—1983-92.

Designations of years and decades, in themselves, do nothing. However, they help provide a climate and an opportunity which can be seized by organizations, governments at all levels, and concerned individuals to further objectives and programs. During the IYDP, the United States established a series of long-term goals of and for disabled persons. The Decade declaration, together with the U.N.'s companion World Program of Action, provide a framework for continuing progress toward the long-term goals of and for disabled Americans.

In these days of fiscal restraint, when all Americans are being asked to do more for themselves and to look to government less, it is especially important that we encourage those institutions and organizations which foster self-reliance and voluntary action. A permanent, private sector organization grew out of the International Year of Disabled Persons and is continuing the nationwide community partnership program developed in that observance. The National Office on Disability includes more than a thousand communities and hundreds of national organizations, and is spearheading the decade observance in this country, in cooperation with many hundreds of organizations, Government agencies, corporations, and all who can contribute. This is an exemplary private sector initiative.

I soon will sponsor a resolution on the Decade of Disabled Persons in cooperation with my colleagues in the House. I was privileged to introduce the House resolution designating 1982 as the National Year of Disabled Persons. Thanks to the work of the National Office on Disability and many other groups, this year has served as a bridge between the IYDP and the decade, which was declared last Friday by the United Nations General Assembly.

Following the General Assembly vote on the Decade of Disabled Persons, one individual was called on to respond to the U.N. initiatives, speaking on behalf of the world's half-billion disabled persons, as well as the United States. In his statement, Mr. Alan Reich, president of the National Office on Disability, urged the United Nations and the world community to continue progress in this important area of human concern.

Mr. Speaker, I ask that Mr. Reich's statement before the U.N. General Assembly be included in the House RECORD.

The statement of Alan A. Reich before the U.N. General Assembly December 3, 1982, follows:

Mr. President and distinguished delegates; thanks to you, fully one-half billion disabled persons of the world now can look forward to a brighter future. The UN, by proclaiming the 1981 international year of disabled persons, aroused the hopes and aspirations of this significant segment of humanity. The continuing vision and leadership of the member nations, Secretary-General Perez de Cuellar, the UN Secretariat, the agencies of the UN system, and the Center for Social Development and Humanitarian Affairs, will have radiating impact reaching people everywhere.

The resolutions you have adopted today for the world program of action for disabled persons and its implementation resolution, including the decade of disabled persons, are marvelous testimony to your humanitarian concern.

As a disabled person myself, I am well aware that your continuing commitment is raising the world's consciousness in the area of disability. You may not fully appreciate it, but people at the grassroots level truly do benefit from your actions. The best testimony to this effectiveness I can cite is a statement my organization, the National Office on Disability, received from one of our more than one thousand community liaisons. Ms. Lee McCoy of Mobile, Alabama wrote, "As chairman of the Mobile program, I request that as you structure your national community program, you think of the UN decade of the disabled as the frontispiece. Local communities need worldwide structures to hang their local programs on effectively. "Geneva UN Program Secretariat Assembly", for example, works magic on the local

level. With an international scope, working members gain in stature. The higher the source, the greater the local response. With this international base and your national plan, we have a total package to take to the community," she stated.

In the United States, as in several other nations, the year 1982 was proclaimed the national year of disabled persons to continue the momentum of the IYDP. President Reagan and the United States Congress issued proclamations to help maintain the public focus on disability issues and secure the support for the programs of organizations committed to improving the lives of disabled Americans. Governors, mayors, and county officials throughout the country have provided leadership for these voluntary, self-help initiatives in States and Communities. Most importantly, many thousands of citizens, both disabled and non-disabled, have joined in a partnership effort to continue what was started during the IYDP. A new era of economic restraint and budget reductions has made these local private initiatives more important than ever.

An outgrowth of the IYDP was the formation of the National Office on Disability, a permanent, private, non-governmental organization. Its purpose is to continue the momentum you have started. It is building on the solid progress achieved during the international year, supporting community level action of and for 35 million Americans with disabilities.

The continuing worldwide response to the IYDP challenge has been significant. More than 130 nations formed national commissions and carried out programs. The IYDP Secretariat in Vienna, under the able direction of Assistant Secretary General Mrs. Leticia Shahani, is spearheading efforts to continue this momentum and has established a UN Trust Fund for Disabled Persons. It has great potential, especially for disabled persons in developing nations. A international organization made up entirely of disabled members, Disabled Persons International, has had its first meeting in Singapore. It serves as a conscience for the disabled throughout the world.

The World Program of Action, which you have adopted today, is the culmination of three years of careful work. This fine document offers great promise and opportunity for all mankind, disabled and non-disabled alike. It will enhance efforts aimed at participation of disabled persons and prevention programs, with enormous humanitarian and economic benefit.

We also are excited about your action today on the Decade of Disabled Persons. Support in the United States for the decade idea has been overwhelming. It will, indeed, help stimulate interest and awaken concern worldwide. It provides the necessary framework for national action.

But, we would not do justice to your initiative and leadership if we did not also recognize another important contribution of your work. By focusing world-wide attention on disabled people, the United Nations has opened an important area of transnational communication across political boundaries on common problems affecting all peoples. This communication will continue. It will further international cooperation and improve the climate for resolving other differences peaceably. Interactions among nations in the area of disability and the worldwide exchanges of information and people will contribute to this climate of peace and cooperation. I am reminded of the words inscribed here at the entrance of the United Nations, "since wars begin in the minds of men, it is in the minds of men that the defenses of peace must be constructed." The Decade of Disabled Persons is an idea born in the minds of men which is helping to build the human foundations for the structure of peace.

These two results of your actions—new commitment to improving the human condition and opening a new area of transnational communication—are inspirational testimony to the moral force of the United Nations. Voluntary response throughout the world to your challenge demonstrates the UN's tremendous capacity to stimulate purposeful action and commitment. With limited funds, the UN has fostered programs with far-reaching implications in all countries.

The IYDP success is not in what was done, but in what was started. By focusing attention over the long-term on the serious problems of disability, the United Nations has created the opportunity. But the opportunity must be seized. This is a challenge to us all.

And, let us no longer question the value of focal year and decade observances. They demonstrates that the UN can unleash tremendous human and organizational potential. As we look ahead to another signal year—the bimillennium in the year 2000—the continuing response you have aroused will be a beacon of hope. The bimillennium will inspire the setting and pursuit of high goals for improving the human condition for all mankind.

I urge you, distinguished member nation representatives and the world community, to intensify your efforts to improve the lives of the one-half billion people with disabilities. By challenging the world and by taking on this responsibility, you have become champions of the disabled. We need you as partners. We need your vision and leadership. We need your continuing concern, compassion and commitment.

You are giving us opportunity. You are inspiring hope. Let's keep up momentum. Together we can make our planet more livable!

Thank you, Mr. President.●

UNITARY TAX

HON. BARBER B. CONABLE, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. CONABLE. Mr. Speaker, I and 18 other members of the Committee on Ways and Means have introduced H.R. 1983 which would solve the international trade and taxation problems caused by a few States using the worldwide combined reporting method of corporate tax assessment.

Most States use the unitary method of tax assessment for those corporations doing business in more than one State. Under that method, income subject to tax is generally computed on the ratio of payroll, sales, and property in the taxing State compared to all States. When the formula apportionment of the unitary method is carried one step further and overseas affiliated corporations are included, that method of tax assessment has become known as the worldwide combined reporting system.

While the formulary apportionment of the unitary system may work for activities within the United States, its application to overseas activities presents serious problems of very different systems of accounting, languages, currencies, levels of productivity, cost of labor, cost of materials, and elements of risk. The obvious differences in property and labor costs worldwide build in an instant unbalance which can cause unreasonable, if not multiple, taxation.

The Federal Government does not use worldwide combined reporting and neither does any other country. Our failure to enact legislation limiting the use of worldwide combined reporting is exerting additional pressure on the already strained international relations.

The problems caused by the continuing situation of the United States and the rest of the world having one corporate tax policy while a few individual States have their own individual corporate tax policies are clearly spelled out by an article entitled "Tax Fight Next?" in the November-December issue of Europe, the magazine of the European Economic Community. I ask that the article be included in the CONGRESSIONAL RECORD so that my colleagues may have an opportunity to become more familiar with the problems of worldwide combined reporting and of the continuing need to pass legislation such as H.R. 1983 to limit its use.

The article follows:

[From Europe, November-December 1982]

TAX FIGHT NEXT?

EUROPEAN MULTINATIONALS UPSET WITH ASSESSMENT POLICIES OF AMERICAN STATES

By Geoffrey Carroll

Though it is not as emotionally charged and does not command the same front-page headlines as the current pipeline or steel-trade disputes, there is yet another increasingly contentious issue between Western Europe and the United States. Known in general terms as "unitary taxation," it is exerting additional pressure on an already strained trading and investment relationship. At stake is the potential diversion of hundreds of millions of dollars of European investment in the United States, with all the accompanying jobs that would be created.

Many individual US states—27 of the 46 states which tax corporate income—use the unitary method of tax assessment for those corporations doing business in more than one state. Under the method, income subject to tax is generally computed on the ratio of payroll, sales, and property in the taxing state, compared to all states. When the formula apportionment of the unitary method is carried one step further and overseas affiliated corporations are included, that method of tax assessment becomes known as the "worldwide combined reporting system."

At present, 13 states are using the worldwide combined reporting system, but today's

recessionary environment, coupled with the Reagan Administration's reduction of federal funds to the states, is causing many more to seriously consider such a unitary tax as another, much-needed source of revenue. Furthermore, the states that use worldwide combined reporting—California, Indiana, Illinois, New York, Massachusetts, Oregon, Alaska, Idaho, Colorado, Montana, New Mexico, North Dakota, and Utah—represent some of the most populous and commercially important regions in the nation. Since roughly 70 per cent of the direct foreign investment in the United States comes from Western Europe, the burden of the unitary tax falls on European-based corporations.

Essentially, the unitary apportionment system is an arbitrary method of assigning a portion of worldwide income of a group of related companies to each state on a formula basis. In the present international context, the system is an alternative to determining the income actually earned with the state or to determining the total United States income of the corporate group, which may then be apportioned between the states. Using the unitary apportionment system, total worldwide income of all related companies as a group is allocated or apportioned, even though many of the companies may do no business whatsoever in the United States.

The allocation is made by formulas such as one based on the ratio between sales, property, and payroll in the American state and worldwide sales, property, and payroll of the entire corporate group. While the formula apportionment of the unitary system may work for activities within the United States, its application to overseas activities presents serious prolems and insurmountable distortions that result from very different systems of accounting, languages, levels of productivity, commercial laws, cost of labor, cost of materials, elements of risk, and currency fluctuations.

Double taxation inevitably results, since using the unitary tax method on a worldwide combination basis can't help but tax income which is already being taxed by foreign authorities in Europe, and elsewhere, under the international arm's length, separate-accounting principle.

It is true, of course, that even under a consistent international tax structure, multiple taxation may occur. Countries frequently differ on the nature and amount of adjustment needed to reflect arms-length dealings among affiliated corporations and they disagree over the creditability of taxes. However, the common conceptual framework—as well as the provisions of tax treaties which have been jointly hammered out and observed—provide the mechanisms for resolving such disputes as may arise and for eliminating double taxation. Indeed, the international income-tax treaty network is based upon the principle of avoiding double taxation. Such economic double taxation as occurs under the established international tax structure is unfortunate, but that which it is not eliminated through treaty mechanisms reasonably may be viewed as an unavoidable consequence of the interaction of the tax systems of sovereign nations. However, because worldwide combined reporting is antithetical to this established practice, any double taxation which it causes should be considered excessive on policy grounds, and individual American states should not be permitted to adopt a system which results in international multiple taxation merely because the federal, internationally-accepted system may also produce some double taxation at times.

A specific example of this unreasonable tax burden is seen in the case of the current dispute between the Shell petroleum company and the state of California tax board. Shell has engaged for many years in business activities, directly or through its subsidiaries, throughout the United States and in numerous foreign countries. For each of the years 1967 through 1972, Shell states that its California payroll, property, and sales did not exceed 20.5 per cent of its worldwide payroll, property, and sales. Yet in every one of those years the state of California tax board deems Shell to have earned in California an amount equal to at least 50 per cent of Shell's worldwide income. In three of those six years, the amount of income attributed to California by this approach would exceed Shell's consolidated worldwide income as reported to the US Internal Revenue Service, (IRS) and in one year, 1969, the income attributed to California would be more than four times as great as Shell's total consolidated worldwide income, as reported to the IRS. Over the six year period, the approach by the California tax authorities would attribute 92.6 per cent of Shell's worldwide income to California.

The unitary apportionment system is contrary to well established international standards of taxation. Since early in this century, the accepted and honored international understanding has been that each nation is free to tax its own nationals or companies on their income, from whatever source derived. A nation may not tax a foreign company on its worldwide income, but may tax only income generated within the taxing nation. Moreover, the international understanding has been that the taxing authority must treat the domestic subsidiary of a foreign company and the legislative path, in both the US Congress and individual state legislatures. In the 96th Congress, identical bills were introduced in both the House and Senate which would limit the use of the worldwide combined reporting system. Hearings were held on the House bill in March 1980, before the Committee on Ways and Means, and on the Senate bill in June 1980, before the Finance Committee. Neither bill was voted out and identical bills were reintroduced in the House and Senate in 1981 in the 97th Congress. Sen. Robert Dole, Chairman of the Finance Committee, has promised hearings this year and it is very likely they will now occur during the lame-duck session which begins November 29, although no concrete action is expected to be taken.

Congress is reluctant to legislate on this matter while several cases concerning the constitutionality of the worldwide combined reporting system are still pending before the US Supreme Court. The cases in question are the Chicago Bridge & Iron Co. vs Caterpillar Tractor Co. and Container Corporation of America vs Franchise Tax Board. Since Chicago Bridge & Iron was the result of an appeal by an intervenor in the state court action, the factual record of the lower court proceedings between Caterpillar and the state were not before the Supreme Court. This was acknowledged at the hearing before the Supreme Court in April of this year and the court therefore decided to rehear the Chicago Bridge & Iron case later this year, along with the Container Corporation case, for this latter case provided a more appropriate factual situation since multinational corporations involved in non-unitary lines of business were involved. However, arguments will not be heard before November 1982 at the earliest, as an independent entity, and may not combine it upstream with its parent and other affiliates of the parent.

This understanding is embodied in the model conventions of three major international organizations whose work has spanned six decades, in three diplomatic communications from the EC to the U.S. Government, and in a statement of position recently made by the U.S. government to the Supreme Court. The U.S. Federal Government does not use the worldwide combined reporting system and has agreed in over 40 international tax treaties not to do so. Notes attached to treaties recently negotiated with England, France, and Canada make it clear that not only does the Federal Government not use worldwide combined reporting, the contracting countries expect the Federal Government to limit its use by individual States.

No other nation, in fact, uses the worldwide combined reporting system. The separate-accounting, or arm's length, method is used by virtually every other Government in the world. The Organizaton for Economic Cooperation and Development and other international trade organizations, after repeated and exhaustive studies, have consistently concluded that only the separate-accounting system is fair and reasonable in taxing international business. They conclude that the unitary apportionment system applied worldwide results in an unreasonable tax burden, multiple taxation of the same income, and heavy and unnecessary admnistrative costs.

Athough so far the U.S. federal Government and the individual states have not been able to resolve satisfactorily or to defuse the unitary tax question, several attempts have been made and efforts are still continuing to reach an accord, these efforts have been made via the judicial route, in the U.S. Supreme Court, and a decision is not expected until after the first of the year. While it is most difficult to predict the outcome of the Supreme Court rulings, it is likely that they will not provide complete relief from the vagaries of world-wide combined reporting and might not address the plight of overseas parent corporations with US subsidiaries.

With regard to individual state initiatives, Gov. James Thompson of Illinois recently reached a major compromise decision on the use of unitary tax by the state of Illinois which, if adopted by the state legislature, would be a substantial victory for the forces of those opposed to the spread of the worldwide combined reporting system. For many months, Thompson has been considering a bill before him which, if enacted, would have outlawed altogether the use of unitary apportionment of corporate income taxes in Illinois. This particular issue split the very powerful Illinois business community and, in a very difficult political decision, Thompson decided to use an amendatory veto which would abolish the corporate unitary taxing method on out-of-country operations of firms operating within the boundaries of Illinois, but would retain the method for their operations in the United States.

The EC Commission is not against the unitary method of taxation per se. Indeed, it recognizes that there may be some validity and theoretical justification for the unitary approach regarding income earned within a homogeneous economic system, such as the United States. However, this unitary concept begins to lose whatever integrity it has when the formula apportionment of the unitary method is carried one

step further and overseas affiliated corporations are included. It is therefore only the worldwide combined reporting that causes such strenuous objection. The bottom line is that unless the same basic rules for calculating taxable profits are followed generally by the main trading nations, it will be impossible to achieve the essential objective of providing a consistent and coherent international tax framework for trade and investment.

If nothing is done to resolve the current impasse, there will likely be several significant developments. First, within the borders of the United States, the continued use of the world-wide combined reporting method will have a negative influence on investment in those states that continue to embrace this principle. Several European multinationals have already either postponed or abandoned investments that they were considering in California due to that state's particularly aggressive application of worldwide combined reporting. It is common knowledge that European companies are anxious to invest in the US market. The United States offers the world's largest and politically safest consumer market; there are no serious nationalization threats and, compared to Europe, the United States possesses a reasonably mobile and efficient labor force. The potential amounts of capital investment and subsequent job creation resulting from European direct investment are rather substantial.

Roughly two-thirds of all foreign direct investment in the United States is from West European parent corporations. U.S. Department of Commerce figures put total foreign direct investment in the United States at the end of 1981 at about $84.2 billion, of which $55 billion came from European companies. In 1981 alone, European companies put close to $11 billion in new investment into the United States, up from $5.4 billion in 1980. Any policy, therefore, which results in a reduction, or redirection of these investment flows does seem somewhat shortsighted on the part of the states. Thus, far, and for the near future as well, the major effect of the application of worldwide combined reporting may be to discourage foreign investment only in the states which use it. If the application becomes more widespread, however, a broader and more pervasive adverse impact on overall foreign investment in the United States is inevitable.

With regard to effects outside the United States, if the states persist in unfair treatment of foreign-owned corporate groups in this fashion, US companies should realize that they are likely to suffer retaliation, not only from other countries, but from their political subdivisions as well. The international tax-treaty partners of the United States have been receiving assurances from two consecutive Administrations that the United States would quickly resolve this internal unitary tax dispute. Little has actually happened, and as more states examine worldwide combined reporting as an attractive revenue source, pressure is growing simultaneously in foreign legislatures to take "reciprocal" action.

Of even greater concern to the United States should be that other foreign countries, particularly developing countries, may follow the California's lead and adapt the unitary tax concept in such a way as to impose a much greater tax burden on US companies operating worldwide.

If the unitary taxation concept spreads to other countries, US companies may be force to provide confidential financial information and other data, just as certain individual US states are currently seeking from European-based companies. Consider for a moment the impact of an unfriendly nation insisting upon details of US plant costs, US research and development expenses, and other such information from a US company with extensive defense production, or one engaged in nuclear reactor construction. The provision of such information may be contrary to an entire series of US laws, just as the provision of information to any of the American states may violate the laws of the various foreign countries in which a foreign-controlled corporate group may be doing business.

With an international trading and investment system that is already under an inordinate amount of pressure, the strain caused by the unitary tax problem is an unnecessary additional risk. Since no other nation in the world permits the use of worldwide combined reporting, it is hoped that the United States will be able to correct this tax inequity before there is any diversion or curtailment of investment.●

WORLD TRAVELER FLIES PEARL HARBOR FLAG OVER CAPITOL

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. CLAY. Mr. Speaker, Mr. Nathaniel Joseph Jordan of Washington, D.C., has traveled around the world five times since 1970. He has been to all 7 of the Earth's continents and to all 50 States in the Union. He is known to be the first black to fly across the North Pole during the Alaska Airlines inaugural flight from Anchorage, Alaska to Leningrad, U.S.S.R., on June 12-13, 1971. He also became the first to return to the pole during a repeat performance on June 10-11, 1972.

Mr. Jordan became the first North Pole visitor to visit the grave of Matthew A. Henson in Woodlawn Cemetery in New York City on April 6, 1974. Henson codiscovered the North Pole with Adm. Robert E. Peary, on April 6, 1909.

Mr. Jordan was a pilgrim to the Holy Land and Rome during the 1975 Holy Year and had an audience with the late Pope Paul VI.

In 1976, Mr. Jordan became the first black to make a commercial supersonic flight across the Atlantic on the inaugural flight of the British Concorde from Washington to London on May 25. The next day, he flew to Paris and took the first regular flight of the French Concorde back to the District of Columbia. This flight made him the first person to fly in both Concordes.

In December 1977, Mr. Jordan traveled to Antarctica on the inaugural cruise of the MS *World Discoverer*, the first tourist ship to sail on both sides of the Antarctic Peninsula. He visted the Argentine Admiral Brown Station where he became the first black tourist and member of the tour which set foot on that continent, on December 24.

He also visited the Argentine Esperanza Station on December 28, where the first human birth occurred, on January 7, 1978.

In 1974, on his way to Australia, Mr. Jordan visited Pearl Harbor on March 8. He had his first look at Pearl Harbor from a Japan Airline 747 on a flight from Los Angeles to Tokyo in July 1970. Mr. Jordan also visited the last commissioned ship present during the attack, U.S.S. *Taney*, on December 7, 1981, in the Washington Channel.

In his recent travels, Nathaniel Joseph Jordan has brought with him a special Pearl Harbor commemorative flag. His Pearl Harbor flag was flown over the U.S.S. *Arizona* 1 year ago today. The flag has also been raised over Independence Hall in Philadelphia, Fort McHenry in Baltimore, Times Square in New York City, the 1982 World Fair in Knoxville, the U.S.S. *Arizona* anchored in Phoenix, and Kitty Hawk, N.C. It has been laid on the graves of Franklin Delano Roosevelt and George Washington and the Wright Brothers in Dayton, General MacArthur in Norfolk and Admiral Kimmel in Annapolis.

Today, Nathaniel Joseph Jordan visited Congress and the Pearl Harbor flag was raised over the Capitol in commemoration of the men and women who gave their lives in service to our Nation.●

H.R. 7122 ENCOURAGES PRODUCERS OF NATURAL GAS TO LOWER COSTS

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. BROWN of Ohio. Mr. Speaker, on September 28, 1982, I wrote to you about H.R. 7122, legislation which I and my colleague from Pennsylvania, Mr. RITTER, introduced on September 16 to do something constructive about natural gas prices. Since that time, a hopper full of natural gas bills has been introduced on both sides of the Hill. More are coming.

I know that many of you are trying to decide which of these bills deserves your support. We have obviously got to do something. I would like to tell you why I and the Members who have already chosen to cosponsor H.R. 7122 believe that it would fundamentally change the operation of the natural gas industry in a way that will help natural gas consumers—not just this winter or this year—but from now on.

Here is the true story that inspired H.R. 7122: How a school board could have cut its natural gas bills in half and a group of small independent pro-

ducers could have found a new market, if the pipeline hadn't been adamant.

A natural gas producer in Athens County, Ohio, named Carl Fout has wells under contract to Columbia Gas Pipeline Co. For 150 days this year, Mr. Fout's wells (and all other Appalachian natural gas wells under contract to Columbia) were shut in by Columbia. These small producers did not have the bargaining power to obtain take-or-pay guarantees in their contracts with Columbia. Thus, they were told Columbia would not buy their gas while it took more expensive gas from the gulf State region.

Since Columbia would not buy Mr. Fout's gas, he and other producers approached individual Ohio industries, school districts, and municipalities and offered to sell gas to these consumers—not at the ceiling price established by the NGPA for their gas, $5.35—but at a price nearly 50 percent less, $2.95. Yet, Mr. Fout's gas stayed shut in and that local school board is paying $4.50 to $5-plus for its gas. Why? Because Columbia maintained that Fout and the others had a contract to sell only to Columbia. Therefore, Columbia would not let them sell to anyone else and refused to transport Mr. Fout's gas to the local industries and school districts which wanted to buy it.

Unfortunately, Mr. Fout's story is not unique. California producers have been relegated to the role of peak suppliers while California consumers choke on high-price Canadian supplies. Producers in Pennsylvania, West Virginia, and New York have also been shut in much of this year even though their gas supplies are cheaper than other supplies being purchased by the natural gas pipelines which serve those areas.

This could not happen if H.R. 7122 were law. Any producer shut in could find another buyer for his gas. The pipeline, for a fair price, would then be obligated to transport the producer's gas to the new buyer.

By providing consumers the ability to purchase the least expensive supplies available, H.R. 7122 puts competitive pressures on the pipelines to hold down their costs. By providing pipelines with the ability to reduce take requirements in contracts of high cost gas by 50 percent, H.R. 7122 encourages producers of high-cost gas to lower their cost to consumers or suffer loss of sales. Both provisions work to induce natural gas prices to ratchet down instead of up, as should be happening in this time of surplus supplies. This is the way markets are supposed to work, and are working in the petroleum industry.

If you would like to return economic sanity to the natural gas markets, please support H.R. 7122.

Mike Boland (5-3641) or Linda Stuntz (6-3400) can provide further information on H.R. 7122 and its cosponsors.●

A SALUTE TO RALPH W. FREY

HON. WALTER E. FAUNTROY

OF THE DISTRICT OF COLUMBIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. FAUNTROY. Mr. Speaker, I would like to take this opportunity to commend one of the outstanding citizens of our Nation's Capital. He has been a leader in our business community, a supporter of the many civic activities of our city, and an outstanding voice on behalf of the District of Columbia. Ralph W. Frey, vice president of C&P Telephone, will retire officially on March 31, 1983, after completing over 41 years service.

Since 1966, Mr. Frey has been responsible for running the operations of the District of Columbia's largest private employer, C&P Telephone.

Mr. Frey's managerial ability has enabled C&P to meet the growing telecommunications needs of the residential, business, and Government customers in the District of Columbia. In addition, he has played a key role in insuring that the unique requirements for telephone service of both the President and Congress be fulfilled, as well as the heavy demands of the news media for telecommunications in covering national events. Mr. Frey has been in charge of Washington telephone operations during the past four Presidential inaugurations and 16 years of congressional changeover, including the 1980 general election which resulted in the move of over 5,000 telephones on Capitol Hill—the largest in congressional history.

During this time, the volume of telephones in service in Washington has grown to more than 1 million. Currently, the Nation's Capital has more telephones per 100 people than any other city in the world.

Under Ralph's leadership, the company has made significant progress in introducing new technology to improve customer service. C&P Telephone is one of the leaders in the Nation in implementing electronic switching systems (ESS) that improve call handling.

In 1980, Ralph served as president of the Greater Washington Board of Trade. During his term of office, the board of trade:

Helped generate more than 56 industry relocations and expansions into the Washington, D.C., area. These represent more than 1,000 new jobs, $9.4 million in new personal income, $5 million in new bank deposits, and $4.4 million in new retail sales.

Was awarded a grant by the U.S. Department of Energy to develop and carry out a voluntary, industry-by-industry, energy conservation program for businesses in the Washington area.

Identified more than 11,000 new summer jobs for youths in the area.

Published the area's first economic and business forecast.

Sponsored for the first time in the Nation, a retail anticrime campaign aimed at preventing shoplifting, bad check writing, and credit card fraud.

Ralph is on the board of Suburban Bank; on the Board of Regents, University of Maryland; a director and member of the Executive Committee of the Greater Washington Board of Trade; a member, Board of Trustees, Group Hospitalization, Inc.; a member of the District of Columbia Private Industry Council; a member, task force on international affairs; and a member of the Armed Forces Communications and Electronics Association; leader, adult education class, St. John's Episcopal Church; past president of the Maryland District of Columbia Utilities Association and National Capital Downtown Committee; and past president and member, Board of Trustees, University of Maryland Alumni Association.●

HONORABLE BO GINN

SPEECH OF

HON. WALTER B. JONES

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 6, 1982

● Mr. JONES of North Carolina. Mr. Speaker, all Members of Congress have their own individual personalities, but among those with one of the most pleasing and accommodating is that of my good friend, Bo GINN. He has been the type of Representative who always is genuinely interested in his colleague's problems and is willing to assist if at all possible. He has certainly represented his district well, and his people can be eternally grateful for the contribution he has made not only to the State of Georgia, but to the Nation as a whole.

Frankly, I will miss him and his pleasant disposition, and certainly wish for Bo and his family many years of health and happiness in the future.●

PERUVIAN PRESIDENT SPEAKS HIS MIND

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. SCHROEDER. Mr. Speaker, Peru has long been one of our best friends and allies. It is unfortunate that President Reagan was unable to

include Peru on his recent paseo through Latin America. He might be surprised to learn how many democratic allies we have there.

Peruvian President Fernando Belaunde Terry recently gave an interview to the Associated Press, which was published in the December 2, 1982, Rocky Mountain News.

$1.2 BILLION SOUGHT BY PERU IN COCAINE WAR

LIMA.—President Fernando Belaunde Terry says he needs $1.2 billion in aid from the United States to stop the illegal production of cocaine in Peru. He's getting $18.5 million.

"We have made a big effort with the sacrifice of human lives, we have lost many policemen by assassination, we have burned tons of drugs and made many arrests," the 70-year-old president said in an interview with The Associated Press.

But he added: "U.S. aid is insignificant—that is one of the big mistakes. To send a commission here and promise a loan doesn't solve the problem."

U.S. experts estimate Peru's illegal cocaine industry at about $600 million a year, with $100 million remaining in the country. Bolivia and Peru are the major producers of cocaine paste, funneled to the United States principally through Colombia, the experts say.

The U.S. Agency for International Development has pledged $18.5 million dollars over a five-year period to induce Peruvian farmers to substitute another cash crop for coca leaves.

The Peruvian government has a matching fund of $8 million, but so far there have been few takers, AID officials say. The reason? Farmers can make 10 times as much from illegal coca as they can from rice, coffee, bananas or other alternative crops.

"No less than $400 million a year for three years is needed" to get farmers to switch from coca growing, said Belaunde.

Legal production of coca is fixed at 39.6 million pounds a year, but the government's top narcotics policeman, Brig. Gen. Miguel Cardenas, last month estimated illegal production at 88 million pounds. He complained that he has only 268 narcotics agents to track down growers, middlemen who collect coca leaves or paste from the growers and shippers who pay more than $18,000 a pound for the paste and smuggle it out by plane or boat.

Belaunde said the international drug traffickers, to distract the police, are also financing the terrorism that has taken 127 lives this year.

"The terrorist movement is clearly linked with narcotics trafficking—that's why we call them narco-terrorists—and is financed by drug trafficking," said Belaunde.

He added that foreigners have been involved in some terrorist sabotage. But he would not identify them or their country, saying only, "There are certain nations that export their ideas."

He did not refer by name to Sendero Luminoso (Shining Path), the Maoist-line guerrilla organization waging a campaign of terrorist violence against his government.

He also complained that Peru had lost $50 million in tourist business because of a much-publicized forecast of earthquakes in the country by geologist Brian T. Brady of the University of Denver. He said the forecast proved to be inaccurate.

Belaunde was elected in 1981 as Peru's first civilian president after 12 years of military rule. He accepted an invitation to Washington from President Reagan, then canceled it at the last minute a month ago because of increases in U.S. tariffs on Peruvian textiles.●

TRIBUTE TO MR. JOSEPH S. HYDRUSKO, PEARL HARBOR WAR HERO AND PATRIOT

HON. GREGORY W. CARMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. CARMAN. Mr. Speaker, I would like to give special recognition to Mr. Joseph S. Hydrusko of Massapequa, N.Y., who worked tirelessly to save fellow sailors after the attack of Pearl Harbor by the Japanese 41 years ago today. Mr. Hydrusko, serving in the U.S. Navy, left his ship, the U.S.S. *Solace*—a hospital ship—and worked through the night of December 7, 1941, and the day of December 8, 1941, to save wounded and trapped sailors aboard the U.S.S. *Nevada*, the U.S.S. *California*, the U.S.S. *West Virginia*, and the U.S.S. *Oklahoma* and returned them to the safety of the U.S.S. *Solace*.

To commemorate the lives that were lost in World War II, Mr. Hydrusko will fly his "Bird," an open cockpit biplane around the Statue of Liberty in New York City and drop American Beauty red roses that have received a Papal blessing. This event takes place at 12:55 p.m. eastern standard time which is 7:55 a.m. Pacific standard time, the exact moment that Pearl Harbor was attacked by the Japanese. Mr. Hydrusko will by joined by seven other men who will also be flying antique planes and are members of the Antique Club of Greater New York. Mr. Hydrusko has led this commemoration for the past 11 years.

For his fine efforts in World War II, Mr. Hydrusko has been awarded the Navy Commendation Medal with Combat Distinguishing Device by the U.S. Navy. I take great pride in noting Mr. Hydrusko's dedication and determination during a time of great crisis, and I join him in honoring the many people who served our country with valor and courage during World War II.●

A TRIBUTE TO DR. WILLIAM S. KISER

HON. RONALD M. MOTTL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. MOTTL. Mr. Speaker, I would like to call to the attention of my colleagues in the House, the achievements of a remarkable physician and administrator who serves as chairman of the board of the world-renowned Cleveland Clinic Foundation, Dr. William S. Kiser.

Dr. Kiser began his distinguished medical career after graduating from the University of Maryland. During his career, he has served as senior investigator and staff urologist at the National Cancer Institute, as staff urologist of the Cleveland Clinic Foundation, and as a member, executive secretary, vice chairman, executive vice chairman, and chairman of the Board of Governors of the Cleveland Clinic Foundation.

Dr. Kiser has been a member of the kidney transplant team and has had well over 60 articles published in professional journals including the "American Journal of Cardiology," the "American Surgeon," and the "American Journal of Medicine."

In his position as chairman of the board of governors and chief executive officer of the Cleveland Clinic Foundation, Dr. Kiser is responsible for the administration of the foundation including activities related to medical care, education, and research. Through his guidance, the foundation has maintained its worldwide reputation of excellence in medical care and research.

Dr. Kiser has furthered his education by attending programs at both Case Western Reserve University and the Harvard Graduate School of Business Administration.

On a personal level, I want Bill Kiser to know how much I have appreciated his support and friendship. He is truly an inspiration to all who meet and know him. I salute him for a brilliant career dedicated to serving others and making Cleveland the most respected medical community in the Nation. Cleveland is indeed proud of this exceptional man who has served the area so well.●

HON. JACK BRINKLEY

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 2, 1982

● Mr. CONTE. Mr. Speaker, I am very pleased to be able to participate in this special order today for my good friend and colleague, JACK BRINKLEY. Also, I want to thank ELLIOTT LEVITAS for taking out this order, because it will be sad to see JACK go.

I must say from the outset that I appreciated JACK'S strong support earlier last year for legislative corrections to the so-called social security "notch" problem, a cause that he championed for the elderly of his district, and of America. As many of us know, the notch problem is a change in social security benefit formulas that effects all persons born after 1917. Because of

bad economic conditions between the time the changes were enacted, in 1977, and the time they went into effect, 1979 the benefit difference between someone born in 1916 and someone born in 1917 can be as much as $110.

Clearly, this is not fair, and some type of plan needed to be devised to resolve the disparity, to more equitably phase in the benefit reduction. Congressman BRINKLEY devised just such a plan, and his legislation received the support of several veterans' groups and elderly people across the Nation.

But, you know, JACK has always been helpful to those groups, and to his constituents as a whole. That is one reason I was always proud to be able to serve with him in the House, from the time he was elected to represent the people of the Third District of Georgia in 1966. As the senior member of the Georgia congressional delegation, JACK has served his people and his State well.

His home district reflects the realities of his committee assignments and his voting record. Serving on both the Armed Services and Veterans' Affairs Committees, he has a unique opportunity to assist in job expansion in his home district with the military bases that are located there. He has been able to assist that area well.

I for one will be sad to see JACK leave the House at the end of this term, but will look back with fondness on his friendship over the years we served together, and with pride at his tireless support for the aged and the less fortunate of our society.●

A SECOND LOOK AT OPERATION JOBS AND IMMIGRATION REFORM

HON. ROBERT GARCIA
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. GARCIA. Mr. Speaker, the December 5 edition of the Wall Street Journal had a very revealing article on "Operation Jobs"—the administration backed project to oust undocumented workers from so-called higher paying, better jobs.

The article uncovers the fallacy that Americans are being pushed out of jobs now being held by undocumented workers. It also dispels the often held belief that those individuals are a drain on society. They are not; they are productive contributers to our economy and society at large.

As I have said repeatedly, this country was built by immigrants. Their enthusiasm and faith in the American system is far from draining, it's heartening.

I am not advocating a lax immigration policy, but I do support a just and realistic policy that does not scapegoat immigrants. The legalization program, as contained in H.R. 7357, should not be eliminated. It should be expanded, so that we can more effectively harness the energy and labor of our newest immigrants.

Developing effective economic policies is the only way that we will be able to reverse our economic ills. I do not believe that H.R. 7357 is a jobs bill in disguise.

The purpose of any new immigration policy should be to regulate the flow of immigrants to this country, and to assimilate those immigrants already here. Because H.R. 7357 does not look at foreign policy concerns, it falls short on the former issue, and because of some of its more restrictive clauses—most notably a watered down legalization program, and an expanded H-2 program—it does not sufficiently address the latter.

I am submitting the article from the Wall Street Journal, December 6 edition, for the perusal of my colleagues.

[From The Wall Street Journal Monday Dec. 5, 1982]

"DIRTY WORK"—AMERICANS TURN DOWN MANY JOBS VACATED BY OUSTER OF ALIENS

THEY DISDAIN MEAGER PAY, LOW STATUS OF POSITIONS; A CASE OF BELITTLED PRIDE

"It Felt Like Being in Prison"

(By Merle Linda Wolin)

When the U.S. Immiration and Naturalization Service launched "Project Jobs" last spring, its aim was to oust undocumented foreign workers from "better" jobs and thereby open employment opportunities for out-of-work Americans.

In the well-publicized crackdown during the last week in April, agents in nine major cities arrested 5,440 aliens at 500 different work sites. Operating on the assumption that unemployed U.S. workers wouldn't take jobs at the lowest level, the agents largely ignored aliens working as busboys and field hands. The aliens seized in the raids had been earning an average wage of $4.81 an hour.

Joseph Salgado, associate commissioner for enforcement at the immigration service and mastermind of the project, hailed the raids as an "unqualified success." But then, over the summer, the aura of success faded as academic and newspaper surveys in cities such as Los Angeles, New York, Houston and Detroit indicated that most of the vacated positions were once again filled by the arrested aliens or their counterparts.

What went wrong with Project Jobs?

The answer to that question is particularly revelant as supporters of the controversal Simpson/Mazzoli bill push for its final passage during the current lame-duck session of Congress. The proposed law, which cleared the Senate in August and possibly will go before the House this month, makes it unlawful for employers to knowingly hire illegal foreign workers and grants amnesty only to those undocumented aliens who were in the U.S. before 1980.

SHAKY HYPOTHESIS

According to its supporters, the proposed law could create an estimated one million to two million job opportunities for unemployed Americans. But for the legislation to work, Americans must be willing to take the jobs now held by illegals and stick with them—a hypothesis that is contrary to much available evidence. Most local and regional studies, for example, show that the estimated 3.5 million to six million undocumented workers in the U.S. constitute a largely unskilled work force holding jobs that most Americans don't want. And in 1980, the Select Commission on Immigration and Refugee Policy, a blue-ribbon task force appointed by President Carter, concluded there is no strong evidence to support either the idea that illegals take away jobs or, more importantly, that Americans want the work.

And then there are the results of Project Jobs.

Interviews with 26 randomly chosen employers hit by the immigration-service raids in five major cities indicate that nearly all the U.S. workers who took the vacated jobs in their operations left within days. But numbers don't tell the entire story. More revealing are conversations with some of the Americans who actually tried the work and left—conversations that suggest why at least some U.S. workers don't want the so-called better jobs held by illegals, even in times of double-digit unemployment.

DEAD-END JOBS

The 19 workers who were interviewed were culled from employer lists of former workers. Most of those interviewed say they spurned the jobs mainly because they considered them dead-end, demeaning and underpaying. But they also left because they had a backup source of support such as welfare or family. All say they believe Americans simply don't want such jobs (although some say they would reconsider if the pay were better).

Some of those who have studied the U.S. work place suggest that unemployed Americans don't want certain jobs because of certain broad, sociological factors. "We simply don't bring up our children to be manual-service workers," says Wayne Cornelius, head of the center for U.S.-Mexican studies at the University of California at San Diego. He speculates that Americans who took positions opened by Project Jobs and then abandoned them might have been influenced in part by the weakening of the belief that hard work is the vehicle for upward mobility, by rising levels of education in the U.S. and by rising occupational expectations.

The kinds of positions opened up by Project Jobs were viewed as "Mexican jobs or Haitian Jobs," Mr. Cornelius says, adding that he thinks a certain stigma is attached to work held by foreign laborers. He says further: "The attitude is this is the dirty work of society and that people born, brought up and educated in the U.S. shouldn't have to do them."

TALES OF FIVE WORKERS

The stories of five U.S. workers who gained employment as a result of Project Jobs and then left their positions are illustrative. One of those workers is Fred Luttjohann, a 35-year-old Californian who took a job created by the raids on a furniture-assembly line only to quit after two and a half weeks. "I wouldn't have stayed even if the money was better," he says, noting that he earned $3.50 an hour. "I knew what I was getting from the beginning. It was the work."

Mr. Luttjohann, a former carpenter, agreed to work at B.P. John Furniture Co. in Santa Ana because he had been unemployed since December 1981 after a five-and-

a-half year job. "I got tired of doing nothing all day, just watching TV," he explains, sitting on the patio of his parents' small, comfortable Orange County home.

A soft-spoken, divorced father of one daughter, Mr. Luttjohann says he has been living with his parents since he was laid off last year. At the time he took the assembly-line job, he says he was drawing $520 in monthly unemployment-insurance benefits—$80 more than his B.P. John take-home pay.

At B.P. John, a budget to medium-priced furniture maker, Mr. Luttjohann and about 400 other workers—most of whom, he says, couldn't speak English—worked 10-hour days, four days a week. His task was to stand alongside a conveyor belt and put drawers in cabinets. By the third week, he was spent. He says the cabinets rolled too quickly down the line to put in the drawers and there was no help. After lunch on the 13th day, he quit.

"I told the foreman, 'I can't do this anymore,' " he says. " 'My arms are tired, my back is tired. For what you're paying me, and for what I'm doing, I just can't do it.' "

Four months after he left B.P. John, Mr. Luttjohann landed a $7.18-an-hour, part-time job as a bus driver for an elementary school in Huntington Beach. He holds that job today; he likes the work, he says, because he gets along with children and because he likes to drive. "It all turned out for the best," he says.

The Cooper brothers of Houston say the main problem with the jobs they took in the wake of the raids was more with the pay than with the work itself. "It was too much hard work for cheap pay," says Billy Wayne Cooper, 23, of his $4-an-hour job repairing railroad tracks for Earl Campbell Construction Co. "I could've slung hamburgers and made more money than that, out there in the hot sun driving picks."

Terry Cooper, Billy's 20-year-old brother, took the same job. A former truck driver who had earned $5.50 an hour, he says: "I was desperate for a job. But the day they work you eight hours a day, that work is worth $12 an hour. . . . We were like dogs out there. I ain't never been in prison, but it felt that way."

After two days working at what they both described as "hard labor," the Cooper brothers quit. "I would've stayed if they paid more," Terry Cooper says. Billy Cooper, also a former $5.50-an-hour truck driver, says: "You can't live on $3.50 an hour. Maybe Mexicans can, living four to five families in one house. But on that, no way we could live by ourselves."

Both men say they took the work only because they had been unemployed for several weeks before the raids and couldn't find jobs. After they quit, they say, they each depended on savings and part-time jobs. Then in June, Terry landed a $6.50-an-hour job on a Harris County park-maintenance crew. "You couldn't chase me off the work," he says. A month later, Billy found another truck-driving job, also for $6.50 an hour. "I earn more money now, and its not near as hard work," he says.

Another Houston worker, Timothy E. Cochran, spurned work created by the raids more because he didn't like working with Mexicans than because of the job or the pay. The 19-year-old accepted a $4.20-an-hour tree-trimming job at Trees Inc., a large concern that keeps branches away from electrical lines for the utility and telephone companies. After two weeks of climbing trees and hauling brush, he had had enough.

"It's too dangerous," Mr. Cochran says of the work, noting that he simply walked off the job. But in further conversation, he repeatedly makes remarks indicating he quit mainly because he was disturbed about working with Mexicans.

Sitting shirtless in a rickety wooden chair in the small, cluttered living room of his mother's house on Houston's North Side, Mr. Cochran frequently disdains his former co-workers as "wetbacks" and claims they weren't as scared of climbing trees as he was "because they were too stupid." He also seems to have been offended by the fact that co-workers spoke Spanish. (Although he makes contemptuous remarks about blacks, he says he would rather work with them than Mexicans because "at least they speak English.") And he says the only way he would ever go back to Trees Inc. is if the immigration service "hauled off the wetbacks" and the company "started having some white foremen.

"A few Spanish ain't bad," he says. "But overdoing it is overdoing it." (Mr. Cochran says his foreman was white.)

Since his work at Trees Inc., Mr. Cochran says he has held a few odd jobs and earned other money repairing a few cars. "Finding jobs is no problem for me," he says, "The problem is finding one that suits me." He currently lives with his parents who support him. In the future, he says, he plans to get married and look for another job. But he asserts he won't accept minimum wage. "That's woman's pay," he explains.

A MATTER OF PRIDE

The current whereabouts of Jerry Goodman is unknown. When interviewed earlier this fall, he was in Chicago. At that time, he admitted that pride got between him and his $4.35-an-hour shipping-clerk's job at Newly Weds Foods Inc., a private food-processing plant on the city's North Side. On his third day of work, when there was nothing else to do, he said, the foreman asked him to sweep the parking lot.

"That's when I quit," he said. "I just couldn't live with the thought of others seeing me (sweep the parking lot). It belittled my pride. I considered it slave labor."

Mr. Goodman, a 25-year-old bachelor, said he only reluctantly took the Newly Weds job the day after the immigration raids because he previously had earned $8.20 an hour driving a truck and considered $4.35 an hour too low. But his unemployment insurance of $592 a month had run out, and he had no other income. "I had to settle for it," he said.

The first two days were spent loading and unloading trucks with sacks of flour and other baking materials, he said, and were "tolerable." His co-workers, he said, were mostly Mexicans and were friendly and helpful. He called everyone "amigo."

On the third day, he said, before he quit, he thought about the rigors of unemployment because he knew it would be difficult to find another job; still, he couldn't bear to sweep the parking lot. "That the others could see me—that's what I didn't like," he said.

HARD TIMES

After Newly Weds, however, Mr. Goodman fell on hard times. Without an income, he was forced to give up his apartment, sell his car and furniture and move back home with his parents and five younger siblings. For money, he relied on $144 a month in welfare payments. That amount, he said, supplemented the $197 a month that his parents receive from Social Security and food stamps. "It's been very hard for the whole family," he said.

In early September, Mr. Goodman accepted a 30-day trial for a $3.95-an-hour security guard position with a local company. "Worse than Newly Weds," he said at the time but added that he would try to stay on the job. Since that time, however, he has been unreachable. His parents' phone has been disconnected, and the personnel director of the security company said "Jerry who?"

At the time of his interview with this newspaper, Mr. Goodman said that employers know that if Americans don't take low-status, low-paying jobs, "the Mexicans and Puerto Ricans will." And he said he believes the government ought to oust undocumented aliens; the resulting labor shortage, he said, would force employers "to pay more to citizens—to people born here who are entitled to these jobs."

Billy Cooper, the Houstonian, agrees. Creating a labor shortage, he says, is the only way to force employers to pay "a white man's wage." And if employers can't—or won't—pay higher wages? Terry Cooper answers that question: "They need to go out of business."

But Fred Luttjohann, the Californian, says that most Americans simply don't want the kinds of jobs that were opened up by the raids. "I wouldn't think Americans would want to do the work," he says about his furniture-assembly job at B.P. John. "I wouldn't recommend it for anybody, that's for sure. It's too much work for one person."●

ERADICATION OF WORLD HUNGER MUST BE PURSUED

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. BIAGGI. Mr. Speaker, on October 16 the United States observed World Hunger Day in communities across our Nation. In my home city of New York a major World Food Day Forum on Ending Hunger was conducted which I was honored to participate in.

World hunger represents an international problem of enormous dimension and seriousness. The numbers are staggering. It has been estimated by the Food and Agriculture Organization of the United Nations—nearly half a billion people are malnourished worldwide. One in nine of today's world population suffers from severe systematic malnutrition. Malnutrition causes blindness in some 100,000 children each year.

According to the Presidential Commission Report on World Hunger "the primary cause of world hunger is poverty." This is reflected in the fact that most of the world's hungry live in the desperately poor areas of the Indian subcontinent as well as comparably impoverished areas of Southeast Asia and Sub Saharan Africa. No region of the World including the United States of America is exempt from the prob-

lem of hunger, but one common denominator seems to be the poverty factor. Poverty combined with rapid rising populations spells continued problems for today and tomorrow. Today we know that over 600 million people exist on incomes of under $50 a year. By the year 2000, 470 million persons will live in poverty. Today developing nations grow 87 percent of their own food; by the end of the century this will drop off to 74 percent. By the year 1988 the developing world will have an annual deficit of 85 million tons of wheat, rice and coarse grains.

One could discuss the problem of world hunger ad infinitum. We are reasonably certain of the tragic fact that it will only get worse in the future unless we are prepared to act today. Consider the birth rates in the poorest nations of this world. Every 60 seconds 136 babies are born in Asia, 41 in Africa and 23 in Latin America. These are all new people who need to be fed; yet where will the food come from?

We must address the issue of eradication of world hunger from two vantage points, short-term needs and longer range solutions. We should help develop a food stamp program in the poorer nations. We must concentrate our economic aid toward alleviating malnutrition among infants and preschool children. Finally, we must be prepared to increase our commitment of developmental and economic assistance to meet the growing need caused by world hunger. The United States once was the largest foreign economic assistance donor in the world. Today 12 nations provide a greater share of their gross national product to developmental aid than do we. The United States spends 20 times more on defense than on developmental assistance. One final sobering thought—in the year 1978, the people of the United States lost more money in Las Vegas gambling than we gave in economic developmental assistance.

Yet the mere providing of aid will not solve world hunger unless it is targeted for that purpose. To that end, I support the creation of a global food reserve or a world food bank as well as all efforts of individual countries to create their own reserves.

Finally I believe that U.S. aid should be directed toward those nations who are dedicated to helping alleviate their own hunger problems. U.S. aid should be the catalyst to stimulate self-help initiatives by other nations but it is vital that we reestablish ourselves as the preeminent fighter in the battle to end world hunger.●

JOSEPH C. KRAJSA, EDITOR OF JEDNOTA WEEKLY, HONORED FOR OUTSTANDING SERVICE TO THE CATHOLIC CHURCH AND THE WORLDWIDE SLOVAK COMMUNITY

HON. DON BAILEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. BAILEY of Pennsylvania. Mr. Speaker, I am very proud to be able to join members of the First Catholic Slovak Union in commemorating the high honor bestowed by Pope John Paul II on Joseph C. Krajsa for his long and distinguished service to the Catholic Diocese of Harrisburg and the worldwide Slovak community. Pope John Paul II has knighted Joseph to the Order of Saint Gregory the Great, an order to which no more than 300 people can be selected.

The award recognizes the service Joseph has performed as editor of Jednota, the official organ of the First Catholic Slovak Union of America, the largest Slovak fraternal organization in the world. As editor, Joseph has worked unceasingly to promote brotherhood and unity among all peoples and to bring word of the faith to the many hundreds of Slovak communities in the United States, Canada, and more than 27 foreign countries. His leadership and dedication have helped make the Jednota a unifying force for Europeans of all nationalities. While Europe is divided in both its civil and religious aspects, Joseph has struggled for the sake of European cooperation and solidarity and brought his readers the Christian vision of freedom and humanity. His message, and that of the union, are a source of strength and hope for all Slovaks and a reminder to all freedom fighters of the efforts still to be waged.

The formal installation of knighthood and the presentation to Joseph of the insignia and Great Cross of the Order of Saint Gregory the Great will be made in his home parish of the Seven Sorrows of the Blessed Virgin Mary, Middletown, in January. While I would like to add my own words of thanks to Joseph, I know that they cannot match the high award the supreme pastor of the Catholic Church has bestowed in honor of his service. As such, I join the members of the First Catholic Slovak Union in congratulating Joseph and wishing him well in his service to God, our country, and, of course, the Slovak community.●

TWO SPECIAL FRIENDS

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. CLAY. Mr. Speaker, I would like to take this opportunity to share with Congress the story of a very brave little boy named Marvin Winston and how, with the help of "Uncle" Leonard Lewis, he came to be the ringmaster of the circus.

Marvin Anthony Winston is the 12-year-old son of Rev. and Mrs. J. A. Winston of St. Louis, and is a victim of cancer. He is also an artist, a devout football fan, and a lover of the circus. Earlier this year, Marvin underwent a series of treatments for his illness. The local press ran an article about Marvin and his remarkable courage and determination. The newspaper report mentioned that one of Marvin's greatest wishes was to take a trip to the circus.

Fortunately, "Uncle" Leonard Lewis, president of the Leonard's Muntz Television Center in St. Louis, read about Marvin and his situation. He generously offered to send Marvin to Las Vegas to attend the renowned circus. With the kind help of "Uncle" Leonard, Marvin went to Las Vegas and served as the honorary ringmaster for the famous circus acts. Marvin was accompanied by his mother and his friends, Chris Haliburton and Merdean Fielding.

Mr. Speaker, I am honored to commend both "Uncle" Leonard Lewis and young Marvin Anthony Winston as two of the most spirited citizens in the St. Louis community. Marvin is a courageous fighter and "Uncle" Leonard is a generous helper. Each has demonstrated a genuine respect for the true meaning of life, and together they have achieved a rare and special relationship.●

A TRIBUTE TO DR. DAVID GITLIN

HON. RONALD M. MOTTL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. MOTTL. Mr. Speaker, I would like to take this opportunity to pay tribute to an extraordinary citizen in my district, Dr. David Gitlin. To say Dr. Gitlin cares about people would be an extreme understatement.

Dr. Gitlan was one of the initiators of the widespread concern over our air quality. As early as 1961, Dr. Gitlin met with his first, in a long line of public officials, to gain support for his ideas that health is affected by the air we breathe. He believed that there was

a strong definite correlation between one's health and our air quality. It was obvious to him, because of his own patients, that respiratory diseases could be caused by the pollution in the air. Dr. Gitlin's work as an allergist and the presence of a large plant in his community led him to a study of his hypothesis. Through his hard work and perseverance, Dr. Gitlin was able to spark support for an issue which is now one of our major health concerns, but had then been given virtually no attention.

Dr. Gitlin also devoted much of his time to fighting for the rights of nonsmokers in hospital rooms. In addition, he was personally a test case for the very first nonsmoking seat on commercial airplanes. While still recovering from major open heart surgery, Dr. Gitlin was asked to be a passenger on a commercial flight where the airline was going to prohibit smoking in the row occupied by him and his family. This would be the first time a restriction would be put on smoking on an airplane. Before the flight the passengers were asked to please refrain from smoking in the first row of the coach in consideration of one of the passengers who was recovering from a major operation. The request was well received and soon after the idea spread. This action so characterizes Dr. Gitlin's life and work. Even in the moments when his health was failing, Dr. Gitlin was doing what he could for his fellow man.

Dr. Gitlin was also very active in other areas. In the late 1960's he, along with a few other people, formed the Council of Soviet anti-Semitism. The council was very effective in bringing attention to the actions of the Soviet Union which were discriminatory against Soviet Jews. The singling out of Soviet Jews for public humiliation was a practice that was unknown previously to the American public. This human rights organization sensitized the American people to what was actually happening in the Soviet Union. As a result of this publicity, many Jews were permitted to emigrate from the Soviet Union.

At home, Dr. Gitlin was one of the founders of the Berea Council on Human Relations. The council was very effective in the early 1960's when discrimination was prevalent in the community.

Presently, Dr. Gitlin is working to gain support for the nuclear freeze which incorporates the need for human rights and verifiable onsite inspection.

Mr. Speaker, please join me in saluting Dr. David Gitlin, a rare man who believes in and works for his fellow man.●

QUINCENTENNIAL OF CHRISTOPHER COLUMBUS

HON. MANUEL LUJAN, JR.

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. LUJAN. Mr. Speaker, on October 12, 1992, we will be celebrating the quincentennial anniversary of the trans-Atlantic voyage of Christopher Columbus which resulted in his discovery of America. On October 12, 1492, Columbus completed his long and uncertain voyage, a historic event made possible through the funding and resources provided by Queen Isabella of Spain.

There is currently a process in all of the Americas to begin planning and developing a hemispherewide commemorative celebration for the year 1992. The American quincentennial celebration will demonstrate and celebrate this event which occurred in 1492, bringing together two worlds and different cultures, changing the geography of the then-known world and initiating the process of history that over the past 500 years has made the Americas as we know them today.

This commemorative celebration will involve all the nations of this continent and the explorer nations which include Italy, Portugal, and Spain. The scope of the celebration will cover all phases of existence in the Americas including culture, law, heritage, history, education, politics, academia, business through the private and public sector's travel, arts, technology, ethnicity, and family tradition. It is in this development that we invite all who realize the importance of celebrating our 500th anniversary as the Americas to join in making the American quincentennial in 1992 a reality.●

JOSEPH ERDELAC

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Ms. OAKAR. Mr. Speaker, one of the finest businessmen in our community has decided to leave the auto business after 50 years of service; he will continue to live a very productive life, but he will be missed in this industry. He was known for his service and integrity. He is a role-model for many of us.

The following is an article which appeared in the Plain Dealer:

PIONEER ERDELAC CLOSES AGENCY

(By Donald Sabath)

Joe M. Erdelac has been in the auto business for 50 years. In many ways, autos have been a way of life for him.

During the stock market crash of 1929 he entered a vocational training program at the Cleveland Trade School. He then worked for auto dealers as a mechanic.

Today, for the first time in 50 years, Erdelac will not be associated with autos. He is closing his dealership, although he still has about 20 used cars remaining to be sold.

In 1938, Erdelac opened his own garage on E. 79th St. between Woodland and Quincy avenues at a dealership which had closed during the Depression.

Since 1958 he has operated his present American Motors Corp. and Renault dealership at 16515 Lorain Ave.

Yesterday, Erdelac watched as packing cases were filled with parts and tools at his store. About 10 employees were cleaning up the back repair shop.

"Sure, I'm going to miss sales and the world of autos," he said. "This has been almost my entire life."

Erdelac, 68, said he wanted to work full-time at his hobby of collecting and selling paintings. He also wants to promote Cleveland painters. He has agreements with 10 local painters and he has opened a studio on Center Ridge Rd., in Rocky River. He stressed he will not be retailing the paintings.

For the past four years, Erdelac said he has had to struggle with falling new car sales. He has had to sell aging AMC models, which have a good reputation of workmanship, but have not achieved the best in fuel economy ratings.

Ironically, this fall, AMC with its French partner Renault, has produced one of the best-selling new AMC models in years, the front-wheel-drive Alliance.

"I have waited three years for this car, and now I won't be able to sell them," he said.

Erdelac is particularly upset because four of his employes have been with him between 34 and 37 years.

"I don't know what they are going to do, but I'm sure they will be able to find jobs—they are good workers," he said.

Erdelac owns the property where his dealership was, and he said he has had talks with people who might want to continue the AMC franchise.

Jerry T. Maloney, AMC zone manager for Cleveland, said the company was trying to put something together soon to get an AMC dealer back on the far West Side.

"We hope to have a dealer there within 30 to 60 days," he said.

Maloney would not confirm if the dealership would be at the Erdelac side.

Erdelac said some customers who had put down payments on 1983 cars would get their deposits back with interest.

He said he would now spend more time with his wife, Elsie and daughter Connie, in his Rocky River home. Connie is an elementary school teacher in Lakewood.

"There is much more to life than autos," he said yesterday. His office walls are lined with Cleveland memorabilia.

"I love art and I have 14,000 jazz records to catalog, and I love my family. It has been a good life."●

TRIBUTE TO GEORGE LEE

HON. GREGORY W. CARMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. CARMAN. Mr. Speaker, I wish to give special commendation to Mr.

George Lee, an exceptional member of the American Institute in Taiwan. Mr. Lee recently assisted me during a special factfinding mission on behalf of the U.S. House of Representatives Banking Committee to promote international trade.

I was very impressed by the organization of the American Institute in Taiwan. Through Mr. Lee's efforts, my meetings with trade officials in the public and private sectors in Taiwan were very successful.

Sharing with you a little of Mr. George Lee's history is my pleasure. Mr. Lee holds degrees from the University of Hawaii, California State University, and the University of Illinois. He has served as an economic officer for the the Department of State, an assistant professor at the University of Hawaii, and as a consultant at the Institute of International Law and Economic Development. Mr. Lee presently holds the post of chief of the economic unit at the American Institute in Taiwan.

Mr. George Lee's exceptional efforts bring credit to himself, the American Institute in Taiwan, and to the United States. We are truly fortunate to have him as a member of the American Institute in Taiwan staff.●

A CONGRESSIONAL SALUTE TO JACK B. KRUEGER, 1982 PRESIDENT OF THE LONG BEACH DISTRICT BOARD OF REALTORS

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. ANDERSON. Mr. Speaker, on December 10 the 78th Annual Installation Dinner Dance of the officers and directors of the Long Beach District Board of Realtors will be held aboard the Queen Mary. Among those to be honored is Mr. Jack B. Krueger—1982 President of the Board.

A graduate of UCLA, Jack joined Moore Realty in Long Beach as a training manager and later became general manager. In 1966, Jack became a cofounder of the Real Estate Stores. Today, Jack serves as its president and now has two stores, both located in Long Beach.

For many years Jack has been quite active with the Long Beach District Board of Realtors. In 1969 he served as their first vice president and, the following year, became president. Twelve years later Jack again served as President.

Mr. Speaker, as you well know, I am very proud of the great spirit that exists throughout my home district. Today, I am especially proud to give deserved recognition to one person who symbolizes this special trait.

An eager readiness to contribute and a sincere commitment to community betterment and development have been the hallmarks of Jack's involvement in business and civic affairs. His work with the board has been most notable. The direction he gave as president made his tenure exciting and productive. To his many friends, Jack is recognized as a person always willing to lend a hand. The people he has worked with in the community know his hard work has always been combined with friendliness and genuine concern for others.

Because of his dedication and fortitude, Jack Krueger has made this past year one of the best ever for the Long Beach District Board of Realtors. As he concludes his term, my wife, Lee, joins me in congratulating him on this occasion and expressing the appreciation we share with so many others for his devotion to the community. We also extend to Jack; his wife, Jan; their two daughters, Lianne and Julie; and three sons, Ron, Robin, and Tim, our sincere wishes for many more years of success, happiness, and prosperity.●

HONORING CSD OF SAN BERNARDINO AND MRS. JOAN HUNSAKER

HON. JERRY LEWIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. LEWIS. Mr. Speaker, I would like to take this opportunity to commend Ms. Joan Hunsaker, youth coordinator for the Community Services Department of San Bernardino County (CSD). Ms. Hunsaker was honored as "Outstanding Work Supervisor," and CSD was designated "Outstanding Worksite for the City of San Bernardino" by the Inland Manpower Association for the summer youth employment program. Mr. Rodolfo H. Castro, CSD executive director, stated that the selection criteria included program effectiveness, sensitivity and concern for clients.

Other participants in the program included: Theresa Rivas, Venita Lamb, Jeanette Olivas, Adelina Jorden, Mary Dominguez, James Griffin, Redge Moore, Donald Richard, Larry Rosales, Angelina Huerta, Lenette Davidson, Virgil Green, Alex Acevedo, Gerardo Hernandez, and La Vonne Macon. Supervisors and supporting staff were: Martha L. Oehlberg, Sandra Brown, Jackie McIntyre, Ona Shelly, Kathy A. Kivley, Marvel Killins, Norma Castro, John Cook, Maria Atilano, Erlina Kates, Rosita Zuniga, Patricia McGlocklin, Leonard Ramirez, Jodi Jones, Foster Fletcher, Zenaida Ortega, Norma Cervantes, and Elaine Moran.

Mr. Speaker, it is with great pride that I recognize and commend to the House of Representatives Ms. Joan Hunsaker and the Community Services Department of San Bernardino County for their selfless devotion to the youth of the Inland empire. They are truly a reflection of good, humanitarian government.●

AMENDMENT TO FREEZE EXISTING NUCLEAR WARHEAD STOCKPILES

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. CONYERS. Mr. Speaker, I shall be introducing an amendment to the energy and water development appropriation bill (H.R. 7145) to delete from the national security programs $1.745 billion from the operating expenses account and $488 million from the plant and capital equipment account.

My intention in offering this amendment is to delete funds for any further development and production of new fissionable materials used in new nuclear warheads, any further assembly of new warheads, and any further testing of newly developed or produced warheads. This amendment, however, leaves ample funds to maintain existing plants, equipment, and stockpiles; to upgrade existing plants; and funding for a slower rate of growth in plant expansion.

The purpose of the amendment is to halt further spending on new nuclear warheads, while maintaining existing stockpiles. This amendment speaks to the growing support for the concept of freezing existing nuclear weapons stockpiles in order to create a context for a mutual and negotiated weapons freeze between the U.S. and the U.S.S.R. It proposes that we take a first step—and not an irreversible step—to explore the possibilities for halting the nuclear arms race.

The amendment I am offering would, in effect, freeze our existing nuclear stockpiles. It involves an arms control strategy by mutual example, an independent initiative for a year or two that would demonstrate to the Soviet Union and the world that we are, indeed, serious about nuclear weapons reduction.

I believe the Congress of the United States should have the ability to pass judgment on what is surely the most menacing and overriding international question in our times.

The nations of the world are spending $600 billion this year on arms and armies. Already there are more than 50,000 nuclear weapons in the world, and it is estimated that the world's nuclear stockpile is equivalent to 16,000 million tons of TNT. Each new weap-

ons system is more sophisticated, lethal, and speedier in delivering its explosive power. The prospect of nuclear war through miscalculation or merely technical error grows each year.

Most objective observers agree that the United States and the Soviet Union now have rough parity in their first-strike and deterrence capabilities. The United States has approximately 26,000 nuclear warheads in its arsenal. That level has remained fairly steady throughout the past decade.

Current plans call for United States production of an additinal 23,000 nuclear warheads over the next 10 years and 14,000 more through the mid-1990's. I daresay that the Soviet Union would match this expansion, as they have every previous one. So instead of 50,000 nuclear weapons in the superpowers' stockpile in the 1980's, we will find 100,000 or more stockpiled a decade later.

I firmly believe the time has come to take some bold actions to slow down and ultimately eliminate the nuclear arms race. The status quo and its extension—namely, more of the same and more that is worse—is simply too dangerous to contemplate.

Last month several million Americans in 9 States and 30 localities voted in favor of a nuclear arms freeze. During the past year, numerous opinions have been taken on the subject of a nuclear arms freeze. Regardless of how the questions were worded, and the particular statistical samples polled, the overwhelming majority of Americans strongly favor a nuclear freeze. The voters in November, I believe, voiced the view that their leaders should explore in every possible way the means to curb the nuclear arms race. That is our responsibility.

The amendment I am offering leaves ample funds to maintain our existing nuclear stockpile. We are not about to disarm ourselves. In dollar terms, the $2.23 billion I am proposing be cut from the national security programs in fiscal year 1983 represents roughly 38 percent of the $5.76 billion that the committee has recommended. This is not a drastic cut.

The national security programs embrace a large number of functions and activities. While I have received very helpful assistance in identifying the programs involved, the committee figures do not differentiate between new and existing programs, new and existing warheads. I am told these figures are classified.

For this reason, I have deleted only 50 percent of the funds the committee recommended for both operating expenses and plant and capital equipment expenditures, that pertain directly to warhead development, production, testing and stockpiling. In addition, I propose to delete all funds involving specific new warhead programs—for example, the enhanced-radiation theater weapons; the MX missile warheads; the Pershing missile warheads, and the cruise missile warheads. The figures I am proposing, overall, represent a very conservative modification in the committee's recommendations. However, they do embody a significant principle—to make room for a more stable and nonlethal future for all of mankind.

The amendment I am proposing to the energy and water development appropriations bill follows:

AMENDMENT TO H.R. 7145, AS REPORTED OFFERED BY MR. CONYERS OF MICHIGAN

Page 5, line 11, strike out "$4,454,740,000," and insert in lieu thereof "$2,709,890,000," and on line 12 immediately before the period insert the following ": *Provided*, that none of the funds appropriated or otherwise made available under this paragraph may be obligated or expended for the production of additional fissionable materials, or for the assembly or testing of new warheads.

AMENDMENT TO H.R. 7145, AS REPORTED OFFERED BY MR. CONYERS OF MICHIGAN

Page 5, line 24, strike out "$1,306,841,000," and insert in lieu thereof "$818,741,000" and on line 25, immediately before the period insert the following ": *Provided*, that none of the funds appropriated or otherwise made available in this paragraph may be obligated or expended to increase existing production capacity.●

H.R. 6514

HON. MANUEL LUJAN, JR.

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. LUJAN. Mr. Speaker, I take this opportunity to convey my concerns regarding the proposed Immigration Reform and Control Act of 1982 (H.R. 6514). I am particularly concerned about the shortcomings of this proposed legislation.

It is apparent to me that although serious attempts have been made to amend this legislation with substantive amendments during markup in the House and Senate, these amendments which sought to improve the bill (H.R. 6514) were not incorporated. My analysis of the legislation clearly reveals that the potential problems with employer sanctions, H-2 guest workers, erosion of judicial review, proposal for a national identification card, lax enforcement of existing labor laws protecting agricultural workers, and the legalization program, have been inadequately addressed as reflected in the House Judiciary Committee report.

Serious concerns about the significance and impact of H.R. 6514 were raised during markup of this legislation in the House Judiciary Committee. The seriousness of these concerns by other Members is reflected in the motion to recommit which was narrowly rejected. Unfortunately, we are being asked to accept this legislation as an answer to a much needed reform of our immigration laws. If the Congress passes this legislation, we would be contributing to the existing problems faced by those that must enforce our immigration laws. Regrettably, if we should vote on this legislation with all of its deficiencies, we will be contributing to creating additional problems and overburden our enforcement agencies.

The consistent and continuous attempts to amend this legislation clearly indicate also that H.R. 6514 does not merit bringing to the floor during this special session of Congress, and we would better serve the interest of this Nation by not considering this legislation during the special session at all. There is no doubt that our immigration laws need reform, but in all candor, we must give immigration reform further attention. I therefore urge the membership to schedule immigration reform on the agenda for the 98th Congress.

Although I have serious reservations with the entire legislation, I have specific concerns regarding the bill's proposed legalization program. My careful analysis of these provisions leads me to conclude that this legislation is in need of a major overhaul legalization program; it needs to include a critical education period whereby providers of legalization benefits will set up a viable and necessary processing mechanism plus educate the public; it needs to include a truly comprehensive and immediate method of reporting on the success of the proposed legalization program; and it must also include specific definitions of "continuous" residency and criteria for eligibility.

My specific concerns regarding the proposed legalization program and the probable impact of this legislation overall prompts me to introduce a number of substantive amendments should this legislation come before us on the floor during our special session.●

THE COST OF DEMOCRACY

HON. JOHN J. LaFALCE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. LaFALCE. Mr. Speaker, as this Chamber prepares to consider the issue of compensation for its Members, I commend a recent editorial from a newspaper in my western New York congressional district.

I believe this editorial, written by the highly respected editor and publisher of a conservative, small town newspaper represents a voice of reason

crying out amid the roar of demagoguery on this issue.

The editorial follows:

[From the Medina Journal-Record, Nov. 30, 1982]

THE COST OF DEMOCRACY

Sending over 400 congressmen and 100 senators to Washington to create our laws and provide the spark of ignition for the democratic process is the essence of our system, and a sound one. But it is expensive.

When the matter of congressional pay raises comes to the surface, the public in one loud voice registers indignation. And rightly so. The act of complaining, far from being a sign of weakness, is the strength of our system. The people must be heard.

Currently, members of the House of Representatives are due cost-of-living boosts of up to $16,000 from their present salary level of $60,000. To a nation agonizing over a deep recession, this seems like a giant slap in the face.

There are differing opinions among congressional members over whether to block the pay raise, or let it come to pass. But the differences are for the most part involved in the timing of the raise and the exact size in dollars.

The blunt fact is, that for anyone not wealthy in his or her own right, the $60,000 pay is not excessive. A little research produces a picture.

A congressman is involved in the work of government full-time, thus he can not earn a steady income from another job. He pays 35 to 50 percent of his salary back in taxes. It costs him $10,000 to $15,000 yearly to live in Washington on a commuter basis, while facing other costs of keeping a home in his district. And he pays 8 percent of his pay into a contributory pension program.

Add to this another side of the picture. Washington is probably tops in the nation (or nearly so) in the cost of living. A small bedroom efficiency providing only basic shelter can fetch $600 a month or higher. And if the lawmaker chooses to maintain a home in or near the capital city for his family he must pay up to $200,000 for a house that would sell in Western New York for $60,000.

There is no point in creating a big defense for unreasonable congressional pay raises. But if the Congress is not to become a club for the wealthy, salaries in the House and Senate must be sufficient.

Secondarily, if there is profiteering in the major capital cities because of the fact that so many officials and bureaucrats are on taxpayer-supported expense accounts, this is an area which should bear some study.●

AGAINST H.R. 6514 AND H-2

HON. LARRY E. CRAIG

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. CRAIG. Mr. Speaker, the Immigration Reform Act of 1982, H.R. 6514, constitutes a serious threat to major segments of agriculture. I recognize the need to update the Immigration and Nationality Act, but I am opposed to the temporary (H-2) guest worker program as adopted by the Education and Labor Subcommittee on Labor Standards.

Upon further investigation into the effects of the temporary (H-2) guest worker programs, I find I cannot support them for several reasons. First and foremost, these proposals are not workable or efficient enough to provide the agricultural community the opportunity to secure qualified workers to harvest their crops. They again put the burden of proof on the employer to insure that no U.S. workers are going to be unduly affected. These provisions also do not allow for a discretionary proviso for those crops which do not ripen as expected. The employer is ultimately placed in the position of monitoring and enforcing legislation that runs contrary to his own self-interest. There are no positive incentives in current proposals which might encourage employers to support anything other than the status quo. These provisions increase the employers' costs without providing any alternatives to solving capital and labor needs.

Hand-in-hand with the increased costs go the burdensome recordkeeping documentation that would be required on all future employees, and the stiff penalties which would be incurred for failure to keep such records. I favor reducing the regulatory burden on employers, not increasing it. I believed this when I became a part of a Special Task Force on Regulatory Reform early this year, and I still believe it today.

There are other areas of the program which I believe need to be rectified. I feel the Department of Agriculture must be consulted in the admission of H-2 workers. Who better than this Department knows the agricultural community? I also believe that the prospective employer should have the option to pay a penalty instead of being debarred from hiring temporary workers for up to 3 years. In the case of the farmer who is banned from this practice, this crops would rot in the fields.

Because of my background as a farmer and rancher, I know from long experience that qualified U.S. workers cannot be recruited to fill a large percentage of the seasonal jobs on farms and ranches. Therefore, I would urge that further consideration be postponed on H.R. 6514 until the 98th Congress convenes.

I believe we need an equitable H-2 program which will allow the agricultural community the flexibility to produce and which will halt the flow of illegal immigration. This program does neither.●

CONGRESSIONAL TRIBUTE TO DR. DAVID E. GRAY, VETERAN EDUCATOR

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. ANDERSON. Mr. Speaker, it is with distinct pleasure that I rise to pay tribute to Dr. David E. Gray, who is retiring this January after 28 years of dedicated service at California State University/Long Beach. Dr. Gray's long association with the university began in 1954, following work with the parks and recreation department of the city of Los Angeles. Since that time he has served the university continuously, with the exception of 1958 and 1959 when he was in London as Chief of Special Services for the U.S. 3d Air Force. He has been professor and chairman of the recreation and leisure studies department, associate dean of the School of Applied Arts and Sciences and, the position which he has held since 1969, vice president for administration and staff coordination.

Dr. Gray served as an infantry officer with the U.S. Army in Europe during the Second World War. He received his bachelor of arts degree in recreation administration from Los Angeles State College in 1950, his master's of science degree in physcal education in 1953 from UCLA, and his doctorate in public administration from USC in 1960.

Among his many achievements in the education field, Dr. Gray has served as an honorary lecturer at Southern Illinois University and at Central Washington University. He is a member of the board of regents at the Pacific Revenue Source Management School. Dr. Gray has served as a visiting professor at USC, the University of North Carolina at Chapel Hill, the University of Massachusetts, the San Jose State University, the Oregon State University, and the University of Hawaii.

Dr. Gray's professional affiliations are both numerous and outstanding. He is a member of the American Academy of Political and Social Sciences; the American Association for the Advancement of Science; the American Association of Health, Physical Education & Recreation; and the American Association of University Professors, as well as being a founding member and first president of the Academy for Leisure Sciences. Dr. Gray also serves as a consulting editor for Wm. C. Brown, Co., publishers; as a member of the editorial board of Leisure Today; and as a member of the editorial policy board of Leisure Sciences. Dr. David Gray has had numerous articles

published and is the recipient of a multitude of honors.

Mr. Speaker, in light of Dr. David E. Gray's numerous outstanding contributions to the education field in general and to California State University at Long Beach in particular, I know you and our colleagues will join me in paying tribute to this most distinguished and deserving man. My wife, Lee, joins me in wishing Dr. Gray, his wife Frances, his children Catherine, Christopher, and Jonathan as well as his four grandchildren Jennifer, Amanda, Andrew, and Nathan only the best in the years ahead.●

KENNY AND MARIANNE ROGERS WORLD HUNGER MEDIA AWARDS

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. GILMAN. Mr. Speaker, I was pleased to have had the opportunity on November 23, 1982, to participate in the 1982 World Hunger Media Awards at the United Nations in New York. These awards, established and endowed by Kenny and Marianne Rogers, honored those in the media whose achievements have helped raise awareness about the critical problem of hunger.

I was honored to be able to participate with my good friend and colleague, the Senator from Vermont, PAT LEAHY, in discussing at that awards presentation, a special achievement award in memory of the late Harry Chapin. Harry, who many of my colleagues will long remember, fought tirelessly to help resolve the world hunger problem. This award, in the amount of $20,000, establishes two fellowships, one in the House and one in the Senate, which will focus on issues relevant to eliminating hunger. My colleague, the gentleman from New York, TOM DOWNEY, and I will work with the House fellow, with Senators LEAHY and BOB DOLE, the Senate fellow.

I commend Kenny and Marianne Rogers for taking this important initiative against hunger, and applaud Marty Rogol, executive director of World Hunger Year, the organization administering the awards program, and Ken Kragen and Co., the management company representing the Rogers, for the very impressive awards program they have arranged.

Mr. Speaker, I insert the announcement concerning the awards program, and statements describing the Harry Chapin Special Achievement Award, and World Hunger Year at this point in the RECORD:

1982 WORLD HUNGER MEDIA AWARDS ANNOUNCED BY KENNY AND MARIANNE ROGERS ON TODAY SHOW

$100,000 AWARDED TO MEMBERS OF THE MEDIA AND SPECIAL AWARDS

NEW YORK CITY.—Kenny and Marianne Rogers announced the winners of the 1982 World Hunger Media Awards on the Today show early this morning. $100,000 in prizes will be presented during an awards ceremony tonight at the United Nations.

Winners in six categories are:

Best Newspaper Coverage, Ann Crittenden, et al., New York Times, for "A World to Feed," a 17-part series, awarded $10,000. Also in that category, Honorable Mentions to Richard Harley, Christian Science Monitor, for "outstanding and continuous coverage" of world hunger, awarded $5,000; and Charles Anzalone, Binghampton Sun-Bulletin, for "Hard Times," a series on local poverty in Broome County, New York, awarded $5,000.

Best Photojournalism, Kent Kobersteen, Minneapolis Tribune, for photography accompanying a piece titled "Global Poverty/ The Darkening Future," awarded $10,000.

Best Magazine Coverage, Gary Gunderson (editor) and Tom Peterson (associate editor), SEEDS, for February 1982 issue on women and world hunger, awarded $10,000.

Best Film, Leigh Wharton, Wharton International Films, and Barbara Gordon, producers of the documentary, "Edge of Survival," aired on PBS and WNET/13, awarded $10,000.

Best Television Coverage, Gene Reynolds, producer/writer/director, "Lou Grant," for the episode, "Hunger", awarded $10,000. Also in that category, Honorable Mentions to Bill Elder, reporter/anchorman, WWL-TV News, New Orleans, for "Haiti, See Why They Run," a five-part series on the evening news, awarded $5,000; and Scott Ferguson, producer/writer, WTBS, Turner Broadcasting System, Atlanta, for the documentary "New Dust Bowl Blues," awarded $5,000.

Best Book, co-winners, Frances Moore Lappé, author of "Diet for a Small Planet," revised 1982, awarded $5,000; and Dr. John R. K. Robson, author of "Famine: Its Causes, Effects and Management."

In addition, a Special Achievement Award of $20,000 will be made to establish two Congressional fellowships in memory of the late Harry Chapin, who was a tireless worker for numerous humanitarian causes, particularly those efforts to end world hunger. These fellowships, one in the House of Representatives and the other in the Senate, will focus on issues relevant to the elimination of world hunger.

Established in March, 1982, by the Rogers, the awards program will honor those members of the media who have made the most significant contribution in bringing public attention to the issue of world hunger. Funding for the program and its administration is provided in its entirety by Mr. and Mrs. Rogers and will be an annual event. They have committed to fund the World Hunger Media Awards for the next 10 years with awards totalling $100,000 each year, plus costs. This brings the total expenditure in excess of their initial commitment of $1 million.

The process of choosing the winners began in the spring of 1982 when over 30,000 invitations to enter the awards were mailed to print and electronic media sources around the United States. Work appearing in the United States between July 1, 1981 and June 30, 1982 was eligible. Judging the entries was a panel of five judges, including Marjorie Benton, Chair of Save the Children; Patricia Carbine, publisher of MS. Magazine; James B. Chapin, Chair of World Hunger Year (the New York-based, nonprofit organization which administers the awards program and was founded by the late performer/humanitarian Harry Chapin); Roy Fisher, Dean of the School of Journalism, University of Missouri, and Tarzie Vittachi, Deputy Director of UNICEF.

The ceremony will be attended by Kenny and Marianne Rogers, who will present the program's recipients with awards and their respective checks. The ceremony will be emceed by Hugh Downs, anchorman of the ABC-TV show "20/20" and Chair of the U.S. Committee for UNICEF. A reception will directly follow the awards ceremony.

In describing how he became interested in creating an awards program, Mr. Rogers referred to Harry Chapin as the person responsible for his involvement. "I was tremendously impressed with Harry's unselfishness and his ability to give so much of his time and I wanted to help. I called Harry last year and asked what he would do with a million dollars. He consulted with a number of his colleagues and suggested the creation of an awards program. Marianne and I felt that, although $1 million is a substantial sum of money, it would have little over-all impact in the war against hunger. We were told that it would hardly feed the hungry people of this country for one day, but recent reports found that public education was the major factor in creating the political will in all the world's people to eliminate the problem of world hunger. And the media was the most-effective tool we could find to reach and influence the public. This awards program will provide us with the opportunity to effectively encourage, honor and reward those members of the media, both print and electronic, who contribute substantially each year in informing the public about this critical issue."

WORLD HUNGER YEAR

World Hunger Year is a non-profit organization devoted to the reality that every year is World Hunger Year until hunger is ended.

As used by WHY, "hunger" is the shorthand term for the field of political, economic and social relations, decisions and policies that determine food production, financing and distribution, which result in or effect malnutrition in the United States and throughout the world. WHY explains, publicizes and seeks to effect policy formation and action on all sectors of the hunger field. Its work is guided by the following propositions: (1) Hunger is primarily offensive because it is unnecessary; (2) hunger is a function of political and economic decisions, rather than a chronic, natural disaster; and (3) hunger is a real and present danger to domestic tranquillity and international peace.

Each of us—individually and together—can make a real difference in affecting those decisions and thus bear personal and collective responsibility to act on them as best we can.

World Hunger Year has three distinct, but somewhat developing, program areas: general public information, media education and public policy formation. The most enduring and substantial of WHY's endeavors to educate the public is the publication of its magazine, Food Monitor. To expand its local outreach, WHY has now created chapters in numerous states, which involve themselves

in local, state and national food issues. WHY manages the World Hunger Media Awards in addition to its other activities.

Public policy formation is the third program area of WHY.

"Although the United States is the biggest producer of food in the world, we have no food policy. At best," explains Marty Rogol, director of World Hunger Year, "policy consists of yearly responses to over production on our farmland. At the same time, farm production is up, farmers are more in debt and more people are hungry. To develop such a food policy, WHY is convening scholars, policy analysts, farmers, trade unionists, consumers and food advocacy groups to fashion a consensus on what goals our food and farm policies should have and what obstacles stand in the way."

WHY's funding comes from three major sources: individual contributions, subscriptions to Food Monitor, and foundation grants.

THE SPECIAL ACHIEVEMENT AWARD, 1982 WORLD HUNGER MEDIA AWARDS

Along with the 1982 World Hunger Media Awards honoring members of the media for specific works, Kenny and Marianne Rogers are also presenting a Special Achievement Award to their late friend, Harry Chapin. This award of $20,000 will create two bipartisan fellowships, one in each house of the United States Congress, whose concentration will be on issues relevant to the elimination of world hunger.

In the Senate, the $10,000 fellow will be assigned to Senators Robert Dole (R-Kan.) and Patrick Leahy (D-Ver.); and will work on the problem of surpluses, our inability to control them or to distribute their bounty. The $10,000 fellow in the House of Representatives will be assigned to Congressmen Benjamin Gilman (R-N.Y.) and Thomas Downey (D-N.Y.); and will address the issues of international trade and development of a Select Committee in the House of Representatives on World Hunger.

Harry Chapin is credited by the Rogers as the inspiration for the World Hunger Media Awards and he was, in his own words, "a man of passion and commitment." His dedication to humanitarian causes led him to devote over 100 personal appearances a year to benefit causes. His lobbying in 1978 moved Congress and President Jimmy Carter to form the Presidential Commission on International, Domestic and World Hunger. Carter then appointed Chapin to a seat on this commission. He was also active in fund raising for cancer and muscular dystrophy research, Democratic and Republican candidates who were "good on food and hunger issues" and Ralph Nader's consumer interest groups as well as many other worthy causes.

Harry Chapin died instantly in an automobile accident on July 16, 1981 on the Long Island Expressway. He was scheduled to perform a benefit concert that evening in Hempstead, Long Island. He had recorded and released 11 albums at the time of his death and was working on a 12th, to be titled "The Last Protest Singer." It dealt with his personal heroes, Paul Robeson, Pete Seeger, Phil Ochs, Wolf Biermann and Victor Jarra.

"The problem with the world hunger issue is that too many of us don't know the truth and without the truth, we make dumb decisions," Harry Chapin said. "The genius of America is knowing the truth."

Harry Chapin is survived by his widow, Sandy, and five children. The Harry Chapin Memorial Fund has been established to continue his humanitarian work.●

FAIR PRACTICES IN AUTOMOTIVE PRODUCTS ACT, H.R. 5133

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 7, 1982

● Mr. DINGELL. Mr. Speaker, I am pleased to provide our colleagues with my statement before the House Rules Committee Tuesday on my support of the automobile content bill, H.R. 5133.

With the granting of a rule, it is my hope this bill now can be promptly scheduled for House floor consideration.

Statement follows:

STATEMENT OF HON. JOHN D. DINGELL

Mr. Chairman, I appreciate the opportunity to appear before this committee today in support of a rule for this most important job's protection and enhancement bill, H.R. 5133, the Fair Practices in Automotive Products Act. It will help automobile workers, but it is also a bill that will help many who work for or are looking for jobs with automobile manufacturers, suppliers, and retail dealers located throughout the Nation, as well as others in related industries, such as steel, aluminum, plastics and the like.

On September 21 the bill was reported favorably by a wide margin with an amendment in the form of a substitute. The speaker then referred the bill to the committee on ways and means. That committee was discharged from further consideration of the bill on October 1, 1982 without making any recommendations.

Mr. Chairman, I urge an open rule with one hour debate with the time evenly divided between subcommittee Chairman Florio and the ranking minority member of our committee, Mr. Broyhill. Although I am advised that no waivers regarding the Budget Act are required, if any question is raised, I would request such waivers. While I believe that amendments will be offered, it is a relatively short bill and should not require any special rule provisions. I urge that no specific amendments be recognized or receive special protection in the rule.

This is important legislation for the working people of America—for those who are a part of the motor vehicle industry and for those who are not. Today, unemployment in the U.S. automotive industry exceeds a quarter million workers, and new lay-offs are announced weekly. My State of Michigan, one of the leading automobile and truck producing States, now has an unemployment rate of 17.2 percent.

According to the Labor Department, employment in automobile manufacturing has dropping from 762,400 in December 1978, to just 459,700 in April 1982. In addition, thousands of other workers whose jobs are related to the vehicle manufacturing industry, or who live and work in communities dependent on the vehicle manufacturing industry, have been fired or laid off. Some 800,000 workers in Illinois, Indiana, Michigan, and Ohio have exhausted extended unemployment benefits since January 1980. Many of these workers are a part of the record 10.8 percent national unemployment rate reported last week by the Department of Labor, and others are not even counted in the figures.

The national cost of this devastating unemployment in the automobile industry in terms of lost tax revenues and payment to the unemployed has been estimated at $16 billion for each of the last 2 years—the cost for State and local governments has been enormous as well. The cost of the overall rate of unemployment is equally drastic, since it is estimated that each percentage point rise in the unemployment rate results in a loss of roughly $25 to $30 billion to the U.S. Treasury. As we face a potential deficit in fiscal year 1983 of $200 billion, we must consider this bill and all other means of getting Americans back to work. Until we do that, this deficit will never go away.

H.R. 5133 will put thousands of Americans back to work. It is a fair and balanced response to current problems in the world automobile market. There is no such thing as "Free Trade" today in the automobile industry or, for that matter, in other industries. Germany, France, the U.K., and Italy: All have sharp curbs on Japanese encroachment into their automobile markets. And the Japanese, who flatly prohibited auto imports until the early 1970's, rely now on a system of non-tariff trade barriers to block foreign entry into their market.

The Deputy United States Trade Representative, in a November 10, 1982 report to subcommittee Chairman Gibbons entitled "Japanese Barriers to U.S. Trade and Recent Japanese Government Trade Initiatives," said that the Japanese Ministry of Transportation "has repeatedly turned down a U.S. request to recognize U.S. Manufacturers' self-certification of automobiles to Japanese standards." Yet the U.S. permits, as he points out, "all auto manufacturers to self-certify compliance with U.S. regulations." He also said that despite "a May 1980 commitment" by the Japanese to accept public affirmations of the "dates of manufacture" of U.S. vehicles, which are necessary in Japan to determine which year's regulations tests must be performed on imported cars, the Ministry of Transportation has not yet adopted the necessary implementing procedures.

The only major open market in the world for motor vehicles is the United States, and we have become victims of the Japanese "export economy" . . . A trade philosophy which provides for worker security in Japan . . . and unemployment in the United States.

That's why American labor unions are so supportive of the bill, from the United Auto Workers to the AFL-CIO and steelworkers.

H.R. 5133 simply requires that those who want to sell to the United States market return something to that market in the form of jobs and investment. It does not distinguish foreign manufacturers from domestic manufacturers—it treats them all equally. It does not exclude foreign companies from selling vehicles in the United States, as a quota would do, but allows all companies to sell in the United States on a fair and equal footing. Nor does the bill automatically raise the cost of foreign vehicles in the United States market—as would a tariff.

The bill that was reported to the House by the Committee on Energy and Commerce adopts a carefully considered, administratively workable and a equitable local content requirement. In the 9 days of testimony by over 50 witnesses before the Ways and Means Trade Subcommittee, virtually no criticism was directed at the technical provisions of the bill. It has been carefully craft-

ed, and is much improved over the bill as introduced.

First, the bill has been simplified and is consistent with other legislation relating to the motor vehicle industry. The adoption of the Energy Policy and Conservation Act approach, which is based on U.S. Customs data about imports by each manufacturer, means that the bill will be simple to administer and enforce. The bill works model-year by model-year, so that it takes into account the production schedule of the industry. Moreover, the motor vehicle industry is already familiar with the Energy Policy Conservation Act system, so it can readily adapt its practices to the bill's requirements without the need for complicated and costly accounting systems.

Second, the bill sets a schedule of domestic content requirements which recognize the efficiencies of production in the motor vehicle industry. This bill encourages the production of motor vehicles and parts in the United States—it does not exclude these products from entering the country. In order to achieve this purpose, the bill sets domestic content requirements at a level which can be met by U.S. and foreign manufacturers alike. The "Big Three" U.S. auto companies are today in compliance with the strictest requirement the bill would impose, as are Volkswagen of America, which is producing cars in New Stanton, Pennsylvania, and American Motors Corporation, with both its domestic name-plate cars and its new jointly produced cars with Renault.

The bill allows the manufacturers to take advantage of the efficiencies which come with large-scale production—and does not require them to make inefficient investments just to sell in the United States market. The bill sets no domestic content requirement on manufacturers that sell less than 100,000 vehicles per year—so consumers will continue to have available to them a wide selection of cars available in the world market.

Third, the bill sets fair penalties for violating the law. The penalties provided in the bill "fit the crime". A manufacturer who violates the law is penalized in proportion to the extent of the violation. This provision will also serve to encourage compliance and, unlike the bill as introduced, does not set arbitrary thresholds for dramatic changes in the requirements.

The "local content" requirement which is reflected in H.R. 5133 is a needed and fair response to the invasion of foreign vehicles into the United States marketplace. It is a necessary bill for American workers, and it is a fair bill for American consumers. It will bring jobs and investment into the United States, and it will continue to provide the American consumer with a wide selection at the lowest price.

This bill encourages foreign auto makers to utilize auto parts built in the United States and to build facilities here just as some have already done, like Volkswagen of America and Honda. It does not establish a quota or a trade barrier. It is a fair bill designed to provide more jobs which have been lost in part due to the deep penetration of foreign auto makers into our markets under our free trade policies.●

SENATE—*Wednesday, December 8, 1982*

(Legislative day of Tuesday, November 30, 1982)

The Senate met at 9:15 a.m., on the expiration of the recess, and was called to order by the President pro tempore (Mr. THURMOND).

PRAYER

The Chaplain, the Reverend Richard C. Halverson, D.D., offered the following prayer:

Let us pray.

Father in Heaven, I pray against discouragement. Our Government may not be the most efficient in the world, but it is certainly the best. It fails often, but it has made possible the strongest, richest, greatest Nation in the world and probably in all history. We thank Thee for the vision of our Founding Fathers which conceived this Republic.

In a situation where there is much more to be done than there is time to do it, give to the Senate leadership and Members the grace of discernment, understanding, and patience. Guide them so that everything that should be accomplished will be. Infuse them with a sense of love and unity and singleness of purpose. Dissolve hostility and drain it from minds and hearts. Make your gracious presence felt in this Chamber. Direct us, in spite of ourselves if necessary, in Thy way. Let truth and justice prevail for the sake of the common good and the glory of God. In the name of the Lord of Life and the Prince of Peace we pray. Amen.

RECOGNITION OF THE MAJORITY LEADER

The PRESIDENT pro tempore. The majority leader is recognized.

Mr. BAKER. Mr. President, I thank the Chair.

ORDER OF PROCEDURE

Mr. BAKER. Mr. President, there are four special orders today in favor of the speaker, the distinguished Senator from Alaska, the occupant of the chair, and the distinguished Senator from Texas (Mr. TOWER).

(Mrs. HAWKINS assumed the chair.)

ORDER AGGREGATING THE TIME AND PLACING IT UNDER CONTROL OF THE PRESIDENT PRO TEMPORE

Mr. BAKER. Madam President, I ask unanimous consent that the time thus provided be aggregated and placed under the control of the distinguished Senator from South Carolina, the President pro tempore, with the understanding that at the request of the minority leader or his designee half of that time may be allocated to Members of his side.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. I thank the Chair.

Mr. ROBERT C. BYRD. Madam President, will the distinguished majority leader yield?

Mr. BAKER. I yield.

Mr. ROBERT C. BYRD. This being Mr. THURMOND's idea, the four orders coming from the other side of the aisle, I prefer that the time be under the control of the Senator from South Carolina but that he allot half of it to our side and he control that half. There may not be that many on our side who wish time.

Mr. BAKER. I thought I had put it that way.

Let me make sure that it is clear that the request I made and which is now before the Senate is that the time created by these four special orders, which would be an hour, be placed under the control of the Senator from South Carolina (Mr. THURMOND), but with the understanding that at the request of the minority leader or his designee that up to half of that time could be allocated to Members on his side of the aisle if they wish.

Is that satisfactory?

Mr. ROBERT C. BYRD. That is all right.

Mr. BAKER. I so ask unanimous consent.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. I thank the Chair.

Madam President, after the execution of the special orders, there will be a period for the transaction of routine morning business of 10 minutes in length in which Senators may speak for 2 minutes each.

After that, I believe under the ordinary procedure Radio Marti would recur as the pending business. Is that correct?

The PRESIDING OFFICER. The majority leader is correct.

Mr. BAKER. Madam President, as I have announced now for some time, today is nominations day, so either at that point or shortly after we resume consideration of Radio Marti, depending on the wishes of the principals involved in that debate, I will ask the Senate to go into executive session for the purpose of considering nominations.

Once more Senators should be on notice that it is the intention of the leadership on this side to try to work our way through all the nominees on that calendar, notwithstanding that there are many notations on the calendar on this side and I surmise and suspect there are notations on the calendar on the other side.

Members who have a particular interest in that should be present and be prepared if they wish or to assert their rights as they may require.

Madam President, I have no further need for my time under the standing order, and I see no Senator seeking recognition for the purpose of speaking on leader time and, therefore, I am prepared to yield back that time or to assign it to the minority leader if he has need for it.

RECOGNITION OF THE MINORITY LEADER

The PRESIDING OFFICER. The minority leader is recognized.

Mr. ROBERT C. BYRD. Madam President, I have no need for the time so generously offered by the majority leader, so he may yield it back or reserve it.

Mr. BAKER. Let me yield it to the minority leader in the event some Senator wishes to speak, and I do so now.

Mr. ROBERT C. BYRD. I thank the majority leader.

I yield 2 minutes to Senator PROXMIRE.

Mr. PROXMIRE. I thank the minority leader.

ARTISTIC RESPONSE TO THE HOLOCAUST

Mr. PROXMIRE. Madam President, on Sunday, December 5, 1982, the New York Times published a lengthy article called "40 Years After, Artists Still Struggle With the Holocaust." The writer, Michiko Kakutani, examines the tremendous proliferation of art focusing on the Holocaust experience. The depth and range of artistic response to the Holocaust testifies to its jarring impact on our civilization. It was, unquestionably, the major event of this century, shattering our illusions about innocence, challenging our conceptions of good and evil.

Beginning with documentary accounts such as "The Diary of a Young Girl" and memoirs of concentration camp survivors, Holocaust art slowly acquired more fictional elements. Marcel Orphuls' "The Sorrow and the Pity" was the first film masterpiece about World War II, and combined

factual matter with an imaginary representation of the event. Orphuls paved the ground for later cinematic expression dealing with the Holocaust: Resnais' "Night and Fog," Wertmuller's "Seven Beauties," Fassbinder's "The Marriage of Maria Braun."

Literary responses to the Holocaust also underwent this slow evolution, from brutal facts to fact blended with fiction. William Styron's "Sophie's Choice" is an excellent example of this trend. It is written from the point of view of a young man, whose brush with the Holocaust is purely accidental: his love affair with a haunted concentration camp survivor.

There has been an outpouring of Holocaust art in yet a third form: theater. From Arthur Miller's "Incident at Vichy" to Alan Howard's "Good," currently playing on Broadway, dramatists have come to grips with the Holocaust in a variety of ways. Miller's play focuses on a historical event, while Howard's concerns a German professor's surrender to nazism.

Clearly, then, artists have not forgotten the Holocaust. It is still a huge cloud hanging over our civilization, that has inflicted irreparable damage already, and may burst again at any time. Postwar artists have not been content to simply ignore this cloud, but have faced it, and portrayed it, and asked questions about it.

Have we politicians fulfilled our obligation to society in a similar manner? Surely we should make some response to the Holocaust, which still touches on every aspect of our lives. The subject of the Holocaust should not be limited to the artistic sphere; it must be seen in a political context as well.

As legislators, our obligation is to make it impossible for a human horror like the Holocaust to occur again. The very least we can do as a political response to the Holocaust is to make genocide a crime under international law. I call upon the Senate to take a cue from Holocaust artists, and ratify the Genocide Convention without delay.

FIRST, UNDERSTANDING; THEN ACTION

Mr. PROXMIRE. Madam President, Flora Lewis recently wrote an editorial piece for the New York Times entitled "Decoding Nuclear Jargon." In this article she stresses the importance of public understanding of military terms, and calls for speedy diplomatic efforts to reduce the possibility of a "first strike" in a nuclear war.

Lewis points out that military phrases often are barriers separating military experts from the rest of Americans. In order for the American public to compete effectively with the Pentagon in determining defense policy, then, citizens must make certain military terms their own. They must not be confused by strategic concepts that sound more complex than they are.

Lewis believes the difference between "first strike" and "first use" of nuclear arms is unclear to many Americans. A first strike is a surprise nuclear attack designed to destroy the opponent's nuclear arsenal. A first use of nuclear is not quite the same thing. Rather than an offensive military strategy, it is a political term. NATO depends on a threatened first use of nuclear arms to deter Soviet conventional aggression in Western Europe.

The questions facing us today are many and multifold. Should we pursue our current military buildup? Should we enhance our first-strike capacity, or seek a reduction in offensive weapons? Should we change the official NATO policy to one of no first use to reduce the risk of nuclear war?

Of all these issues, Lewis considers the first strike most pressing. Why? If both superpowers develop the capacity to reduce the other to rubble in one blow there will be no such thing as national security. The concept of deterrence, the fragile thread tying mankind to survival, will become an anachronism.

Lewis encorages understanding first, and action second. Everyone must understand what certain military terms mean, and their implications for national defense. Then they should recognize that one term in particular—"first strike"—may spell disaster in the long run. This is why Lewis declares "the most urgent need is to negotiate away fears of a 'first strike.'"

Madam President, I ask unanimous consent that this article in the New York Times be printed in the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DECODING NUCLEAR JARGON

(By Flora Lewis)

PARIS, Nov. 25—President Reagan and First Secretary Andropov have made parallel proclamations of continued interest in arms control, and parallel pledges in effect to continue the arms race. Each was trying simultaneously to appease a frightened world and to satisfy his own military-industrial complex.

It might be considered a fancy game, except that the "bargaining chips" are not symbolic. They are many billions of real dollars' worth of real missiles that can really end life as we know it in the real world.

Now it is time for real people to seize the issue. The notion has been spread that they can only deal with simplicities, and that decision must be left to experts to avoid the grave danger of illusion. This idea has been reinforced by the lush growth of jargon among nuclear strategists.

But it isn't impenetrable. The central reasoning is perverse but simple. The vast nuclear arsenals are supposed to deter war by making it clear that launching an attack will assure not victory but ravage to the aggressor. It is Orwellian to call the MX "Peacekeeper," and we are approaching 1984. The effort must be made to decode the jargon.

Perhaps the major element of confusion in the current debate is the difference between "first use" of nuclear weapons and "first strike," and the meaning of "vulnerability." They have precise definitions.

Of course, we are vulnerable to nuclear attack so long as a single atomic weapon exists. There is no defense, in the sense that an antitank weapon can stop a tank before it reaches its target. The strategic concept of "vulnerability," however, refers to the possibility of losing the certain capacity to hit back, after a "first strike."

"First strike" means a surprise, pre-emptive attack trying to establish tremendous nuclear superiority by wiping out a large proportion of the other side's arsenal so it can no longer offer a credible threat.

Some weapons are more usable for a "first strike" than others. Submarine-based missiles aren't considered to have the necessary accuracy to hit enemy silos. Nor are they "vulnerable" to a "first strike" because it's so hard to pinpoint subs.

Intermediate and long-range land-based missiles are the main culprits. The U.S. believes the big Soviet missiles, and for Europe the SS-20's, could deliver a "first strike." It therefore suspects the Soviets plan one because these arms make up most of their nuclear strength.

The MX might or might not survive, nobody can prove or disprove that. But with its accuracy and 10 warheads per missile, it could be used for a "first strike" against the Soviets.

Rep. Albert Gore has proposed a new bipartisan arms control offer, among other things limiting warheads to one per launcher, which would make a "first strike" incredible for either side. So far, the U.S. insists that the fact that it didn't strike the Soviet Union when it had vast superiority is assurance enough that it never will. Not surprisingly, the Russians prefer to rely on their own arsenal now that they have one.

A "first strike" is one way of starting a nuclear exchange, but not the only one. "No first use" means what it says, that the country making the promise will never be first to use any kind of nuclear weapon on any target even during war.

Leonid Brezhnev proclaimed last spring that this is now Soviet policy. U.S. officials did not take it seriously nor probe for details, since they have seen no change in Soviet deployments or procedures to convince them there is more to the pledge than propaganda.

Some allies and former U.S. officials think that is a mistake and that the question should be pursued.

NATO has always planned "first use." That is the meaning of its "sword and shield" symbol. The thesis is that while the Soviets have more conventional force, they can be deterred from using it by the threat of nuclear reprisal.

At first, in the 1950's, NATO planned "massive retaliation" because the U.S. only had big bombs and the Soviets couldn't match them. That is still French strategy, although the French arsenal is tiny compared to that of the superpowers. The French could never give up their plan of "first use" without giving up their claim to independent defense.

Technology and President Kennedy changed NATO's doctrine from "massive retaliation" to "flexible response," a plan to

use small nuclear weapons if early battles were lost, and threaten to "escalate" to bigger and bigger ones if the attack persisted.

Now, NATO's commander, Gen. Bernard Rogers, advocates a shift to "no early first use" by acquiring high technology conventional weapons, which could strike deep in enemy territory to prevent reinforcements. This would substitute for the plan to use short-range nuclear arms at the front. But it would cost a lot more, and the allies have shown little interest in this alternative to the plan for limited nuclear war in Europe.

There is a dilemma, but MX won't solve it. The first urgent need is to negotiate away fears of a "first strike," which could bring war by panicky miscalculation. The jargon shouldn't mask the fact that it is possible to brake the arms race without contemplating surrender.

THE MX: PRELUDE TO A DANCE TOWARD DEATH?

Mr. PROXMIRE. Madam President, on November 26, Louis René Beres published an article in the New York Times, entitled "Reagan Calls It MX; Actually, It's M-Hex." Beres urges the country to consider the question of the MX carefully, before throwing support behind the President's plan to Dense Pack 100 MX missiles in Wyoming at a cost of $26 billion.

The most fundamental consideration is whether the MX will enhance or endanger national security. The purported objective of building the MX is to preserve our deterrence capacity. But does this rationale stand up to close scrutiny? Consider what is needed for effective deterrence: A survivable second strike force. Many defense experts believe we already possess a strong second strike force, which the MX would do little, if anything, to improve. If the Soviets hold the same view, the only conclusion they can draw is that we are masking our real motive for building the MX: developing our capacity for a preemptive first strike.

This may or may not be the administration's motive. Beres is not arguing that point. He is simply pointing out that it could look that way to the Soviets. And, as we all know, perceptions are a key factor in the U.S.-U.S.S.R. arms race. If the Soviets think we are cultivating a first-strike capability, they will waste no time in meeting this real—or imagined—threat.

Beres thinks that the Soviet reaction to the MX will have significant impact on first, the risk of nuclear war, and second, efforts for arms control. It is very possible that the Soviets will respond to the MX by switching to a computer-controlled alert and launching system. Clearly, this would substantially increase the risk of an accidental nuclear war. What a horrible irony it would be if the human race was destroyed by its technological creations: computers and nuclear weapons. Let us diminish that risk by keeping their reins in human hands.

Second, Beres believes the MX "threatens the entire arms control process." Why? The MX would have a potential snowball effect on the arms race, leading to an avalanche burying both superpowers. Consider this hypothetical, but very possible, chain reaction to the MX. The Soviets build a weapon that matches or counteracts the MX. Then, as Beres observes, "this would generate a search for new, even more destabilizing weapons * * * removing any lingering hopes for arms control." Furthermore, we might eventually try to protect the MX with antiballistic missiles, a costly move that might violate both the Anti-Ballistic Treaty and the Nuclear Non-Proliferation Treaty.

In sum, the MX may create more problems than it solves, problems we cannot even fully comprehend at this point. Besides the enormous financial burden it will place on our strained economy, it may be an invitation to Moscow to join us in a dance toward death.

Madam President, I ask unanimous consent that the Beres article from the New York Times be printed in the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, November 26, 1982]

REAGAN CALLS IT MX; ACTUALLY, IT'S M-HEX

(By Louis René Beres)

In taking up the proposed MX missile basing plan, the Congress should consider not only whether President Reagan's "dense pack" approach is workable but also whether the MX is needed—or even desirable—for national security.

Administration officials argue that America needs the MX to preserve its deterrence capability, which they contend has been weakened by the Soviet Union's (alleged) ability to destroy our land-based intercontinental ballistic missile force.

But to guarantee deterrence, the Administration need only insure that sufficient strategic forces survive a first strike to effectively destroy the Soviet Union. It need not take new, provocative steps to threaten Moscow's retaliatory forces.

The 100 MX missiles, each with 10 warheads and precision targeting, which President Reagan wants to base in superhardened silos in Wyoming, can pose such a threat.

Taken together with the expansion of other American weapons such as the intermediate-range Pershing 2, the MX would undermine our security because it would add nothing to our survivable retaliatory capability while creating the impression that America might be moving toward a first-strike capability. Faced with this prospect, Soviet decision-makers might well be induced to adopt computer-controlled launch-on-warning policies or to fire first during a crisis. Deployment of the MX would thus significantly increase the risk of war, either by miscalculation or as a result of computer error.

President Reagan's proposals to improve the "hot line" and to provide advanced knowledge of each other's test launchings recognize the dangers of accidental war. But these measures are marginal improvements. A decision to cancel the MX would have done as much, or more, to insure stability in a crisis.

Indeed, America's current strategic plans may produce a permanent incentive for the Kremlin to move toward pre-emption. By encouraging a strategic climate in which the Soviet Union continually and increasingly expects imminent attack, America may compel it to consider striking first.

Why then does the Administration want the MX? The answer seems to lie in a revised definition of nuclear deterrence, one that supplants the idea of mutual assured destruction with the search for the capacity to "prevail" during a "protracted nuclear war." The Administration, of course, does not seek such a war, but it does believe that preparedness to fight one is essential to meet its deterrence objectives.

The Administration considers the MX, with its highly destructive and accurate warheads, a central part of its plan to develop the ability to fight a nuclear war. The MX would be able to destroy selected strategic forces and command centers, thus enhancing our capacity to wage war "rationally."

This reasoning is sorely deficient not only because it increases the risk of accidental war but also because it threatens the entire arms-control process. The prospect of a ballistic missile defense is particularly worrisome in this regard. Because the "dense pack" might easily become vulnerable to Soviet technological developments—if it isn't already—the Administration might be forced to move to an anti-ballistic-missile defense more quickly than it contends is now necessary.

Should the Administration pursue this path—even though such a deployment wouldn't work, according to the best available scientific information—Moscow would almost certainly undertake a parallel deployment. This, in turn, would generate a mutual search for new, even more destabilizing weapons, heating up the arms race and removing any lingering hopes for arms control.

In addition, a United States decision to provide a ballistic-missile defense for its MX missiles would require us to sufficiently modify, if not abrogate, the 1972 Anti-Ballistic-Missile Treaty. Since one article of the Nuclear Non-Proliferation Treaty obligation the superpowers to move expeditiously toward arms control and disarmament, prior abrogation of the A.B.M. treaty would be widely and correctly interpreted as a violation of the Nuclear Non-Proliferation Treaty. Thus, our deployment of ballistic missiles not only would increase superpower tensions but also fatally undermine nonproliferation efforts, which President Reagan now considers essential for our security.

Until measures are found to replace deterrence with a saner system of security, America must continue taking steps to insure the long-term survivability of its strategic forces. But it is clear that this goal will not be served by the MX and associated strategic programs. The expanding search for nuclear war fighting capacities will do more to degrade deterrence than to provide safety.

Mr. PROXMIRE. I thank the minority leader and I yield the floor.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Madam President, I yield the remainder of my time to Mr. THURMOND.

Mr. THURMOND. I thank the Senator very much.

RECOGNITION OF SENATOR THURMOND

The PRESIDING OFFICER. Under the previous order, the Senator from South Carolina is recognized.

TRIBUTES TO DEPARTING SENATORS

SENATOR HARRY F. BYRD, JR.

Mr. THURMOND. Madam President, it is a special privilege for me to pay tribute today to one of our most esteemed colleagues, Senator HARRY F. BYRD, JR., of Virginia, who, after more than 17 years of service in the Senate, is closing out a distinguished political career.

Since I first came to the Senate in 1954, I have had the pleasure of knowing many fine people who have served their States, their country, and the Congress with distinction and honor.

My association with Senator BYRD, and his distinguished father, Senator Harry F. Byrd, Sr., has been a special one, and I consider it a high honor and privilege to have served with men of such stature and integrity.

Madam President, it is only fitting that, in the last days of this Congress, that we pay tribute to a man like Senator BYRD who has served the State and Nation so well. I will always appreciate HARRY BYRD's honesty and friendship, and I will have many fond memories of his service here and of the time we spent together.

The accomplishments of Senator BYRD are too numerous to mention at one standing, but he will always be remembered for his humility, a keen sense of duty to his country, a strong belief in fiscal responsibility, and above all, for his integrity. He is, and always has been, a gentleman in the true sense of the word.

The Senate, and indeed this country, has profited from the service of men like HARRY BYRD and his late father. Their service here has truly been an investment in good government.

William Penn, one of this country's first political thinkers and the man for whom the State of Pennsylvania is named, knew how good government was shaped and molded by men of character and ability. He knew that the people who serve in government ultimately determine the success or failure of nations and republics such as ours, and that, in the final analysis, whether we accomplish great things or merely serve out our terms of office with no purpose or direction.

"Governments," Penn said, "are like clocks; they go from the motions of men. And it is government that depends upon man, not man upon government."

HARRY BYRD's service in this Chamber, and that of his father, stand as an affirmation of Penn's observation. Both men have provided positive leadership in the Congress, and our Government has been their benefactor.

Like his father, HARRY BYRD, JR., has been a vocal opponent of spending policies that have, over the last two decades, slowly eroded the fiscal well-being of this great country.

He was one of the first supporters of statutory restrictions on Government spending, realizing that the Congress had grown incapable of maintaining a balanced Federal budget. He recognized the immense danger of shouldering our children, and the generations that followed, with a staggering national debt.

At the center of HARRY BYRD's service in the Senate was a philosophy that the Government had become too large and unmanageable, and that the enactment of still more laws would not solve the problem.

He has been, like his father, a stalwart guardian of the Federal Treasury—a man who knows the meaning of a dollar and of the pressing need to control the size of a burgeoning and increasingly irresponsible bureaucracy.

Madam President, if I could just quote a passage about Senator BYRD from Congressional Quarterly's book "Politics in America." It reads:

> In an institution where most work is done in committee, BYRD has opted instead for a life on the floor, where he perches at the rear of the Chamber for hours on end, waiting to pounce on a wayward spending proposal or to fight an extension of Federal power into private enterprise.

We should all be lucky enough to merit that kind of remembrance, and, yet, HARRY BYRD gained that reputation not by luck, but through his actions.

As a member of the Senate Armed Services Committee, it has also been my distinct pleasure to serve with Senator BYRD and his father. Their quest for a strong defense, second to none in the world, is worthy of high praise.

In addition, Madam President, HARRY BYRD will be remembered for his attention to constituent services, his gracious attitude toward others, and for his willingness to stand up for the principles in which he believes.

There is no doubt in my mind that if he were alive today, Harry Byrd, Sr., would be very proud indeed of his son's accomplishments.

I know my colleagues join me in wishing Senator BYRD many successes in the years ahead. To his lovely wife Gretchen and his family I want to extend my best wishes. May God bless each of you.

SENATOR SAM I. HAYAKAWA

Madam President, at the conclusion of the 97th Congress Senator SAM I. HAYAKAWA will be leaving this legislative body.

Senator HAYAKAWA came to the Senate after a long and remarkable career in the field of education. SAM HAYAKAWA earned his Ph. D. in 1928, thereafter taught in several major universities, and culminated his academic career by serving with great distinction as president of San Francisco State College from 1968 to 1973. He has also made a name for himself as a columnist and has authored several books on linguistics, an area in which he is an acknowledged expert.

During the past 6 years, Senator HAYAKAWA has served the people of California and the Nation here in the Senate with a devotion that has earned him the respect of all his colleagues. He has been a diligent, knowledgeable Senator and has particularly distinguished himself by his leadership on the Foreign Relations Committee, where he has served as chairman of the East Asian and Pacific Affairs Subcommittee, on the Agriculture Committee, where he has chaired the Forestry Subcommittee, and on the Small Business Committee. In all of his activities, Senator HAYAKAWA has been a pleasure for me and other Senators to work with because of his sincere dedication, understanding, patience and unmatched courtesy.

I shall always think of Senator HAYAKAWA as a friend and remember with pleasure our years together in the Senate. As he leaves these ranks, I wish him and his family good health and prosperity in the years ahead.

SENATOR NICHOLAS BRADY

Madam President, I am pleased today to pay tribute to my colleague, Senator NICHOLAS BRADY, who will be leaving the Senate after serving with us for 8½ months. Although his tenure has been brief, I am sure that his presence and contributions to the Senate will be missed.

Senator BRADY left the business world in which he had achieved remarkable success to come to Washington after being appointed to fill the unexpired term of former Senator Harrison A. Williams, Jr. Because of the unfortunate circumstances surrounding the resignation of his predecessor, and because he accepted the appointment on the basis that he would not be a candidate for the Senate seat in the November election, Senator BRADY faced a unique and difficult challenge. He quickly and effectively showed that he was more than equal to the task, however, and through his hard work and dedication has not allowed himself to be a simple caretaker of the Senate office.

It has been my pleasure to work with Senator BRADY on the Armed Services Committee, and I know he has also been impressive in his work on the Banking, Housing, and Urban

Affairs Committee. His thorough knowledge of the issues, together with his patience, perseverance, and quiet effectiveness have made him a definite asset to the Senate. I am sure the people of New Jersey must be proud of the work he has performed for them during his short tenure here in Washington.

As he leaves this body, I wish him and his lovely wife Katherine good health, happiness, and continued success in the years ahead.

SENATOR HARRISON "JACK" SCHMITT

Madam President, at the conclusion of this Congress, Senator HARRISON "JACK" SCHMITT will be leaving the Senate.

Senator SCHMITT has served his country well as an astronaut and U.S. Senator. In 1972, he flew to the Moon as a member of the Apollo 17 mission. Upon his return to Earth, he first became Assistant Administrator for energy programs of the National Aeronautics and Space Administration, and then was elected by the citizens of New Mexico as a U.S. Senator representing that State.

While Senator SCHMITT served in this body for only 6 years, he distinguished himself as both capable and hardworking. I have had the pleasure of working with him on a number of issues, and found him to be a fine man and an excellent Senator. He has served his Nation and the people of the State of New Mexico well, and his presence will be missed as we continue to face the pressing issues of our time.

In whatever work he pursues in the future, I am sure that JACK SCHMITT will excel, just as he has excelled here in the Senate. Congress will be losing the services of an excellent man and extremely knowledgeable individual, but I am hopeful and confident that our Nation will continue to benefit from his service in other capacities in the days ahead. JACK, we all wish you and your fine family the very best as you depart from the Senate at the end of this Congress.

SENATOR HOWARD W. CANNON

Madam President, Senator HOWARD CANNON will be leaving the U.S. Senate after 24 years of distinguished service, and I am sure that his presence and leadership will be greatly missed.

It has been a privilege and pleasure for me to work with Senator CANNON on numerous issues over the years. As a fellow member of the Armed Services Committee, I have admired his enduring efforts to improve this country's defense posture, as well as his work to enhance living conditions for military personnel.

While chairman of the Commerce Committee, Senator CANNON presided over the enactment of an exceptional array of aviation, trucking, railroad, maritime, communications, and consumer legislation.

For almost a quarter of a century, Senator CANNON rose to meet the many challenges that came before this Chamber. Through his capable and dedicated efforts, he has earned the respect and admiration of the Members of this body and of the citizens of the State of Nevada.

Senator CANNON has served our country well, and I wish him and his lovely wife Dorothy good luck and good health in the years to come.

SENATOR HARRY F. BYRD, JR.

Mr. BAKER. Madam President, I want to take a moment at this time to reflect on a remarkable and legendary man, Senator HARRY F. BYRD, JR. of Virginia. Senator BYRD is leaving the Senate at the end of this session after 18 years of service to Virginia and the Nation. He will be sorely missed.

Senator BYRD has long symbolized the tradition and dedication which the Byrd name has been synonomous with in Virginia for decades. He has been a distinguished colleague, a valued adviser, and above all, a good friend.

Thomas Jefferson once said, "When a man assumes a public trust, he should consider himself as public property." HARRY BYRD has been such a public servant, and I know that I speak on behalf of all my colleagues when I say that his statesmanship and resolve will long be exhibited as a standard for Democrats, Republicans, and Independents alike.

HARRY FLOOD BYRD

Mr. ROBERT C. BYRD. Madam President, a friend and colleague from my neighboring State of Virginia, HARRY F. BYRD, is retiring after three terms in the Senate.

He has had a career truly unique in American politics, continuing a long and proud family tradition of public service at the highest levels.

He has been a friend of the taxpayer, a defender of States' rights, a vigilant and studious supporter of a strong national defense, and an unbending advocate of political freedom for those not as fortunate as we to live in a democracy.

I know his decision to retire was a difficult one. He must and should be proud that his career-long efforts to focus the debate more critically on economy in government has indeed become part of our everyday debate.

I know the people of Virginia, whom he has so conscientiously served, will miss him, as I and my Democratic colleagues will.

I hope the future holds all the best for him in the years ahead.

Mr. GORTON. Madam President, I thank the distinguished President pro tempore for yielding to me for just 1 or 2 moments.

I have no prepared remarks this morning to read as a tribute to our five retiring colleagues. I do, however, have a strong desire to say something briefly about what they have meant to me during the course of my first 2 years as a Member of this body.

Perhaps the great personal feature of our time here together in the U.S. Senate is the way in which it so quickly metamorphoses colleagues into close personal friends. We spend so much time here together and we spend that time under such intense pressures that, for better or worse, our true characters cannot be hidden from those with whom we serve.

In the case of four of our colleagues who are retiring this year, I have had the pleasure and the honor of serving only during a short portion of their time here.

SENATOR HOWARD W. CANNON

Even so, I have had the honor of serving with Senator CANNON from Nevada on the Committee on Commerce. The profound changes, the greater freedom, the deregulation of so many of the businesses of the United States, with some dislocation, but with great impact on the efficiency and effectiveness of the management of our economic system, is, very largely, due to the hard work and to the dedication of HOWARD CANNON, both as a member of the Commerce Committee and as its chairman. He will leave behind him a tribute of an institutional change in the areas over which he had so much jurisdiction and so much influence which will last not just for years but for decades after his retirement. That dedication and that persistence has been used to serve well not only the people of Nevada but of the United States.

SENATOR HARRY F. BYRD, JR.

To have served here during the last 2 years of the long and distinguished career of the senior Senator from Virginia has been a special pleasure to me. While I do not serve on any committees with him, his courtliness and his friendship have been without any parallel. I have learned the true meaning of the phrase "southern gentleman" from Senator BYRD in his helpfulness and his deference to his colleagues. His willingness always to defer to them or to help them out is something which I greatly appreciate.

SENATOR S. I. (SAM) HAYAKAWA

The Senator from California, of course, is a man of great wit, or puckish good humor, who has raised the level of the use of language in this body considerably because of his presence here and by raising the level of that language, has raised the quality and the precision of debate over many, many issues, not only those in which he has had a particular interest. We will especially miss him from here.

SENATOR HARRISON "JACK" SCHMITT

I note the presence on the floor this morning of my friend, the Senator from New Mexico, Mr. SCHMITT, with whom I also serve on one committee.

In my 2 years here I have not met anyone who was more knowledgeable about so many subjects and who was tougher in the use of that knowledge.

I must say that he is difficult to persuade to a particular point of view, but, when persuaded, one could not possibly have a stronger nor more faithful ally.

He, of course, brought to this place a special knowledge and a special background which was of great value to me during the course of these last 2 years, during which time I have come to value his friendship so greatly. I will particularly miss his presence in this Chamber, which I hope may not be permanent, but will last for a short period of time, at least.

SENATOR NICHOLAS F. BRADY

Of course, as I said, in the case of each of these four Senators, I have served as their colleague only during a minority of their service here.

Senator BRADY, I say to the Presiding Officer (Mrs. HAWKINS), is the individual here, who, in one sense, caused both her and myself no longer to be freshmen or to be the most junior Members of this body.

He does hold a special place in our hearts.

He came here by appointment rather than by election. He is, by nature, relatively quiet and diffident, although with what we have all discovered to be a marvelous sense of humor. Under those circumstances, he learned his duties as a U.S. Senator with extraordinary rapidity. A combination of his background, of his character, and his diligence led him to a degree of influence over his colleagues all out of proportion to the number of months he has served here with us. In fact, I think he can leave here with the feeling that he had a significant impact on both the course and the outcome of debates over economics, over budgetary policy, during the year 1982—so much influence that he and his presence will not only be missed in the future as a Member but will be greatly desired as a visitor by all of his colleagues.

The counsel and advice which he has given us during 1982 will be equally applicable in 1983 and future years. But most especially, I want to express my gratitude for his friendship which has been one of the great pleasures and great privileges of this last year to me, also a relatively junior Senator.

The Senator from New Jersey is a wonderful man of high character and a close personal friend. For all of those characteristics I wish to pay tribute and to express my thanks.

Mr. HELMS. Madam President, as I look down the list of Senators who will not be with us except in spirit after the conclusion of this session, I have the same sadness expressed by others. To me, there are very special vignettes relating to each of these fine, able Americans.

SENATOR S. I. HAYAKAWA

Senator HAYAKAWA, for example, has been an inspiration to me in so many ways. We serve together on the Senate Committee on Agriculture, Nutrition, and Forestry, and on the Foreign Relations Committee as well. Senator HAYAKAWA is probably about the most unique gentleman I have ever known.

I remember my first acquaintance with SAM HAYAKAWA. It was a nodding acquaintance. I watched him on television when he told off those rioting students out in California and I nodded. Senator HAYAKAWA has brought a higher level of intellectualism to the Senate. He has always, without fail, been a man of civility and genuineness and cheerfulness. I shall miss SAM; all of us will.

Then there is JACK SCHMITT, one of the more remarkable young men I have known. I recall so vividly the first time I met Senator SCHMITT. He was not then a Senator; he was an American whom all the people of this land honored and respected. They still do. He had just returned from that Moon trip and he and his fellow travelers, if I may put it that way, came by my office and I was impressed with that young man and his knowledge of government and his dedication to American principles. I recall saying to him, "Why don't you run for the Senate?"

SENATOR HOWARD CANNON

As to HOWARD CANNON, I had the privilege for a couple of years of serving with him on the Committee on Armed Services—again, a man of great civility and knowledge. He made an immense contribution to his country. I watched him operate in the Senate and I have learned from him since the day I became a Senator almost 10 years ago.

SENATOR NICHOLAS F. BRADY

NICK BRADY—what a profound influence he has had on the Senate considering the very short time he has been here. This is a man with knowledge of economics based on the principles of this country. I recall, Madam President, an occasion in the policy luncheon of our party when a matter of immense importance was about to come up in the Senate. It was Senator BRADY who brought a sense of perspective to that issue that had eluded the group up until that time.

Each of these four gentleman, each of these four friends, will be missed by us. It is always an emotional experience to say farewell. Fortunately, we do not have to do that, because I have an idea that we shall be seeing SAM HAYAKAWA, JACK SCHMITT, HOWARD CANNON, and NICK BRADY frequently. Certainly, that is my hope. Mrs. HELMS and I extend our deep affection and best wishes to each of them.

SENATOR HARRY F. BYRD, JR.

Madam President, let me address myself at somewhat more length to the fifth Senator who will not be with us come January. I recall that day, months ago, that HARRY FLOOD BYRD, JR., announced that he would not seek reelection to the Senate. Since that time, I have tried to banish from my mind any thought of the U.S. Senate without a HARRY F. BYRD in it. It is a thought that I do not like.

Three decades ago, Madam President, I came to work in Washington for the first time. I did not want to come, but I had been asked to come by the then junior Senator from North Carolina, a great American named Willis Smith, to serve as his administrative assistant.

I recall stating my reluctance to Senator Smith at leaving my home in Raleigh and, as it turned out, my family, because I did not plan to move them here. Dot and I had two little girls at the time. Being a country boy from North Carolina, I did not know what to expect in terms of bringing a young wife and young children to Washington. But Mr. Willis Smith was my friend and I wanted to be helpful to him if I could.

I recall his telling me that it would be good experience for me. "You will meet some great Americans," he said. Then he began to call the roll of some of the giants in the Senate of that day. He began with Harry Byrd, Sr., and added such names as Walter George, Dick Russell, Robert Taft—down the list he went.

Then I recall Mr. Smith saying, "Who knows, you may decide to be a Senator yourself some day." I laughed at that, because I had not the slightest intention or desire to do anything of the sort. But I came to Washington because a man whom I greatly admired insisted that he wanted and needed what little help I could give him.

As it turned out, Madam President, I did get to know the Senators whom Willis Smith had mentioned and whom he admired so greatly. In particular, Harry Byrd, Sr., was always thoughtful to me, always willing to teach me, spend a little time talking about affairs of the Senate, and as one's mind flies backward in time, one appreciates things of that sort.

I recall Alben Barkley, who sat in the chair where the able Senator from Florida is now sitting. He took time with a young fellow from North Carolina.

When I left here in 1953, I never dreamed that I would be a Member of the U.S. Senate and that I would be serving here with HARRY FLOOD BYRD, JR. But on that day, January 3, 1973, when I first walked into this Chamber as a Senator, I made two very special friends—HARRY BYRD and that great

American from Alabama, Jim Allen. They took me under their wings, and how many were the times that we worked together on issues of importance to us and to the Nation.

These two great Senators, HARRY BYRD and Jim Allen, were a constant source of inspiration and encouragement to me. I have never known men of greater character and dedication and I do not overstate the case, Madam President, when I say that my life has been blessed by the friendship of both of them.

As we all know, the Senate bade farewell to Jim Allen a few years ago. Never a day passes that I do not mourn his loss. Sometimes I think I can see him standing over there taking positions, often tough positions, difficult positions, on issues. I think you can understand, Madam President, why I have tried not to think of the retirement of the able and distinguished Senator from Virginia, Mr. HARRY FLOOD BYRD, JR., because this is the second great loss to me personally. This place will not be the same without HARRY BYRD, but as he goes he leaves his imprimatur on all that is good and honest and decent about our system of government. As he goes, let him be aware that his fellow Senators, all of us who have served with him, know that he has upheld the highest principles of the U.S. Senate; he has done so unfailingly and courageously.

I will leave unspoken the remainder of what is in my heart on this occasion, because I have a hunch that HARRY BYRD may be a little bit embarrassed by the accolades; he is that kind of man. But let me say to him that I shall always be grateful for all that he has meant to me personally and for all that he has meant to America, and I shall always be grateful to the people of Virigina for sending to the U.S. Senate over a period of a half century two HARRY BYRDS, father and son, Virginia statesmen and Virginia gentlemen.

Madam President, my wife, Dorothy, and I extend our affectionate best wishes to HARRY and Gretchen and, like so many others across this Nation and around the world, I hope it is not too corny to say that one of my favorite songs is "I'm Just Wild About Harry."

SENATOR HARRY F. BYRD, JR.

Mr. WARNER. Madam President, I rise today to join my colleagues in paying tribute to the senior Senator from Virginia, HARRY F. BYRD, JR.

It has been one of the greatest honors of my career to have served as Senator BYRD's colleague.

I will miss his strong voice and consistent vote for individual freedom and sound fiscal policy. He has served the Commonwealth of Virginia with dignity, distinction, and grace.

All of his colleagues will miss the Senator's true Virginia gentlemanliness when he steps down at the end of the 97th Congress from a great career of public service.

Senator BYRD has contributed mightily to our Nation and to our fellow citizens, standing fast to his principles and accountable for his beliefs.

From my first day as a Senator, Senator BYRD accepted me as a full partner. Our relationship of trust and respect has always enabled us to place Virginians' interests above partisan politics.

That was and is the famous BYRD tradition about which all Americans have heard and read so much. Senator BYRD is a man who is respected by citizens at all stations of our society, from the President down to the average citizen on the main streets of communities throughout Virginia.

The other evening, in Richmond, a group of Senator BYRD's friends met at the John Marshall Hotel to salute him and his distinguished career of public service.

Vice President BUSH, Supreme Court Justice Lewis Powell, Secretary of the Army Marsh, Virginia Governor Charles Robb, former Virginia Governor Albertis Harrison, Douglas Fairbanks, and I were there to express our thanks to Senator BYRD.

In addition to the comments of the many speakers at that program, several letters and statements of greeting were sent to HARRY BYRD. I ask unanimous consent that they be included in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

COLLEAGUES, FELLOW VIRGINIANS PRAISE BYRD'S SERVICE

The Hon. MILLS E. GODWIN, Jr. and J. SMITH FEREBEE—

It is our special privilege to welcome all of you to this testimonial dinner in honor of our retiring United States Senator Harry F. Byrd, Jr. There is no greater tribute from Virginians, as well as other Americans, than your presence here tonight.

Our honoree has devoted 35 years of his life to public service—the first 18 years in the Senate of Virginia and the last 17 in the Senate of the United States. We are gathered here to pay homage to his long record of devotion to the Commonwealth he loves so dearly and to his country for which he has fought courageously and tirelessly.

There are many different reasons why we have chosen to honor the Senator and his lovely wife Gretchen. Many of us are personal friends, others are political allies, still others have even been adversaries. Nevertheless, we all share a mutual respect and trust for this gentleman from Virginia who more than any other living man has become the symbol of his state's integrity and her history of individual freedom from governmental tyranny, which was the very basis for the founding of these United States.

We are grateful for your presence, for it bespeaks your abiding interest in carrying on Virginia's great traditions.

The Hon. RONALD REAGAN—

DEAR HARRY: I am delighted to send warmest greetings as your many friends and colleagues honor you.

For years you have brought tremendous energy and talent to American political life as a member of the Virginia Senate and the United States Senate. I am proud to extend my best wishes and appreciate the opportunity to celebrate a career that has reflected the highest degree of dedication and achievement.

This special gathering recognizes all that you have done for your fellow man, your State, and the nation.

Congratulations on this richly-deserved tribute and all my best for the future.

Sen. DAVID L. BOREN—

Mr. President, recently our colleague Harry F. Byrd, Jr. announced that he would not seek re-election to a fourth term.

The retirement of Harry Byrd will be a great loss to the Senate and to the country. In an age in which self-gratification has too often been a major motivation, Harry Byrd has truly sought to serve and to give of himself. I have never known a person in public life who was less selfserving and more sincerely patriotic than Harry Byrd, Jr.

In an age in which pragmatic relativism is the rule, Harry Byrd is a man of unyielding principle. His integrity is universally respected by political friends and foes alike.

Throughout his career in the Senate he has warned of the dangers associated with excessive government spending. He understood far earlier than most that even the U.S. government could face a liquidity crisis. With interest payments on the national debt running as high as $100 billion per year and government borrowing bidding up interest rates to levels that bankrupt small farmers and businessmen, all of us would do well to listen more carefully to the warnings sounded by Senator Byrd of Virginia. It is tragic that they were not heeded earlier.

Harry Byrd, Jr. deserves to be known as a gentleman as well as a statesman. How much better our country would be if more people practiced his unfailing courtesy and his demonstrated respect for each person with whom he has contact. His career is proof that a decent and good person who refuses to sacrifice either his principles or his humanity can succeed in government and public life.

I am grateful that I have had the chance to come to know Harry Byrd, Jr. and to serve with him in the U.S. Senate. His character and high standards are a challenge to me to do my best to be a good public servant. Those who come to the Senate after his retirement will miss the very rewarding experience of serving with him.

There have been many outstanding men and women in the lines of the Byrd family extending back to the earliest colonial days of Virginia. None has had a clearer sense of public duty or a more unselfish desire to serve than Harry Byrd, Jr.

Sen. ROBERT DOLE—

Mr. President, this is a chamber familiar with history, an institution graced for nearly two centuries by men and women with their country's best interest close to their hearts. Few names on the Senate's long rollcall have earned more luster than Byrd. And few among us have reflected as much credit upon the state of our births as Harry F. Byrd, Jr.

He comes from the Old Dominion of Virginia—a state that has nourished American leadership from the beginning of the repub-

lic. He comes from a family whose years of service to Virginians have created a legend all their own. But Harry Byrd, Jr. has never been content merely to carry on traditions. He has made history of his own. He has written a very personal chapter in the story of this body.

He leaves at a time when his own concerns—the concerns of Virginians for fiscal responsibility and a strong national defense—are national priorities. He leaves at a time when his personal message of conservative government—a message that spanned both major parties in his state—is now accepted as national policy. He leaves knowing that the scale of history has once more come down on Virginia's side. He leaves triumphant.

Sen. WILLIAM L. ARMSTRONG—

. . . For years Harry Byrd has been warning all who would listen, and many who would not, of the dangers and folly in excessive federal spending and unmanageable deficits. We now know all too well how right he has been.

Virginia, which supplied us with Washington, Jefferson and Madison, is accustomed to sending great leaders to Washington. Harry Flood Byrd, Jr. has carried on the proud Virginia tradition. His successor will have very large shoes to fill.

Sen. JOHN W. WARNER—

. . . I will miss your strong voice and consistent vote for individual freedom and sound fiscal policy. You have served the Commonwealth of Virginia with dignity, distinction and grace.

You have contributed mightily to our nation and to our fellow citizens, standing fast to your principles and accountable for your beliefs.

From my first day as a Senator, you accepted me as a full partner. Our relationship of trust and respect has always enabled us to place Virginians' interests above partisan politics . . .

Mr. WARNER. In the program from this salute was a biographical sketch of the distinguished senior Senator. I ask unanimous consent that it be included in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The material follows:

HARRY F. BYRD, JR.: "A CONSERVATIVE CONSERVES"

Harry F. Byrd, Jr., born December 20, 1914, spent his boyhood in the rolling apple country around Winchester. Growing up, he often spent afternoons at the family's Winchester Star and summers in the orchards.

One of the memorable periods of his life began when he was 11. For four years he lived next to the state Capitol while his father was governor. He liked to stay in the shadow of George Washington—literally—for he would climb the hidden stairs inside Crawford's mammoth monument of the general and peer down unseen on the tourists.

He recalls the evening when a guest at the Governor's Mansion requested mustard for his ham at dinner. Finding that the kitchen had none, young Byrd's mother interrupted his dinner to send him to the grocery for a jar.

The guest, then relatively little known, was Winston Churchill.

He also fondly remembers the night in the mansion when his grandmother, father and he talked by radio with his renowned explorer uncle, Admiral Richard E. Byrd, at the South Pole. Governor Byrd expressed wonder to his brother over radio communication; his mother, Mrs. Richard Evelyn Byrd, warned her faraway son to be careful; and young Byrd asked his uncle to bring him back "a few polar bears."

Harry F. Byrd, Jr., at 16 entered Virginia Military Institute and as a cadet forged friendships that would grow throughout his career. He later tranferred to the University of Virginia, where he majored in government.

Even then, he was keenly interested in newspapers, and he has been known to subscribe to—and scan in a day—more than 40. One day in class a professor called on him, but he didn't get the question fully because he had been immersed in The New York Times.

His father, publisher of the Winchester Star and Harrisonburg Daily News-Record, received a letter from young Harry, criticizing the Star's makeup. He replied quickly, "If you don't like the way I'm running the paper, why don't you come home and do it?" Young Byrd did.

The new publisher of the two newspapers became well known throughout the nation in a few years. He became first vice-president of The Associated Press, winning office in the world's largest news organization by a record number of votes from his fellow publishers. As an editor, he was cited by the Freedoms Foundation for foreign correspondence in Iron Curtain countries and for interviews with several heads of state, among them Marshal Tito, General Franco and Sir Winston Churchill. Later he reported the takeover of Cuba by Fidel Castro.

During World War II, young Byrd's newspaper career was interrupted when he entered the Navy. Rising to lieutenant commander, he served as executive officer of a patrol bombing squadron in the Central and Western Pacific.

Returning home, he took charge of the newspapers and worked with the apple business again but soon he had added duties—he was elected to the State Senate in 1947 and remained there without opposition for 18 years.

A highlight of the Byrd State Senate career was his service for four years as chairman of Virginia's economic development program, which played a major role in helping to create 130,000 jobs. New industry, he emphasized all over the state, means "new jobs. New jobs will keep our young men and women in our state."

In November 1965 Governor Albertis Harrison appointed him to succeed his father, who had resigned from the U.S. Senate.

The following fall, Byrd was elected to the U.S. Senate as a Democrat. In 1970 and again in 1976, he was re-elected as an Independent. He is the only person in American history to have won election to the Senate twice as an Independent, and in the 1976 election he received the largest vote ever given a Virginia candidate for any office.

How has he functioned as an Independent in the often partisan environment of the Senate? The evidence of his record shows he has achieved remarkable success in working with members of both parties.

Early in his Senate career he began taking an active and successful role in floor proceedings and debate. Indeed, one national newsmagazine quipped that the Senate had its work cut out for it if it was going to "keep Byrd in hand."

Although amending legislation on the Senate floor is regarded as one of the most difficult ways to win approval of a proposal, Byrd has been successful with 62 out of 95 amendments he has offered—65 percent of the total.

Rarely has he missed the calling of the roll. He has cast more than 7,600 votes over the years, taking part in 96 percent of all recorded votes.

He is a senior member of the Armed Services Committee, serving as ranking member of the Subcommittee on Seapower. On behalf of the committee, he has made fact-finding trips and reported to the Senate on the situations in the Middle East, Europe, Latin America and North Africa.

He also is active on the Finance Committee, which has primary authority for all legislation dealing with taxes, trade and Social Security. He is the ranking member of the Subcommittee on Taxation and Debt Management. Many proposals from the Finance Committee have borne the evidence of his handiwork.

Over the years he has channeled much of his energy into efforts to get federal spending under control. Many of his successful amendments were cutbacks in such programs as foreign aid, and in 1978 he startled veteran observers of the Congress by winning overwhelming approval of a law—still on the books—requiring balanced budgets beginning in 1981.

Unfortunately, as the Senator himself put it recently, "Congress simply refuses to obey its own law."

He now believes only a constitutional amendment can bring about balanced federal budgets.

He is a sponsor of such an amendment, and this year it was passed by the Senate, only to be defeated later in the House of Representatives.

What is the philosophy which has impelled him to these efforts?

In his own words: "I have tried to express and vote my strong conviction that the federal government must cease living beyond its means, that excess federal spending is eroding the purchasing power of our hard-working men and women and mortgaging the future of our young people—and that too much centralization of power in Washington threatens individual freedom."

This philosophy is usually described as "conservative," and Senator Byrd gladly accepts the description. Often he has pointed out that the word "conservative" comes from the same root as the word "conservation."

"That is the key point," he says. "That is what I have worked for: conservation of fundamental principles, of natural resources, of human liberty and of the taxpayer's hard-earned dollar.

Even though huge federal deficits are projected for the next few years, the Senator is optimistic that the conservative philosophy ultimately will prevail.

Once more his own words: "Trusting as I do in the collective judgment of the American people, I feel the people will lead the politicians—not the other way around—to the philosophy that has guided Virginia from Thomas Jefferson's day to our own and has been the beacon I have followed throughout my career."

Mr. WARNER. Many Virginia newspapers and many nationally recognized newspapers recently have written editorials bidding farewell to Senator BYRD. I ask that these editorials be included in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The material follows:

EDITORS BID FAREWELL TO SENATOR BYRD

[From the Richmond Times-Dispatch]

This is a profoundly distressing development. Sen. Byrd has been one of the most constructive and conscientious legislators in Washington, an often lonely but always fervent crusader against the evils of big and extravagant government. He correctly recognizes governmental excesses, both in the exercise of power and in the expenditure of public funds, as major causes of the nation's social and economic problems; and he has devoted most of his energies to efforts to check the statist trends that have been in progress for the past five decades. With his departure, the cause of responsible government will lose one of its most ardent exponents.

All this is said not to apotheosize Harry Byrd but to state the simple truth that men like him are rare in public life. His senatorial career has been based upon an unshakable foundation of principles drawn from the Jeffersonian philosophy of limited government, and he never wavered in the winds of political expediency. Throughout his career, he has remained true to his convictions and true to the promises that he has made to the people of Virginia.

[From the (Lynchburg, Va.) News]

In the past 18 years, those who stood against the collectivist tide have stood all but alone. And because they stood against that tide, they have not made marks for themselves in the form of memorable legislation. Their warnings, their advice, their proposals have been ignored. It is ironically fitting that the landmark legislation of Sen. Byrd's time, much of which he warned against and voted against, stands today as irrefutable proof of his warnings and monuments to the tunnel vision of their makers.

His was always the quiet voice, although it could on occasion rise and strengthen with indignation. He always conducted himself in the highest traditions of a gentleman from Virginia. He minded the public's business and his own with equal care and consideration. In all aspects of his personal and political life he represented us superbly. We don't see many like him in a lifetime; if we did, it would be a considerably better life.

[From the (Fredericksburg, Va.) Free Lance-Star]

This week's decision by Sen. Harry F. Byrd, Jr. to retire from his term when it expires in 1983 caught the political pundits by surprise. That, in itself, seemed oddly appropriate for a man who remained something of a mystery to his constituents despite 15 years as a U.S. senator.

Harry F. Byrd, Jr. carried on his father's reputation for political integrity and devotion to government frugality. That tradition of integrity was particularly welcome during the days of Watergate, when moral standards elsewhere were so noticeably low. The Byrds' attention to fiscal conservatism has become the new political rage of the 1980s.

Again like his father, Sen. Byrd showed a refreshing devotion to principle.

[From the Staunton Leader]

The causes of fiscal restraint, a strong national defense and rational foreign policy will suffer when one of their greatest advocates, U.S. Sen. Harry Flood Byrd, Jr., retires in 1983.

Virginians owe a debt of gratitude to this selfless public servant, the likes of whom are too seldom seen in public life today. A wealthy orchardist and newspaper publisher, Byrd could have led an easier life than that of a U.S. Senator and guardian of conservative public policy. He has given tirelessly of his time, talent and ability to Virginia and the nation since 1947 when he first won a seat in the state Senate.

Although we are selfishly distressed for the state and nation that Harry Byrd has decided to end his distinguished legislative career, he has certainly earned the right to do so. He can hardly be blamed for wanting to spend more time with his wife, two sons, daughter and nine grandchildren after 18 years of what Mrs. Byrd so aptly describes as the "terrible hours in Washington."

[From the Washington Post]

Somewhere it is written in the cherished traditions that a Byrd in Virginia is worth two in any of the 12 other colonies—and so it is little wonder that there are serious people who refuse to believe that Harry Flood Byrd, Jr. is really calling it quits.

They're probably the same people who doubted seriously that "Little Harry" would ever begin to measure up to his father, and who thought Harry the Younger would be merely a seat-warmer for an unexpired term that his father left him after 38 senatorial years. That, of course, was 18 years ago—and if the Byrd "machine" did rust away in that time, the senator's political grasp on constituents showed little loss of strength. When party labels got fuzzy in Virginia, Sen. Byrd came up with the recipe for having your political cake and eating it too: he left the Democratic party, became an "independent," voted with the Democrats to organize the Senate and protect his seniority and then voted almost without exception with the GOP.

Couple this with a low-to-invisible legislative profile—marked by an incredibly consistent lack of interest in ever becoming the author of any significant legislation—and you have the model Virginian in the halls of the federal legislature, never over-promising and, most importantly, never embarrassing the state.

As dean of the School of Limited Government, in which single-minded fiscal tightness turned out to be the secret of political longevity, Sen. Byrd has persevered with dignity, a strong sense of personal honor and a fierce pride in his state. That is why in his retirement he will continue to be a source of political counsel, and to enjoy the respect even of those who—agree with him or not—respect his dedication, integrity and good old political savvy.

[From the Richmond News Leader]

To those of us who chart the trajectory of the zeitgeist, Harry Flood Byrd, Jr., has stood as an admirable reminder of that time—not long ago—when men commonly lived by principle. Does that mean he has been a reactionary? It does not. It means, rather, that he has been consistent and correct.

He has steered a non-partisan course, and one resolutely non-ideological. He has done it while suffering the distinctive loneliness of the dissenting spirit, and with the knowledge that there are few rewards for prevailing in the cause of moderation.

Few rewards, that is, except in continuing the institution begun by his father, and in becoming a pillar of that institution himself—and winning, in the process, the abiding esteem of his grateful countrymen.

[From the Hearst Newspapers]

Senator Byrd does not read the compass precisely as President Reagan does. The Senator would defer the income tax decrease in its third year, a position with which the President disagrees. And while the president is talking about increased defense expenditures, Harry Byrd thinks we should slow down in that sector.

Basically, however, Harry Byrd and Ronald Reagan are fiscal blood brothers. They plot the same course, albeit by different routes. Each in his own way would cut spending, cut taxes, and steer the Ship of State toward a balanced budget. As Kingsbury Smith (National Editor of the Hearst Newspapers) reported:

"I am, and have been, a strong supporter of President Reagan (Byrd said). I think he is making an effort to take the country in the correct direction."

Then he went on to disagree about Pentagon expenditures, and the third year of tax reductions, but in the long run these are minor considerations compared with the importance of "staying the course" of cutting costs and getting the government off the people's backs. President Reagan is losing a loyal and wise ally in the Senate, but gaining one in the private sector.

[From the Richmond News Leader]

THANKS, AND GODSPEED

On today's page we reprint Senator Harry F. Byrd, Jr.'s farewell newsletter. His departure from the Senate next month will end five decades of Byrd representation in the upper house. During his 18 years there, he has been an exemplar—perhaps the most responsibly conservative Washington advocate for the nation's most responsibly conservative state. We have supported him in all his statewide campaigns, as we supported his father before him.

We shall miss his twinkly, silver-haired, arm-pumping, apple-cheeked aplomb. More than that, we shall miss his consistent advocacy, and consistent articulation, of the correct positions on a constellation of issues. His abiding concerns have remained defense and the economy—the two central issues facing every government. In addition:

He authored the measure permitting the importation of Rhodesian chrome. He authored the 1978 measure that Congress approved (but has violated) requiring a balanced federal budget. He won designation of 80,000 acres of Shenandoah National Park as a wilderness area, and the restoration of full citizenship for General Robert E. Lee. He has opposed compulsory busing and certain provisions of the Voting Rights Act. He has proposed legislation to require the reconfirmation of federal judges, he has advocated limiting Senators to three terms and Presidents to one. He has toiled for nuclear carriers and for tax incentives for plant expansion. He stood down a President on appointments to the federal bench.

An unabashed conservative, he believes "the American people want conservative government." And he has fought for it, hard. He has tirelessly championed the interests of "middle America, the broad crosssection of Americana, the people who work and to whom the government must look for taxes . . . the forgotten men and women." His father called them "the people who bear the burdens of government but enjoy few of its blessings," people without a lobbyist in Washington, and without a loophole.

These are times of fanatical mediocrity—of ideological "imperatives" and fashionable

indictments. In opposition to them, Senator Byrd has offered unambiguous arguments and real-world facts. Time and again he has exposed the poverty of egalitarian thought—standing at the post of honor, and keeping his head while so many around him have been losing theirs. He has represented Virginia capably and courageously in the Senate. He has admirably represented as well a family that, for centuries, has served Virginia with distinction.

His detractors—within his party, and without—have dismissed him as a relic, a fuddy-duddy, an anachronism. He has deftly turned aside their carpings, saying, "If I took everything personally, I'd have been out of this business a long time ago." And they haven't known what to do about him, particularly since 1976 when he became the first independent in modern times to win Senate re-election.

Through it all he has called unperturbed—believing, in the words of one of his Senate contemporaries:

"I do not undertake to promote welfare, for I propose to extend freedom. My aim . . . is not to inaugurate new programs, but to cancel old ones that do violence to the Constitution, or that have failed in their purpose, or that impose upon the people an unwarranted financial burden . . . And if I should be attacked for neglecting my constituents' 'interests,' I shall reply that I was informed their main interest is liberty, and in that cause I am doing the very best I can."

The nation needs more Senators like Harry Byrd. We thank him, and we wish him Godspeed.

Mr. WARNER. Finally Madam President, in paying honor to this great American, I believe it is appropriate to conclude with some of his own philosophy: a philosophy which has served Virginia and the Nation well, and a philosophy I pray will always be remembered in the Halls of Congress—wherever people gather to make decisions about the future of our Nation and its Government.

SENATOR BYRD:

I love Virginia—every mountain, every valley, every seashore—every area of our beloved state. I am deeply grateful to the people of Virginia for giving me the opportunity to serve our state and our nation.

* * * * *

Deficit spending is not a policy. It is a gimmick—for spending programs without the discomfort of voting the taxes to pay for them.

* * * * *

Virginia's problems are far better understood in Richmond, Virginia, than in the marble palaces of the bureauracy in Washington, D.C. I am convinced that most programs can be run more efficiently and more economically by the states and localities than by the federal government.

* * * * *

I believe the people truly want to reverse the flow of power to Washington and cut the enormous growth in federal spending. If the people will continue to insist on these goals, they will be achieved.

* * * * *

Taxes are paid in the sweat of all who labor.

* * * * *

Truly the future is in our own hands. If citizens will take the time to communicate with their representatives, to study the issues which confront us and to take part in elections, then they can change things for the better.

SALUTE TO SENATORS BRADY, HAYAKAWA, SCHMITT, AND CANNON

Mr. WARNER. I joined Senator BRADY this morning, as did many others, at the Senate prayer breakfast, as one of his final acts in the Senate. Indeed, he has been a breath of fresh air that we have all respected and enjoyed. We regret his departure, together with that of our colleague, Senator HAYAKAWA, who has been a great friend throughout my years in the Senate. His wit, wisdom, and wise council have helped me, and I will miss him.

Senator SCHMITT has brought to the Senate a background in technology and science that will be dearly missed. In a very modest way I have been through some training in engineering and will be one of the few remaining Senators with that background, but I will do my best to carry on in the stead of our distinguished colleague from New Mexico.

Senator CANNON has a long and distinguished career in the Senate. I have been priviledged to serve on two Senate committees with Senator CANNON—as a member of the Rules Committee for the past 2 years and as a member of the Commerce Committee, my first 2 years in the Senate. Senator CANNON was the chairman of the Commerce Committee at that time and provided wise counsel and assistance to me.

I wish each of these Senators the very best.

SENATOR HARRY F. BYRD, JR.

Mr. FORD. Madam President, when the next session of Congress convenes in January, the Senate will surely not be the same without the presence of one of our most vigilant and dedicated Members, our colleague from Virginia (Mr. HARRY F. BYRD, JR.) who is retiring.

This body has not had a more constant or watchful guardian of Federal spending than HARRY BYRD throughout his 17 years of service. He has earned my lasting respect for his constant concern over the growing size of the Federal budget. He has never hesitated to make us mindful of the need to exercise restraint of Federal expenditures.

Mr. BYRD often took positions that were not the most popular of causes, but he never abandoned his conscience, even when the odds of prevailing were overwhelmingly against him.

In recent times, we are seeing more and more of what he warned come to pass, especially as it concerns the national debt. Much of what he did was symbolic, but it forced this body to take a hard look at the need for fiscal restraint and responsibility.

This will be the legacy he leaves behind. I know that I, for one, will always feel the eye of HARRY BYRD looking over his shoulder every time I am called on to vote to increase Federal spending or raise the Nation's debt ceiling.

HARRY BYRD has served his State and Senate well. He has been conscientious and faithful to himself, and I value him both as a colleague and a friend. I say to him now, Godspeed and good luck in the years ahead.

SENATOR HOWARD CANNON

Madam President, it is with a feeling of sadness and regret that I take this opportunity to express my farewell to our very senior colleague, Senator CANNON. I have been privileged to serve on two committees with the vigorous and able Senator from Nevada: Commerce, Science and Transportation, and Rules and Administration.

Since 1959, the people of no State have enjoyed more diligent, dedicated or effective service than that given this body by HOWARD CANNON. Moreover, his keen and profound grasp of the complexities of major national issues has enabled him to serve equally well the people of the entire Nation.

His legislative accomplishments are varied and many. Indeed, it could take the greater part of the day to extol the achievements of Senator CANNON during his long and productive Senate career. Suffice it to say that he has certainly left his mark and that the Senate and the Nation are the better because of his service.

I have learned much from HOWARD CANNON during my 8 years in the Senate. I have treasured his friendship and assistance. His companionship has been a source of pleasure to me. I will miss his leadership and guidance.

I wish him nothing but continued happiness in the years ahead.

SENATOR HARRISON "JACK" SCHMITT

Mr. DOMENICI. Madam President, I rise today to salute one of the most distinguished citizens which my beloved State, the great State of New Mexico, has ever produced. Clearly, Senator SCHMITT's record throughout his life has been one of achievement. He is a dedicated public servant, a faithful public servant, and I can tell you that he is going to be sorely missed in this institution.

His accomplishments are legion.

He is a man who has risen from a modest beginning in southwestern New Mexico to the highest plateaus of human achievement. He has served this august body with distinction. He is a credit to mankind.

Those of us who know Senator SCHMITT will know that from his birth in 1935 in the pine tree-covered hills of Santa Rita, N. Mex., he began a life of achievement which saw honors come quickly. From childhood to manhood, his character has been molded by some of the most noble virtues in our

society—virtues such as hard work, honesty, courage, and duty to country.

In 1957 he graduated from the California Institute of Technology.

In 1957 and 1958 he was a Fulbright Scholar at the University of Oslo in Norway.

In 1964 he received a doctorate of geology from Harvard University.

In 1965 he became one of a unique class of individuals. It was that year that he was named an astronaut in the American space program.

In 1966 he received his Air Force jet pilot wings.

In 1967 he received his Navy helicopter wings.

In the late 1960's he became recognized as one of the leading experts on the history of the terrestrial planets.

Then in 1972 he became a part of history. He walked on the Moon. In all of history, only 12 men have ever done this. Senator SCHMITT is one of them.

Ten years ago this very day, Senator SCHMITT was en route to his rendezvous with destiny—hurtling through the infinite reaches of space at more than 17,000 miles an hour in the cramped space capsule of Apollo 17.

This Saturday marks the 10th anniversary of JACK walking on the Moon. He was the only scientist to go to the Moon. He is the last person to step on the Moon. And he and his partner spent more time on the Moon's surface than any other human being—72 hours.

But those of us who know him well know that his flight to the Moon was merely a single milestone along a sterling path of achievement.

In 1975 he turned his attention from exploring the frontiers of space to determining how he could help mankind here on Earth. He returned to New Mexico to enter politics.

During his service here, he has been a leader in issues dealing with science and technology, energy, space, and many other areas.

Few men can match his extraordinary background—that of a geologist, scientist, astronaut, pilot, administrator, educator, writer, and U.S. Senator.

Clearly, his record is an admirable one. I salute my friend and colleague, JACK SCHMITT, whom I consider to be an outstanding New Mexican, an outstanding American, and most important a fine human being.

(Mr. WARNER assumed the chair.)

SENATOR HOWARD CANNON

Mr. LAXALT. Mr. President, I want to take this opportunity to pay tribute to my colleague, HOWARD CANNON. I welcome this time to tender my respect and admiration, but I find it somewhat difficult to put in words the depth of feeling I have for HOWARD. Words are sometimes a poor vehicle for what we feel.

Over the years Senator CANNON and I have been colleagues, advocates, political opponents, fellow Nevadans, and friends. When one shares as many trails, fights as many battles (both with each other and against each other) and, finally, shared so many years in the same service, one gets to know that person fairly well. HOWARD CANNON is a man of honor, steadfast dedication to his duty, and quick understanding. He has proven that to me and his other colleagues over and over again over the years. I am proud to call him a friend. His wisdom will be missed in this Chamber as we wrestle with the many intractable issues facing this Nation.

I want to put into perspective the long career of Senator CANNON. He retires after 24 years of service in the Senate and ranking seventh overall in terms of service among Senators now serving. He has served the Senate under seven Presidents, beginning in the last term of President Eisenhower. But HOWARD CANNON was serving his country long before he was elected to the Senate. In the early days of World War II, Senator CANNON enlisted in the Air Force at a time when it was woefully inadequate as a fighting force. He served with distinction and was, at one point, shot down behind enemy lines. With the help of Dutch freedom fighters, the Senator and his crew mate successfully made their way back to American lines. The Senator's interest in aviation carried over into his duties in the Senate. It is not without reason that HOWARD CANNON is known affectionately as "Mr. Aviation," well beyond the circle of the Senate. He has developed a deep understanding of aviation and its problems and he has helped guide the growth of aviation steadfastly during his Senate career.

Senator CANNON's wartime experiences also carried over to his Senate duties. He is third ranking member of the Senate Armed Services Committee. He has diligently worked to maintain, modernize, and equip our defense establishment. He has never waivered in his belief in a strong defense as the best means of preserving the peace.

HOWARD CANNON's steadfastness of purpose, quiet effectiveness, and humanity are his heritage from his pioneer ranching family with early roots in Utah and later Nevada. He was taught hard work, dedication to principle, and cooperation. Those have been his trademarks in the Senate. He always diligently researched a problem and its alternative solutions before he acted. He has worked with his colleagues in committee in fashioning a workable bill which accommodated the needs of other sections of the country. But he never faltered on principle, doing those things he felt were proper.

I wish HOWARD Godspeed. He has certainly earned a rest along with the accolades he has won for his many accomplishments. But if I know HOWARD, and I believe I do, he will continue his career on another stage. He likes to work and he likes to contribute. And he is capable of contributing at a high level. Our Nation has not received the last of its gifts from HOWARD CANNON.

Mr. SPECTER. Mr. President, I am pleased to join today in paying tribute to our colleagues in the U.S. Senate who will be terminating their service at the end of the 97th Congress.

SENATOR HARRY F. BYRD, JR.

It has been a real pleasure to know the distinguished Senator from Virginia, the Honorable HARRY FLOOD BYRD, JR., who has carried on such a remarkable tradition in this body. I have come to know Senator BYRD on the floor, in the corridors and in the Senate gym where we frequently meet. It has been interesting to discuss with him some of the vignettes which I have read about his father who preceded him in the Senate. Together their careers have spanned a half century. Senator BYRD has served his State and Nation well, and we shall miss him.

SENATOR S. I. HAYAKAWA

For many years before coming to the Senate, I had read about and admired the Honorable S. I. HAYAKAWA when he was a college president and later the distinguished Senator from California. Senator HAYAKAWA has brought to this body a unique background as a scholar. He is a most gracious and considerate person. There is nothing like a train ride to get to know a man and SAM HAYAKAWA and I spent 2 uninterrupted hours traveling to Philadelphia last fall where he graciously spoke at the Republican City Committee dinner. Many of us were disappointed when he decided not to seek reelection last year and we shall all miss him in the Senate.

SENATOR HOWARD CANNON

I have come to know and respect the distinguished Senator from Nevada, the Honorable HOWARD W. CANNON, during the course of the past 2 years from our rides together on the Senate subway and discussions on the Senate floor. He has served his State and Nation well, spending 24 years in this body with special distinction in his capacity as chairman of the Commerce Committee. We all wish him well in his new endeavors.

SENATOR HARRISON "JACK" SCHMITT

The departure of the distinguished Senator from New Mexico, the Honorable HARRISON "JACK" SCHMITT, will be a significant loss for the Senate. I have come to know Senator SCHMITT well during our work together on the Labor, Health and Human Services, and Education, Subcommittee of the Appropriations Committee. In the capacity of chairman of that subcommittee, he had done an outstanding job balancing the needs of the recipients

of important social programs with the inevitable limitations of the Federal budget. He has already had two distinguished careers: First, as an astronaut, and now as a Senator; and it is obvious that he will be a great success at whatever endeavor he chooses.

SENATOR NICHOLAS F. BRADY

The distinguished Senator from New Jersey, the Honorable NICHOLAS BRADY, has made an extraordinary contribution to the U.S. Senate in a relatively short time. Senator BRADY was especially welcomed by the class of 1980 because some of us saw in his arrival the opportunity to abandon the name "Freshman Senator." NICHOLAS BRADY has made many good friends and impressed many people in his tenure here. He has brought to the floor debate and to our informal discussions a unique grasp of and insight into the Nation's economic problems. It is too bad for his State and the country that he will not be serving longer in the Senate; but I know many of us will be calling on him frequently for his advice in the days ahead.

SENATOR S. I. HAYAKAWA

Mr. MATTINGLY. Mr. President, when a man has reached 70 years of age, and has gained a national reputation as an outstanding scholar and college administrator, he has earned his right to retire. But at that point in his life, my distinguished colleague and good friend S. I. HAYAKAWA began a new career in the U.S. Senate. The choice SAM HAYAKAWA made to continue to serve his country reveals a great deal about the type of man he is.

SAM HAYAKAWA the Senator, like SAM HAYAKAWA the college president, is a man of courage and conviction, a patriot who has demonstrated his love for this country and its heritage. Much of the Nation watched during those chaotic days surrounding the Vietnam conflict, when he fearlessly stepped forward to put an end to riots among students at San Francisco State College. That now famous action was not unusual. SAM HAYAKAWA has always courageouly defended justice. As a Member of the U.S. Senate, the junior Senator from California has taken the lead in seeking justice of another kind. He has worked closely with the League of Families in an effort to gain information about those still classified as "Missing in Action" in Vietnam and to recover the bodies of the American dead.

In addition to being a patriot who works to preserve the principles of the past, SAM HAYAKAWA is also a man of vision. He was among the first to identify the Pacific Basin as area of enormous potential economic growth. His foresight has drawn our attention to its future importance to the United States and has encouraged us to seek trade opportunities with those nations.

It was my privilege earlier this year to work closely with Senator HAYAKAWA on an amendment to the Department of Defense authorization bill. I learned much about the man during that joint effort. Now, at 76, S. I. HAYAKAWA has decided to retire from the Senate. Once again he deserves that retirement. But I believe SAM HAYAKAWA still has much to give this Nation. It is my hope that we will have the insight to continue to draw upon his wealth of knowledge and experience. I am sure that SAM HAYAKAWA, as he always has, will meet the challenge.

SENATOR HARRISON "JACK" SCHMITT

In 1981, as a new member of the Appropriations Committee, I gained much from the advice and wisdom of a fellow committee member—Senator JACK SCHMITT. Just yesterday, as the full committee held the markup on the Labor, Health and Human Services bill, I noted with great respect how the chairman of the subcommittee and manager of the bill, Senator SCHMITT, expertly and fairly worked to insure passage of the legislation. Given these tough economic times, Senator SCHMITT has faced a difficult task. He has succeeded in reducing the growth of spending while still providing for those programs important to the men, women, and children of America. He has done so with compassion.

Ten years ago this week, our colleague and my friend, JACK SCHMITT, piloted the Apollo 17 lunar module to the Moon. Senator SCHMITT's background and technical expertise have been valuable additions to the Senate. He has been a leader and supporter of new technological efforts. His efforts in the field of solar energy have been innovative. My interest, for one, has been sparked by his enthusiasm about the future of solar energy. The Senate needs more innovative, creative, and talented scientists like JACK SCHMITT.

I have heard it said that a happy man is one who can enjoy the scenery when he has to take a detour. As all of us in the political arena know, the votes of our constituents can send us all on an unexpected detour. Senator JACK SCHMITT is the kind of man who will make the most of this detour in his life. We will miss JACK SCHMITT.

SENATOR NICKLAS F. BRADY

It is with great regret that I bid our most junior colleague in the Senate goodbye. Since April when Senator NICK BRADY assumed his Senate seat, he and I have become close personal as well as professional friends. We share a concern for and interest in the most serious problem facing our Nation—our economic condition.

During his first speech on the floor of the Senate, NICK BRADY spoke of his concern about the Federal budget and the economic perils we faced then and face now. At the close of his statement, he said that he was not under the illusion that his colleagues would consider at great length what he had to say. He was wrong. In my short 2 years in the U.S. Senate, I have not heard a more inspired address. I doubt that when I retire from service in this body I will have heard a plea of equal import.

I would like to quote from Senator BRADY's memorable statement:

When I came to Washington three weeks ago, I left an economy in real distress with a populace in confusion. I left a country of people, big and small, who looked to the leaders in this city and most particularly in this great chamber to reassure them as they became fearful about their jobs, their homes and their futures. They needed to hear that politics would be cast aside and that reason and strength would dictate a safe course home.

The last sentence that I just quoted, "They needed to hear that politics would be cast aside and that reason and strength would dictate a safe course home" says it all. If all of us cast each and every one of our votes with only the good of the country in mind—laying aside politics and the thought of self-perpetuation in office—I believe things in this Nation would be better. NICK BRADY heeds his own words.

As we face the close of the 97th Congress and the opening of the 98th, I hope that we will look to the example that NICK BRADY has set. I personally want to thank him for his cooperation and help. I want to thank him, too, for the inspiration he has been.

SENATOR HOWARD W. CANNON

Mr. TOWER. Mr. President, I want to join my colleagues today in paying tribute to Senator HOWARD CANNON, an able and dedicated Senator who has served this body well.

My closest assocation with HOWARD has been in our work on national security issues in the Armed Services Committee. HOWARD had already served on the Armed Services Committee for 6 years when I joined the committee in January 1965. He had a reputation then for being tough, but thorough and fair, in scrutinizing the armed services programs. He certainly has been an outspoken and effective advocate for a strong national defense. He has approached the many important and complex issues to come before us intelligently and fairly. As a result, his colleagues have paid close attention to his views.

HOWARD's national defense expertise spans the spectrum of defense issues, but his speciality is air power. I know my colleagues are aware of HOWARD's outstanding service in World War II. As a C-47 pilot, he dropped troops and supplies in the emergence of the United States as the world's foremost air power.

Teamed with my good friend and Armed Services Committee colleague, BARRY GOLDWATER, HOWARD CANNON

has left his mark on the shape of America's air power today and thanks to Senator CANNON, for the remainder of this century, America will continue to be the premier air power in the world.

I would be remiss in paying tribute to HOWARD CANNON if I did not also mention his able legislative aide, Frank X. Krebs. Frank served with HOWARD in World War II and they have been together since then. Frank has done HOWARD's national defense work for more than 20 years and HOWARD's accomplishments are in no small way a tribute to Frank Krebs.

Mr. President, I will miss HOWARD CANNON. His dedication and statesmanship will continue to serve as an example for us all.

SENATOR HARRY F. BYRD, JR.

Mr. JEPSEN. Mr. President, I am honored to have this opportunity to take a few minutes to express my heartfelt thanks to Senator HARRY FLOOD BYRD, JR., my colleague on the Armed Services Committee, for his valued and long-standing friendship. In his gentlemanly demeanor and carriage and careful attention to the concerns and interests of his colleagues as well as his constituents, and in his personal and political life, he has exemplified what a U.S. Senator should be. His fiscal conservatism is well known and is second to none in the body.

There are many things I could say about this steady and reliable Senator who has literally put principle above party as an independent. But the one thing that stands out most in my mind as characterizing the greatness of this man is a tradition begun by his father which he followed. It was known as the golden silence.

Senator BYRD, as his father before him, never endorsed anyone for President until in 1980, he broke the golden silence and endorsed Ronald Reagan for President. He saw an overwhelming need in this country for a strong leader who would reduce the role of the Federal Government in the lives of its citizens and emphasize the need for a strong national defense to protect our many blessings as a free nation.

My fine colleague from the Commonwealth of Virginia has voted, without fear or favor, in the best interests of the United States of America. I am proud to know him, to have worked closely with him, and to bid him my best wishes as he retires from our Chamber.

SENATOR HOWARD CANNON

Mr. HOLLINGS. Mr. President, in saying goodbye to HOWARD CANNON, we in the Senate are losing one of our most dependable and steady colleagues. Senator CANNON has helped guide this Nation through some of its most difficult hours with his competent, responsible, and compassionate leadership. We shall miss him for that.

But HOWARD CANNON leaves behind him a long record of distinguished service for which he will always be remembered.

In 1973, when this Nation was going through one of its gravest political crises, in the dark days of Watergate, it was HOWARD CANNON who held a firm and responsible hand over conferring Senate approval to then Vice Presidential nominee Gerald R. Ford. Senator CANNON as chairman of the Rules and Administration Committee, helped restore America's faith in its political institutions with the thoroughness of his confirmation proceedings. His efforts in that year to hammer out legislation on Federal election campaign financing similarly helped restore that vital public confidence in our fabric of Government.

Later, as chairman of the Senate Commerce Committee, HOWARD CANNON guided through legislation in a wide range of vital areas, from airline deregulation, maritime trade, consumer safety, and small business promotion, to our space program, highway safety, and communications deregulation. In each case Senator CANNON held a steady hand and acted with great distinction. His role on the Commerce Committee will be hard to fill.

I am proud to have served in the U.S. Senate with HOWARD CANNON, to have called him colleague, and—even more importantly—to have called him friend.

His 24 years as a Senator have seen this country go through great trauma, make important refinements, and discover new horizons. Senator CANNON's legacy in helping us through these times has done him, and his country, proud.

COMMENDATION OF SENATOR HARRY F. BYRD, JR.

Mr. LONG. Mr. President, this morning the Committee on Finance presented Senator HARRY BYRD a resolution honoring him as he nears his retirement from the Senate.

I ask unanimous consent to have printed in the RECORD the remarks of the Senator from Kansas (Mr. DOLE) when he presented the resolution to Senator BYRD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR DOLE—RESOLUTION IN HONOR OF SENATOR HARRY F. BYRD, JR., OF VIRGINIA

The first item of business before the committee this morning is a matter of considerable regret to many of us, because we are losing a close and valued colleague. But this is, more than anything, an occasion for gratitude: gratitude for the service Harry Byrd has given this committee, and the country, in the United States Senate. We have prepared a resolution for adoption by the Finance Committee to acknowledge our debt to Senator Byrd for the example he has set.

But no resolution can adequately convey how important Senator Byrd has been to the Finance Committee, or how great our loss is on the occasion of his retirement. It is nearly 50 years since Harry Byrd, Sr. first joined the Finance Committee, and there has been a Harry Byrd on the committee in almost unbroken sequence since then. The devotion both father and son have shown to the principles of limited government and individual freedom are well known. But for those of us who have the privilege of serving with Senator Byrd, and of learning from him, there is much more, perhaps less well known, that needs to be said.

Harry, we know you as one who chooses your causes because you believe in them; and we know that you have worked to carry out your beliefs, rather than seek partisan advantage. Few members of the Senate have shown your consistent and rigorous dedication to principle; yet few would match your example in the civility and good temper you have shown in pursuit of your goals. Those are qualities we can never have too much of in political life, and they will be missed.

We know, too, that you have had some difficulty over the years with the Treasury Department, under every administration. It may be that Treasury has had some difficulty in determininig how to deal with a member who wanted to argue every bill on the merits. Be that as it may, the record should show that the Treasury is not as unresponsive as you may have thought. During the 97th Congress they actually endorsed at least one tax relief bill that came up for a hearing before the Subcommittee on Taxation: there may have been others that escaped my attention. So the record is not all that bleak

In your capacity as Chairman, and now ranking member, of the Subcommittee on Taxation and Debt Management you have constantly reminded us of the need for fair play for the taxpayer, restraint on the tax burden, and the dangers of excessive public debt. Those concerns are with us today more urgently than ever, and your campaign for governmental restraint is even more relevant today than when you first joined the Senate.

Many commentators have remarked that the Byrd Era is ending with the retirement of Harry Byrd. I would say just the contrary: the Byrd Era in government is just beginning, because the principles Harry Byrd has espoused finally begun to enjoy consensus support on the national level. We now understand all to well the dangers of inflation and unending deficit spending: but Harry Byrd warned us first. We know that there are limits to the areas in which Federal spending can be effective; but Harry Byrd knew that many years ago. We know that the national government and the states must share responsibility for public policy, and that the states have an increasingly important role to play; again, Harry Byrd was there first. No, this is not the end of an era at all.

Nor, I hope, will it be the end of our professional relationships with Harry Byrd. We hope, Harry, to have the benefit of your advice and counsel for many, many years to come. We hope you will also give us your candid opinion of what we do in the years ahead, even if it makes us wince once in a while. You have laways spoken out with conviction, and we know you will continue to do so. And for that I know we are all grateful.

SENATOR HARRISON "JACK" SCHMITT

Mr. PACKWOOD. Mr. President, the Senate learned to know and appreciate a very unique person when New Mexico sent JACK SCHMITT to the Senate. He was trained as a scientist—a geologist specifically—and was the only scientist-astronaut to travel to the Moon. This scientific perspective has proven invaluable to the Senate during deliberations on many critical issues. His ability to recognize the long-range implications of solutions to problems we face today and identify the issues we, as a nation, must face tomorrow.

Senator JACK SCHMITT has served on the Commerce, Science, and Transportation Committee since he was first elected to the Senate 6 years ago. He served first as ranking minority member and later as chairman of the Subcommittee on Science, Technology, and Space.

JACK's leadership and dedication to his subcommittee work has significantly enhanced the national recognition of the Commerce Committee's role in formulating science and technology policy. His commitment to science and technology, in the broadest sense, led the subcommittee to deal with such diverse issues as space policy, patent policy, technology innovation, nuclear waste technologies and alternatives, science education, strategic minerals policy, risk assessment, international cooperation and technology transfer, environmental science and technology, biotechnology, and research and development investment. The enthusiasm and energy JACK exerted in exercising his responsibilities was seemingly limitless at times.

Yet, even with a long agenda, JACK's energy and creativity were not restricted to this subcommittee. Over the years, he was actively involved in many of the issues before the Commerce Committee, including transportation deregulation, telecommunications policy, regulatory reform, aviation, and hazardous materials transportation, to name a few. This list certainly underscores his conviction to the congressional process and the importance of committee activities.

JACK leaves the Senate with a void that will not be easily filled. Perhaps almost as important as the contribution JACK made to this Nation for the past 6 years is guidance in helping his colleagues better understand the technological society in which we live. He will leave his mark on all of us who worked with him.

SENATOR NICHOLAS BRADY

Mr. BIDEN. Mr. President, several months ago Senator NICHOLAS BRADY stood before this body and described himself as "the lamest duck" of all. Nonetheless, he has put his brief stay in the Senate to good use. He noted that he had "no time to learn the art of compromise, no occasion to employ the conventions of parliamentary maneuver, and no need to hedge bets for a stake in future legislative alliances."

He has turned his disadvantage to advantage and spoken his mind freely and ably while among us. Through strength of character and good judgment, he prevailed on all of us to recognize that even in his brief tenure he could impart to his colleagues valuable lessons which he had learned in the business community.

On May 18 of this year, he delivered a thoughful and intelligent address on the economy. He lucidly described the devastating and interlocking effects of high interest rates and swelling budget deficits upon this Nation's financial and general economic structures. In particular, he described, with considerable eloquence, the deleterious effects of current economic conditions upon those hoping to find employment and those who have just lost their jobs.

Shortly, Senator BRADY will return to the business community. I commend him for the tact, the intelligence, and the resourcefulness with which he conducted himself while serving in this body. He has served the State of New Jersey honorably during the past 9 months, and I am sure that he will continue to make important contributions to New Jersey and to the Nation upon his departure from the Senate.

SENATOR HARRISON SCHMITT

Mr. President, HARRISON SCHMITT came to the Senate in 1976 with impressive academic credentials and years of brave and distinguished service in our Nation's space program.

A man of steadfast principles, he has combined intellectual sophistication with political tenacity, and has made his mark while serving among us. I have been his colleague on the Select Committee on Intelligence, where he has served with distinction. As chairman of the Subcommittee on Labor, Health and Human Services, and Education, Senator SCHMITT proved both energetic and evenhanded in considering the difficult problems frequently before us.

HARRISON SCHMITT came to this body with a background rich in variety and experience. He was a Fulbright fellow and holds a Ph. D. in geology, in addition to his impressive achievements as an astronaut. He utilized this blend of experience while in the Senate in fighting for issues which drew his attention and which in turn commanded the attention of us all.

I wish him every success in the future, and I join my colleagues in thanking him for his service to his country.

SENATOR S. I. HAYAKAWA

Mr. President, at the end of the current session, we will see the departure of Senator S. I. HAYAKAWA, who has served with distinction during his 6 years in this body.

Senator HAYAKAWA made the difficult transition from the academic world to politics and Government with minimal difficulty. His distinguished career as a semanticist was punctuated with teaching stints at some of this Nation's most distinguished academic institutions, such as the University of Chicago and the University of Wisconsin. His learned books and articles on semantics have nurtured a generation of students, and assuredly will be widely read for at least another generation.

Born in Canada and a product of that nation's fine university system, he has served our own country well. As a member of an ethnic minority which has contributed greatly to the cultural and intellectual strength of this Nation, he brought a special sensitivity and understanding to his position as chairman of the Subcommittee on East Asian and Pacific Affairs.

We shall miss this gentle and thoughtful man, and I join my colleagues in thanking him for his service to his country and in wishing him well for the future.

SENATOR HARRY F. BYRD, JR.

Mr. President, for 16 years HARRY FLOOD BYRD has served in the Senate with distinction. He came to this body well suited by experience to represent his fellow Virginian, for in his life he has been a newspaper editor, a farmer, and a State senator. His long acquaintance with the problems and issues of Virginia prepared him to represent his constituents' interests and concerns with both knowledge and commitment.

As a fiscal conservative and a budget balancer before there was even a Budget Committee, he alerted many of us to the need to rein in Federal spending to a point where each of us believed expenditures were commensurate with needs, in order that the economic health of our Nation be preserved without sacrificing traditional commitments which each Senator believed to be necessary.

Though we have often been on different sides of various issues, I have always found Senator BYRD to be an honorable—as well as a formidable—opponent. I particularly remember the debate over the designation of a site for the refitting of the *Saratoga* and the *Forrestal.* We found ourselves on opposite sides of the fence, but I could not have hoped for a more gracious and courteous opponent.

Senator BYRD hails from Winchester, a city in a part of Virginia known for its beautiful countryside and peaceful atmosphere. The Senate's loss will be the gain of his many neighbors and friends, for they will welcome in their midst once again this reserved and distinguished gentleman.

SENATOR HOWARD CANNON

Mr. President, Senator HOWARD CANNON and I have had in common the difficulty of representing States with a small population. One must sometimes work hard to persuade one's colleagues that the interests of a small State are just as important and significant as the interests of one of our more populous States. While chairman of the Commerce Committee, Senator CANNON displayed a special sensitivity to the needs of Delaware and other small States along the eastern seaboard. I remember in particular his efforts to assist in the reorganization of a viable railroad system for the Northeast—a system critical to the commercial interests of Delawareans and others who with their ancestors, have been served so well for over a century by the seaboard's evolving railroad systems.

In my first years in the Senate, HOWARD CANNON assured that my efforts to see sunset legislation receive fair and extensive consideration met with success. He encouraged other Senators to give the various sunset proposals careful consideration, and thereby played an important role in awakening the country to the need for periodic careful review of Federal programs.

In the early 1970's, while chairman of the Rules Committee, Senator CANNON was a major force behind the progress of the Budget Act through the Congress. As such, we owe him a great deal in the long struggle to develop a more rational, intelligent budget process.

We shall miss his earthy sense of humor and his 24 years of experience in this body.

TRIBUTE TO DEPARTING SENATORS

Mr. RANDOLPH. Mr. President, I join in expressing tribute to our departing colleagues, although such an occasion evokes both joy and sadness. I understand Senators who seek escape from the pressures of public office. I will miss the counsel and companionship of longtime associates.

The able Senator from Nevada, HOWARD CANNON, is a member of that "Class of '58" in which so many issues-oriented lawmakers were elected and faced the challenges of forming the Great Society. As a veteran member of the Armed Services Committee and the Commerce, Science, and Transportation Committee, he has contributed much to the progress of America.

HARRY FLOOD BYRD, Jr., came to the Senate in 1965; he was reelected for a third term in 1976 with the largest vote ever given any Virginia candidate. He holds the distinction of being only the second person in the history of the Senate to be elected as an Independent. His spirit and sense of honor and fair play has enriched each of us. It was my privilege to have known and worked with his father, Harry Byrd, Sr., who was a native of West Virginia.

SAM HAYAKAWA was sworn in as a U.S. Senator on January 2, 1977, 1 day before his fellow lawmaker, HARRISON SCHMITT, who is leaving this body. A noted scholar, Senator HAYAKAWA provided refreshing insight in the workings of Government.

JACK SCHMITT, as the first scientist-astronaut, is renown for his journey to the Moon aboard Apollo 17 and known to us for his dedication to duty and his devotion to his constituency. I am gratified that my alma mater, Salem College, presented the Senator with an honorary degree as doctor of aeronautical science.

NICHOLAS BRADY is a relative newcomer among us, having been appointed to fill an unexpired term earlier this year. In the short time of his service to the Senate, the gentleman from New Jersey has exhibited a sincerity which invigorates.

Mr. President, these legislators have brought to the Senate excellent characteristics, constructive talents, and well-reasoned perspectives colored by their origins and environments. The U.S. Senate is the forum in which these individuals, with diverse interests and backgrounds, work together and produce policies and legislation to benefit the broad populace of this Nation.

SENATOR HOWARD W. CANNON

Mr. PACKWOOD. Mr. President, HOWARD CANNON is a close personal friend and colleague. I will deeply miss his friendship, leadership, and wisdom when he retires from the Senate at the end of this month. We all will.

As members of the Senate Commerce Committee where we have served together interchanging roles as chairman and ranking member, I have particularly come to know and respect him. It is in that context that I have truly appreciated his spirit of bipartisan cooperation and expertise in the fields of transportation, science, space, communications, and tourism. HOWARD has worked with me and our colleagues fairly, honestly, and with a degree of patience that has enabled us to achieve tremendous legislative accomplishments.

HOWARD CANNON has foresight and is always receptive to new ideas. He sets high goals, is energetic, does his homework, and is ever present when it comes to Senate business. We have all benefited from these qualities and his dogged determination.

While he is best known, perhaps, for his expertise in the field of aviation, becoming widely known as "Mr. Aviation," in fact, HOWARD CANNON is never absent when other issues of transportation, such as Amtrak or hazardous materials are discussed.

He has authored and guided through Congress more legislation to reduce regulation than any Member of Congress in recent memory. HOWARD CANNON's leadership has resulted in legislation to strengthen the Nation's transportation and telecommunications industries, improve transportation safety, promote tourism, streamline regulations and reduce paperwork, enhance industrial innovation and productivity, and maintain the Nation's leadership in space and aeronautics.

HOWARD CANNON represents the best combination of professional and personal qualities. I respect and admire him for his accomplishments and faithful and untiring service as a Member of the Senate, and I care for him as a friend.

The people of Nevada and this Nation have been well served by HOWARD CANNON'S tenure in the Senate since 1958.

SENATOR HARRY FLOOD BYRD, JR.

Mr. MATHIAS. Mr. President, one of the most interesting conversations I ever had was with Adm. Phillippe de Gaulle when the French cruiser *Colbert* paid a visit to Baltimore several years ago. We spoke of the problems encountered by a young man growing up in the shadow of a famous father, a subject on which Admiral de Gaulle spoke as an expert.

But Admiral de Gaulle's experience in life is not unique. In fact, in this Chamber we need look no further than the desk of the Senator from Virginia, Mr. BYRD. He, too, is the son of a famous father, yet he has walked beyond his father's shadow to stand in the sunlight in his own right. Harry Flood Byrd was a commanding figure in Virginia and he lives on in American history. But HARRY FLOOD BYRD, JR., has emerged as a new and independent branch on a historic family tree. Being a conservative in the 1980's is different from being a conservative in the 1940's and HARRY BYRD represents that difference. He has changed with the times but his principles remain constant, a talent which may explain how his family has continued to render important service to Virginia for three centuries.

The name of Byrd is usually associated with Virginia, but actually HARRY BYRD'S father was born in the eastern panhandle of West Virginia, as was my grandmother Elizabeth McCurdy, so we share many common values and experiences. We both know and enjoy the orchards and bluegrass meadows along the Bullskin Run at the foot of the Blue Ridge Mountains.

As a result, I have taken a special interest in watching HARRY BYRD and have always found him a worthwhile object of observation and study, whether I agreed or disagreed.

In personal style and manner he is the model Senator; modest, distinguished and quiet, except when orating. His personal discipline can be read in his face and his gait. He usually

walks at a rapid pace instead of riding the Senate subway at taxpayers expense.

Most important, in the Senate where trust and confidence are essential to the institution, HARRY BYRD is known as a man of his word. Once he has committed himself, no questions about his reliability are asked. There have been days when I wish I could have persuaded him to change a position on some issue and while I was disappointed not to have his support, he never lost my respect.

Just as we have shared many personal interests as a result of the fact that we were neighbors on the Bullskin Run, we have shared many official concerns as neighbors on the Potomac River, particularly in the Washington Metropolitan area. We have worked together in the interest of the civil service and the national capital.

In both a personal and an official sense, HARRY BYRD has been a good neighbor and I shall miss him in the Senate. But I shall hope to see him on the banks of the Bullskin and hope that I shall find him enjoying a full and happy life with Gretchen and his family.

SENATOR NICHOLAS BRADY

Mr. President, most of us look up every night into the skies and see a thousand stars without noticing any one of them individually. But when a meteor or shooting star streaks across the sky we all remember it.

So we shall all remember NICK BRADY.

NICHOLAS BRADY came to the Senate under difficult circumstances. He came to fill a seat vacated as a result of a personal tragedy that had shocked and saddened the Senate. But NICK BRADY's dignity, commonsense and good humor made the change easy for all of us to accept and did credit to Governor Kean and to the people of New Jersey.

It was a coincidence that NICK BRADY should come to the Senate at a time when we most needed information and counsel about the world of finance and investment banking, subjects in which he is a past master. His willingness to share his views and experience with those of us taking a cram course in national economics has been a particular help.

On one issue in which we have a common concern we have not yet achieved a full success. That is the difficult job of convincing American horsemen that hay, oats, and water are an adequate diet for American horses without the contamination of a growing array of drugs. In this instance, however, our failure may have a hidden benefit. Although our Senate association may be interrupted, our partnership in the cause of hay, oats, and water can continue without a break. And I shall look forward to that.

It has been an honor to have Katherine and NICK BRADY as friends and neighbors in Washington and Ann and I shall look upon them as friends and neighbors wherever they are.

SENATOR HARRISON SCHMITT

Mr. President, the Senate will be diminished in an important respect when JACK SCHMITT leaves us. That is his ability to make judgments with an eye to the future and to the real economy of Government.

I could expand on the array of talent that we shall lose with JACK's departure, but this one talent is so important that it deserves special notice if only that he will import it to others before he goes.

I first became aware of JACK SCHMITT's rare judgment when we served together on the Appropriations Committee. It was apparent that he was not satisfied with the standard brand of pennypinching in achieving true economy. He would always look at programs to see how the American people could get their moneys worth. This might mean continuing a program for a few years to reap a harvest not yet quite ripe. Or it might mean spending a few extra thousands in order to save millions. Such decisions demand not only judgment, but also courage. HARRISON SCHMITT has both and I salute him for it.

SENATOR SAM HAYAKAWA

Mr. President, nothing is more reassuring than to sit in the U.S. Senate and to lift one's eyes to the gallery to see the alert, intelligent, and attractive face of SAM HAYAKAWA's mother. It is a reminder that life can hold a variety of interests for a long period of time. It is a token of the probability that SAM HAYAKAWA will be around for a long time in the future doing the kind of interesting things he has always done: Teaching young people, writing books, and quelling the anger of mobs.

I am counting on several more careers for SAM HAYAKAWA and only hope that each of them will encourage him to stay in touch with his friends in the Senate and that some of them will give his mother reason to visit the Senate gallery from time to time.

SENATOR HARRY F. BYRD, JR.

Mr. MITCHELL. Mr. President, when the 98th Congress convenes next January, for the first time in half a century, no Senator HARRY FLOOD BYRD, JR. will take his seat in this Chamber.

That is the end of a tradition of service which has earned Senator BYRD the wholehearted admiration of all his colleagues.

As a newcomer to the Senate, I have had the honor of serving on the Senate Finance Committee with Senator BYRD, and I want to take this opportunity to pay tribute to Senator BYRD's integrity, his consistency, and his unique role in the Senate.

No Senator has been as consistent as Senator BYRD in urging the course of financial prudence, frugality with tax dollars and fiscal responsibility. Even though his efforts were at times directed to programs I support, there has been no doubt of Senator BYRD's sincerity. Senator BYRD has consistently voiced his conviction that the purposes for which tax dollars are appropriated should be carefully and thoroughly scrutinized. He has done so when it was a popular stance, and he has done so when it was not a popular stance. The Senate will miss that consistency and will look far before it finds that depth of conviction again.

In this day of trillion-dollar national debt, Senator BYRD stands alone as the constant voice that has warned of this outcome. He has never feared to raise that voice against the creation of a debt by one generation that will be paid by the next generation. The Senate will miss that strong voice.

And on a more personal level, the Senate will miss the dignity and stature that Senator BYRD brought to his work and his efforts in the Senate. Regardless of the differences of opinion and perspective that Senators bring to the issues, Senator BYRD has never failed to conduct his debate with a dignity and an eloquence that do credit to the Senate as a body and to him personally.

I regret that Senator BYRD has chosen to resign and will not be returning when the 98th Congress convenes next month. I want to pay tribute to his many years of service in this body, and to the special qualities be brought to that service. Senator BYRD has earned the regard, as well as the respect of his colleagues, and he has added luster to the proud tradition of public service for Virginia that began on March 4, 1933.

SENATOR HARRY F. BYRD, JR.

Mr. CHILES. Mr. President, it is with considerable regret that I offer these words of tribute to Senator HARRY F. BYRD, JR., as he leaves the Senate. In the 12 years that I have been in the Senate, I have come to know him as a good friend. I have great respect and effection for him and for his wonderful wife, Gretchen. I will sorely miss them both.

Senator BYRD has devoted the past 35 years of his life to public service: 18 years in the Virginia State Senate where, among other things, he played a major role in helping to create new industry and 130,000 new jobs by his excellent chairmanship of Virginia's economic development program; and 18 years with us in Washington where he has served as a great example to us all as a deligent watchdog over the taxpayer's purse and individual freedom.

His dedication to the role of budgetary watchdog and to fiscal conserava-

tism is not just symbolic either. HARRY BYRD lives by the economic words he preaches. During the period from November 11, 1965, when the Senator first opened his office on Capitol Hill, through September 30 of this year, he has returned to the National Treasury more than $2,927,445 of the funds allocated for his office operations. That is an average of $168,895 every year of citizen moneys saved for other, more important items.

He has also been a model for us in his care to limit the introduction of bills. This in itself is another way he saved public money, aside from curtailing Government growth. The cost of introducing an average bill would buy more than 100 measles and mumps shots for children. Just the printing for one bill is equivalent in costs to a month's stay at a nursing home. It is comparable to the average social security check, to the monthly wage of a private first class. It would pay for keeping a criminal in prison for a month. These are the kinds of priorities that Senator BYRD has had in mind.

HARRY BYRD knows and practices the principles of conservatism he proclaims. He equates his conservatism with "conservation," extolling us to conserve natural resources, human liberty and dignity, and—in his very words—to conserve "the taxpayer's hard-earned dollar."

He has not only tried to lead us by example, he has put his beliefs into law. Public Law 95-435 is a living testimony to his work here. The Byrd law says: "Beginning with fiscal year 1981, the total budget outlays of the Federal Government shall not exceed its receipts." His balanced budget law is the embodiment of the sentiment in a Jefferson quote that the good Senator likes to chide us with. Thomas Jefferson warned us prophetically: "To preserve our independence, we must not let our rulers load us with public debt."

HARRY only leaves our company in body. His spirit will remain with us in every meeting of the Budget Committee and everytime we add one more jot and tittle to the laws of this Nation. HARRY BYRD has, indeed, left his mark on the workings of this body.

I shall personally miss his wise counsel, his sound commonsense, his lessons by example, and most of all the daily contact with such a good and gracious gentleman.

God go with you, HARRY.

SENATOR HARRY F. BYRD, JR.

Mr. PELL. Mr. President, I am pleased to join with my colleagues in a farewell tribute to Senator HARRY F. BYRD, JR.

I am one of only 13 current Members of the Senate who has had the pleasure of serving here in the Senate with both Senator HARRY F. BYRD, JR. and with his distinguished father, the late Senator Harry F. Byrd, Sr.

Between them, Senator HARRY F. BYRD, JR. and his father will have served their beloved State of Virginia and the Nation here in the Senate for nearly 50 years. And the service of both father and son has been distinguished and distinctive.

It was, I suspect, not entirely easy for Senator BYRD to directly succeed his father here in the Senate. But he quickly established his own reputation among his colleagues as a man of exceptional intelligence, as a hard-working and diligent Senator, and as a forceful and effective advocate for the interests of his State and for the fiscal and national policies to which he is so deeply committed.

I regret that Senator BYRD and I did not serve on any Senate committees together, but we do share a deep interest in historical events and that interest has been the foundation for a warm friendship.

Senator BYRD is known in the Senate as a man of unequaled courtesy and unquestioned integrity. I wish him all the best in the years ahead and know how very much my wife and I will miss Gretchen and him.

SENATOR S. I. HAYAKAWA

Mr. President, I wish to join my colleagues in bidding farewell to and paying tribute to SAM HAYAKAWA, the distinguished junior Senator from California. SAM and I have served together as members of the Foreign Relations Committee during these past 6 years, and it has always been a delight to work with him. Although he and I have approached foreign policy issues from somewhat different philosophical perspectives, we have nevertheless been on the same side on many important questions, and I have always valued those occasions when we worked together for a common purpose.

There was a time, Mr. President, when people referred to a particularly distinguished person as a scholar and a gentleman. If ever that expression fitted someone to a tee, it is SAM HAYAKAWA. He was a noted scholar and university president before he entered the Senate, and it is clear that he has always been a gentleman. These qualities have served him well as a legislator. The scholar's objectivity and the gentleman's respect for his colleagues as people were the hallmarks of his career in the Senate.

In his academic years, SAM HAYAKAWA was an acknowledged expert in the field of semantics. There is no doubt that his fame in that field is well-deserved. In an era of bureaucratic and even legislative gobbledegook, SAM HAYAKAWA's prose has been refreshingly clear and precise. One always knew what SAM HAYAKAWA's words meant, and he inspired his colleagues to try to match that clarity.

On a personal level, I know that I will miss SAM very much, and my wife and I wish him and Margedant all the best for the future.

SENATOR HOWARD CANNON

I am pleased to join with my colleagues in a farewell tribute to Senator HOWARD CANNON.

I have had the pleasure of serving in the Senate with HOWARD CANNON for 22 years, and during that time I have been constantly impressed by his diligence and his effectiveness in the work of the Senate.

As a member and then chairman of the Senate Commerce Committee, and as a member and chairman of the Senate Committee on Rules and Administration, Senator CANNON always demonstrated a full and detailed knowledge and an incisive understanding of the issues and legislation that came before those committees.

I served with HOWARD CANNON on the Committee on Rules and Administration and succeeded him as chairman of that committee when he became chairman of the Senate Commerce Committee. As chairman of the Rules Committee, Senator CANNON made very significant contributions to the effective working of the Senate. It was under his skilled leadership that the Senate accomplished a major reorganization and streamlining of the Senate committee system, a task which many said simply could not be done because reorganization involved limiting membership and shifting the jurisdiction of committees, matters highly sensitive to every Senator.

As chairman of the Committee on Rules and Administration, Senator CANNON also played a major role in establishing a new Senate code of ethics and in major revisions of Federal election laws.

Senator CANNON also holds the distinction, unique in the history of the U.S. Senate, of presiding over the hearings on the nominations of the only two appointed Vice Presidents in the history of our Nation—Vice President Gerald Ford and Vice President Nelson Rockefeller. It was, I believe, the unanimous view of the Senate that those hearings were conducted with a thoroughness, dignity, and fairness that made them a great credit to the Senate.

I would add also that Senator CANNON, through his years of service on the Commerce Committee, provided strong and enlightened leadership on transportation issues. In particular, I am grateful to Senator CANNON for his unflagging and important support of the program for improvement of rail service and facilities in the Northeast corridor.

For all of these reasons, I will miss Senator CANNON and know that the entire Senate will miss his ability and leadership. My wife and I wish Doro-

thy and him the best of luck in the years ahead.

SENATOR NICHOLAS F. BRADY

Mr. President, as we approach the end of the 97th Congress, we also draw near the retirement of a colleague whose 9 brief months of service have won for him the respect and friendship of every Member of the Senate.

NICHOLAS BRADY brought to the Senate a record of accomplishment and leadership in the banking and investment community. After graduating from Yale University and Harvard Business School, he joined the New York City investment firm of Dillon, Read & Co., Inc. and became a vice president in 1962. He later served as chairman and managing director of Dillon, Read and as chairman of the board of Purolater, Inc. This background gave Senator BRADY a deep understanding of the economic issues and problems confronting America today, and I know his perspective in this area has been greatly valued by his colleagues on the Banking Committee and all of us who have had the opportunity to hear his remarks on the floor on the economic issues of the day.

At the still very young age of 52, Senator BRADY is a man at the peak of his considerable abilities, and I know he will continue to serve the State and Nation he loves so much in the years to come. When thinking about NICK BRADY's brief career with us, I am reminded of a passage from Emerson: "The reward of a thing well done is to have done it."

NICK BRADY will leave the Senate with the reward that his brief service has been truly well done and has earned him the trust and honor of his colleagues and of the people of New Jersey. I know that I shall miss him.

SENATOR HOWARD CANNON

Mr. NUNN. As a legislator, as a policymaker, and as a friend and colleague, Senator HOWARD CANNON holds a unique place in the Senate.

HOWARD CANNON'S entire distinguished political career exemplifies thoughtful and innovative statesmanship. As a city attorney for Las Vegas and as a U.S. Senator, he has been an effective spokesman for Nevada's citizens, and he has made their interests and concerns his own. His 24 years in the Senate have been marked by accomplishments in transportation policy, vigilance on the American consumer's behalf, and consistent advocacy of increased military preparedness. Many Senators, including myself, have learned to craft sound national policy from HOWARD'S example, and Democrats and Republicans alike have looked to him for leadership on transportation and defense issues.

On the Armed Services Committee, HOWARD CANNON has added a dimension and expertise, based on personal experience, that few can match. He was a decorated fighter pilot during World War II and was shot down over the Netherlands, where he spent 42 days behind enemy lines before the Allies liberated the area. He knows the dangers and sacrifices we ask of our military members, and he has pressed their case before Congress repeatedly. The first major legislation he managed in the Senate, the 1963 military pay raise, was in recognition of our service members' diligence.

HOWARD has also translated his experience as a figher pilot into effective legislation. As subcommittee chairman and later as ranking member on the Armed Services Subcommittee on Tactical Warfare, he has guided policy which has kept our tactical air power the most modern and capable system in the world. When complex issues arose, our Members could always look to HOWARD CANNON for his technical knowledge and considered judgments. Senator CANNON'S and his fellow aviator Senator GOLDWATER'S firsthand understanding of military aviation has proved invaluable to the armed services effort to develop and maintain a comprehensive air defense.

In addition to his accomplishments in defense, Senator CANNON has shaped or influenced a massive array of transportation and consumer legislation. He has served on the Commerce Committee throughout his tenure in the Senate, and he assumed leadership early in policy areas under this committee's jurisdiction. For example, in 1963 he was the principal architect of a bill providing for Federal funding for mass transportation, and he guided the bill's passage through the Senate and into law. Later, as chairman of the Senate Commerce Committee from 1977 to 1980, Senator CANNON presided over a thorough restructuring of the Nation's transportation policy. Under his leadership, the airline and trucking industries were deregulated, and his expertise in transportation led to effective legislation to bring about this change without major economic dislocation to either the consumer or industry. His influence in these areas continued in the 97th Congress, during which he has served as ranking minority member of the Commerce Committee.

We will miss Senator CANNON'S quiet, forceful, and effective leadership in the Congress, but I hope that he will continue to provide us with guidance on national issues.

He and Dorothy have our best wishes for a long, successful, and happy future together.

SENATOR NICHOLAS F. BRADY

Mr. JACKSON. Mr. President, I am delighted to have this opportunity to personally commend and congratulate Senator BRADY for the excellent job he has done representing the State of New Jersey during his brief tenure as a Member of the Senate.

NICK BRADY was appointed during a difficult period and has discharged his duties with great competence. He learned the ways of the Senate quickly and rolled up his sleeves and went right to work.

NICK is a capable and dedicated individual and we will miss him after the 97th Congress adjourns next week. His expertise in economics and finance enabled him to make a major contribution to our deliberations this year in the effort to bring about economic recovery.

I join my colleagues in thanking Senator BRADY for his service and hope that he will not stray too far from Washington, D.C., so that we may continue to draw upon his expertise in the years ahead.

SENATOR HARRISON "JACK" SCHMITT

Mr. President, as we enter the final days of the 97th Congress, I wish to join with my colleagues in honoring and paying special tribute to a distinguished friend and colleague, HARRISON "JACK" SCHMITT of New Mexico.

It has been a pleasure for me personally to serve with JACK and, I believe, his unique combination of scientific, academic, and government experiences brought a new and helpful dimension to this body. He quickly established himself in the Senate on complex technical matters.

JACK'S background is outstanding; he studied at the California Institute of Technology, the University of Oslo as a Fulbright Scholar, and he earned his doctorate in geology at Harvard University.

He won international acclaim and recognition for his work at NASA—both as an astronaut and as an assistant administrator.

I had the special privilege of working closely with JACK on the Select Committee on Intelligence. There he approached problems and highly technical issues with the keen, analytical mind of a seasoned scientist and through this approach, he made invaluable contributions to the committee.

I commend JACK SCHMITT for his service in the U.S. Senate and wish him well in the future. JACK, his family, the people of New Mexico—indeed throughout the Nation, can be proud.

SENATOR S. I. (SAM) HAYAKAWA

Mr. President, when the new Congress convenes next month, we will dearly miss one of our colleagues, Senator HAYAKAWA, who decided earlier this year to retire from the Senate after a single term.

It has been my pleasure to know SAM personally for years—going back before his election to the Senate when he was a good Democrat teaching English in California—and I consider him a close friend. It has been delightful these past 6 years having him as a col-

league in the Senate and I bid him a fond farewell now as the 97th Congress draws close to adjournment.

SAM gave the Senate a special character. He could be witty, sharp and charming— and sometimes all of those at once. His way with words added an important dimension to Senate deliberations—he always seemed to know the right question to ask, at the right time, and in the right way. I always admired that ability.

SAM took his work in the Senate very seriously and provided important leadership on matters ranging from East Asian and Pacific affairs to agriculture. He made a valuable contribution that all of us appreciate.

As a colleague and friend, I thank SAM for his help and counsel over the years and extend to him my best wishes for the future.

SENATOR HARRY FLOOD BYRD, JR.

Mr. President, it is difficult to realize that the Senate will convene next year without the presence in our midst of HARRY BYRD. As long as I have served here, there has been a HARRY BYRD in the Senate.

Standing in the great tradition of his distinguished Virginia family, HARRY BYRD, JR. has been a proud and patriotic American, a persistent independent voice, and a most congenial colleague.

In particular, I respect and honor HARRY BYRD for his extraordinary service on the Senate Armed Services Committee.

For one thing, his basic political-strategic good sense contributes to his excellent grasp of the complex issues of national security. Over and over again, he gets right to the heart of a crucial defense issue.

HARRY BYRD has also had the special advantage of a successful business career with the experience and know-how of managing a big enterprise and coping with limited financial resources. No one on our committee has been more outspoken in pressing for the establishment of sensible priorities in defense spending, and for the prudent use of defense dollars. He has performed an invaluable role in keeping the feet of public officials to the fire, in putting the withering questions to complacent Pentagon policymakers, and regularly uncovering faults and flaws in the management of the big weapons systems.

Above all, the word that best describes HARRY BYRD is "integrity." He is an unfaltering champion of Western values and of a strong, responsible, effective America. His example has been an inspiration. His contribution to the safety of this Nation and the future of freedom will not be forgotten.

SENATOR HOWARD W. CANNON

Mr. JACKSON. Mr. President, during 24 years in the Senate, HOWARD CANNON has been a profoundly respected voice, a dedicated worker, and a wonderful friend to so many of us. I want to say a few words of special appreciation.

During World War II, HOWARD achieved an outstanding military record in the service of his country—5 years in the U.S. Air Force, 20 months overseas, shot down over the Netherlands and evading capture for 42 harrowing days before reaching allied lines. Until recently, he served as a Reserve major general in the U.S. Air Force. It is no mystery why HOWARD brought an exceptional understanding to his work as chairman of the Subcommittee on Tactical Aircraft of the Senate Armed Services Committee. During these critical years, our subcommittee has had the most professional leadership one could ever hope for. And HOWARD has contributed in innumerable ways to the advancement of civil and military aviation during his time in the Senate.

Being an able and experienced lawyer has been another of HOWARD'S special assets. As chairman of the Committee on Rules and Administration, his judgment and skills were indispensable in establishing rules to govern the confirmation of individuals nominated to the Vice Presidency of the United States, and in overseeing the confirmation of Vice Presidents Gerald R. Ford and Nelson Rockefeller.

Also, as chairman of the Senate Committee on Commerce, Science, and Transportation, he bravely led the campaign for Federal deregulation of aviation, trucking, broadcasting, and railroads.

It has been a great privilege to serve here in the Senate for so many years with HOWARD CANNON and to share with him in the fateful struggles for the security of this Nation and the advancement of individual freedom.

He should know that his historic contributions to the Nation will never be forgotten, and that his colleagues look forward to benefiting again and again from his courageous and wise counsel.

SENATOR HARRISON "JACK" SCHMITT

Mr. DOLE. Mr. President, my thoughts as we near the end of the 97th Congress include regret upon the departure of my colleague, JACK SCHMITT, the junior Senator from New Mexico. His efforts during the past 6 years on behalf of his State as well as this Nation have been commendable, and he will certainly be missed.

The variety of background brought to this body by its Members most assuredly adds to its dymanic flavor. The Senator from Kansas has been impressed with the expertise and valuable insight added by Senator SCHMITT as he has drawn upon his knowledge and experience in discussions of defense issues, the armed services, interior affairs, science, and space, among others.

JACK SCHMITT'S willingness to share his practical wisdom is complemented by an eagerness to explore all facets of an issue and by an astute political ability. I am certain that he will remain a friend and colleague in the sphere of public policy. We have yet before us many challenges ranging from our economic dilemma to the frontiers of space and technology. Senator SCHMITT will no doubt employ his distinctive sense of practicality to continue leadership beyond this Chamber.

To my colleague JACK SCHMITT, I wish every success in whatever endeavors lie ahead. You will be missed.

SENATOR SAM HAYAKAWA

Mr. President, when Senator HAYAKAWA came to the Senate 6 years ago, we gained an intellectual and innovative force which will be missed. In areas as diverse and wide ranging as foreign relations and small business, he has added the insight of a distinguished academic and professional. My closest work with him, however, was as a fellow member of the Agriculture Committee, where his fresh approach to farm issues was a valuable asset. On several occasions, the California Senator's incisive questions and remarks gave rise to reflection, clarification, and further research before an issue was resolved.

Oftentimes in the history of this body, a Member has significant impact on its direction and personality. I am honored to have worked beside SAM HAYAKAWA, a Senator who has contributed to a sense of distinction and innovation in the U.S. Senate.

Upon your gracious retirement, colleague, I wish you and your wife all the best as you resume endeavors beyond this Chamber.

SENATOR HOWARD W. CANNON

Mr. President, the Senator from Kansas honors a leader in the Senate for the past 24 years, Senator HOWARD W. CANNON. His influence and political prowess have earned him the respect and admiration of all his Senate colleagues on both sides of the aisle, and his presence will be missed.

Senator CANNON has helped shape much of the Nation's commerce and transportation policy through his leadership in the Senate. In the transportation area alone, he has overseen great advances in both technology and policy. Always with an eye on practicality, Senator CANNON took into consideration all interests involved. Thus, he was an effective legislator.

The Senator from Nevada also added much insight too, during consideration of armed services issues. As a retired major general in the Air Force Reserves, he has afforded us the benefit of his viewpoint and dedication to quality in our military.

These are but a few words to pay tribute to a respected leader and colleague. May his legacy of dedication be an inspiration to us all.

I wish you all the best, HOWARD, as you and your wife meet the challenges that lie ahead.

SENATOR NICHOLAS F. BRADY

Mr. President, we all have a special respect for Senator NICHOLAS BRADY. He filled a difficult position for a brief but crucial period in Senate history. This endeavor has been appreciated by his Senate colleagues who called upon him during the difficult deliberations and decisions occurring in recent months.

The businessman's perspective is a valuable one in our governmental processes. NICHOLAS BRADY brought this to his position here and confirmed this with pragmatism and a keen sense of effective management. Government must draw upon business principles for cost-effective policymaking.

Senator BRADY added distinction to this body, and I hope that he will remain a colleague to whom we may look for a pragmatic outlook.

As you resume your endeavors beyond this Chamber, NICHOLAS, you have all my best wishes for every success.

SENATOR HARRY FLOOD BYRD, JR.

Mr. President, the close of the 97th Congress brings with it the end of a chapter in the tradition of service to this body by the Byrd family of Virginia. HARRY FLOOD BYRD, JR., continued this tradition with distinction. As only the second person in the history of the Senate to be elected as an Independent, he fulfilled the role with true objectivity and pragmatism. Certainly, those of us in politics must admire the political abilities of one successful in the governing role without the traditional party affiliation.

Many have been pleased that, with autonomy and fortitude, HARRY BYRD has often followed the course of responsible and fiscally prudent Government policy. May his help be a pillar in the further reconstruction of our Nation's strength.

The people of Virginia were certainly wise in sending Senator BYRD to Washington for three terms, the last time with the largest vote ever given any Virginia candidate. As an able legislator and an effective representative, his efforts have certainly gained the admiration of his constituents.

This admiration is shared by HARRY BYRD's Senate colleagues. The Senator from Kansas expresses his appreciation to you, HARRY, for your noble efforts and valued friendship. All the best to you and your wife Gretchen as you meet life's next chapter.

SENATOR HOWARD CANNON

Mr. RIEGLE. I rise to pay tribute to one of the most outstanding Senators ever to serve in the U.S. Senate.

During his 24 years here, the achievements of HOWARD W. CANNON have been awesome.

I have been in the Senate only 6 years, but during that relatively short period I have had the privilege of serving under the chairmanship of HOWARD CANNON on the Commerce Committee.

I have learned a tremendous amount about the best this institution has to offer by watching HOWARD in action.

And it is easy for anyone who has served on the Commerce Committee to tick off HOWARD's accomplishments in developing numerous pieces of major legislation which have served consumers by increasing competition in a number of vital sectors of the economy.

He brought increased competition to the airline industry, to the trucking industry, to the railroad industry, and to the broadcasting and telecommunications industry.

He fought for consumers as a defender of the Federal Trade Commission when the Commission was under its harshest attacks.

He worked to increase travel and tourism in the United States.

He has been a consistent and staunch supporter of the U.S. space program.

And he has fought to rebuild the Coast Guard.

But Mr. President, others, I am sure, will speak more comprehensively of Senator CANNON's legendary legislative achievements during his many brilliant years in the U.S. Senate.

I want to digress for a moment and speak of what HOWARD CANNON, a senior and revered Member of this institution, has meant to me as a more junior and younger Member of this body.

Every Senator, I think, comes here with at least one constituency which is of outstanding importance to him or her personally.

It is no secret that the automobile industry is vital to my home State of Michigan. It is also no secret that we in Michigan have been going through some very rough times recently.

Over the past 6 years no issue has been more important to me than the survival of this industry.

I want everyone here to know that HOWARD CANNON has been a tremendous friend of the automobile industry * * * its workers, its management, and its consuming public. Whenever I have needed help in seeking assistance to this industry, whether it be in the form of a vote for the Chrysler Corp. or considering fuel economy legislation, which came through his committee, HOWARD CANNON has been there.

HOWARD, you have been a tremendous friend. I shall miss you very much.

SENATOR HARRY BYRD

Mr. KENNEDY. Mr. President, I am pleased to join my colleagues today in paying tribute to Senator HARRY BYRD, on his retirement after 17 years of distinguished service in the U.S. Senate. These have been productive years of important contributions to the people of Virginia and to the Nation.

Although we did not share committee assignments, I have had the privilege of working with Senator BYRD on a number of issues—especially in such areas as taxation and the establishment of the All-Volunteer Army. Senator BYRD will be warmly remembered by all of us for his integrity and commitment, his unfailing courtesy, and his tireless and eloquent advocacy of the responsible fiscal policies he sought for the Federal Government.

His dedicated efforts for the people of Virginia are well known and widely appreciated, and were continuously reflected in his victorious reelection campaigns for the Senate. Indeed, in 1976, Senator BYRD was reelected with the largest vote ever given any Virginia candidate.

Now, as Senator BYRD returns to Winchester, he carries with him the admiration and respect of his many friends and colleagues in the Senate, and the deep appreciation of the people of Virginia for his record of outstanding service.

SENATOR HARRISON "JACK" SCHMITT

Mr. SIMPSON. Mr. President, it is a real tinge of sadness I have as we note the close of the single Senate term of our friend from New Mexico, HARRISON "JACK" SCHMITT. I first met JACK when I was seeking the office which I now hold. He came to Laramie, Wyo. late in the year 1977 at the time I was considering running for the U.S. Senate. I remember so distinctly his helpful assistance and advice to me. The only serious flaw I came to note in JACK's good counsel and advice to me at that time had to do with his response to a question I posed when I stated, "Jack, what is the impact of 'Senate life' upon spouse and family as one becomes involved in the activities of the U.S. Senate and life in the city of Washington, D.C.?" His answer was most impressive and detailed and quite comforting, I assure you. He talked of responsibilities to wife and child and the fine balance that needed to be touched between the duties of the Senate and familial responsibilities and the necessity to find time for sharing with family. I was most impressed. It was not until weeks later that I found that JACK was childless and spouseless. Then I knew that he was truly a formidable man.

He was of great assistance to me when I came to this place. I shall not forget his many kindnesses and his attentiveness to me in those early confusing months of service in this body. He is a man of dogged persistence and determination with a droll and wry sense of humor. A lasting type of friend and certainly a man of his word in every situation in which he and I had dealings.

We shall miss him here. I commend him for his extraordinary work on the Ethics Committee in years past—his fine insight into issues and problems of the day in his other committee duties—his willingness to confront and probe and learn, America has been well served by his presence in the U.S. Senate and in every single one of his previous efforts on behalf of this country.

It has been my sincere pleasure to come to know JACK SCHMITT. My Senate life has been fuller because of his friendship. It seems wholly trite to "wish him well"—for JACK has always made his own breaks and he will do well in whatever goals he sets for himself. Godspeed to him.

SENATOR NICHOLAS F. BRADY

Mr. President, seldom has a man served here for such a short time and has left such an extraordinary impact. In just this short time—literally weeks—NICK BRADY has left his personal imprint on this body. I have not been fortunate enough to serve with him on committees of mutual interest, but I have enjoyed the opportunity of sharing the "Wednesday Club" luncheons with him. It was here that I saw this remarkably successful businessman able to communicate so clearly his thoughts and feelings to those of us here in the Senate. An erudite and talented man with an earthy sense of humor and an extraordinary grasp of the world of commerce and industry. Many of us still use as a reference source a memorandum he prepared for his colleagues on the issue of interest rates. His counsel to us on his knowledge of the international and national banking situation and some of the ramifications of present attitudes and Governent policies was studded with extraordinary insights.

Here was this wry man with a generous smile, and with a facile mind and a curious bent, pursuing the things that piqued his interest in the U.S. Senate. He gave much to every committee upon which he served. He gave much to the people of his State. He gave much to the leadership of this body in service and in attentiveness. He gave much to his colleagues on both sides of the aisles. I want to state with clarity that my life in the Senate has been richer because of my friendship with NICK BRADY.

Let us not forget the participation of his handsome companion in life, Kitty. We have seen her observe our activities from the family gallery. She has in such a short time left such a great impact on all of us and our spouses. She is a lady of style and intellect and compassionate concern for her fellow human beings. An extraordinary lady.

The Senate will miss his presence. He brought much to us and it is the hope and prayer of all of us that we were able to return something to him.

Coming to know Nick and Kitty has been a deep personal privilege. I wish them well in life's coming endeavors. With their sense of concern and loyalty and fealty to the cause, they bring great honor upon their country, their State and upon the U.S. Senate. I join with so many of my colleagues in expressing to them Godspeed and loving protection. They are lovely people.

SENATORS HARRY F. BYRD, BRADY, JR., SCHMITT, AND HAYAKAWA

Mr. WALLOP. Mr. President, today I join my distinguished colleagues in honoring Senators HARRY F. BYRD, JR., BRADY, SCHMITT, and HAYAKAWA, our colleagues who will not return to this Chamber when the gavel cracks the cold January silence, christening the opening day of the 98th Congress.

This Senate, its Chambers, its Members past and present, has acted since its very inception as a crucible of principled tradition. Some of America's greatest moral and political thinkers, from Jefferson and Lincoln to Russell and Dirksen, have used this vessel decade after decade to devise, reform, and refine some of the greatest social advances in the political history of the world. And, decade after decade those same great minds, having created the country whose field bore the fruits of their labor, wrestled with the defense of liberty at home and abroad. Presidents came from here—Presidents returned here. And, today as tomorrow, we will be here to represent and perpetuate everything America was, is, and hopes to be.

And so, it is with a twinge of sadness that I say goodby to my colleagues, to my friends, who have given so much to this body, their constituents, to every American. Senator HARRY F. BYRD Jr., has spent 18 years in this Chamber representing his fellow Virginians. I have had the pleasure of serving with Senator BYRD in this Chamber and on the Senate Finance Committee as well. His voice will long be remembered as a steadfast proponent of fiscal conservatism and a balanced Federal budget.

Although Senator BRADY has served only a brief term, he has made a substantial contribution by helping us restore confidence in ourselves, our office, and the Senate of the United States. In his 8 months, he has served well the people of New Jersey.

Senator SCHMITT, a fellow Member of the freshman class of 1976, has the distinction of being one of the Members of this Chamber to have made contributions in space exploration as well as in the Earth-bound legislative arena. I also have had the pleasure of working with Senator SCHMITT on the Select Committee on Intelligence, and know of his keen interest and efforts to keep American defense capabilities strong and alert.

And finally, Senator HAYAKAWA—another friend and colleague from the freshman class of 1976—an academician turned politician when called on to do so. His quiet, but firm, voice rang out during his 6 years in office as a true friend to American agriculture and small business.

In honoring my colleagues today, I am reminded of how their varied backgrounds—businessman, investment banker, scientist-astronaut, and scholar from America's east and west—truly illustrate the purpose of this great body. And, that purpose is to serve and represent the diverse interests of the people and regions of our United States.

Our departing colleagues have achieved this goal during their varied years of service to America and her people—and have done it splendidly. Recalling the words of President Theodore Roosevelt, "The first requisite of a good citizen in this Republic of ours is that he shall be able and willing to pull his weight." Gentlemen, you have done that and more. This body will certainly feel the loss of your collective weight and your willingness to contribute to the life of our country and to the tradition of the U.S. Senate. I wish you all the best in the years ahead.

SENATOR HARRISON "JACK" SCHMITT

Mr. STEVENS. Mr. President, it has been a great privilege for me to serve in the U.S. Senate with JACK SCHMITT. I had the opportunity to work closely with him on both the Appropriations and Commerce Committees and will sorely miss the energy with which he attacked problems and sought answers.

His contributions both to the Senate as an institution and the country as a whole have improved both. He brought to the Senate both a technical expertise and a sense of public responsibility. He handled a number of difficult assignments with wisdom and with tact. He never tried to duck the hard issues and invariably sought practical solutions.

Because of JACK, major policy changes have been implemented which will reduce the level of Government spending and provide incentives to businesses across the Nation.

Many Members forget the unique needs of the West. JACK SCHMITT has always protected those needs and interests. He understands resources, technology, people, and the process by which change may be made. His enthusiasm will be missed by all of his colleagues.

SENATOR S. I. HAYAKAWA

The junior Senator from California will be returning home at the end of the 97th Congress.

SAM HAYAKAWA has always been a friend. More than once I have sought his thoughtful advice on an approach to a problem. His wisdom is exceeded only by his modesty.

A Senator's integrity is his most valuable asset. In this respect, Senator HAYAKAWA is worth his weight in gold. He has taken strong stands on economic, agricultural, defense, foreign relations, and natural resource issues. I am particularly grateful to Senator HAYAKAWA for the sincere interest he took in the Alaska lands bill. We traveled together throughout my State in order to assess the Federal land policy situation. He spent many hours learning about the problems and issues involved and was quite persuasive in his efforts to educate those who did not understand the unique qualities of my State.

The Senate as a whole, and this Senator in particular, will miss Senator HAYAKAWA's sincerity and courage in representing the needs of his constituents and the people of this country.

SENATOR NICHOLAS BRADY

Although NICK BRADY has not been in the Senate long, he has certainly gained the respect and admiration of many of his colleagues. He came to the Senate under difficult circumstances—at a time when public perception of the Congress was low. I can say without equivocation that Senator BRADY performed his duties with dedication, enthusiasm, effectiveness, and honor. In my opinion he helped to restore public confidence in the Senate as an institution.

The experience and insight that Senator BRADY brought to this body was a breath of fresh air. He is a businessman by profession. He knows firsthand the impact of inflation, high interest rates, and unemployment. He understands the implications of tax policy upon the business world.

I will never forget Senator BRADY's first speech on the Senate floor. He warned us of the economic condition of the country and the significance of factors such as interest rates that affect it so greatly. He warned us of the need to take action expeditiously. His points were well taken.

I am most appreciative of Senator BRADY's willingness to be a team player. The leadership depended on his support and advice on critical legislation affecting defense, employment, Federal spending, and foreign policy.

Mr. President, a Senator is only as strong as his family. I would like to commend Senator BRADY's wife, Kitty, his daughter Kim and his sons Nicholas, Anthony, and Christopher for their support over the past 8 months. I cannot count the number of late night sessions that I have seen Kitty watching the Senate proceedings from the family gallery.

We will miss NICK BRADY in the Senate. He has done us a great service for the Senate and for the country.

SENATOR HOWARD CANNON

Mr. President, few Senators have made their mark on the Senate during their tenure as has the senior Senator from Nevada, HOWARD CANNON. He has served with distinction throughout his 24 years in the U.S. Senate.

I have had the privilege of working with Senator CANNON many times in his capacity as chairman and later as ranking member of the Senate Commerce Committee. His foresight is evident in major legislative areas such as transportation, trade, communications, and commerce policy.

The people of the State of Nevada can be proud of the work Senator CANNON has done. Their interests were always protected and their ideas implemented through his legislative skill.

Senator CANNON is a true westerner. He represented Nevada during a crucial period for the West and he had a significant impact on its growth and development. I think the leadership and foresight he demonstrated was an example for all to follow.

His contribution to the institution of the Senate will be missed in the Congresses to come, but his record of the past will always stand strong.

SENATOR HARRY F. BYRD, JR.

Mr. President, the 97th Congress is near adjournment. The end of this Congress will mark the end of a distinguished and illustrious service in the U.S. Senate for the senior Senator from Virginia, HARRY F. BYRD, JR.

The Senate is a better place because of the contribution Senator BYRD has made to this body. As an appointed Senator in 1965, he quickly learned the legislative process and gained the respect and admiration of his colleagues. As a member of the Armed Services Committee and the Finance Committee, Senator BYRD always believed in a strong defense and in a tax policy that dealt equitably with all Americans.

Throughout his years in the Senate, Senator BYRD displayed his tenacious and fierce independence. The votes he cast were votes that he firmly believed were for the good of his country.

Senator BYRD was only the second person in history to be elected to the U.S. Senate as an independent. That feat alone exemplifies the respect and confidence that was bestowed upon him by the people of Virginia.

Senator BYRD has spoken honestly and frankly about some very complex issues which face our Nation. He has brought the issue of the economy into focus. He has not relented in his concern about high interest rates. He has tirelessly examined the expenditures of the Federal Government in an effort to reduce the burden to taxpayers.

The Senate will miss his leadership and dedication. He has been, and is, an example for all of us in the Senate.

SENATOR HOWARD CANNON

Mr. ROBERT C. BYRD. Mr. President, it is inevitable, in an elected body, for the day to come when it is necessary to say goodbye to valued colleagues, and to welcome new ones. The feelings on such a day are always mixed—good feelings in reflecting back on shared struggles and victories, and good feelings in anticipation of new friendships, but sad, or should I say reflective, feelings on knowing we will miss the companionship and assistance of old friends.

HOWARD has served the Senate since 1958. His accomplishments are many, and known to many as well. I recall, in particular, his willingness to tackle complex, and sometimes controversial issues in the Rules Committee, like the disputed New Hampshire election. He handled that delicate assignment with fairness and dispatch. He used the same committee to work on the unglamorous but difficult and extremely important Federal election laws, which are necessary to the proper functioning of our electoral democracy.

I am sure that other Senators will describe, rightly, his more visible and major contributions in the areas of the space program, telecommunications, and national transportation. In each of these, he has been a leader, and left behind a legacy of improved public policy.

He will be missed. I wish him the best.

Mr. BAKER. Mr. President, there is time remaining, I believe, under the aggregated special orders, is there not?

The PRESIDING OFFICER. The majority leader is correct.

Mr. BAKER. No Senator is now seeking recognition.

So that we can get on with the business of the Senate, I am going to take the liberty of asking consent that I may yield back that time in view of the fact that we are going to keep the RECORD open for the insertion of statements until the hour of 6 p.m. today in any event.

I see no need to keep the Senate in a delaying quorum.

I ask unanimous consent that it may be in order to yield back the time remaining under the aggregated special orders.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I yield back that time.

ROUTINE MORNING BUSINESS

Mr. BAKER. Mr. President, is there now an order for the transaction of routine morning business?

The PRESIDING OFFICER. The majority leader is correct.

Under the previous order there will now be a period for the transaction of routine morning business for not to exceed 10 minutes with statements therein limited to 2 minutes each.

Mr. BAKER. Mr. President, I suggest the absence of a quorum.

89-059 O-86-36 (Pt. 21)

The PRESIDING OFFICER (Mr. HELMS). The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MAMIE K. TAYLOR

Mr. NUNN. Mr. President, Mamie K. Taylor was a remarkable woman from Georgia whose death October 23 was mourned by all those who knew her.

Mrs. Taylor has been described by State and community leaders as "Georgia's indispensable citizen," its "prime volunteer." Indeed, through her dedication to community projects, her active participation in the political process and her staunch support of women's rights, Mrs. Taylor's service to her State and country is immeasurable.

Although Mrs. Taylor retired in 1965 after 44 years as an executive with the Georgia Power Co., she never really stopped working. Throughout her 82 years, Mrs. Taylor's energy was inexhaustible. During World War II, she sold war bonds and ran civil defense centers. Later, she organized veterans' relief programs, directed fund drives for muscular dystrophy, and fought for legislation prohibiting the jailing of minors.

Mrs. Taylor served as a mentor and role model for many young women. Always a champion for women's rights, Mrs. Taylor lobbied for the original equal rights amendment when it was first introduced in Congress in 1923. She served as president of the Atlanta Business and Professional Women's Club and, as head of former Governor Carl Sanders' Commission on the Status of Women, she drafted some of Georgia's first women's rights bills.

Throughout her long life of public service, she exhibited the wisdom, patience, and determination that make for sound leadership. Not only was she a leader and a fighter, but above all, throughout her life, she always conducted herself with the grace, charm and dignity of a fine southern lady.

Although Mrs. Taylor never lived to see what she said was her fondest hope—the ratification of the equal rights amendment—she left a legacy of strength and determination that will be emulated by generations to come.

As tribute to Mrs. Taylor, I ask unanimous consent that the following article from the Atlanta Constitution by Carole Ashkinaze be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LEGACY OF MAMIE K. TAYLOR

(By Carole Ashkinaze)

It's hard to understand why some people try to bury their grief along with their friends. "Don't cry," they admonish one another. Or even worse, "Don't think about it."

I'm no expert, having had blessedly little contact with death and dying in my more than 30 years. But it seems to me a sensible and healthy thing to take stock at such times: to know precisely what you have lost, to measure it, to ponder the gap it will leave in your life and, of course, to cry. How else do you deal with it, and move on?

When I heard that Mamie K. Taylor, the grand champion of women's rights and one of the original suffragists, had died last weekend at 82, I cried. But I was better acquainted with the legend than the person, having met her only in the last few years.

"Don't you worry, dear girl," she told me at a rally for the Equal Rights Amendment on the steps of the state Capitol in the summer of 1981, in a voice no stronger than a whisper. "It's going to be the law of the land." She was very convincing.

She was a Southern lady "to her fingertips," as her friend Dotsie Holmes, a former vice president of the League of Women Voters, has described her; very concerned with proper manners, proper dress and "doing the proper thing," which was how she managed to gain the ears of those hidebound legislators who looked down their noses at her more strident sisters, according to the University of Georgia's Jim Parham, who in the 1960s campaigned with her against the jailing of minors. But she chose her causes with care, and once "boxed Carl Sanders into a corner," Parham chuckles. "Will you support appropriations to build regional juvenile detention centers to get the children out of common jails, or not?" she demanded at a public meeting, during his 1962 campaign for governor. "Yes, Ma'am," the startled Sanders replied. "And she held him to it," Parham says.

Redneck legislators were always apologizing to Mamie for voting against the so-called women's bills, says her friend Dottie Gibson, who worked with her on Gov. Carter's Commission on the Status of Women. "'I don't want to hurt you, Mamie, but I've got to vote against this,' they'd tell her."

Always active in politics, Mamie had lobbied for the ERA since 1923, the year it was introduced in Congress. It was "simple justice," she said.

She was also a "yellow dog Democrat," who preferred Carl Sanders to Jimmy Carter and bit the bullet to vote for her party's choice for governor in 1970. "It was ironic," Ms. Gibson says, "Jimmy Carter was the only governor that really made an effort to fund that commission, but she didn't like him." She was also a "great supporter of George Busbee," though he moved slowly to implement her recommendations for ridding the state code of discriminatory laws and language, she says.

And though many women looked to her for guidance in the current campaign, Mamie had little to say after her candidate for governor, Norman Underwood, was defeated in the primary. Her death appears to have been Republican Bob Bell's loss, however. Her good friend Mary Kate Duskin recently asked if she would vote for Joe Frank Harris despite his opposition to the ERA, and was told, "I just am not going to do that. He's not the person we need." She "wasn't ugly about it, but she had made her decision," her friend recalls.

She was a "role model" and "mentor" to several generations of Georgians, including Jeanne Cahill, who chaired the CSW under Carter and later served on his White House Conference on Families; to Ms. Holmes, who says Mamie "saw no conflict between being a feminist and a happily married woman"; and to state Rep. Eleanor Richardson, who has taken to heart her warnings to "be careful you don't alienate people in the House and Senate on any one bill, as there will be others you'll want passed."

Ms. Cahill remembers attending a luncheon marking the end of an exhausting first and, she hoped, last year as a director of the Clairmont Women's Club in the 1960s. "I had little children at home," she says. "But it was my fate to be seated next to Mamie, who said 'Jeanne, the future of this club is in the hands of leaders like you.'" Ms. Cahill stayed, and wound up taking on much greater responsibility.

Not until much later, wondering how she had been persuaded she was such a valued leader, did it dawn on her. "*Mamie* was the leader," she chuckles. "That's how she operated."

WALTER RUNDELL, JR.

Mr. MATHIAS. Mr. President, during the recess I was deeply saddened to learn that Prof. Walter Rundell, Jr., of the University of Maryland Department of History had died. At the time of his death on October 25, Professor Rundell had just returned from the annual meeting of the Western History Association where he had been installed as that organization's president.

Although only 53 years old when he died, Professor Rundell left behind an impressive record of academic excellence and scholarly achievement. He had published five books and dozens of articles in fields of specialization that included frontier history, historical methodology, early oil exploration, and archival practice. In addition to serving as president of the Western History Association, he had presided over the Society of American Archivists in 1977-78 and was about to assume the presidency of the local Potomac Corral of Westerners International, another Western History Association. He had been instrumental in developing historical programs related to the Federal Government. In that connection, Professor Rundell had served as vice president of the U.S. Capitol Historical Society since 1971 and played an essential role in guiding the work of the Senate Historical Office.

Before assuming the post of chairman at the University of Maryland History Department in 1971, Professor Rundell had held a similar position at Iowa State University. He had also taught at Columbia and Emory Universities, the University of Oklahoma and, in his native Texas, Del Mar College and Texas Woman's University.

At the University of Maryland, Walter Rundell was known to legions of undergraduates as an inspiring and highly effective classroom teacher. Recently he won the university's Student Award for Outstanding Teaching. As chairman until 1976, he brought enlightened and effective direction to the department, one of the Nation's largest. Within that department, he built a strong academic program in western history, capitalizing on the unparalleled documentary riches on the American West available within the National Archives.

Professor Rundell's appreciation of the value of archival sources extended back nearly three decades to his own doctoral studies at American University. While serving as assistant executive secretary of the American Historical Association in 1965, he was chosen to direct a national survey on the use of original source materials in the teaching of American history. From that study came his award-winning book "In Pursuit of American History" and his determination to work for a strengthened National Archives—one worthy of the rich documentary heritage it houses. One of his greatest recent contributions was the fight he waged against changes that threatened the quality of services offered by the National Archives. In that battle, he and I were allies and it was my pleasure on several occasions to receive his testimony.

Walter Rundell's death is a great loss to the University of Maryland as well as to his many students and colleagues across the Nation. My deepest sympathy goes to his wife, Deanna and to his three children, Shelley, David, and Jennifer.

WASHINGTON SEMESTER PROGRAM

Mr. MATHIAS. Mr. President, in 1947, the American University, in conjunction with five other institutions, established the Washington semester program to bring undergraduate students to the Nation's capital to study government through firsthand experience and contact with political, business, and community leaders. Throughout its 35-year history, the program has blended the traditional academic environment with experimental learning. It offers students throughout the United States a rare opportunity to live, work, and learn in Washington, D.C.

The success of the program can be measured by its remarkable growth in enrollment. From an initial membership of five colleges and universities—Oberlin, Wooster, Allegheny, Ohio Wesleyan, and Westminster—the program has expanded to serve students from some 200-member institutions in 41 States, Puerto Rico, and Canada. The first class included 12 students, and now nearly 9,000 students have completed the program, 60 percent within the last 10 years. In the academic year 1973-74, 285 students participated in the program. Some 765 students are projected for 1982-83.

Its success also can be attributed to the enthusiastic participation of the Members of Congress, Supreme Court Justices, members of the White House staff and executive agencies, trade association and corporate leaders, and journalists who have served as guest lecturers.

In response to students' interests, the program has expanded to include eight specializations:

The Washington semester in American national government and politics, the original Washington semester, which focuses on the institutions and processes shaping the Nation's public policy;

The Washington urban semester, which concentrates on urban policymaking and the local/national relationship in problem solving;

The Washington economic policy semester, which involves the analysis of domestic and international economic policy;

The Washington foreign policy semester, which focuses on the analysis of current foreign policy issues;

The Washington justice semester, which emphasizes the criminal justice system and the growing impact of intergovernmental relationships on agencies charged with creating and administering criminal law;

The Washington semester in arts and humanities, which focuses on the cultural and historical development of the Nation and its capital city;

The Washington journalism semester, which examines the role of journalism and communications as these relate to public affairs; and

The Washington semester in public administration, which emphasizes the role of the bureaucracy in the formulation and implementation of public policy decisions.

Each student's core curriculum includes three distinct yet interrelated elements: seminars, research, and internships. The seminars provide students with the opportunity to discuss processes, issues, and politics with practitioners and public officials intimately involved with the areas under investigation. The research element, similar in nature to a senior thesis, allows students the opportunity to delve into Washington's vast resources to investigate current issues or public policy concerns. The internships enable students to explore career opportunities and test skills in an entry-level staff job. Recent internship placements have included the White House; the Supreme Court; the Office of the Secretary of Labor; the Departments of Agriculture, Commerce, Energy and Housing and Urban Development; the General Accounting Office; the Congressional Budget Office; the Organization of American States; the Institute for Policy Studies; the American Petroleum Institute; plus a host of positions with Members of Congress and congressional committees. Full-time American University faculty are responsible for teaching and supervising the students' work in each element of the program. For its future development, the program is applying the successful Washington semester model to study in foreign capitals.

Dr. David C. Brown, dean of the Washington semester program, has been involved with the program since 1972. Over the 35 years of its existence, the Washington semester program has established a tradition of excellence for a variety of reasons. It develops the student intellectually, it offers a basis for challenging simplistic judgments about politics and economics which the atmosphere of the classroom fosters, and it advances many students toward career opportunities and goals in ways that have a lifetime impact. Above all, the program represents an unrivalled opportunity to compare the theories of the textbook with the operational realities of political and economic life in Washington.

I want to commend Dr. Brown for his professional dedication to Washington Senator and to wish him continued success in bringing bright young men and women to the center of their National Government. Both they and our Nation can only benefit from this experience.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Morning business is closed.

BUDGET WAIVER FOR RADIO MARTI

The PRESIDING OFFICER. The pending business is on agreeing to the motion to waive section 402(a) of the Budget Act with respect to the consideration of H.R. 5427.

Under the previous order, the distinguished Senator from Nebraska is recognized.

ORDER OF PROCEDURE

Mr. ZORINSKY. Mr. President, I ask unanimous consent to yield the floor to the distinguished majority leader for the purpose of his comments without losing my right to the floor and without this being considered the end of a speech for the purpose of the two-speech rule, and I ask that I again be recognized at the conclusion of the remarks of the Senator from Tennessee.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. I thank the Senator.

Mr. President, as I indicated earlier, and as I have discussed with the majority leader, it is my intention now to go to nominations on the Executive Calendar.

Before I do so, however, may I ask the Senator from Nebraska if he will permit me to extend his unanimous-consent request this way:

I ask unanimous consent that I may be recognized in my own right with the understanding that I will now attempt to put the Senate into executive session, that the conditions described by the Senator will apply as to his re-recognition under the two-speech rule and other provisions when we return to legislative session, and if we return to legislative session on more than one occasion during the course of this calendar day, the same conditions will apply.

Mr. ROBERT C. BYRD. Mr. President, reserving the right to object, I think I know what the majority leader is trying to do. I do not believe his request would quite accomplish it, if the Senator will pardon me for saying so.

I would think the point should be made clear that any return to legislative session for the purpose of going back into executive session would not automatically trigger the return to the legislation which the distinguished Senator from Nebraska is speaking on.

I think I shall support that legislation, but I want to protect him. I also want to help the majority leader carry out his obligations.

Mr. BAKER. Mr. President, that is an interesting point because, in consulting with the Parliamentarian, I believe there was no precedent found that I can identify or that he can make me aware of for returning to a legislative session for a specific purpose. I should like to do that. I think the precedent the distinguished Senator from West Virginia established of going into executive session for a particular purpose has equal appeal to going out of legislative session into executive session and then back to legislative session for a particular purpose. If there is no objection at this time, I shall attempt to establish that precedent. I would like to see it done.

Mr. ROBERT C. BYRD. I do not think it requires a precedent. I think the majority leader is attempting to do what I would attempt to do if I were in his position. That is, once one nomination is disposed of, I would move to go back to legislative session, immediately seek recognition because I can get, as he can get it, and seek to go back into executive session for the purpose of going back to the next nomination. But if we go back into legislative session under the request, I am afraid that Mr. ZORINSKY would have a legitimate reason to expect to be recognized ahead of the majority leader.

Mr. BAKER. Mr. President, I was relying then on the priority recognition rule. Let me modify the request so that, as we return to legislative session, when we return to legislative session and as many times as we may return to legislative session during this day, notwithstanding this provision that gives the Senator recognition first, I may be recognized solely for the purpose of putting us back into executive session. I believe that would protect the Senator from Nebraska, which I was attempting to do, and take care of the very valid point made by the minority leader, which, after all, is for my protection. So I amend the request in that respect.

The PRESIDING OFFICER (Mr. MATTINGLY). Is there objection?

Mr. ZORINSKY. Will the majority leader yield?

Mr. BAKER. Yes.

Mr. ZORINSKY. This, then, would differentiate from going back to legislative session for the purpose of going into executive session as opposed to seriously returning to the budget waiver request?

Mr. BAKER. Yes, Mr. President, it would. And when we return to legislative session to transact legislative business other than returning to executive session, then the Senator, under this order, would be first recognized.

Mr. ZORINSKY. I thank the majority leader.

Would the majority leader be in a position to indicate his feeling for the success of continuing with the executive session process for the nominations, timewise?

Mr. BAKER. I wish I could, Mr. President. Every time I inquire of Senators about how long it will take to complete this calendar, I get a bleary-eyed response. I am afraid to even estimate, Mr. President, how long it might take, but we shall do the best we can.

I assure the Senator that nobody is—certainly I am not—going to take advantage of him in terms of time. I shall make it my business to consult with the majority leader. I am certain he will make sure that the Senator from Nebraska is on the floor.

Mr. ZORINSKY. I thank the majority leader and the minority leader for their kind consideration.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

MR. BAKER. Mr. President, before I make the request to go into executive session, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. BAKER. Mr. President, I ask unanimous consent that the Senate now go into executive session for the purpose of considering nominations.

The PRESIDING OFFICER. Is there objection?

Mr. HELMS. Reserving the right to object, if the Chair will bear with the Senator from North Carolina.

Mr. BAKER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The majority leader is recognized.

Mr. BAKER. Mr. President, I have stated the unanimous-consent request.

The PRESIDING OFFICER. Is there objection?

There being no objection, the Senate proceeded to the consideration of executive business.

The PRESIDING OFFICER. The nomination will be stated.

U.S. ARMS CONTROL AND DISARMAMENT AGENCY

NOMINATION OF ROBERT THADDEUS GREY, JR., OF VIRGINIA, TO BE DEPUTY DIRECTOR

The legislative clerk read the nomination of Robert Thaddeus Grey, Jr., of Virginia, to be Deputy Director.

Mr. BAKER. Mr. President, the distinguished chairman of the Committee on Foreign Relations is necessarily absent from the Senate. I ask unanimous consent that a statement by him in respect of this nomination may appear first in the RECORD of the consideration of this matter.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE NOMINATION OF ROBERT T. GREY, JR.

● Mr. PERCY. Mr. President, on March 16, 1982, Robert T. Grey, Jr., appeared before the Foreign Relations Committee as nominee for the post of Deputy Director of the Arms Control and Disarmament Agency. He was ordered reported favorably 1 week later, on March 23, 1982, by a vote of 10 to 0, with one Senator voting present.

I believe it is important to support the policy of the President in moving rapidly toward significant and verifiable arms control agreements. In this, we in the Senate can give no clearer sign of our commitment to this endeavor than by giving Senate endorsement of his nominees to key positions within the Arms Control and Disarmament Agency.

Mr. President, the United States is currently handicapped in its dealings with the Soviets in moving toward significant and verifiable arms control

agreements. While the Soviet Union's key arms control staff is in place, President Reagan has few of his arms control managers confirmed. In addition to the delay on the Grey confirmation, only 1 of 4 Assistant ACDA Directors are confirmed.

In June 1981, the committee and then the Senate executed their responsibilities by confirming Dr. Eugene V. Rostow as Director of the Arms Control and Disarmament Agency, after a careful scrutiny of Dr. Rostow's background and of his views on arms control issues.

In the same vein, the Foreign Relations Committee conducted a thorough review of Mr. Grey's views and background to expedite the process of confirming the administration's choice for the second most important position within the Agency. It is now nearly 9 months since Mr. Grey's nomination cleared the committee. The failure to confirm this nominee has harmed the effective operation of that Agency and to that extent it has weakened prospects for arms control. It has also undermined the committee's ability to gain authoritative judgments from the Agency on arms control issues of concern to the Senate.

Let me illustrate the problems. At the current time Dr. Rostow is in the hospital recuperating from major surgery. Mr. President, I know that the Senate wishes him well during his recovery. But during his recovery, the Agency is without an authoritative spokesman and this has undermined the committee's ability to assure the Agency's accountability on several arms control issues. Next week, for instance, the committee has scheduled a consultation on the administration's review of two important arms control accords, the threshold test ban (TTB) and the peaceful nuclear explosions (PNE) treaties. Although the Arms Control and Disarmament Agency has played a key role in the administration's assessment, we cannot hope to gain its testimony on this issue while Dr. Rostow recuperates and while Mr. Grey is unconfirmed. In sum, the failure to confirm Robert T. Grey, Jr., is hampering the Senate in the execution of its duties.

It is important that the Arms Control and Disarmament Agency's unique perspective must be given full weight in the administration's deliberations on arms control and security policy. But that is difficult to achieve when a senior arms control official, who frequently must act on behalf of the Agency, has yet to be approved by the Senate.

I believe that it is also important that we give due respect to the wishes of ACDA Director Dr. Eugene V. Rostow. Robert Grey has the total endorsement and holds the highest confidence of the ACDA Director. They have a close working relationship and we should allow the Director to have in place a confirmed deputy with whom he works well.

I urge that the Senate now act expeditiously to confirm this nominee and, thereby, allow the Arms Control and Disarmament Agency to get on with the business of arms control.●

Mr. BAKER. Mr. President, I see the distinguished Senator from North Carolina is on his feet. I surmise from that and his previous conversation with me that he may be seeking recognition to speak on this nomination.

Mr. HELMS. Mr. President, I am.

The PRESIDING OFFICER. The Senator from North Carolina.

Mr. HELMS. Mr. President, I thank the distinguished majority leader.

I simply wish to say on the nomination of Mr. Grey that the least said the better. I further say to my leader that if the intent of the Senate is to seriously consider this nomination, I have about 8 or 10 hours of material which I wish to discuss and various other Senators have indicated that they wish to discuss the matter at some length.

I point out to the Senate that, at this moment, Senators GRASSLEY and SYMMS are tied up in the gas tax hearing, but they have indicated that they will come immediately to this floor in connection with this nomination and at least one other that is on the calendar.

The same thing is true of Senators JEPSEN and DENTON, who are involved in the MX hearing. They, too, will come to this floor. I really do not think the majority leader wants to put those Senators in the position of having to come here to extend a debate which is going to be exceedingly lengthy with respect to Mr. Grey, whose nomination may very well be withdrawn by the White House later today, and another nominee.

I say to my friend from Tennessee that I hope that I can help him avoid an exercise in futility because there are some of us who are prepared to discuss this and other nominations at some length.

That is not a threat. It is just a friendly signal that I send to the majority leader. I will accommodate him in any way I can within those parameters.

Mr. BAKER. I thank the Senator.

Mr. President, as Members will surmise, this comes as no great surprise to me; the Senator is not in the habit of hiding his light under a bushel, and he has always been candid and frank with me in his statements and views on nominees and on nominations. I am always deeply grateful for that.

Mr. President, there are a number of nominations to be dealt with, and in a moment I am going to ask the Chair to state the next nomination on the calendar. This does not necessarily mean that the Grey nomination is disposed of by inaction. It is perhaps possible in other ways to return to that nomination. But in view of the statement just made by the distinguished Senator from North Carolina and in view of my desire to consult and confer with the President on this subject, I will not at this moment press the debate on that subject in an effort to conclude Senate action.

Mr. HELMS. Will the Senator yield?

Mr. BAKER. Yes.

Mr. HELMS. I know that the majority leader, in the event that an effort is made to consider the Grey nomination, will advise us in advance so that we can be on the floor.

Mr. BAKER. Yes; I will indeed.

Mr. HELMS. I thank the Senator.

LEGAL SERVICES CORPORATION

WITHDRAWAL OF NOMINATIONS

Mr. BAKER. Mr. President, in view of that, in a moment I will ask the Chair to state the next nomination, but before I do so I have advised the minority leader and I now wish to announce to the Senate that the President of the United States has withdrawn the nominations under Legal Services Corporation, which are Calendar Orders No. 845 through 852. The certificate of withdrawal has been signed by the President and has been transmitted to the President of the Senate. I have been advised of that action.

Therefore, I ask that the Chair may state the next nomination following on after the withdrawn names.

U.S. ARMS CONTROL AND DISARMAMENT AGENCY

NOMINATION OF ELMO RUSSELL ZUMWALT, JR. OF VIRGINIA, TO BE A MEMBER OF THE GENERAL ADVISORY COMMITTEE

The PRESIDING OFFICER. The next nomination will be Mr. Elmo Russell Zumwalt, Jr., of Virginia, to be a member of the General Advisory Committee of the U.S. Arms Control and Disarmament Agency.

Without objection, the clerk will report.

The legislative clerk read the nomination of Elmo Russell Zumwalt, Jr., of Virginia, to be a member of the General Advisory Committee of the U.S. Arms Control and Disarmament Agency.

Mr. BAKER addressed the Chair.

The PRESIDING OFFICER. The Senator from Tennessee.

Mr. BAKER. Neither Senator from Virginia is on the floor at this time. I happen to know that both of them are engaged in committee work. I have indicated that I would let them know when we reached this nomination. We have done so earlier than planned because of the President's withdrawal of the Legal Services nominees. In order

to invite them to attend and participate in this debate, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum called be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I see the distinguished Senators from Virginia are on the floor. The item next on the Executive Calendar is the Zumwalt nomination. Has the clerk stated that nomination?

The PRESIDING OFFICER. The clerk has reported the nomination?

Mr. BAKER. Yes.

May I inquire of the two Senators from Virginia if they are prepared to respond as to how they wish to proceed on this side?

Mr. WARNER. Mr. President, I thank the majority leader and the Members of the Senate for their indulgence in this matter. I was delayed at a hearing in the Senate Armed Services Committee because my questioning of the Secretary of Defense was underway and thereby I delayed coming to the Chamber.

It is my intention to state opposition to this nomination for the reason that a hearing has not been held by the Senate affording Members of the Senate to inquire into the qualifications of the nominee.

Mr. President, the history of the nomination is well known by my colleagues in the sense that it was sent here, and neither the senior Senator from Virginia nor myself was notified of the nomination and the fact that it was pending on the calendar of the Committee on Foreign Relations. That committee—and I will allow the members of that committee to state the reasons—did not hold hearings on this nomination, and when I learned of that, I promptly wrote the chairman, dated September 28, 1982, the following letter. It is addressed to Hon. CHARLES PERCY, chairman of the Committee on Foreign Relations. It reads as follows:

Hon. CHARLES H. PERCY,
Chairman, Committee on Foreign Relations, U.S. Senate, Dirksen Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: I am writing in regard to the nomination of Admiral Elmo R. Zumwalt to the General Advisory Committee of the Arms Control and Disarmament Agency.

The law which established the Arms Control and Disarmament Agency provides for a General Advisory Committee, not to exceed 15 members, appointed by the President by and with the advice and consent of the Senate. This General Advisory Committee is to advise the President, the Secretary of State and the Director of the Arms Control and Disarmament Agency on matters which affect arms control, disarmament and world peace.

It is my understanding that periodically the Advisory Committee, on a classified basis, submits their reports to the Director, the Secretary of State and the President. Since the duties of the members of the Committee involve very sensitive and important issues relating to our defense and national security, members of the Committee have access to and share in views on classified information.

Today, I discussed with your staff the Act establishing the Committee, how the nominations were handled, and my concerns which are:

(1) Is there precedent for a syndicated columnist, specializing on national security issues, serving on this particular advisory committee, or other comparable advisory committees serving in the sphere of national defense, intelligence and security?

(2) Is there a potential conflict of interest in allowing a columnist to have access to classified government documents; and, presumably, access to classified contributions and discussions by other members of the Advisory Committee? Does the presence of a columnist inhibit free discussion?

(3) Does such an appointment provide the columnist an advantage over other members of the journalism profession? Since the column is commercial—for a profit—does committee membership enhance marketability?

(4) How did Admiral Zumwalt disclose and characterize his work as a practicing columnist in the official documents relating to conflict of interest submitted to the Committee?

(5) Was there any representation, or inquiry by the Committee, to the effect that he would suspend his work as a columnist while serving on the Committee?

I might interject here at this point, Mr. President, that I will put into the RECORD the statement by another designated member of the general advisory committee to the effect that he would forgo his work as a journalist in view of his appointment. That is a representation which has not been made by Admiral Zumwalt.

A preliminary examination by your staff of your Committee's files provided no information which they deemed adequate. They were very helpful but understandably need and asked for more time. I then decided to formalize this request by letter.

As you may recall, we briefly touched on these questions when we met in your office on the night Senator BYRD and I sought to have the nomination returned to the calendar.

And also Senator HARRY F. BYRD was in that discussion.

Once the nomination was returned to the calendar, I promptly called—as a courtesy—Eugene Rostow, Director of the Arms Control and Disarmament Agency, to inform him of the action unanimously taken by the Senate.

Namely to have the nomination not signed by the President—

I offered to meet with him in the event he desired additional details.

The press queried my office yesterday and this reply was given:

"The Virginia Senators were not advised that the final Senate action on the nomination of Admiral Zumwalt was imminent.

"They feel that there should be more time for consideration of this matter."

Press reports today infer that past professional and personal relationships may become a part of this inquiry. My questions to the Committee, Mr. Chairman, are limited to those recited in this letter, for these reasons.

As you know, for over five years I served in the positions of Under Secretary and Secretary of the Navy and Admiral Zumwalt, as Chief of Naval Operations, worked with me for much of that period.

The relationships between Service Secretaries and their senior military partners are often competitive—at times adversarial—therein lies one of the strengths of our system of civilian control of the military. It is unique in government. It provides a freedom—which is essential—for senior military officers to advocate strongly positions on behalf of their respective Services.

In the interest of national defense and the integrity of the Services, and to enable successive teams of senior management to continue working within an environment of trust and confidentiality, both senior civilian and uniformed defense officials traditionally, and understandably, refrain from commenting publicly on personal differences they may have had. I have strictly adhered to that policy and will continue to do so.

I have strictly adhered to that policy; I strictly adhere to it at this time and will not bring it up on the Senate floor today.

Therefore, Mr. President, I submit this letter for the RECORD in its entirety. The essence of it is that I asked the chairman of the Committee on Foreign Relations to put certain questions to Admiral Zumwalt and, at the same time, I asked that a hearing be held.

At this time, Mr. President, although I have further remarks, I see my senior colleague is here, and I will suspend for whatever period of time he desires and then I will resume my remarks.

Mr. HARRY F. BYRD, JR. I thank my distinguished colleague from Virginia. I would suggest that, perhaps, he might care to finish his remarks and then I will make my statement.

Mr. WARNER. Mr. President, I again wrote the chairman of the Senate Foreign Relations Committee on September 30, 1982, in a letter addressed to Hon. Charles Percy, chairman of the Committee on Foreign Relations:

Hon. CHARLES H. PERCY,
Chairman, Committee on Foreign Relations, U.S. Senate, Dirksen Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: Thank you for meeting promptly with me yesterday with respect to the pending nomination of Admiral Elmo R. Zumwalt. Your staff, in attendance, likewise provided helpful guidance.

As I expressed yesterday, it is my desire that this nomination be given expeditious and fair consideration by the Senate in accordance with our standard procedures. Accordingly, I pledge my full cooperation.

At our meeting, it was mentioned that Admiral Zumwalt could come to the Hill for an informal meeting with interested Senators,

the expectation being that he could provide such information as might be required.

I recommend against this procedure. There are important issues raised by this nomination, which should not be resolved in private. While I have not had access to the Committee's file on this nominee—

And I point out Mr. President, I still have not availed myself of that time—

and have had little time for independent research in two days of other intensive Senate work, I am of the view that this case may be one of first impression. The uniqueness arises from Admiral Zumwalt's declaration to the Committee, so I am informed, that he intends to continue commercial writing on national security subjects.

This distinguishes this nominee from other professionals who have suspended their journalistic activities while serving the Federal Government.

Therefore, I strongly recommend that we have an open hearing following the standard procedures of the Committee. This will provide a written record for all Senators to make a judgment on the nominee's qualifications, any conflict of interest, and any question of fairness, bias or "stalling tactics" connected with this nomination.

A fundamental issue in this nomination is the degree to which the Executive branch can utilize the talents and expertise of a recognized professional on national defense—

And, indeed, Admiral Zumwalt is a recognized professional on national defense—

while that individual is activity pursuing—on a commercial basis—the writing of a column, articles, and lecturing on national security issues. Does this raise an actual or perceptive conflict of interest?

The journalism profession offers a reservoir of exceptional talent valuable to our government and there are many examples of exemplary service. But a question arises when we are dealing in the area of sensitive matters of national security where the individual will be given access to classified data and participate in the free exchange of such information between members of an Advisory Committee and the Executive Branch.

The Senate Executive Calendar for today, page 5, notifies Senators of the pending nomination of Elmo Russell Zumwalt, Jr. to be a Member of the General Advisory Committee of the United States Arms Control and Disarmament Agency. Further, the Calendar states that the nominee has made a "commitment to respond to requests to appear and testify before any duly constituted committee of the Senate". My request, Mr. Chairman, is that the Senate offer the nominee the opportunity to appear in an open Committee hearing.

When a hearing is scheduled, I respectfully request access to the Committee's files on this nominee.

On September 30, the chairman of the Foreign Relations Committee sent the following letter to the Honorable Eugene V. Rostow, Director of the U.S. Arms Control and Disarmament Agency:

DEAR GENE: I have received a letter from Senator John Warner raising a number of questions regarding Admiral Elmo R. Zumwalt's nomination to the General Advisory Committee on the Arms Control and Disarmament Agency.

I feel three of the questions which he has raised could be best answered by you:

(1) Is there precedent for a syndicated columnist, specializing in national security issues, serving on this particular advisory committee, or other comparable advisory committees serving the sphere of national defense, intelligence and security?

(2) Is there a potential conflict of interest in allowing a columnist to have access to classified government documents; and, presumably, access to classified contributions and discussions by other members of the Advisory Committee? Does the presence of a columnist inhibit free discussion?

(3) Does such an appointment provide the columnist and advantage over other members of the journalism profession? Since the column is commercial—for a profit—does committee membership enhance marketability?

In order to facilitate Senate confirmation of Admiral Zumwalt's nomination, I would appreciate your response as quickly as possible.

Sincerely,

CHARLES H. PERCY,
Chairman.

On October 14, 1982, Mr. Rostow directed the following letter to the chairman of the Senate Foreign Relations Committee:

DEAR MR. CHAIRMAN: Before addressing Senator Warner's questions concerning Admiral Zumwalt's nomination to be a member of the General Advisory Committee on Arms Control and Disarmament in your letter of September 30, 1982, I wish to reiterate the importance I attach to the General Advisory Committee. The need for independent analysis in the area of arms control is critical. Admiral Zumwalt's extensive professional national security experience and detailed knowledge of the issues would be a valuable asset for both the General Advisory Committee and myself.

In answer to the first question, we are unaware of any specific precedents concerning a syndicated columnist. However, journalists and editors have served on the General Advisory Committee in the past. John Cowles, editor and president of the Minneapolis Star and Tribune Company, Ralph McGill, editor of the Atlanta Constitution, and James Chambers, president of the Dallas Times Herald, all have served on this Committee. Historically, members of the General Advisory Committee have come from a broad range of occupations, including business, industry, labor, law, science, the military, technology, and education. It is important to note, however, that Admiral Zumwalt has been nominated to serve on the Committee because of his extensive experience in national security affairs, rather than because he writes a syndicated column.

As to a potential conflict of interest raised in the second question, Admiral Zumwalt, like other nominees to the General Advisory Committee, submitted the proper forms addressing this subject. The Office of Government Ethics found no conflict of interest in the Admiral Zumwalt nomination that has been submitted to the Senate. The members of the General Advisory Committee, like all employees, are subject to security procedures applicable to the protection of classified matters. Thus, the meetings of the Committee are usually required to be closed to the public and the work of the Committee and contributions and discussions by its other members are protected from unauthorized use and disclosure. In view of these facts and Admiral Zumwalt's demonstrated qualifications, I believe his presence on the GAC will enhance, rather than inhibit, free discussion.

In response to the last question, service on the General Advisory Committee would not, in my judgement, confer a journalistic advantage or enhance the marketability of the Zumwalt-Bagley Report. Admiral Zumwalt's already well established reputation in the national security field, makes it unlikely that his membership on the GAC would enhance the marketability of his column.

I hope these answers resolve the concerns expressed by Senator Warner and clear the way for the confirmation of Admiral Zumwalt to the General Advisory Committee.

Respectfully yours,

EUGENE V. ROSTOW.

The next correspondence relevant to this matter, Mr. President, was dated November 29, 1982, addressed to Admiral Zumwalt and signed by CHARLES PERCY, chairman of the Foreign Relations Committee.

DEAR ADMIRAL ZUMWALT: As you know, some serious concerns have been raised in the Senate regarding your nomination to be a member of the General Advisory Committee on Arms Control and Disarmament and the potential for conflict between your participation in the GAC and your work as a syndicated columnist writing about national security issues. In an effort to clarify the situation, the Director of the Arms Control and Disarmament Agency, Eugene Rostow, provided the Committee on Foreign Relations with information about the backgrounds and activities of past GAC members and the security procedures that would apply to your participation in the GAC.

However, I believe it is essential that the Committee explore your own views as to your responsibilities as a member of the GAC in order to complete its record with respect to your nomination. Therefore, I invite your response to the following questions at your earliest convenience:

(1) If confirmed as a member of the GAC, what do you understand your responsibilities to be regarding access to and use of classified and national security information?

(2) Under what circumstances, if any, do you believe it may be necessary to excuse yourself from participating in the work of the GAC?

(3) In what ways will you safeguard against there being an actual or even an appearance of a conflict of interest between your work as a member of the GAC and your work as a journalist/columnist?

Your cooperation in this matter is appreciated.

Sincerely,

CHARLES H. PERCY,
Chairman.

By hand delivery and messenger, dated the 3d of December 1982, the following was transmitted to Senator PERCY by Admiral Zumwalt:

DEAR SENATOR PERCY: I am pleased to respond to your letter of November 29, 1982, which I will do in question and answer form:

(1) Question: "If confirmed as a member of the GAC, what do you understand your responsibilities to be regarding access to and use of classified and national security information?"

Answer: If confirmed by the Senate to become a member of the General Advisory Committee, I would be subject to security procedures applicable to the protection of classified matters. The meetings of the

Committee are usually required to be closed to the public and the work of the Committee and contributions and discussions by its other members are protected from unauthorized use and disclosure. I would abide strictly by those constraints.

(2) Question: "Under what circumstances, if any, do you believe it may be necessary to excuse yourself from participating in the work of the GAC?"

Answer: In view of my answer to Question (1), I do not visualize any circumstances under which it would be necessary for me to excuse myself from participating in the work of the GAC.

(3) Question: "In what ways will you safeguard against their being an actual or even an appearance of a conflict of interest between your work as a member of the GAC and your work as a journalist/columnist?"

Answer: As a government servant, I have had many years of experience in having access to highly classified matters. As you know, during those years I have had the occasion to make many speeches, public appearances, media briefings, and to testify in public and unclassified hearings before Congressional Committees. I have therefore had many years of experience in distinguishing between those matters which are classified and those which may properly be discussed. I know of no instances where I have committed a breach of security. I would propose, if serving as a member of the GAC, to apply the same rigid standards which I applied while serving on active duty. If there arose any question in my own mind about whether a specific matter which I was planning to use in a speech, radio or TV appearance, press briefing, article, or syndicated column might be classified, I would not use it until and unless I had assured myself by consultation with the appropriate official in government that it was not, in fact, classified.

I appreciate this opportunity to complete the record of your Committee.

All best wishes.

Sincerely.

E. R. ZUMWALT, Jr.

That letter is signed by Admiral Zumwalt.

Mr. President, I return to the procedural aspect of this case. As I say, my objections at the present time are predicated on procedural aspects, namely that the Senate has not been allowed an opportunity to hold a hearing on this very important nomination. I reiterate the necessity, in my judgment, for the Senate to have such a hearing prior to taking any action on this nomination. We have a very important precedent in this case. It is reflected in Senator PERCY's opening statement in the letter of November 29, 1982, in which he said:

As you know, some serious concerns have been raised in the Senate regarding your nomination to be a member of the General Advisory Committee on Arms Control and Disarmament.

Therefore, Mr. President, at this time I yield the floor to my distinguished colleague and ask again that the Senate reconsider this nomination in view of the precedent.

The PRESIDING OFFICER. The Senator from Virginia.

Mr. HARRY F. BYRD, JR. Mr. President, my distinguished colleague from Virginia has given the Senate a detailed report on the procedures dealing with this nomination. He has devoted a great deal of time to it. He has presented to the Senate quite a number of letters dealing with this nomination. He has pointed out that there has been no public hearing on the nomination.

He further requests that before the Senate acts on the nomination that there be a public hearing.

It seems to me that that is totally appropriate. I have felt through the years that where a nomination is concerned or where important legislation is concerned, if a Member or Members of the Senate request and feel the need for public hearings, such a request should be honored.

I join with my distinguished colleague from Virginia (Mr. WARNER) in requesting that before the Senate acts on this nomination, and which is usually the case, an appropriate public hearing be held so that questions raised by my colleague can be addressed in open session by the nominee.

I am glad to join with him in making that suggestion or request to the Senate.

Mr. WARNER. Mr. President, I thank the distinguished senior Senator from Virginia. There are other Members of the Senate who have expressed concern on this nomination and in all likelihood we would be joined in such a hearing by a number of other Senators who are equally concerned about this nomination as we are and the need for a hearing.

Mr. HARRY F. BYRD, JR. I might say to the distinguished Senator that this Senator from Virginia also has received comments from other Senators feeling that a hearing would be not only appropriate but desirable.

Mr. HELMS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. WARNER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. WARNER. Mr. President, as a part of the record on this nomination, I ask unanimous consent that various newspaper articles and other editorial material written by the nominee be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Times, Sept. 30, 1982]

GENEVA: MOSCOW GOES AFTER U.S. SEA-BASED MISSILES

(By Elmo Zumwalt and Worth Bagley)

Soviet positions in the Geneva strategic nuclear arms talks are beginning to leak through the official secrecy screen. According to the *Los Angeles Times*, Moscow wants to limit U.S. sea-based submarine-launched ballistic missiles and totally ban Cruise missiles.

In return, Moscow would cut its own strategic missile and bomber force by 25 percent and accept a 10 percent reduction in U.S. nuclear arms. In contrast, the Reagan plan would reduce Soviet ballistic missile strength 65 percent and our own 50 percent, excluding bombers or Cruise missiles.

We have predicted repeatedly that Moscow would have to demand that America stop planned sea-based missile development and procurement because it represents the only U.S. counter to Soviet nuclear supremacy.

Current U.S. programs will deploy the Trident II ballistic missile in Trident submarines by 1988 or 1989. The Trident II missile will be suitably armed and accurate enough to destroy Soviet ballistic missile silos on land while the Trident submarine from which it is launched retains invulnerability to Soviet preemptive attacks.

Faced with that prospect, Soviet forces that rely on large land-based ballistic missiles would have to be restructured, giving up silo missiles for new mobile ballistic missiles at great cost in funds and time. We have pointed out that this process would restore nuclear stability because neither side could then preempt the other side's capability for nuclear retaliation against missiles retained in reserve.

Our planned nuclear-armed Cruise missiles add to that foreseeable stability. They improve bomber survivability because they strike from long range and because they add nuclear strike capability to ships and to submarines other than the Trident. Thus if our Trident submarines unexpectedly were to become vulnerable, we would have other accurate nuclear weapons and launchers able to sustain the stable deterrent.

Without these emerging sea-based options, the U.S. would have to rely on the land-based MX ballistic missile. After development and lengthy tests, the MX should have accuracy comparable to that of the Trident II submarine-launched ballistic missile. But no survivable basing arrangement for the MX has been devised. It would invite a Soviet preemptive strike and thus would deny the nuclear-force stablity and the protection against nuclear blackmail attainable with our planned sea-based nuclear arms.

A credible U.S. sea-based nuclear force also offers the best alternative to the NATO intermediate-range land-based cruise and ballistic missiles that may begin to be deployed in 1984. That deployment is being discussed with Moscow in separate Geneva arms control talks designed, for the West, to eliminate the Soviet SS-20 ballistic missile threat to Western Europe.

But the NATO nuclear missile deployment may be unilaterally disapproved by two or more of the NATO countries in which the missiles are planned to be based. The evolving political attitudes in these countries may cause them to disapprove missile deployment before the U.S., Soviet arms control negotiations can run their course.

If the proposed missile-basing is reduced in numbers, types and locations by such national decisions, the remaining missile deployment would become less useful to NATO as a whole. If, at the same time, the Soviets persuaded the U.S. to forgo accurate sea-based nuclear weapons, NATO would

have no deterrent to the feared Soviet SS-20 intermediate-range ballistic missiles.

These considerations result in one simple proposition for the U.S. and those who fervently want stability in strategic nuclear arms to reduce the risks of nuclear war: the U.S. sea-based nuclear arsenal must be protected from negotiating concessions and its planned strengthening must be the first priority in U.S. nuclear arms policy.

[From the Washington Times, Sept. 16, 1982]

SPY VERSUS COUNTER-SPY

(By Elmo Zumwalt and Worth Bagley)

Sensible presidential decisions on international policies and actions require good intelligence. But public discussions generally are conducted without adequate intelligence information and estimates. One result is unproductive public debate about what defense strength we require. Other consequences, suggested by recent events, are questions about whether our intelligence is good enough and whether we are prevailing in the undercover contest of counter-intelligence.

Quickly suppressed news reports a month ago revealed that a well-placed person in the British communications intelligence organization was found to be a Soviet spy. The U.S. and Britain coordinate closely on intelligence collection, exchanging data as well as judgments on its implications. Thus the Soviets may have known for some time what we thought about their defense capabilities and vulnerabilities.

Because our conclusions might spur altered U.S. forces and tactics, the Soviets would have sought with bogus intelligence sources to cast doubt on accurate information we collected. We must now question the intelligence sources we thought useful before the British spy was uncovered. We must now re-examine past decisions about what armed power and weapons systems would best serve the Western nations.

Beyond those uncertainties, there is evidence that our strategic intelligence is either deficient or subject to uncorrectable limitations against which our foreign and security policies should guard.

The U.S. declared surprise at the Israeli invasion of Lebanon and at Argentine aggression against the Falkland Islands. We were insufficiently alerted about the Soviet attacks in Afghanistan. We warned Moscow against Soviet armed repression in Poland, and the Polish army did it instead.

Unpublicized alarms about potential aggression in other areas originate from faulty information and analysis. We justify our embargo against the Soviet gas pipeline into Western Europe, in part, on hurting the Soviet economy. Yet our allies using similar economic and political information conclude that a coercive Soviet bureaucracy retain effective options. Faced, in Iran, with the same Soviet political motivations that led to the Afghanistan invasion, we have no visible policy apparently because our intelligence in Iran is inadequate.

Each of these troubling examples poses current or foreseeable problems for U.S. strategic interests. Continued effort go forward to improve the quality of our intelligence sources and estimates, but conditions in this age ae such that a warning of crisis will be short and often unclear. Modern experience shows aggression across borders or internal subversion may materialize after ambiguous signals that delay responses until the ten-undeterred action occurs.

Deception or disinformation, both Soviet skills, may be used to extend and exaggerate warning ambiguities. If we react to one impending crisis by readying and deploying military forces from afar, a clever foe may take advantage of weaknesses then created at other points.

In these circumstances, it is doubtful if American foreign interest can have the protection of armed power unless we are able to deploy peacetime forces continuously in regions of importance. Such regional forces may help deter preparations for aggression or subversion and, if hostile action nevertheless occur, provide defenses that otherwise might be critically delayed because warning was short or ambiguous. That policy requires more capable U.S. and allied armed forces and gives credence to Reagan defense budgets.

The question of the best form for those defense forces and capabilities is another matter, particularly since decision-makers may be confused by inadequate or bogus intelligence information. Both our technical and human sources of intelligence can be fooled.

The uncovering of the most recent British spy is but one of a series of defections in NATO Europe that suggests Moscow has enough information on what we know to carry out useful campaigns of deception and disinformation. We have no choice other than strengthening our own counter intelligence activities, improving the security of our information, and diversifying our intelligence sources.

Finally, there is the issue of providing requisite intelligence support so that a policy can be developed for keeping the Soviets out of strategically critical Iran. Soviet control in that country would be a disaster for our security and influence in the Persian Gulf and throughout the Middle East. The only thing worse than mistaken policies is no policy at all.

[From Newsweek, Sept. 20, 1982]

A NEW INDICTMENT FOR WILSON?

Former CIA agent Edwin Wilson, already under indictment in Washington and Houston for illegal arms transfers to Libya, may soon face another set of charges. Sources closely involved in the case say that prosecutors in Alexandria, Va., will seek to charge Wilson with smuggling four handguns abroad—including a weapon later used to assassinate a Libyan dissident in Bonn. Wilson's lawyer, Herald Price Fahringer, has denied the charges. A former Green Beret, Wallace L. Klink, has already pleaded guilty to helping to ship the pistols to Europe.

CAN WE PREVENT THE ATTACK ON IRAQ?

(By Elmo Zumwalt and Worth Bagley)

Last week we stated that the best way to preserve the regimes of our vital allies on the Arabian peninsula is for the United States to seek a position of influence with Iran. Here is our analysis of how the United States should seek to make a pro-Iranian policy successful.

We have been briefed by a senior member of the Iranian resistance on the situation in Iran which makes it clear that Khomeini's expansion beyond Iran's borders into Iraq, about which we expressed concern, is now imminent. Khomeini is reportedly ready to issue orders for a one- or two-pronged invasion of Iraq. One possible prong would move into Iraq's northern oil field. The other would seize two cities in southern Iraq considered holy by the Shi'ite Moslems. Khomeini has 180,000 troops along a 300-mile border between Iran and Iraq, some 80,000 of which are to be committed to one or both prongs, leaving 100,000 in reserve.

Khomeini operatives are in close touch with their major ally in the war with Iraq—Syria—and are giving consideration to the establishment of a land corridor between Iran and Syria. There would be a campaign in which Syrian forces would move into northeast Iraq and join forces with the Iranian northern oil field thrust.

Khomeini's regime has already approved a constitution for an Iraqi Shi'ite theological state to be imposed by the two victorious Shi'ite powers—Syria and Iran.

To keep his own people under tight control, Khomeini is spreading terror in a manner similar to that imposed by communist regimes in their takeover years. Recently 200 hostages were shot in groups of five or six, at points around Iran selected to best demonstrate the discipline of terror to hostile crowds. The head of Iranian military intelligence recently submitted a letter to his chief of staff and civilian authorities stating that Soviet KBG agents operating throughout Iran were too numerous to control and that the only place where even marginal control could be maintained was within the confines of Tehran.

Given his dangerous internal situation, one cannot be sure that Khomeini will actually carry out his invasion, but we think the chances are 60 percent that he intends to and that the time available to dissuade him is fleeting.

Here is what we would do:

1. Initiate the most intensive possible propaganda campaign through the Voice of America, Radio Free Europe and underground taped messages (of the type that Khomeini used so successfully against the shah) to alert the Iranian people to the increasingly pervasive Soviet influence. This campaign should be designed to make it clear that while Khomeini and his regime are focusing on Iraq, they are surrendering Iran's future to the Soviet empire.

2. Coordinate urgently with NATO and Middle East allies the economic and political sanctions to be taken against Iran in the event of its incursion into Iraq.

3. Similarly, coordinate with the same allies the actions to be taken against the Soviet Union if it assists Iran in this invasion. Privately inform Moscow that its overt political support for Iraq is essential to keep the Mideast from exploding and drawing the United States into other actions.

4. Makes it clear to Syria that its participation in such an invasion will lead the United States to release its restraining hand on Israel, restraint which has to date saved Syria from major Israeli incursions linked to the Lebanon conflict.

5. Encourage and assist the six Gulf states—Saudi Arabia, Kuwait, Bahrain, Oman, Quatar, United Arab Emirates—to accelerate their efforts to coordinate their military forces to improve their mutual defense.

6. Initiate immediate efforts to establish the strongest possible support for the Iranian nationalists operating inside and outside Iran in opposition to Khomeini, including plans for the covert training of thousands of expatriate military personnel.

7. Deploy major elements of the Pacific and Atlantic fleets to the Indian Ocean as a deterrent.

8. Having initiated all the foregoing anti-Khomeini initiatives—all of which will be known to Khomeini either directly or through his own intelligence penetrations—privately makes known to him that the following alternatives are available if he demonstrates restraint at Iran's pre-war borders:

The Gulf states are prepared (indeed, they have already reportedly so indicated) to provide in excess of $28 billion to Iran for post-war reconstruction as part of their own efforts to atone for their mistake in supporting the loser in the Iran-Iraq war.

The United States is prepared to resume the flow of military aid which their military forces badly need after the rigors of war, including spare parts, replacement equipment and technicians.

The United States is prepared to provide economic aid to assist in the rebuilding of Iran's war-torn economy.

The United States is prepared to liquidate its anti-Khomeini actions of the types discussed above in response to Khomeini's restraint.

In essence our analysis suggests that Khomeini is too fanatical to be wooed and won by benevolent measures alone, but probably is too rational to plunge headlong into an array of anti-Khomeini measures when faced with both those measures and benevolent alternatives.

Mr. WARNER. Mr. President, I would like to refer to an article in the Washington Times dated October 5, 1982, entitled "Percy Raises Questions in Zumwalt Flap," and read the following to the Senate:

John P. Roche, another well-known newspaper columnist asked by Reagan to serve on the same advisory panel, decided to stop writing his column in order to accept the Presidential appointment and avoid the appearance of conflict, the Times learned.

Roche started writing for King Features Syndicate in New York 14 years ago after serving President Lyndon B. Johnson as a national security assistant and adviser on the Vietnam war. His column appeared three times a week in 140 newspapers nationwide. Roche's nomination was confirmed by the Senate September 22.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mrs. KASSEBAUM). The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BAKER. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

DEPARTMENT OF STATE

NOMINATION OF RICHARD R. BURT, OF THE DISTRICT OF COLUMBIA, TO BE AN ASSISTANT SECRETARY

Mr. BAKER. Madam President, in view of the statements made by the distinguished Senators from Virginia and other statements made to me, I ask unanimous consent that the Chair proceed to the next nomination.

The PRESIDING OFFICER. Without objection, it is so ordered.

The assistant legislative clerk read the nomination of Richard R. Burt, of the District of Columbia, to be an Assistant Secretary of State.

Mr. WALLOP addressed the Chair.

The PRESIDING OFFICER. The Senator from Wyoming.

Mr. WALLOP. Madam President, on behalf of Senator GOLDWATER, chairman of the Intelligence Committee, speaking for the Intelligence Committee, I rise to express his and my grave opposition to this nomination. It is never pleasant to rise in opposition to somebody who has been willing to have his name put into the public arena for a position of high public trust, but it is the position of high public trust which so significantly concerns Senator GOLDWATER and this Senator from the Intelligence Committee which make it possible to speak in opposition to the nomination. Suffice it to say that those areas of concern of the Intelligence Committee are matters which deal with the most closely guarded secrets of the United States upon which our survivial and, indeed, upon which much of the world's survival depends.

During the course of the hearings on this nomination, it became obvious to us that there had occurred through the writings of Mr. Burt serious disclosures of classified and highly sensitive material of this country. Moreover, it is an event that has occurred more than once. With all due respect to the President's desire to have this person nominated for his position, the purpose of the Senate confirmation is just that, that Senators look to the specific qualifications and, if they can be accommodated in a general way, I am entirely for the nominations of the President of the United States. I have more than once gone along with nominees of this President and President Carter, people who I would much preferred not to have been nominated, but I thought it was their right basically to have whomsoever they selected. However, we do have this confirmation process for a very specific purpose. I think this is one of those most specific purposes. Speaking for myself and Senator GOLDWATER and for other members of the Intelligence Committee, we are prepared to discuss this issue for a considerable period of time and, if necessary, to ask for a closed and secret session of the Senate to provide the Members of this body who are not on that committee with the opportunity to know in fairly specific detail the concerns which we on that committee have.

With that, I am prepared at the moment to yield to the Senator from North Carolina for comments which he may choose to make.

Mr. HELMS. Madam President, I thank the distinguished Senator from Wyoming. As Senator WALLOP has indicated, none of us enjoys opposing any nominee of any President. Generally speaking, I agree with the principle that the President is entitled to have the people that he wants serving in his administration. But the advise and consent requirement imposed by the Senate is not something I take idly. Either we ought to advise and consent or that constitutional responsibility ought to be lifted from our shoulders.

I happen to be the only Senator who could not vote in favor of reporting out of the Foreign Relations Committee the nomination of Mr. Burt. It may be that I did a little more homework in connection with this nomination than others were able to do at that time. But for whatever reason, the Senator from North Carolina felt obliged to stand alone in opposing this nomination in committee.

Let me tell the Senate why, and I shall be as brief as I can.

On July 29, 1979, during the Carter administration, Mr. Burt, who was then a reporter for the New York Times, published an article in that newspaper which did grave security damage to this country. In that article and in others, Mr. Burt revealed highly classified information.

But with particular respect to the June 29, 1979, article, Mr. Burt revealed highly classified information as to the existence, the purpose, and the capability of a very expensive satellite reconnaissance system intended to assist in the verification of the Soviet treaty compliance.

The publication of that information, Madam President, also compromised the position of the United States with regard to a NATO partner. That last point alone raises questions as to how a person who was responsible for such an act could now conduct U.S. relations with our European allies.

The Senate Select Committee on Intelligence did an assessment of the damage which Mr. Burt did on June 29, 1979, and concluded that the information he released fit the literal definition of "top secret"—that is, information the release of which could be expected to do exceptionally grave damage to national security. In the intelligence business, it is seldom possible to estimate the material damage of disclosures. It is enough to say, however, that if the release of the information about this intelligence-gathering system is not gravely damaging, then we can safely open up every safe in the CIA to Soviet inspection.

But beyond the substantive issue, we must examine the overall question of public policy on such disclosures. It has been argued that Mr. Burt was only doing what a good newspaperman should do and that the person who was really guilty was the person or persons who gave him the classified information. Mr. Burt is not on trial. His actual guilt or innocence would be a matter for judicial decision. He admit-

ted, however, before the Foreign Relations Committee that he was aware that the information he published was sensitive. The law provides that not only the person who releases the information, but also the person who publishes the information, or who conceals or harbors someone who releases such information without authorization, is in violation. Mr. Burt declined to tell the Foreign Relations Committee who provided him with the unauthorized information.

Madam President, this past week in an effort to be accommodating to the administration, I, along with a few other Senators, met with Mr. Burt. We met in the Vice President's office for the better part of an hour. Frankly, I was hopeful that Mr. Burt might be able to resolve some or all of my concerns.

Instead of resolving my concerns, he added to them. I say that in that context, I do not know Mr. Burt personally. If I have seen him more than twice in my life, I do not recall when it was. So there is nothing personal with respect to Mr. Burt in my opposition to his nomination.

But Mr. Burt, I say again, declined to tell the Foreign Relations Committee who provided him with the unauthorized information. He declined even to discuss it in that private meeting in the Vice President's office just outside of this Chamber.

Madam President, I guess the bottom line is that we have a prima facie case that Mr. Burt violated the law.

The question then arises whether or not any news reporter should be exempt from the espionage laws under the first amendment.

It would be useful to have the opinions of experts from the Senate Intelligence Committee or the Judiciary Committee, or both, as to whether news reporters, editors, or publishers have or are entitled to a special exemption.

I come from the news business. I spent most of my life in it.

I will say, Madam President, if they do have such an exemption, then no issue of national security can be protected and this Nation stands defenseless.

What does the relevant law say about it? 18 U.S.C. 798 provides:

> . . . whoever knowingly and willfully communicates, furnishes . . . or publishes . . . any classified information . . . concerning the design, construction, use or repair of any device, apparatus or appliance used or prepared or planned for use by the United States or any foreign government for cryptographic or communications intelligence purposes; or concerning the communications intelligence activities of the United States or any foreign government . . . shall be fined not more than $10,000 or imprisoned not more than ten years or both.

In addition, there is 18 U.S.C. 792, which punishes anyone for

> . . . harboring or concealing a person (who a person has reason to believe has or will violate one of the espionage laws, which prohibit distributing classified information to unauthorized persons).

The espionage laws referred to can be found at 18 U.S.C. 793 (e), (g), and 18 U.S.C. 798.

So the law is quite explicitly applicable not only to those who give such information to journalists but also to journalists themselves, i.e., whoever publishes. The words "furnishes" and "communicates" in the statute close off any possible misinterpretation. The law reaches not only those who have sworn to protect the secrets of this Nation, but also those who receive them without authorization and publish, furnish, or communicate them. Not only is the person who breaks his oath guilty, but so is anyone in the subsequent chain of responsibility leading to the appearance of such information in a newspaper on the street, or broadcast on the air.

On June 29, 1979, Mr. Burt wrote, and this story was published, in the New York Times on that date that the U.S. Government had a currently operational intelligence satellite system, code-named Chalet. He let it be known that although this satellite was similar to the U.S. geosynchronous telemetry collection satellite the Soviets knew about, Chalet was different because, although it was capable of intercepting Soviet telemetry signals, it was really intended for other purposes. He also revealed that the antennas were located at a base in Norway, thereby jeopardizing that nation's delicate relations with the Soviet Union, and straining our own relationship.

I can see that, as a journalist, Mr. Burt may have sincerely believed that he had the right, or even the duty, to publish such information, even though to do so was a prima facie violation of the law. But in so acting as a journalist, this Senator believes that Mr. Burt placed himself in a category that, in the opinion of a number of us in the Senate, ought to disqualify him from receiving the distinct honor of confirmation to an office in the U.S. Government of high trust and responsibility. Obviously, Mr. Burt's problem is not that he acted as a journalist, but that he acted as a journalist in defiance of the espionage laws. The Senator from North Carolina spent many years as a journalist hemself, both in the print media and in broadcasting.

I say again that I am especially sensitive to issues of the freedom of the press. It may be that I have somewhat more practical experience in this area than the majority of my colleagues in the Senate, but I will say this, Madam President, I would never uphold an absolute right of Government to secrecy.

But the espionage laws represent a special case in which the Constitution must be interpreted to allow the Nation to protect the secrets which make national survival possible. Any other interpretation would render the Constitution itself inoperative. It is my conclusion that Mr. Burt's action itself undermines the Constitution.

His action also undermined the security of the country. As Senator WALLOP has indicated the full case cannot be made in public because the matters Mr. Burt revealed are part of a top-secret mosaic, parts of which we hope the Soviets do not know. These matters can only be discussed in a secret session of the Senate.

And I have advised the majority leader earlier this morning that it is my intent if this nomination is pushed or not withdrawn, that I will ask for such a closed session of the Senate.

Mr. Burt's untimely disclosure occurred during the previous administration. The then Director of Central Intelligence said at that time that Mr. Burt's disclosures "are having extremely detrimental effects on the capability of the intelligence community to perform its functions." What would be the impact throughout the executive branch if the Senate should confirm to a post of high honor a person who has prima facie engaged in the flouting of the espionage laws? Does anyone think respect for security would be strengthened by the confirmation of this individual? What would those in lower echelons of Government think if we were tempted to disclose national security information without authorization? Would not the result be for the lower echelon personnel to conclude that they, too, can participate in national security leaks if the executive branch and the Senate condone apparent violation of the espionage laws by persons nominated to higher office?

I say again that I have nothing personal against Mr. Burt. I am really not acquainted with him beyond the hearing process in the Committee on Foreign Relations, of which I am a member, and beyond the meeting last week just off this Chamber. I really do not know the man. I do not dispute his ability. I do not dispute his other qualifications to office, but I do say, Madam President, that Mr. Burt is caught in a formal contradiction between the posture he assumed in his past profession and the requirements now for high Government office.

Indeed the question is relevant: how could Mr. Burt even be effective in the post of Assistant Secretary for European Affairs where he would have to deal on an official level with the allies whose interests he betrayed while he was a journalist? Mr. Burt cannot have it both ways and, Madam President, neither can the administration, and certainly the U.S. Senate cannot

and should not attempt to have it both ways.

I thank the Chair.

Mr. MATHIAS. Madam President, I think the time has come to look at the record in this matter. Part of that record is the fact that the President of the United States sent to the Senate the nomination of Richard R. Burt to be Assistant Secretary of State for European Affairs not on the 20th of January 1981 or any date like that early in the administration but, in fact, sent this nomination to the Senate 3 days before the Labor Day recess of this year. So the President had a long time to think about it; the leadership of the State Department had a long time to think about it, and nothing that has been said today by the Senator from North Carolina or the Senator from Wyoming was a secret at the time that nomination came to the Senate. All of those matters had been thought about and weighed and a judgment made by the President of the United States before the nomination came here.

So I think we need to look at the record and see the basis upon which the President made the nomination and, in my judgment, having looked at the record the Senate will conclude that the nomination should be confirmed.

The chairman of the European Affairs Subcommittee of the Committee on Foreign Relations, the Senator from Indiana (Mr. LUGAR), heard testimony from the nominee very shortly after the Senate came back from the Labor Day recess—I believe the date was the 15th of September—and at this hearing Mr. Burt, as would be expected, gave his views on a very wide variety of issues relating to the relations between the United States and Europe, and that included the competitive nature of Soviet-American relations; it included the utility of an aggressive American public information policy in competing with the Soviet Union; it included the implications for the United States of the Soviet Union's economic difficulties; it included the administration's differentiation of strategy to encourage pluralism in Eastern Europe; it included President Reagan's arms control strategy; it included the importance of effective consultative mechanisms and precise treaty language to support effective verification of arms control agreements; prospects for intermediate range nuclear force arms control talks, for the deployment of modernized NATO intermediate nuclear weapons, the advisability of the U.S. sanctions relating to the imposition of martial law in Poland, the importance of close consultation with our European allies to develop a consensus on economic policy toward the U.S.S.R.

So I submit to the Members of the Senate that Mr. Burt displayed knowledge, experience, and judgment on a very wide range of subjects relating to the office for which he has been nominated.

I think in Washington we sometimes throw the word "expert" around loosely, but I do not think it would be inappropriate to apply that to this nominee for this office. It is an area in which he has worked, of which he has knowledge and experience, and I think he could be said to be an expert, and I think the President is fortunate to have available a person of this capacity and competence.

From January 1981 to May 1982 Mr. Burt served as the Director of Politico-Military Affairs of the Department of State. He has served as a consultant to the House Republican Wednesday Group. However, I suppose that his principal experience has been outside of Government, including his career as a correspondent for the New York Times right here in Washington from 1977 to 1980; as a research associate and later as an assistant director of the International Institute of Strategic Studies in London, one of the most highly regarded institutions for the study of international relations in the world; and his work as a senior research associate at the U.S. Naval War College, which has the highest reputation for professionalism and academic excellence.

During Mr. Burt's nomination hearing on the 15th of September the distinguished Senator from North Carolina expressed, as he has here today, some concern about an article that appeared in the New York Times with Mr. Burt's byline on the 29th of June 1979 which discussed certain possible means available to the U.S. Government for monitoring Soviet compliance with the SALT II agreement which was then pending. At this same hearing Mr. Burt was asked by the chairman (Mr. LUGAR) and by Senator PRESSLER a number of questions that concerned this article and that concerned the circumstances of its writing and of its publication.

Mr. Burt responded to these questions and to additional written questions of Senator PRESSLER.

I think it is fair to state that, in accordance with the traditions of professional journalism, he did not disclose the sources and, frankly, that does not surprise me personally. But, in any event, Senator HELMS pursued the matter and at his request the chairman of the Foreign Relations Committee and the ranking minority member, Senator PERCY and Senator PELL, wrote a letter to the chairman of the Intelligence Committee on the 16th of September, asking the Intelligence Committee to make a damage assessment of the possible damage to the U.S. national security interests that resulted from the publication of the article by Mr. Burt. That really is the crux of this discussion here today.

The Intelligence Committee was directed by Senator GOLDWATER, the chairman, to undertake that assessment. It made the assessment. It made its findings. And those findings are available to Members of the Senate.

Now we are at some disadvantage in this discussion today, because, as Senator WALLOP and Senator HELMS have pointed out, the full case cannot be made public. There is a veil of classification that has been cast over these findings. And I am not at liberty to discuss them even in summary here.

But I am not afraid of them, and Mr. Burt should not be afraid of them. The real test is for every Member of the Senate to go read those findings. Not only have I no hesitation in suggesting that Members of the Senate go read those findings, I urge them to go read the findings. Members of the Senate have access to that file and I think, in judging the issue before us, the confirmation of Mr. Burt to be Assistant Secretary of State, we not only have access, we have a duty to go read those findings. It is my judgment that, having read those findings Members would come back to the Senate and address the issue of this confirmation without very much difficulty.

There was a subsequent meeting of the Foreign Relations Committee on September 28 at which the Burt nomination was discussed, including the question of whether his part in the appearance of the publication of the June 29 article might appear to call into question his professional judgment and his suitability for a post of the high sensitivity and the great responsibility of Assistant Secretary of State of European Affairs.

I call to the attention of Senators the fact that the committee made a report on the nomination, included extensive extracts from comments of members of the committee who had heard the testimony or who had an opportunity to study the transcript, and concluded that the nomination should be reported favorably to the Senate. Now we all know that committee reports are not conclusive of what the action of the Senate will be, but at least it deserves, I think, some evidential value in making the judgment of the Senate. And in this case I hope it will be the dominant voice and dominant influence in confirming Mr. Burt.

I had no trouble in supporting Mr. Burt's nomination because, as I say, I think he is personally qualified as a matter of education, as a matter of experience, and as a matter of judgment. I continue to support him. Even if I had a question in my mind about this so-called security violation—which did not occur while he was a Government employee or official, which occurred at a time, in fact, when he was a newspaperman—even if I had concern about that, my mind would feel considerably

reassured by the fact that he has voluntarily undertaken to execute the oath which is required and which deals specifically with this subject.

He has, among other things, agreed, as to article III of this particular assurance:

> I shall not publish nor reveal to any person, either during or after my employment, any classified or administratively controlled information or other information transmitted to me in confidence in the course of my official duties, except in accordance with these official instructions or regulations or except as may hereafter be authorized by officials empowered to grant such authority.

I believe Mr. Burt is an honorable man. The President obviously has confidence in his integrity. He has made this assurance and I am willing to allow him to have an opportunity to prove his sincerity on that subject. It is a pledge which has been carefully crafted, after years of Government experience in these matters. I think it is comprehensive and I believe that I should give the Senate a great deal of assurance in approving this nomination.

I think further, Madam President, that in dealing with this matter, it is very difficult not to speculate from where the information originally came. I think it is at least a reasonable speculation to think about from where this information may have come.

Now there is a practice which is current in Washington, in fact, it is one of the recognized tools of Government—I say it is a recognized tool of Government; I do not claim it to be an approved tool of Government—but it is not unknown that high Government officials, usually undisclosed, employ what has come to be known as the executive leak.

Mr. Burt has not told me that the source of the information in this article was an executive leak. To my knowledge, he has not said that to anybody else. He certainly did not say it in the committee. But it would not be a great surprise to me if I were some day to find out that that were, in fact, the case, a case of instant declassification by a competent authority.

The Senator from North Carolina has said that the article was published without authorization.

We do not know that. I do not know whether he is right or whether he is wrong. But I do know that there are cases where competent authority on a background basis use the press, employ the press. Whether or not this is such a case is not necessary to decide for the purposes of acting on this nomination. I do think as we consider the kind of charges that have been made here against Mr. Burt, we also ought to consider the climate in which Mr. Burt was writing as a journalist, and at least consider that as a possiblity.

Madam President, we are in a very difficult period of history in the Atlantic Alliance. The newspaper today reports that Denmark is reconsidering some of the commitments to NATO.

The Secretary of State is undertaking a visit to Europe of about 2 weeks' duration in which he will deal with heads of governments, in which he will try to repair the somewhat tattered remants of our alliance, to try to knit up the alliance.

I have recently been in Europe as a member of the Senate delegation to the NATO Assembly and saw and heard the kind of tensions that exist within the NATO Alliance. I find it very difficult to believe that it is in the best interests of the United States to withhold from the President and to withhold from the Secretary of State the services of an experienced, knowledgeable, and competent Assistant Secretary for Europe.

The mutual interests, the common goals that we share with our European allies, with our friends in Europe, are now and have been the very foundation of American foreign policy, and that foundation is being shaken by painful disputes on trade, debates on economic policy, debates that grow more angry as the recession gets deeper and squeezes the flexibility out of policy.

The Secretary General of the OECD reports that by next July unemployment in Europe will rise from the current level to about 15.5 million men and women out of work, and that will increase, rather than decrease, the kind of problems the exist between this side of the Atlantic and the other side of the Atlantic.

The continuing debate over an equitable sharing of the burden of common defense and the appropriate mixture of modern nuclear and conventional forces is intense debate. It is heated up by the political atmosphere.

I think it is impossible not to recognize that we are handicapping ourselves if we are handicapping the President, that we are handicapping the United States in a complex and troubled period by being for 9 long months without the authoritative leadership of a confirmed Assistant Secretary of State for European Affairs.

I think the Senate should consent to this nomination. I think we should do that out of personal fairness to Mr. Burt. But, more importantly, out of concern for one of the most vital and one of the most challenged areas of interest of the American people: our relationship with Europe.

So, Madam President, I hope the Senate will, without further delay, confirm this nomination.

Mr. HATCH addressed the Chair.

The PRESIDING OFFICER. The Senator from Utah.

Mr. HATCH. Madam President, I object to the confirmation of Richard Burt because the questions which I asked Mr. Burt on Friday have not yet been answered. Mr. Burt is presently on a trip to Europe, or at least that is my understanding.

I would like to mention to my colleagues that Mr. Burt requested that my questions be given to him, and he indicated that he would be most willing to provide answers.

My questions, which I will list in a moment, pertain to new information that came to light after the Senate Foreign Relations Committee hearing on Mr. Burt's nomination. These matters need to be thoroughly investigated prior to the consideration of Mr. Burt's nomination. I see no real reason for urgency in considering Mr. Burt's nomination at this particular time, although I understand why the Secretary of State and others would like to have this completed as soon as possible.

I strongly urge my colleagues to postpone the consideration of Mr. Burt's nomination until the 98th Congress. I am speaking, I might add again as others have today, on behalf of Senator GOLDWATER and Senator DENTON as well, neither of whom could be here, Senator GOLDWATER, recuperating in Arizona as a result of surgery, and, of course, Senator DENTON, who is unable to come to the floor. I might add there are others who have been chatting with me about this particular issue and this particular nomination who could not be here today to state their objections.

Madam President, I would like to say that I regret that this matter has become public because of an unfortunate leak. However, I will insert into the RECORD my questions to Mr. Burt that I sent to all steering committee Senators last Friday as well as the Washington Post coverage of this issue.

These questions are stated in the form of statements, and I hope Mr. Burt will be able to provide evidence that they are not true.

Madam President, I will also insert in the RECORD columns about Mr. Burt by columnist John Lofton which appeared in the Washington Times.

The questions are questions that have been raised by various Senators and various staff members, and, I might add, various people within the administration concerning some of the things which have occurred.

I think they are sincere statements that may or may not have great significance in all cases but I believe, in some cases, have tremendously great significance with regard to the choice and selection of Mr. Burt for this very important position.

I might also add that I personally like Mr. Burt and have no question

about his intelligence or his ability to understand this job and his desire to do so.

Let me list these questions. I reiterate that these questions are in the form of statements which I hope will be answered very soon.

1. You opposed the zero option for the INF talks before the President's decision overruled you, both with respect to ruling out any fallback position and with respect to our NATO allies' views on the zero option which you had incorrectly predicted would not support the zero option. According to your colleagues, you made matters worse by stating publicly at a conference in Germany the day Secretary Haig resigned that you could see four fallback options for the INF negotiations even after the President had decided that there would be no discussion of fallback options.

2. You opposed the production decisions on both chemical weapons and enhanced radiation warheads in memoranda you wrote, but the President overruled your recommendations on these issues.

3. You opposed raising any Soviet violations of any SALT agreement at the SCC talks in Geneva, and you personally determined at the SALT Inter-agency Group in April 1981 that the working group findings should be rejected despite the fact that the findings were that the Soviets had violated SALT agreements. Your colleagues claim that your efforts to expose Soviet use of biological warfare amounts to an effort to cover up your refusal to face the issue of SALT violations as called for in the Republican Party Platform.

4. You opposed continuing the pipeline sanctions and the European bureau sent a memorandum to the Secretary of State cautioning that the issue of Soviet slave labor on the pipeline should be played down, and could not be proved.

5. You opposed any decision to deploy submarine-launched nuclear cruise missiles in a memorandum to Secretary Haig in February 1981, but the President overruled you.

6. With respect to the START negotiations on which much of the President's credibility in arms control depends, you repeatedly opposed any provisions to limit Soviet throw-weight and finally settled for this provision to be included vaguely in a second phase of START. This contravenes Senator Jackson's 1972 concern, embodied in statute about equal levels of arms. You argued in memoranda that any mention of throw-weight limits would never be accepted by the Soviets, and your argument has now been used by the media to undermine the President's START proposals.

7. You wrote memoranda to Secretary Haig discussing how to evade the intent of Congress with respect to the Taiwan Relations Act, and participated actively in the Taiwan Communique debates on the side of the career officers who insisted on a cut off of all arms sales to Taiwan at a date certain—which was personally rejected by Judge Clark and the President.

8. Now that the INF talks have recessed for the winter, you have proposed that the earlier idea of equal numbers at significantly reduced levels now be revived, in direct opposition to the President's decisions. Your Bureau has asked for consideration of a Soviet offer about SS-20 deployments beyond the Urals as an acceptable basis for compromise.

9. You signed a memorandum to the Secretary of State calling for a lifting of the pipleine sanctions—in contrast to what I may have misunderstood you to be saying this morning that you were not involved in this issue.

10. You opposed the effort within the Administration to advise the President that the SS-16 activities of the Soviets constituted a specific "violation" of SALT Agreements this spring. In fact, you only consented to raise any issues at the SCC in Geneva under pressure from other officials.

11. You drafted the cable (and are so indicated on that cable) that rebuked Navy Secretary John Lehman in early 1981 for criticizing the SALT II agreement and that made it policy to abide by that agreement. This cable was not cleared or even shown to the Defense Department or the NSC staff or Dick Allen, not to mention President Reagan.

12. You wrote memoranda and briefed Department officials on the need to either circumvent Dick Allen and the NSC staff or to encourage the departure of Dick Allen so as to give Al Haig a free hand in foreign policy, to include contacts with the media on this topic.

13. You briefed the media aboard Secretary Haig's aircraft while in Asia in order to undercut Ambassador Jeanne Kirkpatrick's role in negotiating with the Iraqi Ambassador to the UN, and your role was revealed in the press as were White House aide's calls for your resignation at the time. The President telephoned Mrs. Kirkpatrick in France to apologize to her for the news articles that you had generated.

(Mr. HAYAKAWA assumed the chair.)

Mr. HATCH. At this point, Mr. President, I ask unanimous consent that an article by Mr. Murray Marder of the Washington Post, entitled "Senate Opposition Demands Records About Diplomat" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Dec. 8, 1982]

SENATE OPPOSITION DEMANDS RECORDS ABOUT DIPLOMAT

(By Murrey Marder)

Senate challengers of Richard R. Burt's confirmation as assistant secretary of state for European affairs, suspecting that he has undercut tough negotiations with communist countries, are demanding the records of policy positions taken by the State Department in meetings with the National Security Council and other agencies.

The Burt nomination is one of several disputed nominations scheduled to be called up today on the Senate floor amid threats of a filibuster.

In preparation for a possible showdown today, Sen Orrin G. Hatch (R-Utah), speaking for himself and "my colleagues" among conservative Republicans, submitted a 13-point broadside of accusations against Burt. They question his positions on nuclear arms control policy, sanctions on trade with the Soviet Union in the pipeline dispute and limitations on arms sales to Taiwan, among others.

Hatch said yesterday that he wrote two letters to Burt last Friday following a meeting of the Senate Steering Committee, an unofficial group of Republicans, with Burt and Powell Moore, assistant secretary of state for congressional relations.

In one letter, Hatch said "long-term supporters of President Reagan like ourselves have been appalled at these reports of the positions you have taken." Hatch said the only way "to satisfactorily refute" the accusations "would be to provide us with copies of the State Department positions submitted to NSC or inter-agency meetings about these issues."

It is standard practice in the executive branch to deny requests for records of inter-agency policy debates on grounds of executive privilege, and the State Department yesterday declined to comment on any of the issues raised in Hatch's letters.

Hatch was in a Salt Lake City hospital yesterday recuperating from surgery, but said he expects to be in the Senate today and awaits responses. According to Hatch, Burt answered "three or four" questions Friday, denied those accusations, and said he is prepared "to answer all questions." Burt is traveling with Secretary of State George P. Shultz in Europe.

Among the matters that Hatch said await answers are charges that Burt, inside the administration, originally opposed "the zero option" in negotiations with the Soviet Union on limiting European-based nuclear weapons, "opposed raising any Soviet violations" of agreements on limiting intercontinental nuclear missiles, and opposed continuing sanctions on allied nations helping to equip the Soviet natural gas pipeline.

Burt also was questioned by Hatch about meetings with New York Times reporter Judith Miller and her "articles on arms control appearing so soon after your own meetings with her." Other sources have said that Burt, who has declined public comment on the accusations, denied leaking any stories to Miller and denied the other charges by the Senate critics.

Mr. HATCH. Mr. President, I ask unanimous consent that three articles by columnist John Lofton—one dated September 27, 1982, entitled "Old Leak May Sink Burt Nomination"; two dated October 6, 1982, and entitled "Senate 'Dogs' Sniff at Nominee's Record"; and three dated October 22, 1982, entitled "Nominee Burt Misscores Again"—be printed in the RECORD at this point.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Times, Sept. 27, 1982]

OLD LEAK MAY SINK BURT NOMINATION

(By John Lofton)

A white-hot, knock-down-drag-out, behind-the-scenes battle is rapidly coming to a head over the nomination of former New York Times correspondent Richard Burt to be assistant secretary of state for European affairs. The issue: should an ex-reporter who wrote a story containing classified information damaging to the national security be named to such a high government post?

The critics of Burt include:

Intelligence Committee Chairman Sen. Barry Goldwater, R-Ariz., who on July 21 wrote a top secret code word letter to Secretary of State George Schultz asking that Burt's nomination be withdrawn. Inexplicably, Goldwater's request was neither acknowledged nor answered. And Burt's nomination was sent forward to the Foreign Relations Committee.

Sens. Jesse Helms, R-N.C., Don Nickles, R-Okla., John East, R-N.C., Orrin Hatch R-Utah, and James McClure R-Idaho, all of whom wrote a letter about Burt on September 15 to Foreign Relations Committee Chairman Sen. Charles Percy R-Ill. In this letter the senators call Percy's attention to two things: (1) "the most serious questions" raised by a three-year old Burt article in the Times and (2) "a record of indiscretions committed by Mr. Burt," a record supposedly compiled by the State Department's Security Bureau. Burt denies any such indiscretions.

And finally, although its recommendation was ignored by Secretary Shultz, the White House Presidential Personnel Office also opposed Burt's nomination.

Among Burt's defenders are: U.S. Deputy Permanent Representative to the U.N. Ken Adelman; former Kissinger protege Helmut Sonnenfeldt; and Deputy Assistant Secretary for European Affairs Mark Palmer. In recent weeks, all three have phoned various Senate staffers to lobby for Burt's nomination.

In separate interviews, here's what I've been told. Adelman says the case against Burt rests on "lousy grounds" Sonnenfeldt thinks Burt is getting a "bum rap." And Palmer believes the issues being raised against Burt are "outrageous." Burt refuses to talk on-the-record about his situation.

So, what is the beef about Burt? Well, the central controversy revolves around an article he wrote for the Times on June 29, 1979. In this piece, quoting only "officials," Burt reported in detail how the Carter administration—concerned that Turkey might not allow U-2 reconnaissance planes over its territory—was preparing an alternative plan for verifying the new strategic arms treaty with Moscow. This plan, it was said, called for several improvements to existing methods for monitoring Soviet missile tests, including the upgrading of an electronic listening post in Norway and the use of a satellite that was programmed to collect other information.

Now, there's no doubt that the information in Burt's story was classified. When asked this question directly in his confirmation hearing on Sept. 15 before the Foreign Relations Committee, Burt replied: "Well, I will be quite honest. I assumed that it probably was (classified material) . . . I presumed it was sensitive information." In fact, Burt said that following the publication of his article he was made aware "by people" that his story had created "concern" within the intelligence community. Noting that he was "somewhat alarmed" by this, Burt says he "immediately sought appointments with (at the time CIA Director) Stansfield Turner about this problem.

A source I consider reliable, says that Burt's story compromised one of this country's "most secret and fragile" intelligence gathering systems. It did this in three ways, according to another equally reliable source: (1) It named the satellite; (2) it named its original mission; and (3) it revealed that this satellite could be reprogrammed.

Tomorrow the Senate Intelligence Committee will turn over to the Foreign Relations Committee a damage assessment report which will evaluate the damage done by Burt's three-year-old article. My sources say that while this report will be understated, it will be "devastating" to the contention by Burt and his backers that his Times story did no real harm to U.S. national security. Even Ken Adelman, one of Burt's defenders, tell me he has "no doubt" that the information Burt published "damaged the national interest."

What's astounding about this whole affair is the nonchalance on the part of Burt's backers regarding the very serious issue of his having disclosed classified information. Adelman argues that Burt was just "doing his job" and "that's what happens in Washington—people are given information and publish it." Sonnenfeldt says he doesn't see how a defense or national security reporter "who is given stuff" can avoid publishing it. He observes:

"It would be a shame if Rick was singled out. If journalists once get pilloried for having used stuff given to them by people with access to classified or sensitive information, it's going to go a long way—maybe even to some of the people attacking this particular journalist."

Mark Palmer, who says he doesn't want to go into who he has called in Burt's behalf, says only that the charges against Burt are "outrageous." Both Adelman and Sonnenfeldt readily admitted that they had not investigated thoroughly just how damaging Burt's article in the Times was. At Burt's confirmation hearing before the Foreign Relations Committee, Sen Joe Biden, D-Del.,— who is also a member of the Intelligence Committee—treated the whole subject as a joke. He got a laugh when he said that he had heard it rumored that on occasion senators have leaked sensitive information for political purposes."

Ha-ha.

Just exactly how the flap over Richard Burt's nomination will turn out remains to be seen. But, the relevant question has been raised by Sen. Claiborne Pell, D-R.I., who asks: is Burt's article in the Times material to the consideration of his appointment? The answer must be: it most certainly is and Burt's critics are absolutely correct in raising this issue.

[From the Washington Times, Oct. 6, 1982]

SENATE "DOGS" SNIFF AT NOMINEE'S RECORD

(By John Lofton)

An urgent phone call last Friday night from Secretary of State George Shultz to Senator Orrin Hatch, R-Utah, requesting that he, in effect, call off the dogs concerning the nomination of Richard Burt to be assistant secretary for European affairs, has been ignored for very good reasons: the dogs are on to something. In fact, the dogs are hot on the trail of a lot of things. Hatch was called by Shultz because he is vice chairman of the Senate Steering Committee, which has placed a hold on Burt's nomination.

Originally, hardline Reaganites were on Burt's case because of an article he wrote on June 29, 1979, when he was a reporter for the New York Times, an article which Senator Jesse Helms, R-N.C., says did "grave security damage to his country." This story revealed highly classified information as to the existence, purpose and capability of a very expensive satellite reconnaissance system intended to assist in the verification of Soviet compliance with certain treaties.

Helms says a prima facie case can be made that Burt broke the law. He also says Burt's article "compromised the position of the U.S. with regard to a NATO partner a point alone which raises questions as to how a person who was responsible for such an act could conduct relations with our European allies."

In his confirmation testimony before the Senate Foreign Relations Committee in mid-September, Burt said that prior to publishing his controversial article he checked with no one to see if its publication might be harmful to U.S. national security. But now, in a stunning revelation, in an Oct. 1 letter to Sen. Hatch, Burt says:

"In the specific case of the June 29, 1979 article . . . I was warned by an official that an item of information provided to me should not be compromised. I agreed, and omitted that information from the article."

In recent days, the firestorm of reaction against Burt's nomination has been fueled by other concerns in the area of policy. According to sources familiar with Burt's positions, these policy areas include the following:

Intermediate Range Nuclear Forces in Europe. Burt is said to have opposed, before it was policy, the administration's "zero option" nuclear weapons plan favoring instead a plan that would have seriously limited U.S. deployment options in Europe. At a recent SALT/INF Backstop Committee meeting at State, Burt reportedly advocated immediate consideration of a Soviet proposal concerning the Russian SS-20 missiles, which hardline Reaganites ridiculed and wanted to reject.

START (Strategic Arms Reduction Talks). Burt has persistently pushed policies that would have resulted in the retention of Soviet superiority over the United States. Burt hastily and successfully rammed through the current U.S. START plan now on the table in Geneva, a plan which because it was hurried through to appease the European peace movement, has not been certified as verifiable by the intelligence community.

SALT Violations. Burt was a key architect of the administration's present policy that is to, de facto, adhere to the SALT II Treaty, which candidate Reagan denounced as "fatally flawed," Burt had fought against the idea of challenging and revealing Soviet violations of SALT—something that was promised in the 1980 GOP Platform.

Soviet Pipeline. Burt originally opposed any sanctions against those who wanted to help build the Soviet natural gas pipeline to Western Europe. Lately he has advocated softening those sanctions that were imposed.

NATO Defense Spending. Burt has opposed suggesting publicly or privately that our NATO allies pay a larger share of the defense cost of protecting Western Europe.

To a man, several sources I talked to who have seen Burt work, say that he is not a Reaganite, that he is far too pragmatic and that he is too willing to compromise the Reagan foreign policy agenda for reasons of political expedience.

In late November, Rick Burt will appear before the Senate Steering Committee to answer these charges. It should be quite a show.

Footnote: Burt refuses to discuss these matters on-the-record.

[From the Washington Times, Oct. 22, 1982]

NOMINEE BURT MIS-SCORES AGAIN

(By John Lofton)

Having already gotten himself in crossways with a number of conservative Republican senators—for reasons elaborated on here on two previous columns—Richard Burt has now angered the White House Office of Presidential Personnel. Burt is the president's nominee to be the assistant secretary of state for European affairs. Here's the inside story:

In early September, even before Burt himself had been confirmed by the Senate for

his own job, the State Department notified the White House personnel shop that Burt intended to appoint three people to be his deputy assistant secretaries. These individuals are all careerists and they are: Mark Palmer, Robert Blackwell and James Dobbins. None of these three gentlemen is, by any stretch of the imagination, a Reaganite.

Blackwell first went to work at the department under President Johnson in 1967. He was a special assistant to Henry Kissinger's protege Helmut Sonnenfeldt from 1973 to 1975. And from 1979 to January 1981, he was a senior staff member of President Carter's National Security Council. One knowledgeable source tells me Blackwell was one of the "architects of Carter's foreign policy." Dobbins also came to the State Department under the Johnson administration in 1967.

Now, what has angered the folks in White House Presidential personnel is the fact that Burt's three choices for these senior executive service slots have been presented to the White House as a fait accompli on a take-it-or-leave-it basis. This was done despite well-known White House preference that this not be done. What the White House personnel people want is an opportunity to suggest their own choices for jobs like the ones Burt has already picked people for. And Burt did not give them this opportunity.

When I asked Burt why he had ignored the desires of the White House personnel office regarding his three deputy assistant secretaries, he said he was not aware that the White House wanted a chance to fill these jobs with non-careerists.

Me: But, why wouldn't you have asked the White House if the president had any people to hire as your assistants?

Burt: "Because I wanted—it just—I wanted people I could work with. I wouldn't have chosen these people if I thought they were unacceptable to the president."

Me: Would White House opposition to your choices for these jobs have made any difference?

Burt: "I don't know. I want to be loyal to the White House, to the president."

Burt says that "professionally" he doesn't report to the White House, that he has "nothing to do with them" and this would be "going out of channels." It's not his job, he says, to ask the White House for the names of possible appointees.

Burt's responses to my questions are preposterous on their face. After all, Burt himself is a presidential appointee! Therefore, it is incumbent upon him—or so it would seem—to look out for the interests of both the president and the White House personnel office, which operates in his behalf. This has not been done.

Burt may indeed be loyal to the White House and the president. But, by admitting he has "nothing to do with them" and, by his actions, demonstrating that he doesn't care whom the president wants named to high State Department posts, Burt sure has a strange way of showing is loyalty.

Footnote: Burt may believe he's going to get his way with Palmer, Blackwell and Dobbins. But, the White House personnel office is going to wage war on this one. And Burt himself may well be part of the final body count.

Mr. HATCH. Mr. President, I am trying not to pass judgment on Mr. Burt. I personally have reviewed some of the Intelligence committee's report on the Burt nomination. It is my understanding from looking at the report tht not one of the 12 members of the Committee on Foreign Relations who voted for Mr. Burt has reviewed those records. Be that as it may, I do think that the charges which have been raised by some Senators, by some people on the Hill and by others in the administration, are charges that need to be removed. They need to be explained away. They need to be resolved.

That does not mean that Mr. Burt has to agree philosophically with anybody in the U.S. Senate. I am the last to make that a requisite. As a matter of fact, I have a general record of supporting whoever is nominated by whichever President under whom I have served as a U.S. Senator. I believe that a President should be given great leeway in his nominations and, even though I might differ philosophically, I will say that for the most part, I have tried to support those nominations or have at least not raised objections against them.

I believe the questions raised in this letter, which Mr. Burt—at least I thought—had agreed he would answer, are important questions. They do not have to be answered satisfactorily to me nor do I suppose that they have to be answered satisfactorily to any other Senator. But they are important. Some of them are important because I asked three or four of them of Mr. Burt during our special meeting. He answered them and in subsequent checking, there is some indication that some of the answers he gave were, if not false, at least inaccurate.

That bothers me as a Senator.

I have also been to every arms control negotiation over this past recess, the purpose of which was to examine these arms control negotiations and be as informed as possible on not only the importance of them, which I sincerely declare at this time, but also to be as informed as possible on the significance of each stage of those negotiations. I personally believe that this President has done as much if not more than other Presidents to advance the cause of peace and the cause of real negotiation with our adversaries, and in particular our Russian adversaries, in the hopes of furthering world peace and the reduction of nuclear weaponry. I believe that headway can be made, but I also believe that he needs a team that will help him in this regard. I sometimes think that without Richard Nixon, China never would have been opened. It took a Republican President, who had somewhat of a conservative reputation, even though there are those who would disagree with that characterization, with guts to open up that very important relationship, which is very important and very much supported by many of us in the Senate.

I personally believe that we have an opportunity second to none, because of this President's great desire to further the cause of arms control negotiations, while at the same time strengthening Americas to at least a parity with Russia, to accomplish more than has been accomplished at any time with regard to arms control.

I believe he deserves and needs people who will aid him in those endeavors. There is no doubt in my mind that Mr. Burt has the intelligence to do so. I do have some doubts as a result of the information which has come to me through other Senators and through other people who are informed, or at least are in positions to be informed, concerning whether or not Mr. Burt will work consistently with the other members of the administration to obtain the breakthroughs that all of us hope can be obtained. I think he can resolve these problems in a great sense by answering these simple questions.

I again state for Mr. Burt's benefit as well as others at the State Department that he does not have to answer them all to my pleasure or to my satisfaction in the sense of agreement with me. But he does have to answer them to my satisfaction as far as honesty is concerned. I believe that has to be done, and I will oppose this nomination until it is. So I not only represent my own point of view here, I represent a number of other Senators who are concerned about this matter and who do want this matter resolved as quickly as possible, and hopefully it will be resolved in favor of Mr. Burt. If that is the case, nobody will be happier about that than I.

On the other hand, if it cannot be resolved in his favor because of various matters, then I suppose the country will have been done a service. I personally disagree with the compromise of classified, and I might add highly classified, information which was the case here in the public media, and especially by people who have had great experience in knowing what is or is not or what should or should not be classified information. In this case Mr. Burt certainly meets those criteria.

There have been those in high positions in Government today who personally feel that Mr. Burt made his choice, whether somebody who knows better, in compromising some of the information which Senators on the floor today claim has been compromised and which I know has been compromised.

Even so, perhaps, this matter can be resolved, and in a reasonable and good way, satisfactorily to the administration, Secretary Shultz, Mr. Burt, and everybody else. But I hope that these questions will be answered, and I will oppose this nomination until they are.

Mr. MATHIAS addressed the Chair.

The PRESIDING OFFICER. The Senator from Maryland.

Mr. MATHIAS. Mr. President, first let me thank the Senator from Idaho who deferred so I could respond immediately to the remarks of the Senator from Utah, because I have listened with great attention and with great interest to the questions that the Senator from Utah has posed to Mr. Burt. Many of them are substantive and pertinent questions, but I would hope that he would not press Mr. Burt on the subject of the infighting around Richard Allen.

Mr. HATCH. I will not do that.

Mr. MATHIAS. I hope he would not do that because, after all, Mr. President, that was not a happy scene. He has received a lot of publicity. I consider myself a friend of Richard Allen. I think we all regret the nature of that tragedy for him, but however that may have been Richard Allen has left the public service, Alexander Haig has left the public service. The question of who was right and who was wrong is now committed to the pens of historians who will be corrected by semanticists, so that is not something that we have to inject into this confirmation proceeding. Let us judge it on the merits of the nominee.

Mr. HATCH. Will the Senator yield on that point?

Mr. MATHIAS. I think on the question of the merits of the nominee, the evidence is overwhelmingly in favor of the President's choice.

I will yield for a question.

Mr. HATCH. If the Senator will yield for a statement, I have no intention of dredging up the Richard Allen problem. As far as I am concerned, that is by the boards, and I am more interested in the substance of the nomination.

Mr. MATHIAS. Then we can advise Mr. Burt to strike the Richard Allen question?

Mr. HATCH. Not the question but any concern about why Richard Allen resigned.

Mr. SYMMS. Mr. President, I rise to associate myself with not only the eloquent remarks but the position that was taken by my distinguished colleague from the State of Utah, Senator HATCH.

I make the same request, that before Mr. Burt comes before the Senate for confirmation he should answer those questions that have been posed in the two letters from our good colleague from Utah, Senator HATCH. I request unanimous consent that both of Senator HATCH's letters to Mr. Burt dated December 3, 1982, be printed into the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

SENATE STEERING COMMITTEE,
Washington, D.C., December 3, 1982.

Hon. RICHARD BURT,
Assistant Secretary of State for European Affairs-designate, Department of State, Washington, D.C.

DEAR RICH: I appreciate your taking the time to meet with the Steering Committee Senators this morning and to reply to our many questions.

As I promised you and Powell Moore, these are the key questions that my colleagues and I believe you will have to resolve to avoid a major Senate debate on your confirmation because we have been repeatedly informed by your colleagues in the Reagan Administration that your policy positions and conduct run counter to the best interests of President Reagan, the national security community, and the Department of State. The only way to satisfactorily refute these comments from your colleagues would be to provide us with copies of the State Department positions submitted to NSC or inter-agency meetings about these issues. I am sure you can understand why long-term supporters of President Reagan like ourselves have been appalled at these reports of the positions you have taken. In other words, my colleagues and I will have to oppose your confirmation unless you can show you support the President's policies.

1. You opposed the zero option for the INF talks before the President's decision overruled you, both with respect to ruling out any fallback position and with respect to our NATO allies' views on the zero option which you had incorrectly predicted would not support the zero option. According to your colleagues, you make matters worse by stating publicly at a conference in Germany the day Secretary Haig resigned that you could see four fallback options for the INF negotiations even after the President had decided that there would be no discussion of fallback options.

2. You opposed the production decisions on both chemical weapons and enhanced radiation warheads in memoranda you wrote, but the President overruled your recommendations on these issues.

3. You opposed raising any Soviet violations of any SALT agreement at the SCC talks in Geneva, and you personally determined at the SALT Inter-agency Group in April 1981 that the working group findings should be rejected despite the fact that the findings were that the Soviets had violated SALT agreements. Your colleagues claim that your efforts to expose Soviet use of biological warfare amounts to an effort to cover up your refusal to face the issue of SALT violations as called for in the Republican Party Platform.

4. You opposed continuing the pipeline sanctions and the European bureau sent a memorandum to the Secretary of State cautioning that the issue of Soviet slave labor on the pipeline should be played down, and could not be proved.

5. You opposed any decision to deploy submarine-launched nuclear cruise missiles in a memorandum to Secretary Haig in February 1981, but the President overruled you.

6. With respect to the START negotiations on which much of the President's credibility in arms control depends, you repeatedly opposed any provisions to limit Soviet throw-weight and finally settled for this provision to be included vaguely in a second phase of START. This contravenes Senator Jackson's 1972 concern, embodied in statute about equal levels of arms. You argued in memoranda that any mention of throw-weight limits would never be accepted by the Soviets, and your arguments has now been used by the media to undermine the President's START proposals.

7. You wrote memoranda to Secretary Haig discussing how to evade the intent of Congress with respect to the Taiwan Relations Act, and participated actively in the Taiwan Communique debates on the side of the career officers who insisted on a cut off of all arms sales to Taiwan at a date certain—which was personally rejected by Judge Clark and the President.

8. Now that the INF talks have recessed for the winter, you have proposed that the earlier idea of equal numbers at significantly reduced levels now be revived, in direct opposition to the President's decisions. Your Bureau has asked for consideration of a Soviet offer about SS-20 deployments beyond the Urals as an acceptable basis for compromise.

9. You signed a memorandum to the Secretary of State calling for a lifting of the pipeline sanctions—in contrast to what I may have misunderstood you to be saying this morning that you were not involved in this issue.

10. You opposed the effort within the Administration to advise the President that the SS-16 activities of the Soviets constituted a specific "violation" of SALT Agreements this spring. In fact, you only consented to raise any issues at the SCC in Geneva under pressure from other officials.

11. You drafted the cable (and are so indicated on that cable) that rebuked Navy Secretary John Lehman in early 1981 for criticizing the SALT II agreement and that made it policy to abide by that agreement. This cable was not cleared or even shown to the Defense Department or the NSC staff or Dick Allen, not to mention President Reagan.

12. You wrote memoranda and briefed Department officials on the need to either circumvent Dick Allen and the NSC staff or to encourage the departure of Dick Allen so as to give Al Haig a free hand in foreign policy, to include contacts with the media on this topic.

13. You brief the media aboard Secretary Haig's aircraft while in Asia in order to undercut Ambassador Jeane Kirkpatrick's role in negotiating with the Iraqi Ambassdor to the UN, and your role was revealed in the press as were White House aide's calls for your resignation at the time. The President telephoned Mrs. Kirkpatrick in France to apologize to her for the news articles that you have generated.

These seem to be the main questions, Rick, and I remain confident that you can refute these allegations and silence once and for all your critics within the Administration. It would help if you had deputies named by the White House rather than from the Foreign Service and if you could lay to rest the rumors about Judith Miller's articles on arms control appearing so soon after your own meetings with her, but these are less important to my colleagues and me than the substantive issues.

An attached letter raises another set of issues that I hope you can address with a separate codeword response.

Thanks for your frankness.

Sincerely,

ORRIN G. HATCH,
Vice Chairman for Foreign Policy.

U.S. SENATE,
Washington, D.C., December 3, 1982.

Hon. RICHARD BURT,
Assistant Secretary for European Affairs-designate, State Department, Washington, D.C.

DEAR RICK: I and several colleagues would very much appreciate receiving your answers to the following questions before we proceed with further consideration of your nomination.

1. What is the primary function of the CHALET satellite?

2. What other means does the U.S. have to gain that kind of information?

3. What did the Soviets learn from Geoffrey Prime about our ability to intercept their telephone communications?

4. What do you think that your article of June 29, 1979 added to the Soviets' knowledge of our space-based intercept system?

5. Do you know that the COMINT statute, Sec. 798, 18 USC says that anyone who publishes, transmits, or discloses classified information about the COMINT system of the United States can be prosecuted? Why should that not apply to you?

6. Do you know that Sec. 792, 18 USC mandates that anyone who, knowing who has disclosed such information, conceals his identity can be prosecuted?

7. Are you willing to publicly disclose the chain of people through whom the information about CHALET reached the Soviets?

8. If you are confirmed, what should the Government answer to the defense lawyer for the next person accused of violating the COMINT statute? That lawyer will argue that your confirmation was tantamount to a repeal of the law. How could anyone be prosecuted under that law if you are awarded this position of great honor and responsibility?

Sincerely,

ORRIN G. HATCH,
U.S. Senator.

Mr. SYMMS. Mr. President, Senator HELMS made some very excellent points this morning. I will not belabor the Senate to go back over that old ground, but it is very difficult to think for the dedicated public servant at a lower level of Government to have a person dealing with matters sensitive to national security cloud their reputation and then ask the Senate to go ahead and give advice and consent to that confirmation. If we had all these questions answered, it may not be a difficult thing for us to decide. But where we do not have the questions asked and answered I think we are questioning the very system that we all cherish a great deal, if this man were confirmed today—and I have nothing personal against him either.

But then, if later on it comes up that laws and procedures pertaining to security have been violated and there were problems, it sets a very bad example for those people who work in those agencies and deal with those very sensitive matters on a daily basis as to what their response and what their possible solution should be. Senate confirmation of Mr. Burt could set a very bad precedent for enforcing our laws and procedures pertaining to security.

So having said that, Mr. President, I thank the Senator from Utah and the Senator from North Carolina and say here there are many other Senators who are also interested in this. There are not only two or three people. It is a concerted concern I think very sincerely on our part that we simply wish the questions answered that were posed in the letters that Senator HATCH sent to Mr. Richard Burt, and I think that is a fair request.

Then I think after that has happened, we could reconsider this whole situation.

I ask unanimous consent to have printed in the RECORD three articles from the Washington Times, one dated September 27, by John Lofton, dealing with this subject, then on October 6, another Washington Times article by John Lofton, and again on October 22, another article by John Lofton.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Times, Sept. 27, 1982]

OLD LEAK MAY SINK BURT NOMINATION

A white-hot, knock-down-dragout, behind-the scenes battle is rapidly coming to a head over the nomination of former New York Times correspondent Richard Burt to be assistant secretary of state for European affairs. The issue: should an ex-reporter who wrote a story containing classified information damaging to the national security be named to such a high government post?

The critics of Burt include:

Intelligence Committee Chairman Senator Barry Goldwater, R-Ariz., who on July 21 wrote a top secret code word letter to Secretary of State George Shultz asking that Burt's nomination be withdrawn. Inexplicably, Goldwater's request was neither acknowledged nor answered. And Burt's nomination was sent forward to the Foreign Relations Committee.

Senators Jesse Helms, R-N.C., Don Nickles, R-Okla., John East, R-N.C., Orrin Hatch, R-Utah, and James McClure, R-Idaho, all of whom wrote a letter about Burt on September 15 to Foreign Relations Committee Chairman Senator Charles Percy, R-Ill. In this letter the senators call Percy's attention to two things: (1) "the most serious questions" raised by a three-year old Burt article in the Times and (2) "a record of indiscretions committed by Mr. Burt," a record supposedly compiled by the State Department's Security Bureau. Burt denies any such indiscretions.

And finally, although its recommendation was ignored by Secretary Shultz, the White House Presidential Personnel Office also opposed Burt's nomination.

Among Burt's defenders are: U.S. Deputy Permanent Representative to the U.N. Ken Adelman; former Kissinger protege Helmut Sonnenfeldt; and Deputy Assistant Secretary for European Affairs Mark Palmer. In recent weeks, all three have phoned various Senate staffers to lobby for Burt's nomination.

In separate interviews, here's what I've been told. Adelman says the case against Burt rests on "lousy grounds." Sonnenfeldt thinks Burt is getting a "bum rap." And Palmer believes the issues being raised against Burt are "outrageous." Burt refuses to talk on-the-record about his situation.

So, what is the beef about Burt? Well, the central controversy revolves around an article he wrote for the Times on June 29, 1979. In this piece, quoting only "officials," Burt reported in detail how the Carter administration—concerned that Turkey might not allow U-2 reconnaissance planes over its territory—was preparing an alternative plan for verifying the new strategic arms treaty with Moscow. This plan, it was said, called for several improvements to existing methods for monitoring Soviet missile tests, including the upgrading of an electronic listening post in Norway and the use of a satellite that was programmed to collect other information.

Now, there's no doubt that the information in Burt's story was classified. When asked this question directly in his confirmation hearing on Sept. 15 before the Foreign Relations Committee, Burt replied: "Well, I will be quite honest. I assumed that it probably was (classified material) . . . I presumed it was sensitive information." In fact, Burt said that following the publication of his article he was made aware "by people" that his story had created "concern" within the intelligence community. Noting that he was "somewhat alarmed" by this, Burt says he "immediately sought appointments with (at the time CIA Director) Stansfield Turner about this problem."

A source I consider reliable, says that Burt's story compromised one of this country's "most secret and fragile" intelligence gathering systems. It did this in three ways, according to another equally reliable source: (1) It named the satellite; (2) It named its original mission; and (3) It revealed that this satellite could be reprogrammed.

Tomorrow the Senate Intelligence Committee will turn over to the Foreign Relations Committee a damage assessment report which will evaluate the damage done by Burt's three-year-old article. My sources say that while this report will be understated, it will be "devastating" to the contention by Burt and his backers that his Times story did no real harm to U.S. national security. Even Ken Adelman, one of Burt's defenders, tells me he has "no doubt" that the information Burt published "damaged the national interest."

What's astounding about this whole affair is the nonchalance on the part of Burt's backers regarding the very serious issue of his having disclosed classified information. Adelman argues that Burt was just "doing his job" and "that's what happens in Washington—people are given information and publish it." Sonnenfeldt says he doesn't see how a defense or national security reporter "who is given stuff" can avoid publishing it. He observes:

"It would be a shame if Rick was singled out. If journalists once get pilloried for having used stuff given to them by people with access to classified or sensitive information, it's going to go a long way—maybe even to some of the people attacking this particular journalist."

Mark Palmer, who says he doesn't want to go into who he has called in Burt's behalf, says only that the charges against Burt are "outrageous." Both Adelman and Sonnenfeldt readily admitted that they had not investigated thoroughly just how damaging Burt's article in the Times was.

At Burt's confirmation hearing before the Foreign Relations Committee, Senator Joe Biden, who is also a member of the Intelligence Committee—treated the whole sub-

ject as a joke. He got a laugh when he said that he had heard it rumored "that on occasion senators have leaked sensitive information for political purposes."

Ha-ha.

Just exactly how the flap over Richard Burt's nomination will turn out remains to be seen. But, the relevant question has been raised by Senator Claiborne Pell. Who asks: is Burt's article in the Times material to the consideration of his appointment? The answer must be: it most certainly is and Burt's critics are absolutely correct in raising this issue.

[From the Washington Times, Oct. 6, 1982]

SENATE "DOGS" SNIFF AT NOMINEE'S RECORD

An urgent phone call last Friday night from Secretary of State George Shultz to Senator Orrin Hatch, R-Utah, requesting that he, in effect, call off the dogs concerning the nomination of Richard Burt to be assistant secretary for European affairs, has been ignored for very good reasons: the dogs are on to something. In fact, the dogs are hot on the trail of a lot of things. Hatch was called by Shultz because he is vice chairman of the Senate Steering Committee, which has placed a hold on Burt's nomination.

Originally, hardline Reaganites were on Burt's case because of an article he wrote on June 29, 1979, when he was a reporter for the New York Times, an article which Senator Jesse Helms, R-N.C., says did "grave security damage to his country." This story revealed highly classified information as to the existence, purpose and capability of a very expensive satellite reconnaissance system intended to assist in the verification of Soviet compliance with certain treaties.

Helms says a prima facie case can be made that Burt broke the law. He also says Burt's article "compromised the position of the U.S. with regard to a NATO partner a point alone which raises questions as to how a person who was responsible for such an act could conduct relations with our European allies."

In his confirmation testimony before the Senate Foreign Relations Committee in mid-September, Burt said that prior to publishing his controversial article he checked with no one to see if its publication might be harmful to U.S. national security. But now, in a stunning revelation, in an Oct. 1 letter to Sen. Hatch, Burt says:

"In the specific case of the June 29, 1979 article . . . I was warned by an official that an item of information provided to me should not be compromised. I agreed, and omitted that information from the article."

In recent days, the firestorm of reaction against Burt's nomination has been fueled by other concerns in the area of policy. According to sources familiar with Burt's positions, these policy areas include the following:

Intermediate Range Nuclear Forces in Europe. Burt is said to have opposed, before it was policy, the administration's "zero option" nuclear weapons plan favoring instead a plan that would have seriously limited U.S. deployment options in Europe. At a recent SALT/INF Backstop Committee meeting at State, Burt reportedly advocated immediate consideration of a Soviet proposal concerning the Russian SS-20 missiles, which hardline Reaganites ridiculed and wanted to reject.

START (Strategic Arms Reduction Talks). Burt has persistently pushed policies that would have resulted in the retention of Soviet superiority over the United States. Burt hastily and successfully rammed through the current U.S. START plan now on the table in Geneva, a plan, which because it was hurried through to appease the European peace movement, has not been certified as verifiable by the intelligence community.

SALT Violations. Burt was a key architect of the administration's present policy that is to, de facto, adhere to the SALT II Treaty, which candidate Reagan denounced as "fatally flawed." Burt had fought against the idea of challenging and revealing Soviet violations of SALT—something that was promised in the 1980 GOP Platform.

Soviet Pipeline. Burt originally opposed any sanctions against those who wanted to help build the Soviet natural gas pipeline to Western Europe. Lately he has advocated softening those sanctions that were imposed

NATO Defense Spending. Burt has opposed suggesting publicly or privately that our NATO allies pay a larger share of the defense cost of protecting Western Europe.

To a man, several sources I talked to who have seen Burt work, say that he is not a Reaganite, that he is far too pragmatic and that he is too willing to compromise the Reagan foreign policy agenda for reasons of political expedience.

In late November, Rick Burt will appear before the Senate Steering Committee to answer these charges. It should be quite a show.

Footnote: Burt refuses to discuss these matters on-the-record.

[From the Washington Times, Oct. 22, 1982]

NOMINEE BURT MIS-SCORES AGAIN

Having already gotten himself in crossways with a number of conservative Republican senators—for reasons elaborated on here on two previous columns—Richard Burt has now angered the White House Office of Presidential Personnel. Burt is the president's nominee to be the assistant secretary of state for European affairs. Here's the inside story:

In early September, even before Burt himself had been confirmed by the Senate for his own job, the State Department notified the White House personnel shop that Burt intended to appoint three people to be his deputy assistant secretaries. These individuals are all careerists and they are: Mark Palmer, Robert Blackwell and James Dobbins. None of these three gentlemen is, by any stretch of the imagination, a Reaganite.

Blackwell first went to work at the department under President Johnson in 1967. He was a special assistant to Henry Kissinger's protege Helmut Sonnenfeldt from 1973 to 1975. And from 1979 to January 1981, he was a senior staff member of President Carter's National Security Council. One knowledgeable source tells me Blackwell was one of the "architects of Carter's foreign policy." Dobbins also came to the State Department under the Johnson administration in 1967.

Now, what has angered the folks in White House presidential personnel is the fact that Burt's three choices for these senior executive service slots have been presented to the White House as a fait accompli on a take-it-or-leave-it basis. This was done despite well-known White House preference that this not be done. What the White House personnel people want is an opportunity to suggest their own choices for jobs like the ones Burt has already picked people for. And Burt did not give them this opportunity.

When I asked Burt why he had ignored the desires of the White House personnel office regarding his three deputy assistant secretaries, he said he was not aware that the White House wanted a chance to fill these jobs with non-careerists.

Me: But, why wouldn't you have asked the White House if the president had any people to hire as your assistants?

Burt: "Because I wanted—it just—I wanted people I could work with. I wouldn't have chosen these people if I thought they were unacceptable to the president."

Me: Would White House opposition to your choices for these jobs have made any difference?

Burt: "I don't know. I want to be loyal to the White House, to the president."

Burt says that "professionally" he doesn't report to the White House, that he has "nothing to do with them" and this would be "going out of channels." It's not his job, he says, to ask the White House for the names of possible appointees.

Burt's responses to my questions are preposterous on their face. After all, Burt himself is a presidential appointee! Therefore, it is incumbent upon him—or so it would seem—to look out for the interests of both the president and the White House personnel office, which operates in his behalf. This has not been done.

Burt may indeed be loyal to the White House and the president. But, by admitting he has "nothing to do with them" and, by his actions, demonstrating that he doesn't care whom the president wants named to high State department posts, Burt sure has a strange way of showing his loyalty.

Footnote: Burt may believe he's going to get his way with Palmer, Blackwell and Dobbins. But, the White House personnel office is going to wage war on this one. And Burt himself may well be part of the final body count.

Mr. SYMMS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. SPECTER). Without objection, it is so ordered.

NOMINATION OF RICHARD T. M CORMACK, OF THE DISTRICT OF COLUMBIA, TO BE AN ASSISTANT SECRETARY OF STATE

Mr. BAKER. Mr. President, I will not do so at this moment, but shortly I will ask the Chair to proceed to the next nomination. It appears we are unlikely to resolve the debate and finally determine the issue on the Senate.

So that other Senators may be on the floor if they wish to do so, the next item will be Richard T. McCormack, of the District of Columbia, to be an Assistant Secretary of State. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, as I have observed in a distressing number

of cases so far, it does not appear that the Senate will be able to complete action on this matter. Since there are other matters on the calendar that must be dealt with, I ask unanimous consent that the Chair now lay before the Senate the next nomination on today's Executive Calendar.

The PRESIDING OFFICER. Without objection, it is so ordered. The nomination will be stated.

The legislative clerk read the nomination of Richard T. McCormack, of the District of Columbia, to be an Assistant Secretary of State.

Mr. HELMS addressed the Chair.

The PRESIDING OFFICER. The Senator from North Carolina.

Mr. HELMS. Mr. President, there has been some talk in the cloakroom that this nomination may be held hostage to the Burt nomination and perhaps the Grey nomination. I do not believe that. But if it is so, so be it. "The opera isn't over until the fat lady sings."

I would point out, in connection with Mr. Burt, I was not among those who had a hold on his nomination. I did vote against him at the time the Foreign Relations Committee reported favorably his nomination to the Senate.

As for Mr. McCormack, just a few words about him and his nomination to be Assistant Secretary of State for Economics and Business.

Mr. McCormack has had a long and distinguished career in government. He began his career in the Peace Corps, following which he served on the staff of our distinguished colleagues from Pennsylvania and present occupant of the chair, Mr. SPECTER, when Mr. SPECTER ran for mayor of Philadelphia in 1967.

In 1969 he served as special assistant to former Pennsylvania Governor, William Scranton, during the Intelsat negotiations at the State Department, before accepting a senior staff position in the Executive Office of the President. In this capacity he drew up the plans for establishing the White House Council for International Economic Policy. Later he was named Deputy to the Assistant Secretary of the Treasury for International Economics.

In 1975 He served as a consultant to the White House Trade Office, where he did analyses on potential international commodity agreements. He then spent 2 years at the American Enterprise Institute doing reserch and writing on international economic policy, and other foreign policy issues.

I had the pleasure of having Mr. McCormack on my staff for a while, from 1979 through 1981, and he served me well in the foreign policy area. And in this capacity, as Senator PERCY noted during Mr. McCormack's confirmation hearings, Mr. McCormack was held in the highest regard by the staff members of the Foreign Relations Committee who worked with him on a daily basis.

A number of Senators have been active on behalf of Dick McCormack's nomination, including Senators DURENBERGER, LUGAR, and others. Senator PERCY, the distinguished chairman of the Foreign Relations Committee, has spoken very highly of this nominee. The support for Mr. McCormack is broader than any one wing of the Republican Party—both moderate and conservative praise his professionalism and his integrity.

He is highly qualified for the position for which the President has nominated him. Needless to say, I hope that this Senate will confirm him.

Mr. President, I ask unanimous consent that responses to questions posed of Dr. McCormack by the distinguished chairman of the Foreign Relations Committee (Mr. PERCY) be printed in the RECORD. This would include a letter of transmittal to Senator PERCY from Powell A. Moore, Assistant Secretary for Congressional Relations.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF STATE.

Hon. CHARLES H. PERCY,
Chairman, Committee on Foreign Relations, U.S. Senate.

DEAR MR. CHAIRMAN: I am pleased to forward the responses to the questions you and Senator Biden requested in connection with Mr. Richard T. McCormack's confirmation hearings.

With cordial regards,
Sincerely,

POWELL A. MOORE,
Assistant Secretary for Congressional Relations.

SENATOR PERCY'S QUESTIONS AND RESPONSES BY MR. MCCORMACK

Question. More and more Illinois companies are telling me how they are being affected by competitive pressures from Japanese exporters. One aspect of this concern . . . and one which I've been hearing on an increasing basis relates to the relative value of the Japanese Yen in comparison to the dollar. These Illinois companies . . . both domestically-oriented as well as exporters . . . point to the Yen as a major contributor to the deterioration of markets for U.S. products. I am told there is growing awareness that the currently undervalued nature of the Yen may be a direct result of manipulation by the Japanese government.

My question to you is—do you view the relative strength of the Yen as an artifically induced condition? And is this situation . . . whether it's real or perceived . . . of sufficient importance to warrant your attention as Assistant Secretary of State?

Answer. It seems likely that the value of the Japanese Yen relative to the dollar is lower than consistent with medium-term payments equilibrium, although the exact extent of the undervaluation is very difficult to measure. There are clearly many factors which have currently made the dollar very strong relative to foreign currencies, including interest rate differentials (which are being reduced as U.S. rates fall), confidence in President Reagan's economic policies, our success at reducing inflation, and political and economic uncertainties abroad.

In any case, such a condition clearly adversely affects the competitive position of U.S. companies relative to Japanese industry, and tends to aggravate trade tension between our countries. I believe the exchange-rate question is therefore a very important one.

Question. Your predecessor, Bob Hormats, was one of the strongest proponents of value-added exports—particularly agricultural products with a high value-added component. He worked very closely EPIC—the business/labor group formed to boost our value-added exports. Could you tell us your ideas about the importance of these exports to the U.S. economy and what course you might initiate to boost these exports.

Answer. I concur fully with Mr. Hormats' emphasis on increasing exports of value-added agricultural products. Such exports benefit our economy by stimulating economic activity, creating jobs, and earning foreign exchange. The U.S. has only about a 10 percent share of the market for high value agricultural products, and the unit value of our agricultural products has been declining in recent years. Increased sales of value-added products should be an important goal of our agricultural export promotion policies of the Eighties.

Export promotion programs which familiarize overseas buyers with the range and quality of available U.S. food products can make a significant contribution to value-added exports. An example is the National Food and Agriculture Exposition to be held in Atlanta next Spring for foreign buyers of food products. We are in the process of preparing a joint message from Secretaries Shultz and Block to chiefs of mission at our overseas posts asking for their cooperation in encouraging attendance at the show. I believe we need to involve our embassies as well as the Congress and Washington agencies in our efforts to increase value-added exports.

The private sector has a unique and major role to play in increasing our sales of value-added products. I look forward to working closely with the Export Processing Industry Coalition, the leading private sector advocate for value-added exports.

Mr. HELMS. I thank the Chair, and I thank the majority leader.

Mr. BIDEN addressed the Chair.

The PRESIDING OFFICER. The Senator from Delaware.

Mr. BIDEN. Mr. President, the Assistant Secretary of State for Economic and Business Affairs is a very important post, particularly at a time of a threatening worldwide financial collapse and with trade wars looming on the horizon.

I do not think we should act very hastily until we are quite sure of the nominee and the policies he may wish to carry out.

Before we vote on this nomination, I think the Senate should be fully aware of Mr. McCormack's background and of his answers to questions posed to him in the committee hearing.

Before I go into his background and the answers, let me talk about the job.

The functions and responsibilities of the Assistant Secretary of State are that the Assistant Secretary formulates and implements policy regarding

foreign economic matters, trade promotion and business services of an international nature, and, in this connection, negotiates agreements. He is responsible for departmental guidance and representation with respect to the United States and other public international lending institutions.

He is responsible for all departmental activities necessasry to advise and assist the office of U.S. Trade Representative, in accordance with the Trade Act of 1974.

He insures, in coordination with the Assistant Secretaries of the regional bureaus, the provision of an adequate and regular flow of information concerning the U.S. Government's multilateral economic and commercial policies, policy deliberations, legislative developments, and diplomatic exchanges, especially in matters that may result in negotiations and representations abroad.

During the past decade, the U.S. economy became increasingly linked with the rest of the world. Trade grew rapidly as a share of GNP, from 6 percent to around 12 percent. Industry became increasingly reliant upon imported raw materials, petroleum becoming a critical problem.

International flows of capital and investment made isolated monetary policies difficult if not impossible to pursue. Stagnant economies in the industrial West, cries for help from industries beleaguered by imports, concern about increasing debt problems in the Third World and in the Eastern bloc, and use by the United States of economic sanctions to pursue foreign policy objectives, have all placed a considerable strain on relations among the industrial nations of the West.

I should note parenthetically that we have finally acknowledged what was written in the report generated about 5 years ago, by a staff member of the Foreign Relations Committee, a fellow named John Ritch, talking about the Polish debt and Eastern European debt. Now, all of a sudden, we are waking up to the fact that major worldwide banking institutions may be in peril, that entire economies are in jeopardy, and there is a need, as recognized by Secretary Regan as recently as 2 days ago, to consider the possibility of assembling the industrial nations of the West in a circumstance not unlike Bretton Woods, which was in 1944, to consider what everyone has acknowledged is a pressing and difficult problem.

In this morning's press there was mentioned the question of whether or not the American public and American industries were long going to tolerate the Reagan administration's position with respect to subsidizing the American banking industry, to hedge them against potential colossal American losses.

At the same time, they continue to suggest, and I am not arguing the merits but the difficulty, that we should continue to bail out American corporations, American cities, American States.

So there is a very, very serious problem in terms of domestic impact and the international financial situation, the incredibly high debt ratio that the underdeveloped world is carrying, and the continued recession in the Western World.

We also have the serious problem, the serious domestic policy question, and the serious foreign policy question, of the role of economic sanctions, if any, in a very increasingly complicated world. Is it consistent to sell grain and not go along with the pipeline deal? Is it wise to have changed our mind with regard to the pipeline? What do we do now with regard to lessening sanctions against Poland? Do we do it on a unified basis with our Western European allies? Do we go it alone?

These are all very, very difficult questions.

The United States has a long history of using economic controls on international commerce to pursue foreign policy objectives. For nearly a quarter of a century we restricted almost all commerce to Cuba. In the last administration, the Carter administration, they imposed sanctions against Iran and the Soviet grain embargo. This administration at various times and stages has announced various restrictions on the sale of gas- and oil-related equipment that would go to the Soviet Union.

In June controls that were put on were particularly frustrating to and frustrated by the Europeans and Japanese who believed we were ignoring not only their economic interest but even their sovereignty, given the extraterritorial nature of those sanctions.

What has been the effectiveness of the economic sanctions over the past three or four administrations in bringing about desired foreign policy objective?

Another question we have to ask ourselves is the current sanctions against European shipments, which are now lifted, of equipment produced under U.S. license appear to have had little impact either in preventing such shipments or altering Soviet policy vis-a-vis Poland. Although that has been lifted, I suspect we should come to a resolution of whether or not it was working. Would it make sense again? Did it make sense when it was proposed? The United States-European political relations have been seriously damaged as a consequence of that and other matters.

How do we see this current impasse being resolved? Obviously, the lifting of the sanctions has resolved part of the impasse, but still we are in serious disagreement on many issues with our European allies.

What is the impact on U.S. business and agriculture of economic restrictions imposed for foreign policy reasons? The United States has argued strongly that our companies with investment overseas should be given at least as favorable treatment as national companies.

One of the questions we have is how did the nominee defend the position giving the U.S. claims of extraterritorial control over U.S. business subsidiaries, even over U.S. licensed technology?

As we pursued these issues with the nominee we received some enlightening and not so enlightening answers.

Let me read some of the questions that should have been directed to the nominee.

With regard to financial loans, the United States has traditionally supported the free flow of capital through lending and investment. Since the early 1970's, there has been a mounting concern over the growth of external private debts in a number of developing countries.

Recent events in Mexico and Argentina, countries which are among the largest debtors, have called into question the stability of the entire financial system. The problems in Poland and Romania have focused attention on debt levels in Eastern bloc countries.

One of the questions which should have been asked with regard to these financial flows was:

Private debt held by developing countries has now passed $360 million. Relatively slow growth in the industrial world compiled with high interest rates have made servicing that debt particularly difficult. We wondered whether the nominee foresaw any major defaults ahead.

Another question to be asked was: "Specifically, would you inform the committee of the current status of discussions with Argentina and Mexico to help alleviate their financial difficulties?"

Mr. President, we had this hearing on September 27; we went home to determine who was going to come back. Then we had a lameduck session and there has been a lot of change in the world since we had the chance to ask the nominee these questions. So we would, if we had him back again, be asking him questions not merely about Mexico, and Argentina, and Eastern bloc countries, but also the relative impact on U.S. foreign policy of the exorbitant amount of outstanding loans of our Western European allies to some of these very countries, too.

For, even if we could hold ourselves harmless if our European allies were to find themselves in serious economic

straits as a consequence of default, what impact would that have on the United States of America? We never got into that very thoroughly, and I think we should have.

Another question to be asked was:

Several times in the past decade concern has been expressed as to whether private banks can recycle funds to the developing countries. Each time they have done so. In recent months this issue has once again gained prominence. Do you believe we are finally reaching a point where private banks will be increasingly wary of extending their exposure in developing countries? If so, what policy response is called for?

I am not sure that in fact, in the past several months, that has happened. I would still like to know what the administration policy calls for.

Another question to be asked is: "This administration appears to share some of the concern over the system."

I should note, parenthetically, that, obviously, the administration not only shares some of the concern, it shares an incredible amount of concern over some of the statements made by the Secretary of the Treasury within the last few days.

Back to the question: "Would you explain the intent and nature of the U.S. proposal floated in Toronto at the IMF annual meetings for a new special facility within the IMF?"

In the light of some of the Treasury Secretary's recent statements, I would ask him the same question in light of the proposals floated by the Secretary of the Treasury.

A second question:

Some critics of our Polish policy have argued that we should force the Poles into default, to call attention to the sorry state of Eastern bloc economies and to discourage private banks from increasing their lending to those economies. What is your view?

Another question to be asked was, "Do you believe any further controls are needed on foreign investment in the United States?"

Then there is the issue of trade.

The United States has expressed frustration over barriers to the Japanese market and subsidies provided to export industries by European countries and some developing countries. Japan believes it is being made a scapegoat because of the inefficiencies of other countries' industries. The European Community, which runs a roughly $10 billion trade deficit with the United States, reacts strongly to actions such as the U.S. complaints against subsidies to their steel industries.

I should again note that just within the last 3 weeks, the British have made some significant decisions with regard to their steel industry. They essentially said they are not going to play any more. What impact does that change have?

Developing countries believe they were discriminated against in the Tokyo Round of trade negotiations. Against the background of mutual recrimination, there will be a ministerial level meeting of the General Agreement on Tariffs and Trade this November.

Those have occurred. A lot did not occur. The meeting—I think it would be too strong to say it was a disaster, but it is not too strong to suggest that it was not successful, and everyone is incredibly worried.

In the light of that backdrop, Mr. President, we still need to ask some of these questions. He did not have the benefit, nor did we, of knowing of the failure of the GATT discussions in November.

1. Are you satisfied with recent steps Japan has taken to open their market? Is the problem Japanese barriers, or lack of aggressiveness by U.S. industry?

2. A number of European and U.S. industries are in deep trouble. Competition from imports is part of the problem. How can we deal with the real domestic problems of those industries, while maintaining a reasonably open trading system?

That question is going to be debated at length, I suspect, soon. As a matter of fact, it is going to be debated in the House very soon, probably today or tomorrow. We could talk about the content of the bill when we ask him about his views on that.

The third question we asked him is:

The U.S. urges developing countries to rely on market forces, yet we have extended the restrictive international textile agreement and imposed tighter controls on the import of sugar—thereby limiting two critical developing country exports. How do you justify these seemingly contradictory policies?

Since World War II, the U.S. has argued against preferential trading arrangements, pressing rather for an open trading system. Yet the Caribbean Basin Intiative includes a one-way free trade zone. Do you see this as marking a major departure from traditional U.S. policy? Are there situations where such departures from general policy may be justified?

We want to know about that, because that is a major issue facing this body and industry.

The fifth question:

Do you see any real possibility of phasing out official export credit subsidies? Can we bring real pressure to bear on other countries when we are reducing our own Export-Import Bank's activities?

That question may not be particularly relevant right now, because I am not sure what our policy on the Eximbank is going to be. It may very well be changing in light of the Secretary's statement.

The other question was, "What do you expect from the GATT ministerial?"

Well, that would be a fascinating answer, which I shall get to in a while, because we have already had the GATT ministerial.

What do you expect from the GATT ministerial? Is it realistic to hope for real progress in obtaining new international guidelines on service and high technology industries? Will recent disagreements with Europe over such economic issues as the Soviet pipeline and steel exports impede progress at the GATT?

I suspect we all know the answer to that, but it would be interesting to get an insight as to how insightful the nominee is when I get to reading the answers to those questions.

The other thing we asked about as a general subject matter was managing the system.

Following World War II, the Bretton Woods Institutions were established to help with rebuilding Europe and maintaining a financial and trading system primarily involving Europe and the United States. In the last decade this system has come under increasing strain as it has had to absorb many new members, deal with floating exchange rates, and devote considerable attention to development problems.

A series of economic summits were begun among the Western world's major economies, but those, too, have not lived up to the expectations of some. I suspect they have not lived up to the expectations of most. And one of the questions still to be asked is:

Trade disputes seem increasingly to be handled on a bilateral basis rather than through the GATT; developing countries complain that the IMF is ill-equipped to deal with the problems faced by developing countries; and this administration has indicated that in the development assistance area it intends to place more attention on bilateral programs than on the multilateral development banks.

Which I should note I think is a bad idea.

If so, could we slip back into the kind of beggar-thy-neighbor nationalistic economic policies which helped lead to the Great Depression?

Mr. BAKER. Mr. President, will the Senator yield to me at this point?

Mr. BIDEN. Yes, I would be happy to yield.

Mr. BAKER. Mr. President, once again I have monitored the debate on this issue, and it would appear that there is no likelihood that we are going to be able to deal with it in anything like a reasonable time, and I am going to propose in a minute that we move onto the next item, which will be Orville G. Bentley, of Illinois. But before I do so, perhaps some other Member wishes to make a statement or comment on this nomination.

Mr. BIDEN. Will the Senator yield just 30 seconds?

Mr. President, I ask unanimous consent that the series of questions which I personally submitted to the nominee and his answers be placed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

1. Q. Dr. McCormack, your biographical materials indicate that when you worked in the Executive Office of the President from 1968 through 1971, you conducted a "major study on ways and means of managing bureaucracies on the part of senior political appointees."

What conclusions did you reach that can assist you in your new post?

A. The basic conclusion of this report was that the career people and the political appointees should not regard each other distrustfully or as adversaries. Instead, the political appointees and the career officials should recognize the strengths which they both have, and harness together for the benefit of the American people. Please see the attached letter dated June 18, 1970, from former Under Secretary Richardson.

2. Q. In 1980, you traveled to Rhodesia as a Senate staff member and personally observed the elections that brought Robert Mugabe to power. Subsequently, you wrote a report entitled "The Rhodesian Debacle" which was printed in the CONGRESSIONAL RECORD.

Based upon your experiences as a Congressional observer, what do you think is the appropriate role for Senators, Congressmen, and their staffs to play in the policymaking or diplomatic process?

A. The Congress of the United States has a constitutional mandate to advise and consent on matters of foreign policy. More broadly, the Executive Branch needs to consult the Congress and to take Congressional views into account. Otherwise, needless errors might transpire, and Congress might refuse to provide funds to support Executive Branch initiatives.

Staff members serve as eyes and ears for elected members of the Congress, as one source of information upon which Congressmen and Senators draw to assist in gaining perspective on individual foreign policy issues.

3. Q. In your 1980 report, you concluded that "over the next several years, the Rhodesia of today will, in all likelihood, slowly fade away."

What did you mean by this statement?

A. I felt that Robert Mugabe would probably implement economic policies which would discourage investment and, over the long haul, would prevent Zimbabwe from reaching its enormous economic potential. I believed there was a great danger that economic levels could actually deteriorate, over time.

I carry no brief for racism in any form as you may see from both my own past record in this area. But I felt that some form of coalition alternative to Mr. Mugabe and his party had a higher probability of providing wise policies and a better future for the people of Zimbabwe.

4. Q. In your 1980 report, you predicted that "within two years, Rhodesia's economy is likely to be nationalized, piece by piece." To what extent have your predictions come true? In your personal view, what have been the effects of the Zimbabwe government's policies on economic performance? In your own view, what is the current state of Zimbabwe's economy?

A. While there has been some increase in government participation in the private sector, wholesale nationalizations have not occurred. The business community is, however, watching closely the development of the Zimbabwe government's economic policies, and naturally does not agree with a number of steps which have been taken.

After two years of growth, the Zimbabwe economy will be slowing down in 1982 due to a number of internal and external factors. Zimbabwe has, however, the potential to be one of the stronger economies of Africa.

5. Q. As Assistant Secretary for Economic and Business Affairs, in what ways—if any—would you seek to promote an expanded role for U.S. trade and investment in Zimbabwe?

A. I think that the U.S. Government has a role to play in underlining the concerns of the U.S. business community to the Zimbabwe Government, and when appropriate, in encouraging the Zimbabweans to take specific steps which meet these concerns. For example, I think it entirely appropriate that we emphasize to the Zimbabweans the interest of U.S. companies in seeing an investment code in Zimbabwe.

In the end, of course, there is only so far that we can go. While we can encourage the development of a general climate in Zimbabwe conducive to foreign investment, the "go-no go" decision has to be made by the companies themselves.

6. Q. The Administration has indicated that an internationally acceptable settlement in Namibia may be quite close. In your view, what would be the appropriate role for U.S. trade and investment in a newly independent Namibia? Would your answer differ if Namibia were ruled by an elected government of the Southwest Africa People's Organization (SWAPO)?

A. We of course feel that U.S. trade and investment can be a positive influence in any developing nation. Namibia is no exception.

It would be premature to go into specifics on this issue. At this stage of the negotiations for Namibian independence it would be difficult to speculate on what our approach to any particular post-independence government would be.

7. Q. During last year's debate on the repeal of the Clark Amendment, which bans overt or covert U.S. operations in Angola, a number of major U.S. companies doing business in Angola argued against repeal. As Assistant Secretary, to what extent would you argue, during the deliberative process, that trade and investment concerns should play a significant role in the formulation of policies such as the repeal of the Clark Amendment or diplomatic recognition of Angola?

A. Our goal is to achieve full normalization of relations based on a cooperative approach to regional peace and stability.

We favor repeal of the Clark Amendment as a matter of principle to remove unwarranted restraints on the President's ability to conduct foreign policy. The Administration is on record as having no plans to aid any opposition group. Our efforts to repeal the Clark Amendment do not mean that we have any such plans.

8. Q. In your view, what is the role for U.S. private trade and investment in countries with avowedly Marxist governments?

A. Private trade on commercial terms in areas which do not violate the COCOM agreements, related national security strictures or other national policies are mutually advantageous. This is true regardless of the form of government of the other trading partner. It is not, however, clear to me how great the opportunities for investment will be in most Marxist societies. Investors are reluctant to put long-term fixed investments in countries where the leadership is actively discussing policies which could compromise the viability of these investments. But this is a matter for private, not government, decisions. Private investors are, as a general rule, very aware of local conditions and risks where they are considering making investments.

9. Q. As Assistant Secretary, would you seek to promote trade and investment with such countries around the world?

A. With respect to these countries, I would not be comfortable either encouraging or discouraging individual exporters or investors, wherever they may be considering investing or trading, beyond providing them with whatever factual information the Department of State has at its disposal which might have a bearing or risk assessment or opportunities.

10. Q. Please describe in your own words the present U.S. policy of "constructive engagement" toward South Africa, with particular regard to the trade and investment components of that policy.

A. President Reagan has stated on several occasions that we find apartheid repugnant but that we would support those many South Africans trying to move away from apartheid. I would associate myself with the President's views which are a succinct statement of what constructive engagement stands for.

The United States supports an arms embargo against South Africa and has imposed other unilateral restraints on sales to the police and military. We are opposed to Congressional legislation which would limit new U.S. investment, ban the sale of Krugerrands, ban U.S. bank loans, and force compliance with a set of now voluntary fair employment principles for U.S. firms operating in South Africa. We do not believe such punitive measures will at this point encourage the government in South Africa to change. We also believe that these economic relations give the U.S. important leverage and a means of communicating to South Africa U.S. support for peaceful change in South Africa.

11. & 12. Q. To what extent, if any, have changes in U.S. trade policy and export controls for South Africa been tied to South African cooperation in securing an internationally acceptable Namibia settlement or changes in apartheid policy?

A. Changes in Commerce Department Commodity Control list regulations on trade with South Africa were made for three reasons.

First, the law requires that the controls be reviewed on an annual basis and either renewed, modified or dropped altogether.

Second, the regulations as drafted were not appropriate in terms of their stated objective of distancing ourselves from the practice of apartheid.

Third, as events in South Africa over the past year have demonstrated, there is a process of change underway there.

These considerations remain the prime determinants of U.S. trade policy toward South Africa.

13. Q. Do you feel that any such linkage of trade and investment policy to other foreign policy consideraitons is appropriate?

A. In general, we believe that trade and investment issues should be decided on their own merits and should not be subjected to other considerations. Clearly, where major foreign policy implications arise it may be appropriate, and even necessary, to subordinate them to these broader interests.

14. Q. In your report on the Rhodesian elections, you noted that British policy toward Rhodesia was influenced by economic pressures from other African states, particularly Nigeria.

To what extent do you feel that it is appropriate for U.S. policies to be directed by real or perceived economic pressures from other countries?

A. American policies should be aimed at advancing the interests of the American people in the broadest possible sense. They must also take into account our moral values. To the extent that external economic pressures are realities, they must be con-

sidered in the overall formulation of our policies. But broader perspectives must also be factored into any final policy decisions.

15. Q. (a) In your view, to what extent is the United States dependent upon imports of "strategic minerals" from South Africa?

A. The Republic of South Africa is an important source of U.S. imports of chromium, platinum group metals, manganese, vanadium, and ferrochromium.

Q. (b). Should U.S. policy toward South Africa be shaped in any way by such dependence?

A. In the long run, our best insurance against a cutoff of strategic minerals from South Africa is helping it find peaceful solutions to its problems. A politically moderate and economically viable South Africa is more likely to be a dependable source of critical materials for the West than one beset by economic stagnation and political tension. The Administration has adopted a policy of constructive engagement in South Africa. Our interests are served neither by a maintenance of the status quo of the apartheid system nor by violence and the destruction of South Africa's economic system.

16. Q. What is the impact on U.S. business and agriculture of economic restrictions imposed for foreign policy reasons?

A. U.S. business and agriculture are largely opposed to the use of restriction of trade as an instrument of foreign policy, and have not been reluctant to air this opinion before the Congress or the Administrations imposing the sanctions. For the years 1979 through 1981, the Department of Commerce estimates that USG economic sanctions cost U.S. companies some $1 billion. Grain sales during 1979–1980 were expected to be about 25 million tons. Actual sales were limited to 8 million tons, a loss of 17 million tons. However, since this administration lifted the grain embargo, sales to the USSR in July 1981–June 1982 market year reached a record of 15.4 million tons.

We regret that the sanctions on oil and gas equipment, and technology will cause economic hardships and we are sympathetic to the sacrifices required of U.S. industry and firms abroad as a result of the measures we have had to take. The President fully understands the objections to the sanctions policies, but is not persuaded to reduce the impact of the sanctions absent significant progress in Poland. Secretary Shultz will have meetings with a number of them during the opening days of the current U.N. General Assembly session. Meanwhile, we intend to implement the sanctions consistently and firmly.

17. Q. The U.S. has argued strongly that our companies with investment overseas should be given at least as favorable treatment as national companies. How do you then defend this position given U.S. claims of extraterritorial control over U.S. subsidies, and even over U.S. licensed technology?

A. A principal foundation of U.S. policy toward international investment is the treatment of foreign investment on terms no less favorable than treatment received by domestic investment. We argued strongly not only for national treatment of our investment overseas but for national treatment for foreign investment in the U.S. as well. Every country, of course, maintains certain sectors in which it does not accord national treatment, largely on national security grounds. Foreign policy problems have occasionally arisen and will continue to arise in a number of areas as a result of the application of U.S. law to commercial conduct outside our territory. National security constitutes a key reason for U.S. claims of control over certain conduct abroad by both U.S. and foreign-owned companies. We are also concerned about the economic impact on the U.S. of actions which take place outside our territory. This is the inevitable result of an increasingly interdependent world economy.

18. Q. This Administration appears to share some of the concern over the system. Would you explain the intent and nature of the U.S. proposal floated in Toronto at the IMF annual meetings for a new "Special Facility" within the IMF?

A. The Administration does share some of the growing concern over the international financial system. We look to a strengthened IMF to play a continued important role in smoothing/promoting balance of payments adjustment and in cushioning shocks to the system.

At Toronto, the U.S. raised the idea of a new, permanent borrowing arrangement for the IMF, which would be in addition to any quota increase agreed upon. In concept, the quota increase would be designed to meet temporary balance of payments financial requirements under normal circumstances. The borrowing arrangement would be activated on a contingency basis and could be drawn upon by the Fund to finance country drawings in extraordinary circumstances.

The U.S. suggestion will be developed further and considered by IMF members in coming months. We will keep the Congress fully informed on this issue.

19. Q. Please list all the steps that the U.S. has taken in the past year and a half to pressure the Japanese to lower trade barriers.

A. This Administration has pressured the Japanese continually to reduce barriers to U.S. exporters to Japan. Virtually every bilateral or multilateral meeting where U.S. officials encounter their Japanese counterparts includes discussion of the need to lower Japanese trade barriers. In addition, public statements by U.S. officials are often an effective means of pressuring the Japanese for trade liberalization. It is not practical to list every such occasion, but the following are some key events in the past year and a half.

June 1981 Meetings of the U.S.-Japan Lumber Trade Promotion Committee.

July 1981 USTR Brock presents trade policy focusing on reduction of foreign trade barriers to the Senate Subcommittee on International Trade.

July 1981 Ottawa Summit.

July 1981 Secretary Baldrige upgrades U.S.-Japan Trade Facilitation Committee.

September 1981 U.S.-Japan Subcabinet-level talks on trade.

September 1981 USTR Brock testimony to JEC calls for liberalization of Japanese agricultural imports.

October 1981 U.S.-Japan Agricultural products meeting in Tokyo.

October 1981 Secretary Baldrige visit to Tokyo.

November 1981 U.S. delivers a formal request for reduction of tariffs and non-tariff barriers.

December 1981 Subcabinet-level talks on lists presented in November.

March 1982 Subcabinet-level talks in Tokyo to follow up on first trade liberalization package.

July 1982 Follow-up meetings on second Japanese trade package.

August 1982 Follow-up group meets again in Tokyo.

August 1982 Japanese are informed about GATT cases.

September 1982 Further follow-up meetings, initial consultations under GATT.

Later this year we will be continuing our follow-up to the trade liberalization measures announced by the Japanese as well as seeking additional reductions of Japanese trade barriers.

20. Q. Since World War II, the U.S. has argued against preferential trading arrangements, pressing rather for an open trading system. Yet the Caribbean Basin Initiative includes a one-way free trade zone. Do you see this as marking a major departure from traditional U.S. policy? Are there situations where such departures from general policy may be justified?

A. The U.S. has in no way abandoned our overall opposition to non-discrimination. We recognize the inconsistency of the preferential trade aspects of the CBI with our well established position on non-discrimination, but believe that the serious economic deterioration in the Caribbean Basin justifies this temporary departure. With this temporary assistance, we expect the Basin to be able to develop to the point where preferences will no longer be necessary. We plan to present the CBI to the appropriate GATT review, and have no plans to extend preferential arrangements to other areas of the world.

21. Q. Trade disputes seem increasingly to be handled on a bilateral basis rather than through the GATT; developing countries complain that the IMF is ill-equipped to deal with the problems faced by developing countries; and this Administration has indicated that in the development assistance area it intends to place more attention on bilateral programs than on the multilateral development banks. If so, could we slip back into the kind of beggar-thy-neighbor nationalistic economic policies which helped lead to the Great Depression?

A. The U.S. continues strongly to support a multilateral approach to the resolution of international economic problems. We participated actively in several rounds of tariff negotiations under GATT auspices and hope that the upcoming GATT Ministerial will give new impetus to trade liberalization. The U.S. does not accept the hypothesis the IMF is ill-equipped to deal with the problems faced by the LDCs. Indeed, we look to a strengthened IMF to play a continued important role in promoting balance of payments adjustment and in cushioning shocks to the financial system. While this Administration has placed increased relative emphasis on bilateral assistance, our commitment to the multilateral development lending institutions remains firm.

22. Q. At both the Cancun and Versailles Summits, the President gave conditional agreement to Global Negotiations between North and South in the UN framework. Please describe the details of discussions on this issue. Do you expect anything to come of this process? Can the sterile debate on procedure be overcome, and are there areas which you believe substantive progress can be made on economic issues through such negotiations?

A. At Versailles the seven summit leaders agreed to move forward with Global Negotiations provided the independence of specialized agencies such as the GATT, IMF, and IBRD is protected. The Summit leaders proposed amendments to the G-77 draft UN resolution on GNs to assure a sound basis for proceedings. These amendments were presented to the G-77 in New York.

Although the majority of G-77 members were prepared to accept the Versailles amendments, several radical members led by Algeria, persuaded the G-77 to reject key portions of the amendments, and to propose substitute language. The substituted language is unacceptable to us because it does not protect the existing agencies. We and our Versailles summit partners continue to firmly support the Versailles amendments as the only basis for proceeding. Despite continuing discussions in New York, the G-77 has not accepted the Versailles language.

The issue is not merely one of procedures. The U.S. believes that existing multilateral institutions such as GATT, IMF, IBRD and the regional development banks have served the international economy well, and have evolved to meet the changing needs of both developing and developed nations. In contrast, some developing countries are pushing for widespread changes in the structure of the international economy which are not soundly based, and which would be harmful to existing institutions and to the economic interests of all the non-communist countries.

Despite these concerns, the U.S. is prepared to engage in Global Negotiations on the basis set forth at the Versailles Summit. If GNs do occur on this basis, the U.S. would seek realistic and practical discussions on development issues in the 1980s.

In particular, we would plan to discuss the mutual interests of developed and developing countries regarding energy. There is no existing agency in which both developed and developing countries meet to discuss energy issues and Global Negotiations would provide a forum for exchanging views in order to improve mutual understanding of the oil and energy situation. This could contribute to greater stability in the world energy situation.

23. Q. Now that the United States has given its tentative approval to global negotiations, what are the prospects for structural changes in the international financial institutions, long a goal of the Group of 77?

A. When the U.S. Government agreed to consider global negotiations at Cancun, we made it clear that we would not consider any fundamental changes in the structure of the international financial institutions. We have maintained this position in all subsequent discussions of the issue. We see no reason to alter radically institutions which are serving well the purposes for which they were developed.

24. Q. If confirmed, what role do you expect to play in reviewing and in determining levels of bilateral aid in our foreign assistance program?

A. Under the President's directive, this administration has carefully scrutinized and fully integrated all foreign assistance resources to ensure that they are directed to the most vital goals of American foreign policy, an essential criterion in this period of tight fiscal constraints. I will ensure that we continue to work closely with all bureaus and agencies involved in development of the foreign assistance budget so that a country's economic situation is fully taken into account when the type and level of aid is under consideration. I believe, as does this administration, that foreign assistance in all its forms, while of great significance to development, can never substitute for a country's own efforts. I will endeavor to see that the formulation of bilateral aid programs reflects that view. At the same time we will ensure that there is a cogent rationale for the overall assistance package and for individual priorities.

25. Q. In your article, "The Twilight War," published in Army magazine in January, 1979, you wrote: "About 1970, however, guilt and fatigue over the American effort in Vietnam, fueled by an unparalleled Soviet propaganda effort, soured many Americans on the role of world policeman." What are your personal views on U.S. fulfilling this role of world policeman?

A. My views on this subject are spelled out in detail in the article, "The Twilight War", which has been supplied to the Committee. Basically, it proposed recognizing that the Soviet Union and her allies were providing guns, training, and financial support to a variety of marxist guerrila and terrorist groups preying upon small third world countries. The article advocated providing some American assistance, where appropriate and practical, to help counter these Soviet efforts.

26. Q. In that some article, you wrote: * * * "not since the end of World War II has the American State Department contained a greater number of senior individuals actively disposed toward seeking a permanent and friendly accommodation, not only with the Soviet Union, but also with Cuba, North Korea and Vietnam." What proof do you have for this statement? How has this disposition changed over the past 40 years?

A. This was a value judgment on my part based on the intensive efforts mounted by some of President Carter's appointees in the State Department during its first two years in office to reach accommodation with the Soviet Union on a broad range of issues, and to remove some of the perceived impediments to better relations with Cuba, Vietnam, North Korea, etc. The point in my article was that the Carter State Department went the extra mile to indicate non-hostile intentions towards the Soviet Union during those first years in office, and it was not clear to me that the Soviet Union was responding in the same spirit.

This article was a summary of memorandum which I wrote for private distribution to some of my friends then working in the State Department and NSC to call their attention to what I felt was their overly optimistic assessment of what could be expected of Soviet policy makers in the then current circumstances.

27. Q. You also wrote: "Many Westerners have never fully understood that true detente holds far more risks for the Soviet Union than it would be for us." Do you favor such "true detente"? What policies of the Reagan Adminsitration seek to promote such "true detente"?

A. I certainly favor a complete relaxation of tensions between the United States and the Soviet Union, and I am hopeful that the new generation of leadership within the Soviet Union will gradually adopt policies more in keeping with this spirit. On the other hand, we would be unwise to ignore some of the developments that have caused successive American administrations to lower exaggerated expectations, and take a clearer eyed view of the Soviet arms buildup and activities in the Third World since the policy of detente was initiated by President Nixon.

The challenge facing all of us is to keep up our defenses, military and otherwise, while hoping for some change of heart by Soviet leaders. We need some kind of code of conduct for detente, without which Soviet leaders are potentially in a position to reap the benefits of detente, while continuing activity that is profounding destabilizing to many parts of the third world, and to East-West arms balances.

As a general rule, I would say that we must move on a parallel track: maintaining our strength, while at the same time indicating our readiness to talk with the Soviet Union on matters where we can, hopefully, get agreement, such as at the START talks now underway in Geneva.

28. Q. You write that "present tensions between East and West . . . are serving the Soviet Empire as a sort of psychological cement, holding its system together." What do you plan to do, and can you do in the position for which you have been nominated, to reduce those tensions and weaken that "cement"?

A. A major purpose of my article was to indicate that it appeared to me that the Soviet leadership saw important internal political advantages in maintaining a degree of tension between East and West.

We can only change this situation in limited ways, since the Soviet Union chooses to portray us to their own people as a menace to justify internal disciplines, austerity, and vast military expenditures.

The overall policies of this administration, of which I will play a modest part, are geared to striking a balance between maintaining a strong deterrent on one hand, and offering an olive branch at the START talks on the other. Quiet American strength is the appropriate stance.

29. Q. In the Army article, you wrote: "The crucial role played by multinational corporations in the interlocking economy of the West has made them a particular target for Soviet propagandists and agitators." Where has the USSR been most successful in this regard? What do you believe should be done to blunt that success?

A. Soviet propaganda and local marxist agitation against multinational corporations has been most visible in the third world, where kidnapping of the children of local company officials, disruption of harvests, etc., have been a frequent pattern. There is no single solution to this problem, as I outlined in the article which you quote. The solution requires a combination of enlightened management and fair treatment of workers, on one hand, combined with prudent security measures on the other.

30. Q. In that same article, you wrote, "The credibility of our principal alliance structure, NATO, would in all likelihood not survive intact should communists enter the governments of our allies." Would you, with hindsight, alter that opinion on the basis of the recent experience in France?

A. President Mitterand has made significant efforts to isolate communists from participation in the activities most vital to the NATO effort. To the extent these efforts are successful, it will reduce the concerns which President Ford, Henry Kissinger, and others expressed concerning the security problem which communist participation in the government of a NATO ally would cause.

30. Q. In order "to unlock private capital on a worldwide basis" you urge "helping to provide greater physical security for societies now being preyed upon by the Soviet Union, terrorists, guerrillas and Cubans." Which countries are most urgently in need of such enhanced security? Is such help an absolute prerequisite before private investment can be effective?

A. The recent hostage action in Honduras, where marxist sympathizers held more than a hundred business and financial leaders, dramatizes the general security problem in various parts of Central America and elsewhere. Every week the New York Times car-

ries articles of other terrorist actions. To the extent that local people feel threatened and insecure, they are reluctant to tie down their potentially liquid assets in long-term, job producing investments in unstable areas.

The greater the degree of physical and economic security, the greater the extent that individuals will invest locally.

32. Q. At one point in your biographical information form, you say that you worked for Senator Helms "1979-1981" and at another point you say "March 1979-present." What were your precise dates of employment in the U.S. Senate? What jobs and specific duties have you had since leaving the U.S. Senate?

A. I left the Senate staff in November of 1981, and have been a consultant on international economics at the State Department since that time, working closely with the former Assistant Secretary of Economics and Business, Robert Hormats, on a wide variety of international economic negotiations and issues. For example, I was part of the delegation which negotiated the new airline agreement with Japan. I attended the African Development Bank and Fund meeting in Lusaka. Finally, I represented the State Department at a broad range of other meetings, here and abroad, on matters relating to international economic policy.

33. Q. The biographical information also says "Did small amount of outside consulting for Connally for President, June 1979-Dec. 1979." Were you compensated for such consulting? Did you comply with the applicable rules governing Senate employees with regard to outside employment and political activities?

A. I did receive a small amount of compensation from the Connally Committee. My employment arrangement with the Senate was to cover ⅘ of my time. I was free to use the additional ⅕ of my time for other consulting activities, consistent with the rules of the Senate. I made very sparing use of the ⅕ of my time that was potentially free for outside activities, devoting the vast bulk of it to the Senate's work without additional charge.

34. Q. What specific experience did you gain as a Senate employee which is directly relevant to the duties to the position for which you have been nominated?

A. The most important thing I gained as a member of the Senate staff as far as the performance of my present duties at the State Department is concerned was an understanding of the way the legislative process works, and gaining the trust and confidence of those Senators and Staff members with whom I dealt.

35. Q. What specific insights into the policymaking process and into legislative-executive relations on foreign policy matters did you derive from your work as a Senate employee?

A. I learned the vital importance of consulting with the Congress in advance to the maximum extent feasible before taking decisions or making recommendations.

36. Q. Among the duties of the position for which you are nominated are to negotiate certain agreements and to represent the United States with respect to international lending institutions. What personal experience have you had of negotiating agreements of making representations to foreign government or international organizations?

A. I was assistant to former Governor Scranton at the INTELSAT negotiation in 1969, and was later involved in another stage of that negotiation at the Office of Telecommunications Policy. During the past year, I have represented the Department of State on a number of international economic conferences and negotiations, to the general satisfaction of the Department.

37. Q. In your personal judgment, are the duties of the Assistant Secretary for Economic and Business Affairs essentially nonpartisan? Or are there specific campaign themes or commitments by President Reagan which will guide your performance of your duties?

A. It is important in forming decisions regarding economic and business-related matters to consult in advance, to the maximum extent possible, with members of Congress and involved interests on a non-partisan basis. This has been and will continue to be my overall mode of operation. I am also a member of President Reagan's Administration, a role not inconsistent with the principle of bipartisan consultation. President Reagan is hoping to revitalize the American economy, defeat inflation, and stimulate investment and trade. I am anxious to assist in the achievement of these objectives.

38. Q. In your January 1979 article in Army magazine, you are identified as "Most recently * * * in charge of Saudi Arabian policy and operations as Deputy to the Assistant Secretary of the Treasury." Please amplify on your duties in that position. What insights did you gain from that experience that are directly relevant to the duties of the post for which you have been nominated?

A. My job at the Treasury in 1974 was to help with the Joint U.S.-Saudi Arabian Economic Commission. This involved arranging plans for some fully reimbursible technical assistance projects. At that time, we had just gone through an oil embargo, and we were most anxious to keep the communications channels between the U.S. Government and the Government of Saudi Arabia very open to avoid a renewed oil embargo. The Commission was a modest part of the process. I participated in a number of discussions with Saudi Arabian officials, as part of delegations, during that period.

In the course of this job, I inevitably learned something about energy policy and economic development which are relevant to my current responsibilities.

Mr. BAKER. Mr. President, I see no other Senator seeking recognition on this nomination. However, in order to give Senators who may wish to come to the floor just a brief moment to do so, I say once again it is my intention in the next few moments to ask the Senator to turn to the consideration of Orville G. Bentley, of Illinois, to be an Assistant Secretary of Agriculture.

While Senators consider the request which I am about to make, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, as I indicated as few moments ago, just prior to the call of the roll to establish the presence of a quorum, the next item on the list of nominees is Orville G. Bentley, of Illinois, to be an Assistant Secretary of Agriculture, which is Calendar Order No. 1053.

Mr. President, I ask the Chair to now lay before the Senate that nomination.

The PRESIDING OFFICER. Is there objection?

Mr. ROBERT C. BYRD. There is no objection.

The PRESIDING OFFICER. Without objection, the nomination will be stated.

DEPARTMENT OF AGRICULTURE

NOMINATION OF ORVILLE G. BENTLEY, OF ILLINOIS, TO BE AN ASSISTANT SECRETARY

The legislative clerk read the nomination of Orville G. Bentley, of Illinois, to be an Assistant Secretary of Agriculture.

Mr. ROBERT C. BYRD. Mr. President, I am advised there is no objection to this nomination on this side of the aisle.

Mr. BAKER. Mr. President, I thank the minority leader.

Could I inquire, Is the majority manager then prepared to go forward with the nomination?

Mr. HELMS. Yes.

Mr. President, it is indeed an honor to speak in behalf of the nomination of Orville G. Bentley to be Assistant Secretary for Science and Education at the U.S. Department of Agriculture. This position was created by the 1981 farm bill to emphasize the need for continuing advances in agriculture, research, teaching, and extension programs.

In choosing Dr. Bentley, the President has selected a scientist who knows agriculture and who knows, and is preeminent in, agriculture research and education. Dr. Bentley is a noted biochemist as well as a college administrator. He has managed research programs and has developed a world of experience in transferring grassroots research requirements into national agricultural research policy that has guided agricultural progress not only in the United States but in many of the world's developing countries.

Prior to the election recess, the Senate Committee on Agriculture, Nutrition, and Forestry held a hearing on Mr. Bentley's nomination. Senators PERCEY and DIXON, Congressmen DAN CRANE and WILLIAM WAMPLER testified in support of his appointment. The committee unanimously approved the nomination. Unfortunately, the Senate was not able to confirm Mr. Bentley before it adjourned, and President Reagan made a recess appointment. I urge the Senate to ratify the appointment of this well-qualified gentleman.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

Mr. HELMS. Mr. President, I move to reconsider the vote by which the nomination was confirmed.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. BAKER. Mr. President, the next item on the agenda before the clerk reports is the nomination of Martin S. Feldstein, of Massachusetts, to be a member of the Council of Economic Advisers.

My estimate is that a number of Senators will wish to speak on this and once again it is my intention at this point to suggest the absence of a quorum so Senators who have particular interest in that nomination might come to the floor. I hope that we can get a time agreement or some sort of arrangement to complete the consideration of Dr. Feldstein this afternoon.

After that, I wish to complete the call of the calendar through the remaining three nominations under new reports.

I think the minority leader could consider whether he could do that this afternoon. It is possible that we might confirm those three in advance of the Feldstein nomination which I expect will take some time.

Mr. ROBERT C. BYRD. Mr. President, I think that would be possible.

The majority leader has not asked to go to the Feldstein nomination yet, has he?

Mr. BAKER. Not yet.

Mr. ROBERT C. BYRD. All right.

Mr. BAKER. Before I do so is the minority leader prepared to consider the three under new reports at this time?

Mr. ROBERT C. BYRD. We will check again.

Mr. BAKER. All right.

Mr. President, in the meantime, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, as I indicated prior to the quorum call, it is my intention to proceed down the list as we can.

I now ask that the Chair lay before the Senate Calendar Order No. 1056, the nomination of Martin S. Feldstein, of Massachusetts, to be a member of the Council of Economic Advisers.

The PRESIDING OFFICER. The nomination will be stated.

EXECUTIVE OFFICE OF THE PRESIDENT

NOMINATION OF MARTIN S. FELDSTEIN, OF MASSACHUSETTS, TO BE A MEMBER OF THE COUNCIL OF ECONOMIC ADVISERS

The assistant legislative clerk read the nomination of Martin S. Feldstein, of Massachusetts, to be a member of the Council of Economic Advisers.

Mr. BAKER. Mr. President, the distinguished Senator from Utah, the chairman of the Banking Committee, will manage this bill. I yield the floor.

Mr. GARN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. GARN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GARN. Mr. President, President Reagan has nominated Dr. Martin Feldstein to be his chief economic counselor as Chairman of the Council of Economic Advisers. Dr. Feldstein has an outstanding professional background, he is brilliant and talented, and he is well respected among other economists. Also, he has a special talent which is particularly necessary for an economic adviser: he can reduce technical data and jargon into clear facts and commonsense. Because of his excellent training, experience, and attainments his nomination should be confirmed.

No one questions Dr. Feldstein's qualifications or professional reputation. He was graduated from Harvard with a B.A. and from Oxford with a Ph. D. in economics where he received numerous fellowships and scholarships. He is presently a professor at Harvard, where he has taught economics for the past 17 years. He also heads the National Bureau of Economic Research, which gathers and produces statistics about the Nations economy, and is president of his own economic analysis company. His nearly 200 scholarly articles, as well as numerous articles published in such papers as the Los Angeles Times and the Wall Street Journal, have established him as one of America's foremost economists.

Dr. Feldstein is highly regarded by his contempories. He is regarded as a fighter, a strong leader, someone who will give greater policy importance to the Council of Economic Advisers, a strong-minded, technically competent, pragmatic adviser.

Dr. Feldstein has been criticized because he is a forceful and persuasive voice for saving and investing in capital goods. This has offended some who have perhaps not understood his position, which is that if more of our money is saved and invested, rather than consumed, we will have greater capital formation for housing, business plant and equipment, and all other investments.

All in all, Mr. President, Dr. Feldstein should be confirmed because he is the President's choice, because he is a respected and capable professional, because he supports saving and investment to make our Nation's economy grow, and because his economic skills well qualify him to advise the President on the critical economic issues confronting our Nation.

Mr. President, I ask unanimous consent that a statement in support of Chairman Feldstein's nomination be included in the RECORD.

There being no objection, the statement was order to be printed in the RECORD, as follows:

STATEMENT

On September 14, 1982, President Reagan nominated Dr. Martin S. Feldstein to be a member of the Council of Economic Advisers. The President also stated his intent to appoint Dr. Feldstein as chairman of the Council.

The Employment Act of 1946 created the Council of Economic Advisers and stated that the Chairman of the Council, along with the other 2 members "shall be a person who as a result of his training, experience and attainments is exceptionally qualifed to analyze and interpret economic developments, to appraise programs and activities of the government, and to formulate and recommend national economic policy and to promote employment, production and purchasing power under free competitive enterprise." After establishing the qualifications of the advisers, the Employment Act sets forth in the Council's charter five specific duties for the advisers to accomplish. They are:

1. to assist and advise the President in the preparation of (a yearly economic report to Congress)

2. to gather timely and authoritative information . . .

3. to appraise the various programs and activities of the federal government . . .

4. to develop and recommend to the President national economic policies to foster and promote free competitive enterprise to avoid economic fluctuations or to diminish the effects thereof and to maintain employment, production and purchasing power;

5. to make and furnish studies, reports thereon and recommendations . . . as the President may request.

Dr. Feldstein qualifies eminently under these standards to serve as Chairman of the Council and to perform the duties listed in the charter. He has a distinguished record of intellectual, academic and professional accomplishments which have prepared him well for the demands of that position. Dr. Feldstein's achievements include the following: He completed a B.A. degree at Harvard College on a Harvard scholarship, and earned B. Litt., M. Litt. and D. Phil. degrees in economics from Oxford University on a Fulbright Scholarship. While a student in England working for his doctorate, he lectured at Oxford, and published 15 monographs in scholarly journals analyzing the social and economic aspects of the British national health care system. He began teaching at Harvard University as an assistant professor and was granted a full tenured professorship there after only 2 years. He

has since had a distinguished career at Harvard, spanning 15 years, as Professor of Economics. In 1977, at age 38, Dr. Feldstein was awarded the John Bates Clark Medal, awarded to the most promising American economist under 40, by the American Economic Association. Since 1977, Dr. Feldstein has presided over the prestigious National Bureau of Economic Research, a private non-partisan, non-profit organization which sponsors and publishes the writings of economic scholars from such respected universities as Yale, Chicago, Massachusetts Institute of Technology, Harvard, and Stanford, and conducts economic research on the national economy. He has served as a private economic consultant, as a lecturer and as a columnist. He is a member and leader of the American Economic Association, the Econometric Society, the American Statistical Association and the Royal Economic Society. Through the last year and a half, he has served as a member of the President's Commission on Productivity.

Throughout his outstanding career as professor and student, Dr. Feldstein has published a steady stream of scholarly analytical articles, at least 184 in number, covering a broad spectrum of economic issues in such respected economic journals as the Review of Economic Studies, the American Economic Review, and the Quarterly Journal of Economics, and has written monthly editorial articles for the Wall Street Journal and a regular column for the Los Angeles Times Syndicate.

In his writings, Dr. Feldstein has been a careful, thoughtful analyst of federal social programs, monetary policy and of both the spending and tax aspects of fiscal policy. He has published numerous articles discussing such topics as reducing the permanent rate of unemployment, especially teenage unemployment, stimulating private savings, the effects of inflation on the economy, the economic structure of Social Security, monetary policy, hospitals and health care costs, the stock market, and macroeconomic analysis. His published studies have been thorough and comprehensive, and are technically and professionally well respected.

In his confirmation hearing, Dr. Feldstein disabused the Committee of any notion that he is "anti-housing." This misconception apparently arose because of his concern over inadequate U.S. investment in new factories and equipment, given the relatively low level of savings in our economy. Dr. Feldstein's solution to this problem is not to deny funds for housing but to increase the over-all pool of savings for both housing and productivity-enhancing capital investments. As he told the Committee: "If we have more saving, we'll have more capital formation of all kinds, including housing, as well as business plant and equipment."

Because of his accomplishments, particularly his academic achievements and large body of scholarly publications, Dr. Feldstein is extremely well regarded by his fellow economists. Such economists have said in the press that Dr. Feldstein is a "strong" leader, a "fighter", someone who will give "greater policy importance to the Council of Economic Advisers," a "strong minded, technically competent, pragmatic adviser." The New York Times noted "he is well respected among his fellow economists."

Among his other talents, Dr. Feldstein has a unique human skill, the capacity to reduce arcane technical data and jargon into understandable concepts and clear facts, to make clear and straightforward the mystical and abstruse. Such skill is necessary for a man who will be a spokesman to the public for the Administration, and adviser to the President and the producer of economic reports for the Congress.

In view of the above, there remains no question that Dr. Feldstein's attainments, experience, and training fully qualify him, by the standards of the Employment Act which established the Council, to serve as the President's Chief Economic Adviser and to meet the goals of the Act of maintaining employment, increasing production and promoting competitive free enterprise. His training at Oxford and Harvard, his attainments of scholarships, fellowships, awards and a huge scholarly publishing record, and his experience as an economics professor, consultant, President of the National Bureau of Economic Research, member of the Presidential Economic Advisory Commission, and member and leader of professional economic societies well qualify him to "advise the President, to appraise federal programs, to develop national economic policies and to make studies and recommendations" to President Reagan, as his chosen advisor. The Committee, therefore, recommends that the Senate confirm Dr. Feldstein's nomination.

Mr. GARN. Mr. President, I yield the floor.

Mr. RIEGLE. Mr. President, I yield myself such time as I require.

Mr. President, there are several members of the committee who will speak in opposition to this nomination, so I will, in my opening remarks, attempt to lay a foundation as to why there is serious opposition to this nomination.

I might say that on the minority side there were no votes cast in favor of this nomination in the Banking Committee. The minority views which we submitted and which are part of the report, are signed by all the Members of the minority side.

I ask unanimous consent that those minority views be printed in the RECORD in full at the conclusion of my opening statement.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. RIEGLE. In addition, and it is quite unusual for this to be the case, the National Association of Homebuilders strongly opposes this nomination. However, this very important, thoughtful national organization, the National Association of Homebuilders, has looked at this nomination carefully, and have found it so disturbing that it not only opposed it openly but appeared before the committee to express its active opposition.

I think this organization's opposition is well-founded. I think it has a persuasive case to make.

One might wish to look at the reasoning and arguments of this organization in the formal document that we have in the way of the hearing record from the Banking Committee pertaining to this nomination.

I would say further that as one who once served in the other party, I have been privileged to know over the years a number of noted economists who would have been thought of as Republican economists, who were traditional, conservative economists, of various sorts. People like Arthur Burns, Alan Greenspan, and others, would tend to fall in that category.

In my opinion, Dr. Feldstein does not fall into that category, I think clearly if I were to try to decide a descriptive category, it would be that he, in my view, is a radical conservative economist, not a mainstream conservative economist. He has, over a long period of years, put forward a number of very controversial recommendations and ideas that I think not only would be harmful to the country but are profoundly naive.

For one as intelligent and as professionally competent as Dr. Feldstein is, it is troubling to me that we have a nominee who comes forward with ideas whose practical effect in everyday life would be so harmful, I think, to the economy as a whole and to millions of Americans that he really has no business being considered for this position let alone being on the verge of receiving an official Senate confirmation to the position of Chairman of the Council of Economic Advisers.

Just to give you one illustration that is current, within the last 3 weeks everyone who follows the news would be aware of the fact that there was a proposal made within the Reagan administration to tax the unemployment benefits of unemployed workers in this country. It was a terrible idea and an insulting proposal. After it surfaced and was kicked around for a period of days, it was such an embarrassment to the White House that the President himself felt compelled to clearly indicate that he would oppose the idea and that it would receive no further consideration.

This ill-fated proposal was Dr. Feldstein's idea. He had written about it as early as 1973, so this is not something that he has just recently considered. He has been identified in news stories as the person who was the originator of the idea at the highest levels of economic advice in the administration. He was the person who came forward with it and was clearly the person who feels that, as far as I know, it would make good sense to put a new tax on unemployment benefits for those out of work. He has some sort of misguided notion that this will, in some way, solve our problems, drive people into jobs, or whatever the thinking may be.

Clearly, Mr. President, this is as clear a current example of the kind of economic nonsense that has been practiced in too many instances by this administration over the last 2 years. We do not need any more of it.

What we need are changes in economic policy that can put people back to work so that they not only not re-

quire unemployment compensation benefits, but are not further threatened by the prospect of being unemployed and having people like Dr. Feldstein leading the charge for new taxes on unemployment compensation benefits.

Clearly, Mr. President, if there was ever an impractical, unsound, insensitive proposition to be put forward, at a time when we have nearly 12 million people unemployed in this country, it was the idea of the tax on unemployment benefits. That concept, that idea, that push has come directly from the nominee that is before the Senate at this time.

I dare say, Mr. President, that in the future, I think we can anticipate, if he is confirmed, that we shall see more ideas like this we will see more ideas as flawed, as insensitive and as impractical as this particular one is.

I might say further, Mr. President, that Dr. Feldstein has achieved some notoriety and is well known for proposals that have called for cuts in social security benefits. I know there are not too many people around here right now who would be prepared to stand up and call for cuts in social security benefits. And that there are some of us who are very strongly, adamantly opposed to cuts in social security benefits. But, Dr. Feldstein has been out front on proposals to cut social security benefits for some period of time.

He has written about it. His views have been widely circulated. They have been published as the views of one of the leading advocates of the need for cuts in future social security benefits. I would think that any Senator who has reservations about those kinds of proposals, who, in fact, may oppose cuts in social security, will want to very carefully consider what Dr. Feldstein has had to say in this area and to examine the radical nature of many of the proposals he has put forward which, in my view—and I think the view of others of us who opposed his nomination in the committee—would not only damage the social security system but would put it into greater jeopardy.

In addition to that, Dr. Feldstein has been out front on other controversial proposals, such as the subminimum wage. He is on record as saying in a variety of forums and in written remarks that the minimum wage creates economic problems and that one of the ways to deal with those would be to move in the direction of a subminimum wage for certain categories of workers. Again, there is not only a pervasive kind of insensitivity in the recommendations that he has made, but there is an absence of practical analysis as to how this would actually impact upon the lives of people, let alone the economy in the aggregate. I shall give a couple of illustrations later in my remarks taken from the cross-examination and the testimony we had in the committee when he was there as a witness.

In addition to that, Mr. President, the basis of the opposition of the National Association of Homebuilders to his nomination can be traced to very well-publicized pronounced views that Dr. Feldstein has to the effect that, and I quote him here, "Our Nation today is overhoused." He has this notion that we spend too much in the United States on housing, and that the American people have been too generous to themselves with their standard of living by affording themselves the degree of privately owned housing that we presently have in the United States.

I happen to strongly disagree with that. I think we have today, in fact, a housing crisis. I think we are underhoused. I think we have tens of millions of people who need better housing than they have, or need to acquire private housing, because they presently do not have it. The industry to provide these things is literally in depression circumstances which in part is pulling down the whole national economy. Yet we have here this particular professor who is now before us as a nominee who says that the country is overhoused, and he argues very strongly that there needs to be a shift to less emphasis in this area at the very time when many of us feel strongly that exactly the reverse is true, and that it is time to put more emphasis in this area.

As a matter of fact, Mr. President, it was the U.S. Senate that passed, by an overwhelming vote, the Lugar housing proposal, with strong bipartisan support to try to do something about the housing crisis in the United States at this time. As a matter of fact, that legislation, which passed the House and the Senate with bipartisan support, would be law today except for the veto of the President of the United States.

This man who now stands before us as a nominee brings us that kind of view, I dare say if one compares those views to the views we have seen over the years from a broad group of traditional, conservative Republican economists, these views go substantially beyond what we have seen or heard before. They are radical notions and they are harmful notions. Perhaps the most troubling of all in terms of weighing the implications of these kinds of policy notions that this nominee holds is not only the fact that he will be the Chairman of the Council of Economic Advisers and, therefore, presumably one with a disproportionate influence and weight on the policy process but, based on those very radical proposals, whether he really had a deep awareness and personal understanding of what the meaning of these things would be in terms of their impact on people across the United States. So in the committee hearing I began by asking a series of questions that I must say I did not imagine would proceed finally in the fashion that they did.

I thought he would be able to come forward with ideas that were clear and demonstrated an awareness and a sensitivity that would at least give some greater sense of depth to indicate that he knew or had thought through what the implications of his proposals would be in terms of real-life circumstances facing the American people.

I do not want to dwell on this, Mr. President, but I want to touch on it. We had quite an exchange. It is an exchange that I would ask people who are interested in it to take a look at.

I started out by asking Dr. Feldstein what I felt was a very innocent question. I meant for it to be. I asked him if his net worth were in excess of $1 million.

I knew for a fact it was, because he had submitted his financial documents to the Senate committee and the documents which he had prepared, or were prepared at his direction, which he had signed and submitted to the committee, clearly indicated a net worth well in excess of a million dollars. By that, I mean some number of hundreds of thousands of dollars above a million, without going into the precise number. So the committee knew this.

The committee knew this, and he was aware of it; he had submitted the documents. And so I asked the question if he had a net worth in excess of a million dollars.

I expected him to acknowledge that in fact that was the extent of his net worth and to go on from there, but he responded by saying no, that his net worth was not above a million dollars and as a matter of fact was substantially less than that.

I was quite unprepared for that answer because it was at odds with the fact, and so we had an exchange and finally established over a period of a few minutes that in fact his net worth was well above a million dollars. He indicated that it was originally at odds with the fact for a variety of reasons, either that it was unclear in his mind or his recollection of what he was worth was different. But the critical issue is, and what I said at the time was this: It does not matter in the end what his net worth is, assuming, of course, that he is truthful in presenting it to us both in his submitted statements and his actual verbal testimony. That is important but what is more important than that is I was interested in knowing if he could demonstrate a sensitivity, an awareness of what the meaning of his proposals would be on the lives of people in this country who do not have the financial strength and wherewithall that is available to him

and to others as well situated in this country.

I must say that as we began to try to establish the facts in this area I thought his responses were appalling, and I choose that word with some care.

I mentioned earlier that this gentleman has professionally advanced some of the most radical notions in journals and in verbal statements with respect to cuts in social security, so I asked a very simple question. I asked if he was aware of what the average person on social security now receives each month. Again I wanted to start from the point of trying to be able to identify his awareness, and for that matter the awareness on the record as well, as to what the practical impact of his proposals would be on the lives and well-being of people today who are on social security.

Do you know what his answer was? He had no idea—no idea—what people in terms of averages receive today for social security payments. I said, "Come on, you must have some notion. How can anybody even analyze a proposal for cuts in social security without starting with some kind of baseline factual assessment of what people now get?" But he was frank to say, and I suppose he gets high marks for candor at least on this question, that he did not know.

I said, "Well, you must have some idea. Would you be prepared to make an estimate?" He was not prepared to make an estimate. So I finally had to make an estimate for him.

But what does this mean? In the area of social security it means we have here a highly ideological nominee, a person who has advanced a number of radical views, who is out advocating those views at the present time, and who at the same time is not able to demonstrate any clear understanding or specific knowledge of what those views would mean in practical fact to the people that would be affected by these policy decisions.

Most people on social security are just scraping by. They are not getting fat. In fact, many of them are sliding backward right now in terms of their living standard because there are a lot of highly inflationary items that face older people, utility bills being one. We are having something of a crisis now with an alarming rise in natural gas prices, and the same thing is true for medicines and medical costs and things of this sort. Millions and millions of our elderly people on social security are under terrible financial stress and pressure and they are worrying day and night how they are going to meet their bills today, tomorrow, and the next day.

We have some obligation as Senators to consider very carefully any changes in social security or other things that bear directly on that group of our citizens. But the Chairman of the Council of Economic Advisers to the President of the United States has that same obligation, in my view, and has the same requirement to understand fully and carefully what the practical consequences would be of radical proposals for cuts in social security benefits that he may think are necessary or he may be prepared to advocate.

When I see those proposals being put forward with all the weight and strength of professional credentials, Harvard professor, and all the rest of it, and then on cross-examination find he does not have the slightest notion, when asked a direct question, as to what the average benefit payments level is for people on social security, I find that an insulting response to the country and to social security recipients; I find it worrisome. I think we have too many people like this in the Government now. There are too many of these people in the Reagan administration at the present time, and I mean by that people who are in very good financial circumstances. And they come along with these absurd notions and proposals never designed to hurt them, I might say, never cutting benefits that they might be receiving, but usually going out and finding somebody on social security or some unemployed worker or somebody else to take it from. We have too many people like that in this administration, and we do not need another one.

(Mr. HAYAKAWA assumed the chair.)

Mr. RIEGLE. Mr. President, I wish to pursue this question of sensitivity and awareness because this lies at the heart, I think, of his ability not only to have ideas but to understand what the meaning and the impact of those ideas would be upon the lives of people, upon the entire economic system, and upon our country as a whole.

In trying to get to the issue of the meaning of cuts in social security benefits, I tried to construct with Dr. Feldstein in the cross-examination some understanding with him as to what monthly costs people face in this country, social security recipients, and all other families, for that matter.

We got into the area of heating costs because I wanted to see if he had some sense of what is happening in that area in terms of the degree to which rising utility bills are eating up what is a very small income from social security for millions of Americans.

I assumed that Dr. Feldstein lives somewhere in Cambridge as a professor from Harvard so I asked him about that.

I am paraphrasing, but the thrust of what I said was along these lines:

I said:

I assume you live in Cambridge in a home somewhere in that area and that as you carry out your duties there at Harvard University and your private business duties, and so forth, you know what are you seeing happening with your own utility bills.

Take last winter, for example, in the dead of winter—you are in Massachusetts, a northern State—you have hard winters as we do in Michigan.

What were your own utility bills running, say, in the coldest months of last year? I mean in what range would they have been running? Do you have any idea what utility bills are that you are paying or others in your situation would be paying?

And he had to frankly say, and I assume he was being honest, that he had no idea what his utility bills were in those months or any other months. It just was not anything that he had any awareness of.

I said:

Look, I am not trying to find out to the dollar. I am interested in sort of a general level. Are you paying $50 a month, are you paying $100 a month, are you paying $200 a month, $250 a month?

The reason I asked the question is that I have people in Michigan who are getting social security payments of maybe $250 a month or $300 a month and who have utility bills that are higher than the entire social security payment. People are getting monthly utility bills in the dead of winter of $300 a month, $350 a month, and I was interested in knowing from a person who is going to be the Chief Economic Adviser to the President and who is proposing cutting social security benefits if he had any understanding of what the cost of living was like for basic items like utility bills for people who have to try to get by on social security.

He did not have the slightest idea, and he was frank to admit it in the committee.

I am not here to rest this whole case on the issue of whether he did or did not have any semblance of a notion as to what his utility bills might have been during the winter of last year. What I was looking for is whether he has any practical understanding of what life is like for average people, whether he has any sense of awareness of what life is like and how tough it is to get by these days if you are living on a limited income.

And I have to come to the floor of the Senate and report that this man did not show 1 ounce of understanding. He did not show any awareness. His responses were pathetic in this respect.

So I am not surprised that he continues to advance these radical economic notions. I was not surprised to read in the paper 10 days ago that this is the person advising the President of the United States to tax unemployment compensation benefits.

I was not surprised at all because this man demonstrated no understanding and no sensitivity to these kinds of issues in practical fact in his appearance before our committee.

And I think it is a shame because I think the country deserves something better than that.

Mr. President, lest you think that the answers to other questions of a different sort were answered more fully than what I have just described, let me give you some other examples on completely different kinds of issues.

Let me take the constitutional amendment to balance the budget. Many people here favor that approach. This question was put to Dr. Feldstein:

What are your views on a constitutional amendment to balance the budget?

His answer:

I don't have a professional view on that at all.

Question. What is your personal view?

Answer. I really don't have an informed view on that question.

So much for the constitutional amendment to balance the budget.

On the issue of Federal assistance to State and local government, he was asked this question:

What are your views on Federal assistance to State and local governments for such functions as education, community development and job training?

His answer:

I do not currently have views on the subject of Federal aid to State and local governments for these functions.

On the issue of Government's role in housing, mass transportation, and urban development, he was asked this question:

What do you believe should be the Government's role in stimulating (1) housing, (2) mass transportation, and (3) urban development?

His answer:

I do not currently have views on the Federal Government's role in stimulating housing, mass transport, and urban affairs.

Defense. This is the question:

Do you think it is wise, given our present level of deficits, the projected level of deficits, that as a general proposition we reduce defense spending? Yes or no?

Answer. I think I really have to look at that.

As to recovery in terms of the economy, the question was:

When do you expect the strong recovery promised by the administration last spring?

This is the person who will become the Chairman of the Council of Economic Advisers if confirmed today, and his answer was:

Because of the nature of the position for which I have been nominated, I believe it is inappropriate for me to make public forecasts at this time. Projections will, of course, be made by the Council through our report at the appropriate time.

It goes down through the area of social security, minimum wage, and so forth and so on. I have mentioned some of these previously.

So I think what we have here is exactly what we do not need. We have got the wrong person for the wrong job at the wrong time. We need somebody very different from Dr. Feldstein to try to engineer an economic recovery in this country, to give some sensitive, practical, and humane advice on economic policy to the President and to the country.

We do not need someone who comes in with a briefcase full of exotic propositions designed to hurt many people in this country, all of whom are in circumstances quite different from his, and where he is not able to bring to the committee under cross-examination any sense of an understanding of or an awareness of what his policy proposals would mean in practical effect in the lives and circumstances of the people of our country.

So I would just say to the Senators listening, Senators present, and to the American people if this confirmation goes forward today—as it likely will—I think we should brace ourselves for some disappointments from this nominee. I think we should brace ourselves for other proposals such as the tax on unemployment benefits, which came from him a matter of days ago. I think we can expect to see him in the vanguard of those trying to cut social security benefits; I think we can see him fighting to try to erode, change, and lower the minimum wage in this country because these are all propositions he has advanced numerous times and is well known for advocating. It is not what the country needs.

I will conclude by saying this: Much publicity has been given in different quarters, from columnists, magazines, and so forth, to the colloquy that Dr. Feldstein and I had in the committee with respect to his financial disclosure statement and his net worth, and so forth. I want to emphasize again the fact that this man has a net worth of well in excess of $1 million by no means disqualifies him from good and sound service in this position or in any other position in Government, and I do not want to have my position either misstated or distorted on that issue.

What I am concerned about is something different and it is this: If people of enormous wealth who, at the same time, had an awareness of what life is like for the great majority of the American people who do not have enormous wealth, then I would think they could bring the fairness, the sensitivity, and the understanding to these decisions that they require.

At a time of extreme national hardship, where today we meet under conditions where we have to go back 50 years to find economic conditions as bad or as desperate as they are this very minute, we need someone with understanding and compassion and humanity, yes, and brains and talent and professional standing, and we should not have to settle for less. We can find people with all those qualities. We do not have to go with someone who has the professional standing but brings no evidence of any awareness of what his propositions and proposals would mean to people in this country.

We should not settle for that, and the fact that the President of the United States may be comfortable with that means nothing at all. That is why we have the confirmation process; that is why our laws require that these candidates have to pass muster here in the U.S. Senate because Presidents do make mistakes and Presidents of both parties in the lifetimes of all of us in this room have made more mistakes than we care to even have to try to acknowledge at this time.

This nomination is a clear mistake, and the country will not be well served. This nomination ought to be turned down. I yield to the Senator from Maryland.

EXHIBIT 1

MINORITY VIEWS OF MESSRS. RIEGLE, PROXMIRE, CRANSTON, SARBANES, DODD, DIXON, AND SASSER

We acknowledge Martin S. Feldstein's technical qualifications as an economist, but have deep reservations about his nomination to be Chairman of the Council of Economic Advisers because: (1) his statements suggest that he is insufficiently sensitive to the economic distress facing the country today; and (2) he has not been fully responsive to questions about his views on the major public policy issues raised by the deteriorating economic situation.

The Chairman of the Council of Economic Advisers (CEA) plays a key role in the formulation of the Administration's economic policies. He is the top adviser to the President and chief spokesman for the Administration on the state of the economy. The Chairman is the author of the Economic Report of the President and is directly reponsible for the Annual Report of the Council of Economic Advisers.

The Chairman of CEA must be more than a technical adviser to the President. He must provide the Congress and the American people with comprehensive, responsive, and accurate statements on economic conditions and policies. Unlike the President's national security adviser, the CEA Chairman is subject to Senate confirmation and testifies frequently before Congress. The position requires more than an economist whispering adivce in the White House. The CEA Chairman must be held accountable for his views and recommendations on economic policy, especially in the present economic situation.

The current state of the economy is the worst since the Great Depression. The jobless rate is the highest since 1940. The report on September unemployment, published by the Department of Labor, confirmed that 11.3 million Americans are out of work, almost three million more than a year ago. These figures do not count the record total of 6.6 million workers who are partially unemployed because their hours have been cut, and the 1.6 million who are so discouraged that they have stopped looking for jobs. When these categories are added to the 10.1 percent officially counted

as unemployed, the total becomes more than 17 percent.

Over the last two years, record high interest rates have devastated housing, automobile sales, small business, agriculture, and other interest-rate sensitive sectors of the economy. Business failures during September averaged 549 per week. Factory output and capacity utilization declined again in September—less than 70 percent of U.S. manufacturing capability is being used. Auto sales are at the levels of the early 1960's Housing starts remain at recession level despite a flurry of Federally stimulated activity in September. The total Gross National Product in real dollars is less now than it was at the end of 1979.

At his confirmation hearing, Dr. Feldstein was asked whether he thought "today's monetary policy and fiscal policy are in conflict." He responded: "No, I don't agree with that. I think that the two policies are moving in a coordinated way."

We find that answer incredible. Fiscal policy has been too expansionary (record Federal Budget deficits); monetary policy has been too restrictive (record high real interest rates); and the sharp conflict between the two has been tearing the economy apart. A nominee for the Chairmanship of the Council of Economic Advisers ought to address candidly the conflict between fiscal and monetary policies, when all available evidence demonstrates that a conflict exists.

Many economists and businessmen believe the economy would have recovered from the recession and unemployment could have been reduced, instead of increasing, if the Federal Reserve had pursued a less stringent monetary policy and if the budget deficits had been reduced. Feldstein, however, stated: "I generally support the broad thrust of the Federal Reserve Board's approach to the conduct of monetary policy." When asked whether monetary policy was too tight, Feldstein replied:

"I think that monetary policy is correctly focusing on the inflation rate. I think its failure to focus on holding the growth of nominal GNP is the source, one of the key sources, of our increasing inflation in the past and that the monetary policy is appropriately aimed."

Other statements by Dr. Feldstein suggest that he does not recognize the profound economic distress in our Nation. From his response to questions submitted at his confirmation hearing, it is clear that Mr. Feldstein is willing to accept current high levels of unemployment and interest rates in an attempt to eliminate inflation and redirect capital investment. This costly experiment has shown few signs of success, however, and we believe less draconian measures would produce better results.

UNEMPLOYMENT

On May 11, 1982, Feldstein termed the recession "relatively modest thus far." On September 24, 1982, he passed up an opportunity to change his description of the economic situation and, instead, noted that the unemployment increase to that date from "the business cycle peak in July 1981" was "a smaller increase in the unemployment rate than was true on average in the previous recessions." While technically correct as of September 24th (September's 10.1 percent unemployment rate had not been reported), Feldstein's answer is based on the notion that the unemployment rate of 7.2 percent in July 1981 was a "business cycle peak" level. In fact, the average unemployment rate during business cycle peaks at the seven previous expansions in the postwar period was 4.8 percent, 3 percent lower than the July 1981 level.

Feldstein's response can be viewed as part of a pattern of statements intended to minimize public concern (and the Federal Government's responsibility) for extraordinarily high levels of unemployment by portraying high unemployment as a "natural" product of the business cycle. If high unemployment can be shown to be normal, then the Federal Government is relieved of any responsibility to use macroeconomic policy instruments (fiscal and monetary policy) to reduce unemployment by providing a better mix of policies to stimulate economic growth. Indeed, if 7.2 percent unemployment were a normal level of unemployment for a business cycle peak, the use of stimulative fiscal and monetary policy to reduce unemployment below that level could be inflationary. That is the implication of Feldstein's reply to a question submitted to him by Senator Riegle:

"What do you consider an acceptable level of unemployment? In Michigan, the current unemployment rate, as of August 1982, is 15.2 percent. Is that an acceptable level of unemployment? What, in your opinion, is the "full employment" rate of unemployment?"

Feldstein's reply:

"As a long-run goal, the unemployment rate should exceed zero only by the "fractional" unemployment required for healthy job search. It would clearly be better to have a rate lower than that which recently prevailed in Michigan. The "full employment" rate of unemployment is a technical term used by economists to denote the lower unemployment rate which, with the existing structure of labor markets and worker incentives, can be sustained without an increase in inflation. Econometric research generally places this unemployment rate in the 6 to 7 percent range."

Economists disagree, in fact, about the "full employment" or "natural" rate of unemployment, but most choose a lower figure than Feldstein uses. Professor Robert Eisner of Northwestern University says the rate is 4 percent; his colleague, Robert J. Gordon, says 6 percent, as does Walter W. Heller of the University of Minnesota. The consensus estimate, according to Professor Donald Ratajczak of Georgia State University is 5½ to 6 percent. Feldstein's reference to "the 6 to 7 percent range" is clearly on the high side.

Feldstein's statements imply his support for macroeconomic policies which would tolerate still higher levels of unemployment "temporarily" (presumably levels well above 7 percent) in an attempt to reduce the inflation rate.

Feldstein was quoted in the Washington Post of August 15, 1982 as believing that "if the inflation rate is above its optimal level, the economy should then be deflated to reduce the inflation rate, regardless of the temporary consequences for unemployment."

Feldstein's views on structural unemployment suggest the same tendency to understate the magnitude of the problem and the lack of sound and acceptable policy prescriptions evident in his comments on unemployment generally. Senator Riegle asked Feldstein about youth unemployment:

"You have concluded in past studies of youth unemployment that the problem is concentrated in a relatively small group of disadvantaged workers whose low productivity prevents employers from hiring them at the minimum wage. If the problem is concentrated in a relatively small group, how do you explain the Federal Reserve Board's Mid-Year Monetary Policy Report figure that 'black male teenagers experienced an unemployment rate of nearly 60 percent in June 1982'?"

Feldstein replied:

"Unemployed black male teenagers are clearly a disadvantaged group. The vast majority of teenagers are either students, or working, or both. The unemployed non-students constitute a small portion of all teenagers. The high unemployment rate in any subgroup reflects the exclusion of the out-of-the-labor-force students from the denominator."

Elsewhere Feldstein has called attention to changes which may reduce the measured rate of unemployment, but fail to address the plight of the unemployed.

"I think we will see a variety of small changes in market incentives which will allow the labor markets to be slack without registering 8½, 9, 9½ percent unemployment rates. [A] very subtle change that occurred October 1, [1981] was the sharp reduction in long term unemployment insurance benefits, reducing from 39 to 26 weeks. A lot of people who were previously counted as unemployed will not be counted as unemployed now. Some of them will go back and find jobs. Some of them will drop out of the labor force. They won't show up in the official statistics as unemployed."

SOCIAL SECURITY

Feldstein has targeted Social Security for budget cuts:

"Where will these budget cuts occur? Revenue sharing that transfers money through Washington back to States and localities. In federal matching programs that distort local decisionmaking. The Medicare and Medicaid programs that inflate the cost of medical care for everyone. And a variety of welfare type programs that provide inappropriate benefits to middle income families for such things as school lunch subsidies and food stamps and so on. And although the Administration's poorly designed proposal to reduce Social Security benefits for new retirees has temporarily made Social Security a politically hypersensitive taboo area, I believe that a way will be found to slow the growth of Social Security, thereby providing substantial reductions in future government outlays."

Feldstein has advocated "an immediate start to slowing the growth of benefits." Testifying at a Joint Economic Committee hearing on Social Security last September, he said that "the proposals for doing so have generally been far too timid." His recommendation is entirely consistent with his view that we have "a Social Security program that makes saving virtually unnecessary to the majority of the population."

We do not agree that Social Security benefits are go generous that most people need not save for retirement. Many retirees, in fact, find Social Security benefits so meager that they are forced to return to work. We wonder whether the nominee is thoroughly familiar with the practical impact of his proposals. He was asked by Senator Riegle:

"Do you know, offhand, what the average person on Social Security would be receiving or what the median benefit level would be for a person now collecting Social Security benefits under the system?"

Dr. Feldstein replied: "No, I do not know that number offhand."

HOUSING

Feldstein has described (and supported) the Administration's strategy as "a coordinated mix designed to twist the composition of spending away from housing, away from consumer durables, and into plant and equipment." He has said that "As a nation we are overhoused." He has said that he believes "housing is going to continue to be in trouble" and that as far as he is concerned, "that's all good news from my point of view, but it doesn't exactly lead to a buoyant economy."

We find these statements astonishing in view of the fact that more than 41 million people will reach their 30's in this decade, creating an unprecedented increase in the number of potential first-time homebuyers. An addition of 13 million persons to the 35 to 64 age group will keep demand high in the "buy-up" market as well.

We view the fact that the housing industry is producing at the lowest level since the 1940's as bad news, not good news, for the U.S. economy. We fear that continuation of the depression in home-building will prevent many Americans from realizing their dream of home ownership.

The "baby boom" generation may be unable to afford the housing which is available, if the Administration's policies continue. "Creative financing" assumes that the homebuyer's income rises over time, but the National Journal estimates that one of the central consequences of the Reagan Administration's policies is that: "Income in the United States will be distributed more unevenly than before between the rich and the poor." Families at the bottom one-fifth of the income scale will receive lower average incomes and a smaller share of the total national income. Only the rich will gain substantially. With declining or fixed income levels, millions of Americans could find themselves underhoused and overborrowed, if the policies advocated by Dr. Feldstein continue.

The National Association of Homebuilders testified before the Committee on September 22, 1982 in opposition to the Feldstein nomination. NAHB President Fred Napolitano said he was deeply troubled by Feldstein's remarks: "I feel that these views are so antihousing that they would impair Dr. Feldstein's ability to provide advice to the President in the critical area of housing and economic policy."

VIEWS ON OTHER ECONOMIC PROGRAMS

Feldstein's oral testimony and written submissions to the Committee were not forthcoming with respect to his views on many economic policies and programs. He was asked about Federal assistance to State and local governments for education, community development, and job training, and about the Government's role in housing, mass transportation, and urban development. He replied: "I do not currently have views on [these] subjects.

The nominee's statements raise serious doubts about his ability to relate theoretical economics to real economic conditions and specific economic programs. The recurrent theme in Feldstein's views is the necessity for enduring a painful economic period in the hope of some eventual improvement. He has said:

"Unemployment must rise, industries must suffer, profits decline, and the current beneficiaries of government programs must feel the effects of reduced government spending."

We find this perspective too callous and shortsighted to be an acceptable approach to economic recovery.

Mr. DIXON. Mr. President, I thank my distinguished colleague for yielding. I rise in opposition to the nomination of Martin S. Feldstein to be Chairman of the Council of Economic Advisers.

My general position regarding Presidential nominations is that the President is entitled to have as his chief advisers those persons he believes would be the most effective advocates for his programs.

However, in addition to playing a key role in formulating the administration's economic policies, the Chairman of the CEA must analyze and appraise programs and activities of the Government. The Chairman must provide the Congress and the American people with statements on economic policies.

Therefore, given the current deplorable state of the economy, the worst since the Great Depression, I believe the Senate must take more than a cursory look at the philosophy as well as the technical qualifications of the nominee to chair the CEA.

There is no doubt that Dr. Feldstein has acquired an outstanding education and qualifies eminently under the standards of achievements and training. My opposition to Dr. Feldstein's nomination relates to what I believe to be his insensitivity to the "real" economic sufferings of our citizens.

In Dr. Feldstein's confirmation hearing, it became clear from his response to questions that he is willing to accept high levels of unemployment and interest rates as a means of eliminating inflation and redirecting capital investment.

Dr. Feldstein has expressed the view that the social security program "makes saving virtually unnecessary to the majority of the population." Unfortunately, Dr. Feldstein apparently is not aware that of the 36 million Americans receiving social security benefits, 40 percent rely on these benefits for three-fourths of their household income.

Additionally, in Dr. Feldstein's confirmation hearing, he stated that "As a nation we are overhoused." He has said that he believes "housing is going to continue to be in trouble" and that, as far as he is concerned, "that's all good news from my point of view, but it doesn't exactly lead to a buoyant economy."

I find these statements utterly appalling. In my own State of Illinois, multifamily and single family housing starts for 1977 were 83,800. Just 5 years later, it is estimated that these same starts will be down to 18,000 units. This places Illinois as the second leading State in the Nation with its housing downturn of 78.5 percent.

I fear that with Dr. Feldstein's antihousing attitude, he cannot give unbiased advice to the President on the housing sector of our economy.

Mr. President, these are examples of Dr. Feldstein's insensitivity to the economic distress facing the United States today. I believe that should the Senate confirm Dr. Feldstein as Chairman of the CEA, it gives a stamp of approval to a person who has demonstrated a lack of feeling for those citizens who are suffering most due to the economic conditions of our society.

I thank my distinguished friend from Michigan for yielding to me and I join him in his excellent opposition to the nomination of Dr. Feldstein and confirmation of Dr. Feldstein.

The PRESIDING OFFICER (Mr. HAYAKAWA). The Senator from Maryland.

Mr. SARBANES. Mr. President, I thank the distinguished Senator from Michigan, the ranking minority member of the Senate Banking, Housing and Urban Affairs Committee.

Before I start on my remarks, I simply want to make the observation that I think the Senator's last point is an extremely important one. The economic policy being pursued by the administration is clearly beneficial to the very wealthy, including those serving in the President's administration and most of the members of the President's Cabinet, but is placing burdens on middle income and working people in this country.

There is not a single element of the President's economic program that requires any sacrifice on the part of those at the top of the income scale. In fact, the program means enormous benefits for the very wealthy in this country at a time when unemployment is at its highest rate since the Great Depression, and when the squeeze on middle-income individuals and families is being greatly intensified.

Mr. President, I want now to address another aspect of Mr. Feldstein's conduct, and that is his refusal to appear before duly constituted committees of the Congress.

In his confirmation hearing before the Senate Banking Committee the distinguished chariman of our committee, the Senator from Utah, put to Mr. Feldstein this question, and I now quote:

Will you be willing to appear before this committee or other committees of the Congress when requested?

Mr. Feldstein replied, and I quote:

I will happily.

Mr. President, last Friday the Joint Economic Committee held its regular monthly session to receive the latest unemployment figures, and Mr. Feldstein was requested to come before the committee at that hearing. He indicated he would not be able to do so. The

chairman then set another hearing for Monday at 2 o'clock. Mr. Feldstein declined to appear then, and the chairman, Chairman REUSS, the distinguished Representative from Wisconsin, indicated that other times could be arranged to accommodate Mr. Feldstein because it was felt that, given the economic situation and the need to address it, it was important for Congress to hear from the Chairman of the Council of Economic Advisers.

We should recall that the figure announced at Friday's hearing with respect to the unemployment rate was 10.8 percent. It was 10.4 percent the month before that, and 10.1 percent the month before that, and 7.2 percent in July of 1981.

So in the period between July of 1981 and last Friday, unemployment in this country has increased 50 percent with the rate rising from 7.2 percent to 10.8 percent.

I want to read the letter that Mr. Feldstein sent to Chairman REUSS with respect to appearing before the Joint Economic Committee. Mr. President, I ask unanimous consent that the full text of the letter be included in the RECORD and that immediately preceding that letter a letter from Chairman REUSS to Mr. Feldstein asking him to appear be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

CONGRESS OF THE UNITED STATES,
JOINT ECONOMIC COMMITTEE,
Washington, D.C., November 30, 1982.

Hon. MARTIN FELDSTEIN,
Chairman, Council of Economic Advisers, Executive Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: Because of the importance of the economic issues facing this session of Congress, we would appreciate your appearing before the Joint Economic Committee at 10:00 a.m. this Friday morning, December 3. If you are able to present a prepared statement, we would be happy to receive it; if, however, you find that inconvenient, we can proceed without such a statement. I look forward to hearing from you.

Sincerely,

HENRY S. REUSS,
Chairman.

THE CHAIRMAN OF THE
COUNCIL OF ECONOMIC ADVISERS,
Washington, D.C., December 3, 1982.

Hon. HENRY S. REUSS,
Chairman, Joint Economic Committee, Washington, D.C.

DEAR CHAIRMAN REUSS: Thank you for recent invitation to testify before the Joint Economic Committee on the problem of unemployment.

I am terribly concerned about the problem of unemployment and the unemployment numbers that came out this morning. As you know, reducing the problem of unemployment is one of the Administration's key priorities. I am working with other members of the Administration to supplement our initiatives in this area.

In the next several weeks the Administration must formulate both its fiscal year 1984 budget proposals and its agenda for major Presidential initiatives in the coming year. Both of these activities will require nearly all of my time throughout December. Additionally, I will be spending time in developing the President's 1983 Economic Report of the President to be released January 24. As I am sure you can appreciate, particularly in light of recent unemployment figures, formulation and refinement of sound economic policy by the Administration have become especially imperative.

Quite apart from these demands on my time, as a matter of Administration policy I should not testify until I have been confirmed by the Senate. As you are aware, my confirmation by the Senate has not yet occurred.

As a consequence, I will not be able to appear before your Committee before the first of next year. I regret that I will miss this opportunity, but I do look forward to testifying before the Joint Economic Committee frequently in the months and years ahead.

Thank you again for your invitation.

Sincerely yours,

MARTIN FELDSTEIN.

Mr. SARBANES. The letter from Chairman REUSS of the Joint Economic Committee to Mr. Feldstein, dated November 30, 1982, reads as follows:

The Honorable Martin Feldstein, Chairman, Council of Economic Advisers, Executive Office Building, Washington, D.C.

I just state parenthetically that the Chairman of the Council of Economic Advisers is the principal economic adviser to the President. In that letter Chairman REUSS said:

DEAR MR. CHAIRMAN: Because of the importance of the economic issues facing this session of Congress, we would appreciate your appearing before the Joint Economic Committee at 10:00 a.m. this Friday morning, December 3. If you are able to present a prepared statement, we would be happy to receive it; if, however, you find that inconvenient, we can proceed without such a statement. I look forward to hearing from you.

As I indicated, Mr. Feldstein communicated, apparently orally, that he would not be able to attend. It was then indicated that the hearing could be scheduled for Monday afternoon. He again indicated he was not going to attend and Chairman REUSS indicated other times could be worked out. He was anxious for the committee to hear from the administration's chief economic spokesman.

On December 3, Mr. Feldstein sent the letter which has just been included in the RECORD to Chairman REUSS. I want to quote from that letter.

DEAR CHAIRMAN REUSS: Thank you for your recent invitation to testify before the Joint Economic Committee on the problem of unemployment.

I am terribly concerned about the problem of unemployment and the unemployment numbers that came out this morning. As you know, reducing the problem of unemployment is one of the Administration's key priorities. I am working with other members of the Administration to supplement our initiatives in this area.

Then he declares that the administration has to formulate its 1984 budget proposals, its agenda for major Presidential initiatives, and developing the economic report.

Then he states:

Quite apart from these demands on my time, as a matter of Administration policy I should not testify until I have been confirmed by the Senate. As you are aware, my confirmation by the Senate has not yet occurred.

As a consequence, I will not be able to appear before your Committee before the first of next year.

Mr. President, I want to take the two reasons that he gives in order, beginning with his assertion that the demands on his time prevent him from appearing before a duly constituted congressional committee. First of all, it is a major responsibility of an executive branch official, particularly one requiring the confirmation of the Senate, to appear before the Congress. Mr. Feldstein is obviously insensitive to that responsibility.

But second, the assertion that he makes about the demands on his time, citing work that he is doing within the administration with respect to the preparation of the economic program, is directly contradicted by Mr. Feldstein's own public activities.

Let me quote from an article which appeared on Monday of this week in the New York Times, giving what is termed a working profile of Martin S. Feldstein. That article states as follows:

He did a press breakfast and two speeches on Monday, a half hour televison interview Tuesday, another press breakfast Wednesday, a speech Thursday night to the Directors of the 12 Federal Reserve Banks, and an address Saturday to the British North American Committee, a business group. Even by White House standards, that is a whirlwind agenda of outside appearances.

Now, here is Mr. Feldstein telling the Congress that he is so busy—working on the agenda for the Presidential initiatives and developing the economic report to be released on the 24th of January, more than 6 weeks from today, so busy engaged in that activity that he cannot respond to the invitation of the Joint Economic Committee to appear last Friday morning, to appear Monday afternoon, or to appear on any other occasion mutually convenient to testify with respect to the administration's economic policy. And yet, while he is so busy in these endeavors, which he lists in his letter of December 3, he has the time to do a press breakfast and two speeches on Monday, a half-hour television interview on Tuesday, another press breakfast on Wednesday, a speech on Thursday night to the Directors of the Federal Reserve banks, and an address Saturday to the British North American Committee. And those are not the only public appearances which Mr. Feldstein has made.

How long are the Members of the Congress going to tolerate the refusal of high-ranking members of the administration to appear before congressional committees to discuss national economic policy, at the very same time that they are making a series of public appearances before the television, with the press, and at major dinner addresses, as Mr. Feldstein has done in this instance?

Now, as to his assertion that he holds a recess appointment and ought not to appear for that reason, there is no basis whatever for it. A recess appointee exercises the powers of his office. Other recess appointees have appeared before congressional committees to discuss issues of concern to the Congress during the course of their recess appointment. The very notion that because you hold a recess appointment you can duck from the obligation of appearing before congressional committees is an insult to the Congress.

It is no wonder that Chairman REUSS, in his statement on this matter, declared:

Chairman Feldstein owes an obligation to the Joint Economic Committee and to any other Committee of Congress to appear when called. He is the duly-constituted, recess-appointed holder of the Office of the Chairman of the Council of Economic Advisers. As such, he is subject to all the duties and responsibilities of that Office, including accountability to Congress. Indeed, on Friday the White House Counsel's office informed our staff that no policy against congressional testimony by recess appointees exists.

As for Chairman Feldstein's schedule, I note that it has not prevented him from making appearances within the last few days before the Commercial Club of Boston, the British-North American Committee, the Directors of the Federal Reserve Banks, "Meet the Press," the "McNeil-Lehrer Report," and groups of working press. He is scheduled to appear before the National Press Club on December 13.

Chairman REUSS went on to say:

Chairman Feldstein's refusal to appear is indefensible. It is an insult to the whole Congress, including the Senate which has yet to act on his nomination.

The Nation needs an economic adviser, not an artful dodger.

This Congress has many questions today for Chairman Feldstein. We want to know whether it is true that the administration is now prepared to accept unemployment above 7 percent for the indefinite future. We want to know whether the adminstration believes that taxing unemployment compensation would help reduce unemployment. We want to know whether the administration is promoting its gasoline tax in full knowledge of the fact that it will cost thousands of productive private sector jobs. All of these stories have been associated with Chairman Feldstein's name in recent weeks. Congress must have an opportunity to find out whether they are the awful truth.

Mr. President, there is no basis whatever on which Mr. Feldstein can justify his refusal to come before the Congress.

As I considered this refusal, and thought further about the comments which the distinguished Senator from Michigan has made—about the insensitivity reflected by Mr. Feldstein in his testimony before the committee on the economic questions of the day about the effects of the policies he advocates on the unemployed, the recipients of social security, those engaged in the housing industry, that there was a kind of arrogance of wealth that fails to be sensitive to these concerns. It was also clear to me that Mr. Feldstein is now reflecting an arrogance of power by his rejecting the invitation to the Joint Economic Committee to come before them and testify.

He had earlier responded to the chairman of a committee, to a specific question. I will now quote the chairman of the Banking Committee, the distinguished Senator from Utah.

Will you be willing to appear before this committee and other committees of the Congress when requested?

Mr. FELDSTEIN. I will, happily.

What did he mean when he said that, in light of the conduct which I have just outlined to the Members of the Senate?

It is an outrageous response, Mr. President, for him to make. It is incredible that he should be making this string of public appearances and then have the temerity to say to a congressional committee that he is too busy to appear before them. I defy any Member of this Senate to take the floor in defense of Feldstein's refusal to appear to testify. I invite any of my colleagues to take the floor—I am prepared to yield time to them now or later, if I have the floor—to make any case for Feldstein's refusal to go before a congressional committee, particularly in view of the fact that he is running not only all over town, but all over the country giving speeches and holding interviews.

I do not begrudge him doing that, but he has a responsibility to the Congress, which he appears to recognize in his confirmation hearing. Or was he simply playing a game with the members of the committee? How does Mr. Feldstein himself square this response to the chairman's question, which is put as a standard matter of procedure? How does he square his response to that question with his refusal now not only to respond to the invitation to come on Friday at the time of the unemployment hearing, or to come on Monday, but to the further invitation held out to him by Chairman REUSS to appear at some other time mutually convenient?

What Mr. Feldstein says in his letter is that he is so busy, and that he holds a recess appointment, and "as a consequence I will not be able to appear before your committee before the first of next year."

Mr. President, there is a lengthy statement by the minority members of the Banking Committee in the report with respect to Mr. Feldstein's views on a range of issues. I agree with those of my colleagues who have spoken before and who I anticipate will speak afterwards with respect to the insensitivity and the callousness revealed his positions on important economic questions. But I submit to the Members of this body that in his conduct over the last few days he has reflected a very distrubing view of his relationship with the Congress of the United States, to which Members must respond by sending a clear message that we do not intend to accept this kind of conduct; and he has refused to come before a duly constituted committee of the Congress, despite his own prior assurances at his confirmation hearing that he would do so.

Can you imagine how the committee would have reacted in that hearing had he at that time answered "no" to the question of the chairman of the Banking Committee? Suppose when Mr. Feldstein was asked, "Would you be willing to appear before this committee and other committees of the Congress when requested," if instead of saying, "I will, happily," he had said, "No, I will not."

What do you think would have happened at that point? He would have been turned down by the committee, I have no doubt, and in my judgment that is what ought to happen at this point by the Senate of the United States.

Mr. PROXMIRE. Will the Senator yield?

Mr. SARBANES. I yield.

Mr. PROXMIRE. I would like to ask the Senator, is it not true that the Council of Economic Advisers was created in 1946 by an act which at the same time created the Joint Economic Committee, with the concept that they would run in tandem, that they would work together, that they would be independent; that the primary purpose of the Council of Economic Advisers is preparing an economic report and keeping the President informed of economic policy, advising him on it, with the Joint Committee having the same function with respect to Congress, with the idea that they should work together, work in tandem, and certainly the chairman of the Council of Economic Advisers should report to the Joint Economic Committee on request? Is that not the concept of the whole law?

Mr. SARBANES. The Sentor is absolutely correct. In fact, the committee of the Congress with which the Chairman of the Council of Economic Advisers interacts most closely is the Joint Economic Committee. They were both established by the Employment Act of 1946. It is the Joint Economic Commit-

tee that considers the economic report of the President and the report of the Council of Economic Advisers. It is to that committee which the Council of Economic Advisers has traditionally reported and with which it has traditionally had a close and continuing relationship.

The nomination is, by necessity, before a standing committee of the Senate. It could not constitutionally go before a joint committee of the Congress, even though under the statute much of the reporting by the Council is done by the Joint Economic Committee.

The nomination had to come through the Banking Committee, but the committee of Congress with which the Chairman of the Council of Economic Advisers most closely interacts is the Joint Economic Committee.

Mr. PROXMIRE. Is it not also true that the Congress can hardly expect nominees to keep their word that they will appear when, under these circumstances, a nominee whose nomination is, in effect, pending before the Senate, simply says that he refuses to appear? It seems to me of all the times when a nominee should be on his good behavior, this is a time we should expect him to keep this kind of commitment. I wonder if the Senator from Maryland can enlighten me on how the Congress can expect to be respected by the executive branch if we simply meet this kind of arrogant refusal to appear, first, in view of his promise that he would; second, in view of the fact that he knows that this body is going to act on his nomination or has to before he is confirmed, if we do not show concern at this time, indicate our strong dissapproval. We shall do so, I hope, in the vote that we cast on this nominee.

It seems to me there is no way Congress should expect to be respected. Is that not correct?

Mr. SARBANES. I think the Senator is absolutely correct. The way to make it clear that this kind of conduct will not be accepted is to register a very definitive judgment as we consider this nomination.

I want to emphasize again that it is not as though Mr. Feldstein had disappeared into the deep recesses of the Executive Office Building and said:

> I am just overwhelmed with the work down here. I have reports to get through and statements to write, and the President is calling on me morning, noon, and night. I was in the Oval Office early yesterday morning, again at lunchtime, late in the evening. You do not know how I am being pushed to the very limit of my energy and my abilities, and I simply cannot come up before the committee; I just do not have the time to do that.

I frankly do not think that would be good enough, because as the President's appointment to be Chairman of the Annual Economic Advisers, Mr. Feldstein has an important responsibility. We need to discuss these matters with a co-equal, separate branch of the Government to air economic policy. That is the number one item now on the national agenda.

But that is not what Mr. Feldstein has been doing. He has been running all over the country holding television interviews, holding press conferences, giving speeches. He is to go before the National Press Club on the 13th of December, and he cannot appear before the Joint Economic Committee.

It was not an invitation that said, "Come now or not at all." It said, "Come Friday morning." He could not do it.

"Come Monday afternoon." He refused to do it.

"Come some other time, we will work it out."

The letter states in very absolute terms: "As a consequence, I will not be able to appear before your committee before the first of next year."

The Chairman of the Council of Economic Advisers cannot come before the committee which has on its own agenda right now important matters involving national economic policy. He refuses to come before them and testify. What does his assertion before the committee mean, in response to the very direct question put by the chairman of the Banking Committee, the Senator from Utah (Mr. GARN), who, to his credit, puts this question to every nominee who appears before us, recognizing its importance to the relationship between the executive and the legislative branch of the Government?

It is, as has been said by Chairman REUSS and others, an insult to the Congress. It is an insult to the Congress.

Mr. Feldstein is refusing to come here and testify, yet he is appearing on television shows, holding press conferences, addressing the Board of Governors of the Federal Reserve Bank, addressing the Commercial Club of Boston, addressing the British North American Committee, Meet the Press, the MacNeil-Lehrer Show—but not the Joint Economic Committee.

Mr. Feldstein is insensitive, clearly, to his responsibilities to the legislative branch of our Government, an equal, coordinate branch of the National Government.

It seems to me that his response to the Joint Economic Committee ought to be a matter of very deep and serious concern to each Member of this body. I do not think it can be explained away, and I think it is of such consequence that it requires Members, in effect, to say that he has exhibited conduct that will lead them to conclude that he ought not to be confirmed for this nomination.

I yield the floor.

The PRESIDING OFFICER. The Senator from Wisconsin is recognized.

Mr. PROXMIRE. Mr. President, I join the distinguished Senators from Michigan, Maryland, and Illinois in opposing the nomination of Martin Feldstein to become Chairman of the Council of Economic Advisers. I oppose him because, based on his prior record and his statements before the Banking Committee, the evidence shows that he has a fundamental disregard for the consequences of the economic policies of high Government deficits and tight monetary policy, of a devastated housing industry, of the unacceptably high numbers of those now unemployed, and of the important public policies embodied in the social security system.

I am sure it will be argued most persuasively that Mr. Feldstein's background suits him for this position and that the President should not be denied his choice, short of the choice being a convicted felon or something. I cannot go along with that philosophy. The Constitution gives this body the responsibility to advise and consent to Presidential nominations. Wielding a rubber stamp is not what the Constitution envisioned for the Senate.

It is true that Mr. Feldstein has been an economic professor at Harvard, that he has served as the president of the National Bureau of Economic Research, has written extensively about social security, about housing policy, about unemployment. His statements concerning these vital areas of economic policy are enough to make your hair stand on end.

The National Association of Home Builders testified before the Banking Committee against Mr. Feldstein's nomination. Why? Because, quoting the witness from the National Association:

> I am concerned about his—
>
> Feldstein's—
>
> views regarding housing and the economy, his basic philosophy of the administration's economic program, and, in particular his views on housing and how it affects the people of this country who need housing very desperately.

Mr. President, it is spectacularly rare for a trade association to oppose the President on a key nominee. In fact, it is so unusual that it must convey to the Senate, I feel, the depth of concern felt by the homebuilders of America over this nominee. I have been in the Senate 25 years and have been on the Banking Committee for all those 25 years. I have been on other committees. I have listened to a number of other nominees who have been sent by a variety of Presidents—seven Presidents. I cannot remember another occasion when a major trade association appeared in opposition to a Presidential nominee. Of course, there have been occasions when an association has been unhappy, but they did not come forward, because they felt

the President had the right to make his choice.

Mr. President, the Chairman of the Council of Economic Advisers is a key player in the administration's development of economic strategy for the economy. He is a chief spokesman on economic matters for the administration. He is a personal adviser to the President on economic matters. He is no technocrat. He does not merely whisper into the ear of the President. He is the author of the economic report of the President. He is responsible for the production of the annual report of the Council of Economic Advisers. As a person occupying such an exalted economic post Mr. Feldstein must be held accountable by the Senate for his views.

Here are my reasons for opposing Mr. Feldstein:

No. 1. We are 180 degrees apart on the matter of the fiscal and monetary policies of this administration. Mr. Feldstein actually testified before the Banking Committee that he saw no conflict—get this—between the fiscal and monetary policies of this Government, and he saw the two moving forward in a coordinated way.

Perhaps only a Ph. D. economist or a Harvard professor could make such a statement with a straight face. In fact, Mr. President, in my view the fiscal and the monetary policies of this administration could not be more uncoordinated, could not be more contrary, could not be more opposed to one another. These policies are wreaking havoc on the economy and, more specifically, on the homebuilders and the unemployed. If Mr. Feldstein cannot see that, then I think he cannot see very much. With that kind of eyesight, thank the Lord he is not an umpire at the ball park calling balls and strikes.

It should be as plain as day that Federal fiscal policy, with its huge deficits—think how big they are: We just had in the year we have concluded, on September 30, a $110 billion deficit, the largest deficit by far in the history of our country, by far. We are told that the deficit will be at least $150 billion in the current fiscal year that will end next September. We can anticipate further deficits in fiscal 1984. How can anybody consider this to be a restrained fiscal policy in any sense? It is the most expansionary, inflationary policy this country has followed in its history.

It should be as plain as day that Federal fiscal policy, with its huge deficits, presents a claim on the money markets that drives interest rates through the roof. The reason is simple. The monetary policy of this Nation has been restrictive. The capital markets have been burdened with demands for funds. Real interest rates are still sky high, at least for long-term obligations. They have come down sharply for short-term obligations, but they are still high in the long-term area and they are certain to go back up as soon as we begin to have a recovery, and before it is choked off by high interest rates once again.

The only reason nominal interest rates have fallen during the tenure of this administration is because housing and the economy are flat on their backs. People have not been borrowing money to buy cars and homes. There has been a small pickup lately, but they are still far, far below the level which would provide for anything like reasonable employment in the homebuilding industry and in the automobile industry.

The administration has turned the fiscal deficit heat up to 100°, turned it up, and the monetary air-conditioning policy down to zero. They then wonder why the economy is operating at 50° and the electric bill is so high. There my disagreement with Mr. Feldstein is fundamental.

Second, Mr. Feldstein's views on housing are downright irresponsible. Mr. Feldstein argues that the ultimate goal of the Nation's monetary and fiscal policy should be—and these are his own words of what the ultimate goal in monetary and fiscal policy should be—"to twist the composition of spending away from housing and into plant and equipment." He thinks that "as a Nation we are overhoused." Overhoused. Vacancy rates are very, very low. How anybody can argue that we are overhoused is absolutely beyond me.

Furthermore, he says it is "good news" that housing is going to be in trouble in the coming years. His statements demonstrate an antihousing bias that gives me great concern and that caused the National Association of Homebuilders to oppose his nomination. I hope it would give each Member of the Senate reason to oppose his nomination.

Mr. Feldstein's testimony before the committee gives no one any comfort that his antihousing bias has lessened.

Mr. President, I find Mr. Feldstein's views shocking at a time when the housing industry is on its back, dragging down the rest of the economy along with it. We built 1.1 million houses last year, which was the lowest annual figure since 1946. Think of that. Think how much bigger our country is.

I recognize that 1946, of course, was still very close to World War II. We had not been able to redirect our great resources. Since 1946, in all that time, 36 years, we have never had housing starts as low as they were last year. Not only is the supply of housing diminishing, but the need for more housing will continue to grow throughout the eighties. I think it is becoming clear that housing needs to be a top economic priority. The Nation is not overhoused, it is underhoused. Anybody watching the nightly news would see that this is so obvious. While a very few families with children who have graduated from college and moved away from home live in large houses—arguably too large for their needs—it is clear that for younger Americans the dream of homeownership is becoming a nightmare. This Nation has been served well by young people finding a stake in society by owning a home. Will this Nation remain as stable with the price of interest rates to the next generation of homeowners?

Mr. President, I do not think there is any element that is more stabilizing in the best sense of the word, more conservative, than homeownership. It gives people a stake in society. It gives them a stake in their community. It gives them a reason for having community interest.

What distinguishes this Nation more than almost any other element is we have a larger portion of our families as homeowners than any nation in the world. It is very close to 70 percent. But it has been declining lately, and it is going to continue to decline with the policies that we are following and the policies that Mr. Feldstein particularly would encourage. Millions of young people will reach their thirties in this decade of the 1980's. The number of people between 25 and 34, those most likely to want to buy a house, will increase by 5 million. The number of married persons will increase by 6 million. Some existing housing will deteriorate, and will need to be replaced. In the last few years we have built no more than 1.5 million housing units in any year. This Nation will need millions of additional housing units every year in this decade to adequately meet the coming demand and to make up for the ground that we have lost during the past several years. Clearly we need to take serious action to help build an adequate number of houses for the next generation of home buyers. I cannot think of anything, Mr. President, that would do more to stimulate this economy, put people to work in a constructive way with the most wholesome kind of objective than homebuilding. After all, the American people spend more on homebuilding, more on housing, more on those expenditures relating to housing than anything. If you look at the Consumer Price Index, made up on the basis of very careful analysis of top economists, of how people spend their money, you will find as much as 45 percent, almost half, far, far more than any other expenditure, is for housing and housing-related expenditures.

Mr. Feldstein would not recommend such action as the Chairman of the Council of Economic Advisers. He does not hide the fact that he thinks we

cannot afford to build as many houses as we have now. Where, in the world, will his views on housing take us in the formulation of economic and public policy? He considers investment in plants ultimately more beneficial to our country than investment in a home. I disagree with Mr. Feldstein; he is wrong on two counts, first, on economic grounds and, second, as a matter of social policy or value judgment.

The National Association of Homebuilders also disagreed with Mr. Feldstein, testifying as follows. This is the witness for the homebuilders:

> But I don't believe that if you take money away from housing and put it into other areas, we're going to have the production in this country that everybody claims we will. He talks about putting money into more productive areas as plants and equipment.
>
> I would like to remind the Senator and the Committee that the homebuilding industry is made up of about 3,000 different items that go into homes. These are all manufactured, for the most part, in some plant in this country. So plants and equipment, when you talk about that, is housing.

That is the purpose. What do we want plants and equipment for? Do we want them to build Yo-Yo's? Do we want them to build aircraft carriers? We do, we need that, but there is a certain limit on how much we are going to spend on military weapons. Certainly the most constructive end product of which I can conceive in our society would be homes.

To go on with the quotation from the witness from the homebuilders:

> So, if you want to build up the economy, you must build up housing. The gypsum companies, the lumber mills, the roofing companies—these are all plants that we're talking about. This is the plant and equipment I assume we're talking about in this country, not just steel mills. That's not all we're talking about.
>
> So, if we want to build up plants and equipment, get housing moving again. Put money back into housing as a priority and the economy will begin to move, much more rapidly than it's moving at the present time.

I could not agree more with the homebuilders or disagree more with Mr. Feldstein.

It appears to me that Mr. Feldstein is making an unwise value judgment when he indicates that housing is less important than other things. After all, why do we want productivity? Just so we will look good? Is that just a matter of kind of flexing our muscles in the mirror? Or do we want productivity so we can produce more efficiently at lower costs to have the things we want without inflation? That is what productivity is all about.

Why do we want production in various areas? Because of the end product. Is housing less important than soft drinks? Is housing less important than entertainment? Than armaments? We need other things, but we need housing, too. Public policy should not denigrate housing or make it take a back seat.

Dr. Feldstein would have us believe that housing is a losing investment. He hopes that we will never again reach the housing production level of the 1960's and the 1970's. He does not pause to consider that housing encompasses all sorts of industries—construction, plumbing, supplies—and offers jobs to workers in the industrial and service sectors. He does not take into account that housing is the major investment for many Americans. He ignores the social implications of a decline in housing production. If more and more people are crowded into smaller quarters, or forced to rent because they cannot afford a down payment on a house, they will feel less committed to their neighborhood and to the community. Social values and morale would be significantly undermined. If the American people are underhoused, they will feel as though their policymakers do not have their best interests at heart, and that the American dream—a house—is a far cry from the American reality—renting. If their policymakers are people like Mr. Feldstein, they will be absolutely right. On the grounds that Mr. Feldstein would try to divert more and more of our Nation's resources away from housing, and because Mr. Feldstein does not indicate any sensitivity to the economic policy issues involved in formulation of housing policy, I urge the Senate to vote against his confirmation.

Mr. Feldstein evidences a callous disregard for the unemployment situation, the deplorable, outrageous unemployment situation we are suffering in this country today. Here is an excerpt from one of his speeches:

> Moreover, I think we will see a variety of small changes in market incentives which will allow the labor markets to be slack without registering 8½, 9 and 9½ percent unemployment rates. A very subtle change that occurred October 1 was the sharp reduction in long term unemployment insurance benefits, reducing them from 39 to 26 weeks. A lot of people who were previously counted as unemployed will not be counted as unemployed now. Some of them will go back and find jobs. Some of them will drop out of the labor force. They won't show up in the official statistics as unemployed.

Mr. Feldstein confuses real progress on unemployment with the gimmickry of statistics.

He also overlooks the fact that the statistics that we rely on for unemployment do not come from the establishment survey that he is talking about here but from the neighborhood survey which is much more comprehensive and includes more than 50,000 individual homes and which will include all the unemployed who have looked for work during the preceding week. And there is no way that the fact that people are no longer getting unemployment compensation benefits will mean they are not unemployed if they want a job. They will be unemployed. So technically, also, Mr. Feldstein is wrong.

Should this Nation find solace in an unemployment figure that does not take into account millions of people who drop out of the labor force because the economy is so bad? Do we want a Chairman of the Council of Economic Advisers who closes his eyes to what is really taking place in the economy? Apparently, he thinks it is a good thing that some workers are so discouraged in the search for employment that they have ceased to look for a job, thereby bringing our unemployment figures down slightly. He favored the reduction in unemployment insurance effective in October 1981 for the same reason: Many people who were previously counted as being unemployed will not be counted as being unemployed now. Whether or not these people are officially counted as being unemployed is not the issue at question here. What matters is that an alarming percentage of Americans who are willing and able to work cannot find employment. This is the fact the Chairman of the Council of Economic Advisers must face, and this is the fact that he must do something about. He cannot be complacent about high unemployment figures, nor can he be relieved when the unemployment figures are lower because people have dropped out of the labor force. This Nation's Chairman of the Council of Economic Advisers needs, instead, to focus his concern on developing policies to counteract a recession so severe that large numbers of workers are discouraged from looking for work.

On August 15, 1982, Mr. Feldstein was quoted in the Washington Post as having argued that "if the inflation rate is above its optimum level, the economy should then be deflated to reduce the inflation rate, regardless of the temporary consequences for unemployment."

What a cruel set of policies Mr. Feldstein's philosophy would set in motion. Not a word about fairness to society as a whole, who gets hurt, and who benefits. In short, Mr. Feldstein ignores that it is the basic mix of fiscal and monetary policies that needs to be addressed. He would simply take inflation out on the hide of the unemployed. That is too callous an approach for most Members of the Senate. I hope the Senate will reject this nominee on grounds of insensitivity to the workers of this Nation.

Mr. Feldstein's views on social security should concern every person who is retired or who ever expects to retire. Mr. Feldstein has been an outspoken critic of the social security system. He has called for a major revamping of the social security system, including

raising the retirement age and reducing the cost-of-living adjustments. He testified before Congress in 1981 that proposals for slowing social security benefits "have generally been far too timid." He has stated that "a slowdown in the growth of benefits would be appropriate." "Moreover, because high social security benefits reduce private saving and private pension accumulation, slowing the growth of benefits would increase capital formation as well as reducing Government outlays." "Fortunately," he says—"Fortunately, social security is in such a financial mess, the problems are so severe, that serious financial reform cannot be avoided in the next few years." Fortunately. How do you like that?

I find these statements by Mr. Feldstein to be shocking and encompassing a bias against the social security system that I find appalling. Does Mr. Feldstein regard the program as something of a luxury rather than as an important national institution—an expendable fringe that we will have to trim if policymakers find the load too burdensome instead of acknowledging the real need for our senior citizens? When Mr. Feldstein speaks disapprovingly of the "unprecedented explosion of social security benefits in the last decade," he makes it sound as though we allow our senior citizens to live in luxury while the rest of us scrape to get by. In fact, the average retired male worker receives $416 in benefits monthly, and that is not much more than $5,000 a year, and that is pretty close to the poverty level. That is the average retired male worker in this country. That is hardly a ride to Easy Street, especially in these times of rising energy costs, high interest rates, and escalating property taxes.

Mr. President, it is easy for those of us who enjoy a good life, salaries of $60,000 a year and more, to consider social security as something that can be cut, ought to be cut, must be cut. We certainly, Mr. President, ought to consider what income people on social security receive, and also the fact that a great proportion of people on social security have no other income. That is it. That is what they get. That is what they have to live on.

We also ought to recognize that there is no country, no other developed countries, no country in Europe, for example, that provides such a small proportion of its gross national product for social security as does the United States. We can afford it, Mr. President, and we should also not forget the fact that social security provides the floor that keeps this economy from dropping out of a recession into a truly deep depression of the kind we had in the thirties when we did not have social security, and when we suffered the ravages of 25 percent unemployment.

Thirty-six million people depend on social security benefits today, Mr. President. Ninety percent of the work force now pays into the system, and rightfully looks forward to just compensation in their retirement years. How do you tell 36 million retirees and 90 percent of the work force that, after financially paying into the social security fund, they can expect a substantial reduction in future Government outlays? Those are Mr. Feldstein's words. Adopting Mr. Feldstein's approach would be a betrayal of both the public's trust and the firm commitment the Government has made thus far to the social security program since its inception during the Great Depression.

Mr. President, the social security program is not a fringe in our national budget. Its goal lies at the very heart of our national purpose: To provide a decent living for our senior citizens when they retire from the work force. What program could be more fundamental to our Nation than that? It is worth preserving, and worth fighting for. If we as a nation face troubles on the economic front, do we want to destroy the country's morale by threatening to tinker with social security benefits?

I cannot vote in favor of a Chairman of the Council of Economic Advisers who finds it fortunate—that is his word—that social security is in a financial mess, as he terms it. And I do not agree that the social security system reduces the rate of savings. Our rate of savings is low, primarily because savers have been required to subsidize borrowers. Fortunately, Congress has altered that system of subsidies by requiring that regulation Q be phased out. I urge my colleagues to vote against Mr. Feldstein's obvious bias against social security.

Mr. President, I have outlined the reasons why I oppose Martin Feldstein. I think we need to send a strong signal to the administration on this nominee. By rejecting Mr. Feldstein, the Senate will be on record as wanting a better mix of economic policies, and that it wants to stop using housing, social security, and unemployment as scapegoats for our economic ills.

Mr. President, I yield the floor.

Mr. RIEGLE addressed the Chair.

The PRESIDING OFFICER. The Senator from Michigan.

Mr. RIEGLE. Mr. President, I commend the Senator from Wisconsin for his very fine and illuminating statement and the care with which he has documented in instance after instance the positions Dr. Feldstein has taken that I think the Senate would not support. So I think it is important for Senators to consider exactly what this nominee stands for, advocates and would attempt and has been attempting to do even during the time he has been serving in this recess appointment.

I have no doubt in my mind, I might say to the Senator from Wisconsin, if the American people could be convened as a body and listen to the debate on this nominee, and we could put it to a vote today, Feldstein would not be confirmed to this position because this is not what the people of the country want. The people know we need something quite different, and this would not be a nomination that would survive a public referendum during which people would have a chance to weigh the specifics of what this particular person advocates in positions he has taken in attempting to make national policy in this administration.

I might add in addition here for the record the statement of the president of the National Association of Home Builders, Fred Napolitano, who said he was deeply troubled by Feldstein's opinions, and then stated:

> I feel that these views are so antihousing that they would impair Dr. Feldstein's ability to provide advice to the President in the critical area of housing and economic policy.

That comes from the elected president and head of the National Association of Home Builders, representing all homebuilders in the United States. Of course, this organization has come forward has actively opposed the nomination, and has testified against it before the committee. But I think that is a very sobering bottom line judgment by the president of an important national organization.

I might further acknowledge another comment by Dr. Feldstein when he was speaking before the Washington Press Club on November 29 of this year. In the course of his remarks he said:

> A faster recovery runs the risk of accelerating inflation and, therefore, of an expansion that comes to a premature end.

There is a clear inference there that we dare not have a fast recovery, and none of the policies he has put forward suggests that he either wants to see or believes we ought to have a faster recovery.

He was also quoted in the Washington Post of August 15, 1982, as believing—and this is a quote—

> If the inflation rate is above its optimal level the economy should then be deflated to reduce the inflation rate regardless of the temporary consequences for unemployment.

That is about as pure a statement—there is a little bit of professorial language used here, but this is probably as clear a quotation of the view that says in the search for whatever this so-called optimal inflation rate is that if that means a higher level of unemployment, so be it, that we will trade off joblessness to try to do something in terms of lowering the inflation rate.

This administration has pursued that line of reasoning now to the point where we have about 12 million people unemployed whom we can list by name, and probably another 5 million whom we can no longer identify. We cannot identify those people who are just out roaming the country looking for jobs or looking for some way to just scratch out a living day to day. So we know where that kind of logic and position has taken us.

I must say I am distressed to think about having somebody running the policy, economic policy, area for the administration who holds that view. I will mention other things in a moment.

Dr. Feldstein on another occasion in an issue of the Harvard Business Review for July-August of 1979 made this comment:

The most important economic effect—

He is referring here now to social security—

is a reduction in the Nation's rate of saving. Social security is the real root of our capital scarcity problem.

I think that is an extreme statement, if I have ever heard one. That is my comment. Dr. Feldstein's comment, continuing the quotation:

Social security is the real root of our capital scarcity problem. Although tax incentives for greater savings and investment can boost the rate of capital formation, that rate will continue at a very low level until we can reduce our dependence on social security.

This man is as clearly antisocial security as anybody I have ever seen. And to put him in charge of economic policy formulation in this administration, which has a very bad record on social security in the country, as everyone now knows, really makes no sense at all.

I understand the Senator from Virginia is on the floor and wishes to speak, so I will yield the floor so that he might seek the floor.

Mr. HARRY F. BYRD, JR. I thank the Senator.

The PRESIDING OFFICER. The Senator from Virginia is recognized.

Mr. HARRY F. BYRD, JR. Mr. President, I rise to make a few comments in regard to the appointment of Martin S. Feldstein, of Massachusetts, to be a member of the Council of Economic Advisers.

The able Senator from Michigan has quoted a number of newspaper articles in regard to reported comments of Dr. Feldstein. I certainly do not associate myself with every statement that Dr. Feldstein has made or certainly not with all the newspaper reports that have been made as to his views. I suppose I disagree with him on a number of issues. Certainly if he is accurately reported in regard to social security matters, I am in disagreement.

But I rise today to support his nomination and to say a word in his behalf for one simple reason. He is one of the few persons in high position in recent weeks to speak publicly and to tell the Congress in his testimony before congressional committees that this Government simply must get Federal spending under control.

He asserted time and again that we will not have a sustainable economic recovery until the Congress is willing to face the issue of Federal spending. Now, Congress does not like to hear that. Congress does not like to be told that spending must be curtailed. But I think he is totally correct in his assertions that if we are to have a sustainable recovery, Congress must control its appetite for spending, and we must get back to a balanced budget. That is what he has been telling the American people. That is what he has been telling the Congress. As I indicated earlier, he is one of the few persons in high position to so assert.

So I just want to commend him for being willing to speak out in that regard. I think our fiscal problems are of a very serious nature.

Yesterday, the chairman of the Senate Appropriations Committee, the distinguished Senator from Oregon (Mr. HATFIELD) told the Senate that the budget deficit for fiscal 1983 will be 50 percent greater than the budget resolution called for when it passed the Senate and the House of Representatives last May—a 50-percent increase in the deficit since the Senate passed the budget resolution last May.

I think we are living in a fool's paradise. The Congressional Budget Office has estimated that the deficit for fiscal 1983 will be $155 billion. The Assistant Secretary of the Treasury for Economic Affairs testified before the Senate Finance Committee today, and when I queried him as to what the budget deficit would be, he put it at $150 billion or upward. So this Nation is faced with gigantic deficits. And I see no evidence—no evidence—that either the House of Representatives or the Senate of the United States is facing the issue, which I think is a fundamental issue, that we cannot go on year after year with these huge and accelerating deficits.

I must say I do not know Dr. Feldstein. I must say I have not searched his record to the degree that the able Senator from Michigan has. But I am impressed with his testimony before the Congress this past week. I feel that he needs to be encouraged to speak out as he has urging the Congress to curb its appetite for spending and to reduce substantially the huge deficits which this country faces in fiscal 1983, in fiscal 1984, in fiscal 1985, and probably in fiscal 1986. We are headed for disaster if we do not take affirmative action in that regard.

Mr. RIEGLE. Will the Senator yield just briefly?

Mr. HARRY F. BYRD, JR. Certainly.

Mr. RIEGLE. I may have misunderstood the Senator. I just wanted to clarify this. Did I understand the Senator to say that Dr. Feldstein testified before the Congress sometime within the last week?

Mr. HARRY F. BYRD, JR. I gathered from the news accounts that he testified before the Joint Economic Committee, was it not?

Mr. RIEGLE. No. I think the problem is that they have asked him to testify and he has said he is unwilling to testify or that he cannot find the time to do that right now and something of a controversy has arisen. We have had some difficulty getting him before committees of the Congress in the recent period. That is why I wondered if perhaps he had appeared somewhere that did not come to my attention, because, if that were so, I wanted to know that.

Mr. HARRY F. BYRD, JR. Well, I will withdraw that statement. I may have misread the newspaper.

Mr. GARN. Will the Senator yield just for a clarification?

Mr. HARRY F. BYRD, JR. Yes.

Mr. GARN. The Senator from Michigan is correct. He did decline to appear before the Joint Economic Committee. His reasoning—which I frankly said in committee yesterday I did not agree with; I think he should have appeared—but his reason was that he had not yet been confirmed in the position and wanted to wait until he had been confirmed, then he would accept the invitation.

That is the one thing that I agree with the minority views on. I totally disagree with their opposition to his appointment, but I do agree with them that he should have appeared. But that was the reason. It was not just a blind refusal. He did give that reason that he had not yet been confirmed and would not appear until he had been.

Mr. HARRY F. BYRD, JR. I am pleased to have the clarification by the distinguished Senator from Utah and the distinguished Senator from Michigan. I stand corrected. I do not know where these statements were made, but they were published, the statements I have been commenting on that he made in regard to Federal spending and a balanced budget. But, obviously, I was in error when I said they were made before a congressional committee. But there were apparently public statements attributed to him and quoting him in the public press. I thank the Senator from Michigan for getting that point cleared up.

Mr. RIEGLE. I thank the Senator for yielding.

Mr. HARRY F. BYRD, JR. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. KENNEDY. Mr. President, as I understand, there is no time limitation.

The PRESIDING OFFICER. The Senator is correct.

Mr. KENNEDY. Mr. President, I will vote against the confirmation of Martin Feldstein as Chairman of the Council of Economic Advisers. I believe in general that the President is entitled to advisers of his own choosing, so long as his choices do not display grave insensitivity to serious national problems and human needs. Professor Feldstein has displayed just such an insensitivity to the pain of our current economic situation. He favors an economic policy that at its best would not bring unemployment down even to the 6- or 7-percent range for the next 5 or 6 years.

Early this summer, when over 10 million Americans were unemployed, Professor Feldstein termed the recession "relatively modest thus far." In September of this year, with another 1 million Americans unemployed, he repeated his earlier view.

In recent weeks, Professor Feldstein has suggested that we increase the pain of unemployment by taxing unemployment benefits. He has suggested that we increase the burdens on already strapped workers and small businesses by taxing the value of employer-paid health insurance. His disregard for the economic suffering which now afflicts our country is persistent and unyielding. I do not question the fact that Professor Feldstein is a talented economist. But I am convinced that he is profoundly wrong about the direction of national policy and profoundly insensitive to the human costs of the course which he advocates.

At a time when the economy is experiencing its greatest trouble since the Great Depression, the President needs economic advice which will urge him to change the course and to embark on policies designed to insure growth and full employment. Nothing in Professor Feldstein's record holds out the prospect that he is even open minded on this question.

Professor Feldstein recently said, "unemployment must rise, industries must suffer, profits decline, and the current beneficiaries of government programs must feel the effects of reduced government spending." Those are not the views or the values that America now needs in the Chairman of the Council of Economic Advisors.

I urge my colleagues to vote no on this nomination.

Mr. SASSER. Mr. President, in the course of the debate on the matter of the nomination of Martin Feldstein to be the Chairman of the Council of Economic Advisers, both in the Senate Banking Committee, on which I serve, and on the floor today, I have heard the arguments in support of the nomination and the arguments in opposition set forth so eloquently by my colleagues on the Banking Committee.

As I indicated by my vote in committee against this nomination, my own study of Dr. Feldstein's record, his philosophy, his outlook, coupled with the arguments brought out here today in the debate, convinced me that this nominee should not be confirmed by the U.S. Senate.

Most of Dr. Feldstein's most notable departures from economic and political commonsense have been reported over and over again. His statement, for example, that he is pleased to see the continuation of the depression in the homebuilding industry is one such departure, in view of the staggering unemployment rates in residential construction and the inability of the great majority of American families to enter the market. "Housing is going to continue to be in trouble * * * and that's all good news from my point of view, but it doesn't exactly lead to a buoyant economy," was how he expressed it.

On unemployment generally, Dr. Feldstein has demonstrated a marked lack of sensitivity about the meaning behind the statistics showing that over 10 million Americans are out of work.

That is 10 million Americans—over 10 million Americans—that we can count that are out of work. That does not include what some statistics estimate to be approximately 2 or 3 million who are not in these figures, who have quite looking for work because they have become discouraged, and those numbers have fallen from the list.

It does not include some estimates of 5 to 6 million people who are underemployed, those who, last year, might have been working 40 hours a week or occasionally getting overtime for 45 hours a week, who now find they are reduced to working perhaps 20 to 25 hours a week; or those who, last year, had good-paying jobs which they have since lost and are now working at jobs, perhaps, at the minimum wage.

When you add the unemployed that we can count, the unemployed that we cannot count, and those who are underemployed, you are approaching close to 20 million people, a very substantial percentage of the work force of this country.

Dr. Feldstein noted that:

> A lot of people who were previously counted as unemployed . . . some of them will drop out of the labor force. They won't show up in the official statistics as unemployed.

Are we then, Mr. President, to find solace in lower unemployment statistics that result form the adject despair of hundreds of thousands of our fellow citizens who are out of work? Second, there is not a Member of this body—and I trust there are not many people across the country—who have yet forgotten the ill-fated and ill-advised Thanksgiving Day proposal from the White House to tax unemployment benefits. We have an opportunity in the Senate today to express our opinion in opposition to that kind of economic advice.

Perhaps the most egregious examples of Dr. Feldstein's insensitivity to the economic needs of most of the population of this country can be found in his remarks on social security. His view is that we have "a social security program that makes saving virtually unnecessary to the majority of the population."

I certainly commend for Dr. Feldstein's perusal some letters that I get with regularity from constituents in my home State of Tennessee who indicate to me that they are not doing very well on the social security payments that they are presently getting. As a matter of fact, some of them in the wintertime tell me they are having to choose between staying warm or getting adequate nourishment.

This kind of insensitivity might not make as much difference in other departments or agencies of this Government of ours. But the Chairman of the Council of Economic Advisers, according to the Council's charter, is the chief individual in this Government responsible for:

> Developing and recommending to the President national economic policies to foster and promote free competitive enterprise to avoid economic fluctuations or to diminish the effects thereof and to maintain employment, production and purchasing power. . . .

I have great confidence in Dr. Feldstein's ability to avoid fluctuations; if his policies were to remain in effect, the vast majority of our population would, at best, continue to scrape along the bottom of the economic barrel, where he seems to be most comfortable with their presence.

Adding insult to injury is Dr. Feldstein's refusal to appear before the congressional committees charged with oversight responsibility over the Nation's economy. We are told that the press of business and a full schedule have kept this very busy individual from appearing before congressional committees that have jurisdiction over problems dealing with this Nation's economy. Interestingly enough, the press of business and a full schedule

have not kept Dr. Feldstein off nationally televised interview programs, have not kept him from making various speeches around the country to a number of different groups, and he has used these appearances as excuses to avoid appropriate inquiry from duly elected Members of the Congress. By his actions in this regard, I fear that Dr. Feldstein becomes very close to demeaning the office of the Chairman of the Council of Economic Advisers.

Mr. President, I have followed a policy since I have been in the Senate of supporting nominees of the Presidents of either party in the general belief that the Chief Executive should be able to choose those he would have serve with him in carrying out his executive responsibilities.

Only in extreme cases have I opposed any Presidential nominee. But I regard this as one such case. Dr. Feldstein has a fine intellect. He is an accomplished researcher. He is a good citizen. However, his economic views, in my judgment, do not show any awareness of the harm that is being inflicted on the American people and in the long range perhaps irreparable damage to our economy that is occasioned by this administration's economic policies.

I firmly believe that Mr. Feldstein is an inappropriate choice at this crucial time for the chairmanship of the Council of Economic Advisers. I rise today to uge my colleagues to oppose his nomination.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. RUDMAN). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. GARN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GARN. Mr. President, one of the most difficult items on behalf of the minority in their objection to Mr. Feldstein was the fact that he had not agreed to appear before the Joint Economic Committee last week. And although, as I have stated earlier, I think he is eminently qualified for this particular position and disagree with what the minority has said in opposition to their other points of disagreement with him, nevertheless, I stated in the Banking Committee, and will do it here again today, that I think he was not wise in not appearing before the Joint Economic Committee.

I do believe we have that particular problem resolved. I have just gotten off the phone with Mr. Feldstein. He has called the chairman of the Joint Economic Committee, Congressman REUSS, the former distinguished chairman of the House Banking Committee. He will appear before the Joint Economic Committee at 10 a.m. tomorrow morning. So I am pleased at his quick response to my request and that of the minority that he appear before the Joint Economic Committee, and especially pleased that he agreed to appear that promptly. I, frankly, had not anticipated that they could have set it up. But he and Chairman REUSS have agreed that he will appear at 10 a.m. in the morning.

So with that assurance, I would hope that we could proceed with the vote as soon as the minority is finished with their comments.

Mr. SARBANES addressed the Chair.

The PRESIDING OFFICER. The Senator from Maryland.

Mr. SARBANES. Mr. President, I wish to commend the chairman of the Senate Banking Committee for his efforts in this matter. I must say to him I think that it is an impressive exercise of one's responsibilities, both as chairman and as a Member of the Congress of the United States. I am very pleased that Mr. Feldstein is appearing before the Joint Economic Committee tomorrow morning at 10 o'clock.

In view of that, I, of course, am quite prepared to go to a vote on Mr. Feldstein. I intend, as I indicated earlier, to vote against him.

I have a number of difficulties with him. They are outlined, of course, in the minority report to the committee report. Of course, I remain troubled by his initial position on appearing before the committee, although I am pleased that in view of the communication made to him by the chairman of our committee, and I gather others on that side, that he will be appearing tomorrow morning.

I think that it is very important that that should have been resolved in terms of the role of the Congress in relation to the executive branch, and particularly with regard to Mr. Feldstein's responsibilities to the Congress, to the Senate Banking Committee, the Joint Economic Committee, and any other properly constituted committee. I think the chairman for his effort and I am prepared to go to a vote on Mr. Feldstein when other Members have completed their comments.

Mr. RIEGLE. Mr. President, I commend the chairman of the Banking Committee for his efforts and leadership in endeavoring to work this matter out, which he has been successful in doing.

I further commend the majority leader for his help, because he also was constructively involved in these discussions this afternoon.

I want to particularly commend the Senator from Maryland because the Senator from Maryland, I think, throughout the day, helped to bring to light the importance of this particular issue, the need that we have here within the Congress to have appointees of this consequence available to respond affirmatively to a proper request by the committees of Congress to have them appear as witnesses. I think the Senator from Maryland has rendered a great service to the Senate and to the Congress by pressing forward on this very proper point.

I will conclude by saying that I want to remind colleagues again that all of the members on the minority side of the committee joined in the dissenting views, the minority views, in opposition to this candidate. We are certainly prepared to discuss those points in opposition with Members as they arrive for a vote.

I say again that the candidate is opposed actively and openly by the National Association of Homebuilders and others.

With that, I am prepared to yield the floor.

Mr. GARN. Mr. President, I certainly do not intend to take any more than just a minute or two. I certainly do not intend to get into any debate to rebut what the opposition said today. That was all done in the committee and my views are very well known and certainly do not need repeating.

There is one point that the distinguished ranking minority member from Michigan mentioned that I simply cannot let go, when he referred to Mr. Feldstein as a radical conservative. That was very interesting to me because when I first got here I was told that the way economists got to Washington was to attend Harvard and turn left.

I did not know that Harvard ever produced a student or a 17-year professor that was a radical conservative. I have learned something today that absolutely startles me.

Mr. SARBANES. Will the chairman yield at that point?

Mr. GARN. I am happy to yield.

Mr. SARBANES. There is an adage about Harvard that you can tell a Harvard man but you cannot tell him much. [Laughter.]

Mr. GARN. The second point I would like to make is simply that I do not think anybody, as I said in my opening remarks, disputes the professional qualifications within the economic community of Mr. Feldstein. He is widely and highly respected. The opposition today is primarily a matter of disagreement with some of his views.

I would only state that I do not think that is a sufficient reason to oppose a Presidential nominee. Most of the time I have been in the Senate I have served in the minority, and the majority of the time with a President of the opposite party. There were many nominees that came before the Banking Committee for confirmation with whom I disagreed totally on their views. They had liberal economic

views. Mine are well know to be conservative. My judgment as to whether they were professionally and ethically qualified fit in that position. I have not opposed or supported nominees from either Republican or Democratic Presidents on the basis of their views alone because I disagreed, only judging their character and their professional ability to do so.

Certainly, my colleagues have the right to disagree with their views of this nominee or any other, and I respect that right for them to do so. But I do believe that Mr. Feldstein is very well qualified for this position and I certainly hope that the Senate will confirm him today.

Mr. President, I know of no one else who wishes to speak, but I would suggest the absence of a quorum. We need to inform some people that a vote is about to take place.

Mr. President, I will withdraw that request. We are ready to proceed to a vote. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is, Will the Senate advise and consent to the nomination of Martin S. Feldstein, of Massachusetts, to be a Member of the Council of Economic Advisers? On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Arizona (Mr. GOLDWATER), The Senator from Illinois (Mr. PERCY), and the Senator from Connecticut (Mr. WEICKER) are necessarily absent.

I further announce that , if present and voting, the Senator from Illinois (Mr. PERCY) would vote "yea."

Mr. CRANSTON. I announce that the Senator from Hawaii (Mr. INOUYE) and the Senator from Colorado (Mr. HART) are necessarily absent.

The PRESIDING OFFICER. Are there any other Senators in the Chamber wishing to vote?

The result was announced—yeas 77, nays 18, as follows:

[Leg. Rollcall Vote No. 398]

YEAS—77

Abdnor	Danforth	Heflin
Andrews	DeConcini	Heinz
Armstrong	Denton	Helms
Baker	Dole	Hollings
Bentsen	Domenici	Huddleston
Biden	Durenberger	Humphrey
Boren	Eagleton	Jepsen
Boschwitz	East	Johnston
Bradley	Exon	Kassebaum
Brady	Ford	Kasten
Bumpers	Garn	Laxalt
Byrd, Harry F., Jr.	Glenn	Leahy
	Gorton	Long
Chafee	Grassley	Lugar
Chiles	Hatch	Mathias
Cochran	Hatfield	Mattingly
Cohen	Hawkins	McClure
D'Amato	Hayakawa	Mitchell
Moynihan	Randolph	Stevens
Murkowski	Roth	Symms
Nickles	Rudman	Thurmond
Nunn	Schmitt	Tower
Packwood	Simpson	Tsongas
Pell	Specter	Wallop
Pressler	Stafford	Warner
Quayle	Stennis	Zorinsky

NAYS—18

Baucus	Dodd	Proxmire
Burdick	Jackson	Pryor
Byrd, Robert C., W. Va.	Kennedy	Riegle
	Levin	Sarbanes
Cannon	Matsunaga	Sasser
Cranston	Melcher	
Dixon	Metzenbaum	

NOT VOTING—5

Goldwater	Inouye	Weicker
Hart	Percy	

So the nomination was confirmed.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the nomination was confirmed.

Mr. STAFFORD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER (Mr. LUGAR). The clerk will report the next nomination.

DEPARTMENT OF ENERGY

NOMINATION OF DONALD P. HODEL, OF OREGON, TO BE SECRETARY OF ENERGY

The assistant legislative clerk read the nomination of Donald P. Hodel, of Oregon, to be Secretary of Energy.

Mr. BAKER. Mr. President, if I could have the attention of the Senate for a moment, there are three more nominations on the Executive Calendar and it would be the intention of the leadership on this side to try to finish them. I would hope we can do that promptly.

The nomination that is now before the Senate is Mr. Hodel to be the new Secretary of the Department of Energy. I understand there may be a request for rollcall vote on that nomination. If that is the case, I wonder if there be such a demand made at this time.

Mr. ROBERT C. BYRD. Mr. President, I will respond, if I may, if the Senator will yield. There are Senators on this side who support the nomination but who, nevertheless, because it is a Cabinet level nomination believe that there should be a rollcall vote on such a nomination. Therefore, we would request one.

Mr. BAKER. I thank the Senator.

In that situation, then I ask for the yeas and nays on this nomination.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. BAKER. Mr. President, I certainly do not want to truncate the debate and abbreviate anyone's comments. But I do hope that at 6:25 in the evening we might be able to proceed with some dispatch on the remaining three nominations.

Mr. President, I yield the floor.

The PRESIDING OFFICER. The floor is open for debate on the nomination.

Mr. McCLURE. Mr. President, I do not know of anyone who wishes to actively debate the nomination. I have a statement which I will read in the RECORD. If other Members are of the same frame of mind, we could then go to the vote on the nomination immediately.

Mr. President, I rise in support of the President's nomination of Donald P. Hodel to be Secretary of Energy. Mr. Hodel has been serving as Secretary of Energy since November 5, pursuant to a recess appointment by President Reagan. The President's nomination of Mr. Hodel, which the Senate is considering today, was submitted to the Senate on November 15.

Both the Congress and the President are most fortunate to be able to turn to an individual who is so highly qualified to provide new and effective leadership in setting our national energy policy and carrying out that policy. At the outset, I note that Mr. Hodel has a broad knowledge of energy issues, and he also has extensive management experience within the Federal Government. These qualifications, combined with his well-known ability as a highly capable and very articulate administrator, leave no doubt whatsoever that Mr. Hodel is well suited for the position of Secretary of Energy. Therefore, Mr. President, it is with a great deal of personal pleasure that I urge my colleagues to support his prompt confirmation.

On December 7, the Committee on Energy and Natural Resources favorably reported the nomination of Mr. Hodel. The vote was 19 to 1. The committee's action followed a full review of Mr. Hodel's personal and professional background, and in particular, his record as Administrator of the Bonneville Power Administration, and Under Secretary of the Interior.

At his nomination hearing, which was held on December 1, Mr. Hodel presented prepared testimony that outlined, in considerable detail, his views on a broad range of energy policy issues and his plans for managing the Department of Energy. Mr. Hodel also responded to oral questioning from a number of committee members. In addition, the committee received oral and written testimony from witnesses representing a number of special interest organizations and environmental groups. They expressed a full range of views on Mr. Hodel's nomination. That is not surprising, considering that a similar range of views applies to the policies of the Federal agencies with which Mr. Hodel has been associated.

After the nomination hearing, a number of committee members sub-

mitted written questions to Mr. Hodel. Responses to the questions were provided prior to the committee's consideration of Mr. Hodel's nomination on December 7.

Mr. President, I ask unanimous consent that at this point in my remarks, there be inserted in the RECORD the biography of Mr. Hodel prepared by the Department of Energy.

In his testimony before the committee, Mr. Hodel provided an overview of what he termed his "energy perspectives", He stated:

It is my perspective, based upon these experiences, that energy has an importance far beyond that of most commodities. it is a significant component of every aspect of the U.S. economy. Without energy, our economy does not run; without a viable economy, this nation cannot be strong and its people united; without a strong and united nation, the defense of the free world is threatened. It is clear to me that energy is intimately bound up in maintaining the free society that we cherish.

Consequently, energy policy is not something any of us ought to take for granted. A purposeful energy policy is crucial for this country and for the rest of the world. What Congress and the Administration do about energy has global implications, for although what we do in the United States may cause only ripples on the energy shores of our society, it may cause tidal waves on the energy shores of other nations, especially in the developing countries.

In discussing the need for a balanced approach to energy resources, Mr. Hodel pointed out:

If we have learned anything from the 1970's, it is that overreliance on any one energy source is unwise. The oil embargo of 1973 and the price shock of 1979 made the nation dramatically aware of its dangerous dependence on foreign oil. For nearly a decade, the country has struggled to work its way out of that dependence.

I have argued before, and believe now, that no one approach and no one fuel can or ought to be depended upon to meet all the needs of a diverse country such as ours. What works in New England may not work in the Southwest. Resources available in the Pacific Northwest may not be available in the South. I happen to believe that recognition of the inherent value of diversity should be one of the bases upon which we can build an energy consensus in this country.

Mr. Hodel's testimony also emphasized the importance of energy conservation and reliance on renewable energy sources. He pointed out that as far back as 1974, he had publicly stated that "Energy conservation has become a national imperative." He also expressed to the committee his view that there should and can be an appropriate Federal role in the area of conservation and renewable resources. He made a commitment to working with the Congress in a common effort to articulate and fund that Federal role.

In discussing the proper management of the Department of Energy, Mr. Hodel stated:

I come with an acute awareness of the need to provide strong management and strong leadership. If there is anything I hope I have acquired during my years as administrator at BPA and as Under Secretary of the Department of the Interior, it is the skills needed to manage large, multi-goal organizations. I hope to use those skills to make the Department of Energy an agency in which we all can take pride.

I intend to conduct the Office of Secretary in a collegial, open manner—and to be available to all viewpoints and to all organizations. Ultimately, I intend to employ a management style which is conducive to forging an energy consensus. But I also intend to be decisive, to make decisions and recommendations, and to implement those which are my responsibility as quickly as is appropriate.

Mr. Hodel also discussed the issue of the status of the Department of Energy. He testified:

The manner in which we organize the Federal effort to assist in the meeting of national energy objectives necessarily will change as circumstances and the basic thrust of Federal policies evolve. Just as the creation of the Department of Energy added a dimension to energy policymaking unavailable to the government within either the FEA or ERDA, I feel that, although we continue to need an agency devoted to energy matters, it no longer should be a separate cabinet-level agency devoted only to energy.

From the beginning of his administration, President Reagan has stressed that his economic and trade policies are inseparable from his energy policy and that each of these policies must be developed in concert with the others. The organizational separation of the government's energy activities has made this needlessly difficult. The solution, it became clear to us, was fusion of the Department of Energy with economic and trade policy through merger with the Department of Commerce.

Although the Reagan administration continues to advocate merger of the Department of Energy into the Department of Commerce, Mr. Hodel assured the committee that pending legislative enactment of the President's proposal, "I shall administer the Department of Energy in conformance with the statutes which govern its structure and operations."

Mr. President, Mr. Hodel's nomination has been the subject of some critical commentary and even the opposition of some witnesses and groups. All of that commentary has focused on Mr. Hodel's performance of his responsibilities in prior Federal service as the Administrator of the Bonneville Power Administration in the middle 1970's and as the Under Secretary of the Interior since the beginning of 1981. The critical comments received by the committee were largely covered in the extensive questions for the record to which Mr. Hodel responded prior to the committee business meeting on December 7, 1982. The following questions and Mr. Hodel's answers address the specific comments. I ask unanimous consent that these materials be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

INSERT FOR TRANSCRIPT OF HEARING

Senator Bumpers asked a series of questions regarding my involvement in the Powder River coal sale and specifically about whether certain information was seen by coal companies prior to the sale. The Senator inquired whether such circumstances in any way compromised the sale, and asked that a full explanation be provided relative to this matter. In response to the Senator's inquiry, I have obtained from the Department of the Interior a number of documents:

1. Letter to Senator Jackson signed by me, dated July 14, 1982, transmitting answers to 28 questions covering a wide range of matters relating to the Powder River Sale, including detailed questions and answers relating to fair market value, need for coal, and leaks of data relating to Minimum Acceptable Bids.

2. Copy of prepared testimony by Assistant Secretary Garrey E. Carruthers, "Before the Mines and Mining Subcommittee, Committee on Interior and Insular Affairs, U.S. House of Representatives, on H.R. 5895, A Bill to Amend the Mineral Leasing Act of 1920 . . .," dated June 10, 1982. This testimony appears to have been in further response to question number 28 from Senator Jackson. A portion of the testimony deals with Interior's views on diligent development.

3. Letter to Senator Bumpers signed by me, dated July 14, 1982, transmitting answers to 13 questions covering a wide range of matters relating to the Powder River Sale, including detailed questions and answers on coal volumes, bid comparisons, fair market value determinations, and leaks of data.

4. Letter to Congressman Markey signed by me, dated July 14, 1982, responding to questions regarding the Powder River Sale and attaching copies of:

(a) My concurrence in the establishment of post-sale evaluation procedures for the Powder River Sale, dated April 27, 1982;

(b) The proposal for such procedures, dated April 23, 1982; and

(c) A June 21, 1982 memorandum to the Deputy Director of the Minerals Management Service from the Associated Director for Onshore Minerals Operations.

5. Testimony of David C. Russell, Deputy Director, Minerals Management Service, Department of the Interior before the House Committee on Interior and Insular Affairs, Subcommittee on Mines and Mining, July 15, 1982, in which he discussed the fair market value process and the Powder River Sale.

I am submitting copies of the foregoing documents for the record as part of the Appendix hereto.

My involvement clearly was as Chairman of the Minerals Management Board and as Under Secretary. I believe the answers provided in the various letters and testimony set forth Interior's and my views in the matter in great detail. It is my further belief the GAO has inquired into some aspects of this matter, but that, as yet, no report has been issued.

In the Department's July 14, 1982 letter to Senator Bumpers, it is stated that MMS in Reston was directed to initiate an investigation into the issue of a leak. I have contacted MMS regarding this direction and have indicated that it has a continuing obli-

gation to pursue this matter. I have been assured by MMS that it will report the results of its inquiry directly to you.

Finally, a question was raised regarding the delay in responding to your letter of May 18, 1982, in which it was suggested that it would have been helpful if a telephone contact had been made with your office explaining the delay. I am informed that the staff of the Office of Congressional and Legislative Affairs at the Department of the Interior was in communication with the staff of your office regarding our response and had indicated the difficulty in assembling all the information required to respond to the various Congressional requests on this subject. Nevertheless, as a matter of standard operating procedure, I am hopeful that delays of this sort can be eliminated at the Department of Energy.

RESPONSE TO QUESTIONS FROM SENATOR MAX BAUCUS

1. What was your role in the five WPPSS nuclear plants? Did you promote their construction? Did you urge utilities and cooperatives to participate in them? Did you issue notices of insufficiency that may have encouraged participation in the plants? Please provide appropriate documentation for your answers.

Answer. In addressing my role in the five Washington Public Power Supply System (WPPSS) nuclear plants, we first must distinguish between the projects themselves. The WPPSS Projects Nos. 1, 2 and 3 were intended to be directly related to the Bonneville Power Administration (BPA) in both financial and power supply relationships in accordance with the Congressional mandates included in the 1970 and 1971 Public Works Appropriation Acts. In essence, BPA was not intended to have a direct relationship with WPPSS Projects Nos. 4 and 5 other than providing some transmissions system and reserve support services. My answers, therefore, are divided into the two categories Projects Nos. WPPSS 1, 2 and 3 and separately Projects Nos. WPPSS 4 and 5.

WPPSS PROJECTS NOS. 1, 2, AND 3

In November 1966 (three years before I became Deputy Administrator at BPA), 108 public and private electric utilities in the Pacific Northwest and BPA formed the Joint Power Planning Council (JPPC) to develop a program to meet the region's estimated power needs over the next 20 years. After two years of consultation, in October 1968 the JPPC announced the Hydro-Thermal Power Program-Phase 1 (HTPP-1), which, among other things, provided for the construction of one nuclear plant essentially by investor-owned utilities (shared 70 percent investor-owned and 30 percent publicly-owned utilities) and of three nuclear power plants by the Washington Public Power Supply System (one plant shared 70 percent public and 30 percent investor-owned, two plants 100 percent public). The WPPSS is a corporate consortium of 23 State of Washington municipal and public utility district systems formed under Washington state law. The capability of the portions of these plants owned by municipalities, public utility districts and rural electrical cooperatives (called "preference customers" of BPA) was to be integrated into BPA's power distribution system through net billing agreements with those utilities, which Congress approved in appropriations acts in 1969 and 1970 for the fiscal years 1970 and 1971, respectively.

I became Deputy Administrator of BPA in October 1969, a year after HTTP-1 was announced and 23 days before the then-Secretary of the Interior announced Administration approval of the program. I became Administrator in December 1972, about three years after Congress approved BPA's involvement in this effort. Two of the three-party net billing agreements between BPA, WPPSS, and the participating public utility members (participants) in regard to WPPSS Project Nos. 1, 2 and 3 were signed during my tenure as Administrator. Under the net billing and companion agreements, WPPSS had the contractual responsibility to design, construct, operate, and maintain these plants. The concept was that funding for these three plants was to be provided by WPPSS' issuing and selling its bonds in the municipal bond market. The actual debt service payment was to be the responsibility of BPA acting through what was called "the net billing process." Fundamentally, the participating utilities acquired shares of these projects and assigned their rights to BPA. They were obligated to pay WPPSS for their respective shares. In exchange, the participants received credits against their purchases from BPA of electric power and services marketed by BPA—their WPPSS payment was "netted" against their BPA bill.

The notice of insufficiency had no bearing on the initiation of these projects since it followed Congressional action on these projects by more than five years.

WPPSS PROJECT NOS. 4 AND 5

BPA does not have any direct contractual relationships with Projects Nos. 4 and 5 nor any responsibility for their operation and oversight; however, those two projects were a part of a regional program to meet the collective needs of the utilities in the Pacific Northwest region. This program was a follow-on program to the Hydro-Thermal power program described above. It came to be known as Phase 2 of the Hydro-Thermal power program. Phase 1, which included Projects Nos. 1, 2 and 3, became not feasible to continue as a practical matter following an IRS ruling on the tax exempt status of such financial arrangements in 1972. At that time, efforts began to go foward toward the development of Phase 2.

The region's electric utilities, both public and private, the BPA, members of the Pacific Northwest Congressional delegation, and other elected officials and leaders in the region concurred that additional generation development was necessary to meet the expected electrical energy needs of the 1980's and beyond. Discussions began in 1972 to determine what was an appropriate follow-on program to Phase 1, utilizing the efficiencies inherent in developing base load thermal generation and integrating that with the Federal Columbia River Power System. By letter dated March 12, 1973, the Secretary of Interior wrote to me with instructions to work toward the development of such a follow-on program or issue a legal notice of insufficiency in order to protect the Federal Government's interests. Because of the lead times which BPA's preference customers would need to seek and to arrange for non-federal resources if the notice of insufficiency eventually had to be issued, the Secretary's letter was generally communicated to BPA's utility customers. By late 1973, a general agreement outlining Phase 2 principles was completed and work began developing the contractual relationships among utilities and the sizing and siting of generating resources.

The notice of insufficiency was a legal term provided for in the power sales contracts that BPA had with its preference customers. Essentially, it provided that, upon an 8-year notice, BPA could limit its legal obligation to meet the load growth requirements of its preference customers. (In 1973, BPA had notified its investor-owned utility customers that it would not renew their expiring power supply contracts.) Work on the necessary Phase 2 principles had to lead to project agreements in order to assure BPA that a combination of generation developed by its customers plus the power marketed by BPA would be adequate to meet preference customer needs and would protect the federal government's obligations and interests. It was apparent that this work would take such time that a notice of insufficiency nevertheless might have to be given. Therefore, late in 1974 and early in 1975, contracts with all of BPA's preference customers were amended by mutual agreement to allow a delay of one year in the notice of insufficiency, i.e., shortening the notice period from eight years to seven. This also increased the risk that if the program did not go together there might not be enough time to develop an alternative.

In 1975, as a result of court action under the National Environmental Policy Act, BPA was enjoined from moving forward on agreements among its customers which, the courts held, would have enabled Phase 2. The courts basically directed BPA to develop an Environmental Impact Statement on its role in power planning and development in the Pacific Northwest region including, specifically, Phase 2 of the Hydro-Thermal Power Program (Role EIS).

As a result of these court actions, coupled with the sharply increasing costs of new resource development being experienced within the Pacific Northwest as well as throughout the country, the principles supporting Phase 2 were unable to be implemented on a timely basis. Many of the leaders who were involved in the electric utility activities within the region agreed that the Pacific Northwest was facing serious electric energy supply problems. On the basis of an analysis of the data then available to the region and following discussions with its customers, I issued in June 1976 the notice of insufficiency which would limit BPA's obligations to meet load of its preference customers beyond July 1, 1983. While some have suggested that this notice in and of itself encouraged the commitment to Projects Nos. 4 and 5, it must be recognized that it was merely a reflection of the energy deficits then projected and discussed throughout the region as part of the development of Phase 2.

The initiation and progress toward commitments to Projects 4 and 5 proceeded as early as September of 1974, well prior to the June 1976 notice of insufficiency. In October 1974, WPPSS had announced a $2.1 billion financing program for Projects Nos. 4 and 5. Throughout 1975 and into early 1976, negotiations between preference customers and WPPSS were underway on Projects Nos. 4 and 5. Since, by July 1976, all Project Nos. 4 and 5 agreements in fact had been signed by the 88 participants, it would appear they must have been completely negotiated and submitted for signature well prior to that date and well prior to issuing the notice of insufficiency.

Throughout the development of Phase 2, I did actively participate in the Development of a cooperative, unified approach to the development of energy supply which

could lead to an adequate, reliable and low-cost supply of power for the Pacific Northwest region. As a part of that effort, Projects Nos. 4 and 5 were identified by the utilities and WPPSS and, as such, were supported by me.

For example, based on the best information then available to me, in November 1974 I informed BPA's preference customers of my judgment that these two plants were necessary to meet the utilities' projected load growth in the mid-1980's, that major financing for the plants would be required in 1975 if the construction schedules were to be met, and that, therefore, execution of the participant's contracts for the facilities was necessary at the time if the construction were to be completed on a schedule sufficient to meet then-projected loads after July 1, 1983. At the March 1976 annual meeting of the Bonneville Regional Advisory Council, I publicly stated my view that it would be desirable to continue to try to have WPPSS Projects Nos. 4 and 5 on schedule.

Since the technology and best information at that time suggested the develpment of large-scale nuclear electric generating facilities, the possibility of establishing twin units with other large nuclear plants was explored and finally adopted by the utilities—not including BPA since it was not a participant. Project No. 4 is a twin unit (the same design, size and site location) to Unit No. 1 at the Hanford Site in the State of Washington. Project No. 5 similarly was a twin unit with WPPSS Project No. 3 at the Satsop site in Western Washington. It was anticipated that significant cost savings and operational safety and protection could be obtained by this effort. At the request of WPPSS and BPA customers, and following discussion with the Appropriations Committees of Congress in 1973, 1974, and 1975, I approved of this concept and approach insofar as it affecterd BPA's obligations in Project No. 3. This was believed by the sponsors to be the most efficient and the least costly approach to meeting the power supply "public utility responsibilities" of our customers. I agreed that they should consider it carefully Also during this period, I, along with virtually all other power system managers within the region, continued to inform people of the serious power supply situation forecast by the PNUCC.

The Role EIS prepared by BPA is an excellent source for background material and discussion of the issues and options surrounding Phase 2 of the HTPP of which Projects Nos. 4 and 5 initially were a part. That document, although published in final form in December of 1980, was first released as a draft by the President's Council on Environmental Quality in July 1977 when I was Administrator. A GAO report entitled "Bonneville Power Administration and Rural Electrification Actions and Activities Affecting Utility Participation in Washington Public Power Supply System Plants 4 and 5," dated July 20, 1982, and a September 8, 1982 letter from present BPA Administrator Johnson to Congressman George Hansen, together with a "Chronology of Events Regarding the Supply System Nuclear Projects" prepared by BPA and referred to in such letter, also constitute comprehensive sources of information. I was interviewed by GAO during preparation of the July 20, 1982 GAO report, and my comments and GAO's evaluation of my role are reflected in that report. Copies of the introductory portions to the final Role EIS (including introduction, table of contents, summary and "overview") and of the other documents I have mentioned are included for the record in the Appendix hereto.

2. Please explain the BPA/WPPSS relationship regarding the WPPSS nuclear plants 1 through 3. Was BPA obligated to pay the full costs of these plants whether they were completed or not?

Answer. The WPPSS Projects Nos. 1, 2 and 3 are contractually related to BPA in both financial and power supply relationships. Through those agreements, BPA is completely obligated to pay the full costs of these plants whether completed or operable or not. This relationship grew out of BPA's participation in the Hydro-Thermal Power Program as discussed in Question 1, above. This relationship had express Executive Branch and Congressional approval. Specifically, BPA explained its proposed participation to the House and Senate appropriations Committees in 1968, 1969 and 1970. (The first of these preceded my 1969 appointment as Deputy Administrator, and all of them preceded my 1972 appointment as Adminstrator). In 1969, Congress approved BPA's participation in two of the thermal projects under the program. In 1970, Congress approved BPA's participation in the remaining projects, including WPPSS Projects Nos. 1, 2 and 3. Recently, Congress reaffirmed its approval of the integrated participation of these plants into the BPA system in the Pacific Northwest Electric Power Planning and Conservation Act. (P.L. 96-501). The further details of this relationship are provided in answers to the subparts of this question A. through E.

2A. The bond statement for WPPSS plants 1, 2 and 3 provide as follows: "Bonneville is obligated to pay . . . the total annual costs of each net billed project, including the debt service on the net billed bonds, whether or not the net billed project is completed, operable or operating and notwithstanding the suspension, reduction or curtailment of project output." Are you aware of any other arrangment in the U.S. where a federal agency has entered into such a contract?

Answer. I am not aware that there are or are not any other arrangements in the United States where a federal agency has entered into a similar contract. I will request the Department staff to research this question further.

2B. What were the contractual arrangements under which BPA exercised oversight to the net-billed WPPSS plants? Or is it your position that BPA was empowered only to exercise discretionary review of WPPSS?

Answer. The nature and extent of BPA's oversight or review authority in regard to the net-billed plants (WPPSS Projects Nos. 1, 2 and 3) is specifically contained in two agreements. Principally, they are contained in what is called the Project Agreement between BPA and WPPSS. Some additional, although lesser, criteria are provided in the net-billing agreements between BPA, the participants, and WPPSS. Although these agreements very slightly between Projects Nos. 1, 2 and 3, in the essential areas regarding oversight there is not any appreciable distinction. Therefore, I have included for the record as part of the Appendix hereto a Project Agreement and a Net-Billing Agreement for Project No. 3. These contracts provided very carefully defined review authority and limited enforcement rights for BPA to modify or to make adjustments to the operation and activities of these projects.

The contracts basically provided that the duties of WPPSS to design and to construct Projects Nos. 1, 2 and 3 were to be carried out "in accordance with prudent utility practice," a term which, by the contracts, required, among other things, the exercise of reasonable judgment in light of the facts known at the time, taking into account practices engaged in or approved by the electrical utility industry. The contracts established a Participants' Review Board, consisting of nine representatives of the participating utilities (virtually all of BPA's preference customers), which had the responsibilities of reviewing WPPSS' construction and annual budg- ets, as well as all bids, bid evaluations, and proposed contract awards for amounts exceeding $500,000.

After adoption by the WPPSS Board of Directors, the annual and construction budgets of WPPSS, generally after review by the Participants' Review Board, formally were submitted to the BPA Administrator for approval, rejection, or modification, but solely on the basis of whether the WPPSS proposal was or was not consistent with prudent utility practice. However, the contracts also provided for ultimate review and decision by a "Project Consultant" of any disapprovals by the BPA Administrator of WPPSS proposals. The resolution was to be on the ground of consistency with prudent utility practice.

It should be noted that WPPSS is governed by a Washington State Board of Directors made up of Public Utility Districts and municipal utilities of the State of Washington. These board members essentially represent the same consumers who, in the final analysis, pay the BPA rates covering the costs of these projects. The WPPSS Board of Directors and the Participants' Review Board ultimately are accountable to several hundred publicly elected utility officials throughout the Pacific Northwest region. In the circumstances, BPA's relationship with WPPSS was not similar to that with a private contractor.

I am informed that in 1980 BPA and WPPSS executed an agreement increasing BPA's oversight role.

2C. What caused the massive WPPSS cost overruns?

Answer. I cannot identify specifically those items which may have resulted in the WPPSS cost overruns. The substantial increases in the projected completion costs of Projects Nos. 1, 2 and 3 are generally attributable to various factors including, primarily, slippages in the construction schedules. Every construction delay—whether attributable to lack of adequate foresight concerning the difficulties in constructing such facilities, labor disputes, the need to conform design to newly-acquired knowledge concerning plant safety, regulation changes, and other technological advances or otherwise—increases cost because of, among other things, the carrying cost of money and the inflationary pressures on costs that were experienced throughout the 1970's and into the 1980's. There have been numerous evaluations of cost overruns, not only at Projects Nos. 1, 2 and 3, but at other projects being developed by utilities throughout the United States. BPA did evaluate the WPPSS cost overruns, and it is my recollection that the cost of the WPPSS Projects Nos. 1, 2 and 3 tracked in general the cost increases that other utilities were experiencing with their nuclear projects. This was particularly true when the costs of the WPPSS projects in this comparison were adjusted for a major labor dispute that occurred at the Hanford site and the higher labor costs in general that were attributable

to costruction in the Hanford location in the State of Washington. While I was administrator at BPA, we discussed the possible need for an independent review of the WPPSS management systems in order to evaluate to what extent management in and of itself may have contributed to those cost overruns. Those discussions finally culminated in the Theodore Barry and Associates Study commissioned by BPA shortly after I left.

2D. Do you think that BPA oversight of WPPSS was adequate?

Answer. I believe that the thrust of your concern relates to the problems of WPPSS Projects Nos. 4 and 5. BPA's contract responsibility for oversight of WPPSS relates only to Projects Nos. 1, 2 and 3. Even as to Projects Nos. 1, 2 and 3, it is difficult to assess fully whether BPA oversight was adequate. Certainly, knowing what we know now, there are things we should have done differently—different contracts, different procedures, and, likely, even different institutional arrangements. Perhaps, even the State of Washington and the preference customer participants should have structured WPPSS differently. However, the question should, in all fairness, be judged by what was known and perceived at the time.

The following remarks relate to projects Nos. 1, 2, and 3:

The oversight provisions of the contracts were established on the fundamental principle that the Washington State Board of Directors of WPPSS, and the participants and BPA all had the same interest in mind and essentially the same consumers to whom they were responsible. Furthermore, the NPR project at Hanford had just been completed under a similar arrangement and had come in ahead of schedule and below budget. The normal, arms-length oversight relationship that would exist with a private contractor simply was felt by the parties not to be appropriate in this circumstance and, possibly, in the atmosphere at the time might not have been able to be negotiated.

Throughout the progress of construction, the relationship on oversight was continuously reviewed and adjusted. The basic premise of a common motivation with the WPPSS Board and the participants remained. As costs overran estimates and delays were experienced, greater and greater pressure was exerted by BPA. However, in the early years, these explanations regarding these impacts were felt reasonable by the region's utilities, the Board of Directors, the Participants' Review Board, and BPA senior staff.

In retrospect, neither WPPSS, its State Board of Directors, nor the participants during that time were adequately situated to deal with a construction project of such immensity and complexity. In such an atmosphere, BPA, before, during and after my tenure as Administrator, saw its role as one not just of oversight, but one of helping them in their efforts to move these projects forward. It will be remembered that the region, including BPA, believed we were facing serious power supply deficits and needed to act in such a way that we did not add to the delays of these projects.

Subsequently, the GAO, Theodore Barry and Associates, the Washington State legislature and others have looked back and suggested what might have been done. They also will play a part in the judgment about whether BPA oversight of WPPSS was adequate. I am advised that the GAO currently is updating its report which will add to the views on this subject.

2E. During your tenure at BPA did your office have an auditor at the WPPSS facilities? What was his name? Could you submit for the record his reports and your responses to him and to your deputies as to what responses should be made to his reports?

Answer. I am not aware whether or not throughout the period of time when I was in office as Administrator, BPA had an auditor at the WPPSS facilities. BPA did, however, have an engineer or other suitable technical person at each of the project sites able to review the technical construction and design activities. At the BPA Headquarters Office, there were several other engineers and auditors who dealt with the WPPSS construction and budget activities. I have initiated a request to determine the specific nature of the then-existing BPA auditing activity, the names of the person(s) primarily responsible for such activites at the time, and a review of the BPA files for reports and responses.

3. What is your view of prospective solutions to the WPPSS debacle? What is likely to occur in the event of a default? Would you be willing to prepare a departmental overview of WPPSS—the causes and possible solutions—for submission to Congress? When could you complete such a project?

Answer. There is no basis for a government bail out of WPPSS at this time. I believe there is the capability within the region to resolve these issues if there is the will to cooperate.

I am not personally or technically aware of all the ramifications that may be associated with a default on the bonds to pay for Projects Nos. 4 and 5. There has been a great deal of discussion and speculation on that issue. A July 2, 1982 GAO report on this subject to Congressman Weaver is believed by me to be the most definitive piece covering the whole spectrum of views currently available. I am including a copy of that July 2, 1982 GAO report for the record as part of the Appendix hereto.

I am willing to undertake any reasonable or appropriate studies which the Committee might request. The date of completion would be an outgrowth of the scope and complexity. In this case, however, I respectfully urge the Committee not to request a study of the type about which this question inquired. A critical situation exists. Litigation is active. All parties have inordinate demands on their time. A review such as the one asked about in the question undoubtedly would divert important management resources at BPA, WPPSS, the Pacific Northwest Regional Power Council and the utilities away from discharging their respective responsibilities to the region in the weeks and months ahead. Moreover, WPPSS is a legal entity organized under special statutes of the State of Washington and, apart from the contractual provisions concerning WPPSS Projects Nos. 1, 2, and 3, is not subject to direct oversight by BPA or DOE. Any Departmental oversight efforts should be conducted carefully to reflect appropriate respect for the legal status of WPPSS.

4. Do you have any observations concerning the polarization that occurred in the region's energy debate—particularly around the time of your speech to the City Club of Portland in which conservation groups were severely castigated? What did you learn from that experience? How will things be different in your work as Secretary of Energy?

Answer. Rather than encouraging debate, the polarization resulting from what were perceived as personal attacks crippled dialogue on most fronts. I have learned that if we seek a dialogue, as I do, it is essential to try to reduce polarization. A big difference at DOE will be my determination, to the best of my ability, to seek areas of agreement in order to foster the ability to communicate. This effort is already underway with encouraging beginnings.

5. In 1976, BPA received a contracted energy conservation study from Skidmore, Owings and Merrill. The study concluded that conservation could reduce, if not eliminate, the need for new power plants. Were the study findings circulated to customers in order to encourage them to undertake conservation activities? Was it made available in time for review by those considering participation in the WPPSS projects? Since the question has arisen whether BPA tried to withhold the report from public scrutiny, please supply copies of statements and memoranda which deal with public release or discussion of the report. Did you make or authorize an effort to slow release of the report?

Answer. The Skidmore, Owings and Merrill (SOM) Report was a study contracted by BPA in January 1976 for use in preparing BPA's "Role" environmental impact statement. The draft report was completed by SOM in May 1976, and the final report was submitted by SOM to BPA on July 20, 1976. On August 18, 1976, the final SOM report was distributed by BPA to participants in the BPA "Role" EIS process, including the Public Power Council, conservation and other public interest groups, and the Pacific Northwest states. After a thorough review by BPA staff, the final SOM report, together with BPA's analysis, were the subject of a BPA press conference on October 4, 1976.

With respect to the issue of whether the results of the SOM report were available to the utilities participating in WPPSS Projects Nos. 4 and 5 before they signed their participants' contracts, it will be recalled that negotiations on WPPSS Projects Nos. 4 and 5 leading to contract signatures had been going on throughout 1975, with the final agreements all being signed by July 14, 1976, which was prior to SOM's submission to BPA of its final report.

At BPA's instigation, the preliminary conclusions and approach by SOM were discussed even prior to the draft SOM report. Such an advisory meeting of BPA preference and other customers was held on April 19, 1976, under the sponsorship of the Northwest Public Power Association. A substantial number of customers attended, together with SOM representatives, to discuss the report SOM was preparing. On April 27, 1976, a similar meeting was held with the staff of the Northwest Energy Policy Prcject, an energy policy group commissioned by the Governors of Oregon, Washington, and Idaho.

A member of the SOM group preparing the report publicly discussed the draft conclusions of the report in May 1976, prior even to the time BPA had the opportunity to complete its analysis and review of the draft. There was very substantial media coverage of the findings and recommendations of that draft because of their controversial nature. It is inconceivable to me that the 88 utilities which eventually signed WPPSS Project Nos. 4 and 5 contracts in July 1976 were unaware of the existence of the SOM report and of its views on the subject of conservation as an alternative to construction of new nuclear plants.

At the time of this early release of SOM's views and subsequently, BPA expressed its concern that the draft could be or was misleading in the sense that a substantial portion of the conservation savings identified by SOM might or might not be capable of realization because they depended upon mandatory conservation through laws, the enactment of which could not be assumed. An example of one such conservation option which was a part of SOM's projected savings, as I recall, required homeowners to weatherize their homes before they would be allowed to sell them. BPA and I were concerned that the projected energy savings from that and similar mandatory measures could not be relied upon safely by utilities which had an obligation to make the necessary plans to provide an adequate power supply prior to the time there could be confidence that the required laws would be enacted. In my view, the utilities' awareness of the views of SOM could only have been heightened by the debate surrounding these matters which was carried on at numerous gatherings of utility groups, much less in the media.

I do not recall in any way making or authorizing any effort to slow the release of the final SOM report together with BPA's analysis which, in the circumstances, was believed by BPA to be necessary to minimize the risk that the public otherwise might be misled in drawing conclusions from the report.

The inference that I might suppress a report favorable to conservation as an alternative to development of additional generating capacity runs counter to my long-standing, publicly articulated advocacy of conservation as a necessary resource. My opening statement to the Committee refers to some of my public remarks as far back as two years before the SOM report. Indeed, during the year which preceded execution of the contracts for WPPSS Projects Nos. 4 and 5, I referred in a major speech in Seattle to "the overriding need for energy conservation." In December 1975, I stressed that "energy conservation is an essential first step in solving the energy crisis which confronts both this region and the United States;" and, contemporaneously with the draft SOM report, I publicly urged that "conservation is essential, and we strongly emphasize that it must become a way of life." Therefore, in light of material supplied for the record by one of the public witnesses, I have initiated an inquiry to identify what copies of statements and memoranda may be available in response to this question.

RESPONSE TO QUESTIONS FROM SENATOR BUMPERS

4. Projections of the future demand for electricity have, in recent years, been far higher than the actual demand, haven't they? Wasn't this the case with the Washington Public Power Supply Service? What was your role in this matter? Did you consider the alternative of promoting conservation? If not, why not? If so, why was that alternative rejected? In retrospect, how might the WPPSS problem have been avoided? Does this experience show that we have greatly underestimated the value of conservation?

Answer. In recent years, utilities' forecasts indicate diminishing future load growth. Recognizing that these forecasts are projections for several years in the future, if you compare the actual load in each of the recent years with that forecast ten years earlier, it is apparent the forecasts have been significantly higher than the actual demand in those years. This should not be too surprising in view of the increases in energy costs plus the economic situation, both of which were not contemplated in the earlier forecasts. This has also been the case with the projections of power supply requirements in the Pacific Northwest, which impacts directly on the need for the Washington Public Power Supply System projects.

While Administrator at Bonneville, we had a limited responsibility in the area of load forecasting. In general, we forecasted, as a service, the loads for many of the very small public utility and cooperative utility customers. The larger preference customer utilities and all the investor-owned utilities were responsible for forecasting their own loads as a part of their individual utility responsibilities. BPA participated with all of the utility customers in putting together a sum of all of the utility forecasts within the Pacific Northwest region. In the mid to late 70's, this was done under the auspices of the Pacific Northwest Utilities Conference Committee.

I did, in fact, actively promote conservation as evidenced only in part by my early speeches to which I referred in my opening statement to the Committee. I continued that effort while I served as BPA Administrator. I can only speculate as to why conservation was not given greater attention by utility planners. The year 1974 was at the end, in retrospect, of a long period where additional power generation resulted in a net overall decrease in price in real terms. That investing directly in the saving of energy as a resource in the end would result in lower cost power and lower rates to consumers was, as yet, an untested concept. I am pleased to note, however, that through the intervening years the conservation approach has flourished and has become a meaningful part of our Nation's energy management activities.

At the time WPPSS Projects Nos. 1, 2 and 3 were planned and arranged for, there was a very clear indication of need. As yet, I am unaware of any evidence that would question the need for those projects. It is my understanding that recently BPA recommended to WPPSS, and that the WPPSS Board has agreed, that construction of Projects Nos. 2 and 3 even now should proceed at full pace to maintain or to improve existing construction schedules on those projects and that the schedule for construction of Plant No. 1 be extended for up to five years to parallel more closely the expected requirements for power from Project No. 1 based on recent forecasts of demand over the next decade, including BPA's first independent regional demand forecast pursuant to the Pacific Northwest Power, Planning and Conservation Act of 1980. No information has been called to my attention which presently causes me to believe that there was any mistake as to need in undertaking the construction of these three projects.

Projects Nos. 4 and 5 have been terminated. Although the need for this power has been questioned, I must speculate that a basic reason for their termination is their extensive cost overruns and an associated inability to finance the projects economically.

It is difficult to assess realistically whether we have greatly underestimated the value of conservation. Certainly as costs of energy have increased sharply since the late 1970's, there has been a corresponding reponse in the conservation of energy. It should be noted, however, that had the cost of energy stayed as projected, such as the initial estimates of the WPPSS projects, then the resultant cost of energy would have been significantly lower and the resulting economically motivated conservation also would have been less.

15. In 1975, you said the environmental movement had fallen into the hands of a "small, arrogant faction which is dedicated to bringing our society to a halt." Do you still think that?

Answer. The speech to which the question refers was made by me at a time when Bonneville Power Administration (BPA) and I, as its Administrator, were experiencing an enormous sense of frustration arising from a series of lawsuits which we felt were aimed not so much at achieving the true intent of the National Environmental Policy Act—preservation of a clean and wholesome environment—as at bringing to a halt virtually every effort on the part of BPA and the publicly- and investor-owned electric utilities in the Pacific Northwest to provide energy to the people of the region. At the time, virtually every participant in the regional power systems foresaw the prospect of a severe shortfall in energy resources during the decade ahead, yet litigation brought under NEPA threatened the very existence of Phase 2 of the Hydro-Thermal Power Program, which BPA and its over 100 customers with diverse interests carefully had worked out to the end that people could have jobs and the other social benefits of an adequate energy supply.

In that speech, I urged my audience "to take up this dialogue." To my chagrin, I learned that verbal challenges as I issued that day can be counter-productive. I now realize that, regardless of the amount of frustration one feels when those programs and policies in which he earnestly believes are sidetracked by antagonists who have equally earnestly held convictions, dialogue is better served by lowering the temperature of the rhetoric.

I am acutely aware that, to be successful as Secretary of Energy, I first must succeed in the commitment I made to the Committee in my opening statement—"to work with you and others toward a broadened energy consensus in the United States." In my first four weeks as Secretary of Energy, I already have begun that effort by, among other things, meeting with a substantial number of leaders of environmental and conservation organizations to engage in an exchange of views concerning a broad range of energy issues. The discussions have been cordial, straightforward, and I believe, beneficial for all concerned. I have asked my staff to try to arrange follow-on meetings in the near future.

In all fairness, I suggest it would be appropriate to note that the persons who bore the brunt of my remarks over seven years ago purposefully were described by me as being a small faction—in contrast to what I termed "the responsible majority of environmentalists." I am satisfied that, while the present leadership of environmental and conservation organizations may have some policy disagreements with me, we can interact with each other in a manner which, based on mutual respect, will produce the broadened energy consensus I seek.

RESPONSE TO QUESTIONS FROM SENATOR JACKSON

6. Among your publications you list a speech you gave at the City Club of Portland on July 11, 1975, in which you stated: "The greatest threat to the environmental movement is the environmental movement itself. Over the past several years, it has fallen into the hands of a small, arrogant faction which is dedicated to bringing our society to a halt. I call this faction the Prophets of Shortage. They are the antiproducers, the antiachievers. The doctrine they preach is that of scarcity and self-denial." Do you still stand by those words?

Answer. The speech to which the question refers was made by me at a time when Bonneville Power Administration (BPA) and I, as its Administrator, were experiencing an enormous sense of frustration arising from a series of lawsuits which we felt were aimed not so much at achieving the true intent of the National Environmental Policy Act—preservation of a clean and wholesome environment—as at bringing to a halt virtually every effort on the part of BPA and the publicly- and investor-owned electric utilities in the Pacific Northwest to provide energy to the people of the region. At the time, virtually every participant in the regional power systems foresaw the prospect of a severe shortfall in energy resources during the decade ahead, yet litigation brought under NEPA threatened the very existence of Phase 2 of the Hydro-Thermal Power Program, which BPA and its over 100 customers with diverse interests carefully had worked out to the end that people could have jobs and the other social benefits of an adequate energy supply.

In that speech, I urged my audience "to take up this dialogue." To my chagrin, I learned that verbal challenges as I issued that day can be counter-productive. I now realize that, regardless of the amount of frustration one feels when those programs and policies in which he earnestly believes are sidetracked by antagonists who have equally earnestly held convictions, dialogue is better served by lowering the temperature of the rhetoric.

I am acutely aware that, to be successful as Secretary of Energy, I first must succeed in the commitment I made to the Committee in my opening statement—"to work with you and others toward a broadened energy consensus in the United States." In my first four weeks as Secretary of Energy, I already have begun that effort by, among other things, meeting with a substantial number of leaders of environmental and conservation organizations to engage in an exchange of views concerning a broad range of energy issues. The discussions have been cordial, straightforward, and I believe, beneficial for all concerned. I have asked my staff to try to arrange follow-on meetings in the near future.

In all fairness, I suggest it would be appropriate to note that the persons who bore the brunt of my remarks over seven years ago purposefully were described by me as being a small faction—in contrast to what I termed "the responsible majority of environmentalists." I am satisfied that, while the present leadership of environmental and conservation organizations may have some policy disagreements with me, we can interact with each other in a manner which, based on mutual respect, will produce the broadened energy consensus I seek.

RESPONSE TO QUESTIONS FROM SENATOR WILLIAM PROXMIRE

4. In 1975 and 1976 did you ask members of the public to write their members of Congress to ask for changes in the National Environmental Policy Act? Did you use federal funds for this purpose?

Answer. To my very best recollection, I have not asked members of the public to write their members of Congress to ask for changes in the National Environmental Policy Act (NEPA). This question, however, may have reference to a July 1975 speech I delivered. In that speech I stated: "I have no quarrel with that Act [NEPA] or what I believe to be its intent. We have a right to demand both a clean environment and economic opportunity." But I described in some detail what appeared to be the efforts of some at that time to use—misuse, in my view—NEPA "to obstruct the orderly progress of obtaining the power supply this [Pacific Northwest] region must have if we are to continue to provide for a reasonable lifestyle for ourselves, our children and the generations to come."

I believe that the speech clearly indicated my support for environmental laws of our nation. Several options came to mind for alleviating some of the problems I had described, which I outlined without advocating any particular action. These were offered simply to provide some ideas for consideration in the public debate on this subject. I stated:

"I do not have a set of pat solutions, but we might consider the following: (1) a legal or regulatory point of final decision where a project is either approved or disapproved, and no further complaints are permitted, (2) an obligation on the part of a plaintiff who abuses the NEPA process to pay the damages caused by his actions, and (3) a statute of limitations on lawsuits which challenge the adequacy of Environmental Impact Statements."

The audience before which I spoke consisted of opinion leaders from all segments of the Portland, Oregon community. After a discussion of the problems we faced, I urged the listeners:

" . . . [T]o take up this dialogue. If you belong to an environmental organization, scrutinize its polices and how your dues are being spent. If you have friends who are members, ask them if they know what is being done in their names. Urge them to blend their best efforts to getting their club or association back on its original, constructive course.

"Talk to you business colleagues, talk to our State and local office holders. Write to your Congressmen. Tell them these delays are costing jobs now and for the future. Tell them we're jeopardizing our economy and our way of life."

The speech triggered a spirited and sharply mixed reaction. There were numerous requests for copies of the speech, so BPA printed copies accompanied by an introductory letter from me in which I said to people who had asked "What can I do?" that they should send me their written comments, with the understanding I would bring them to the attention of the Pacific Northwest Congressional delegation. It was my hope to foster an increased public debate on the issues facing the region and to provide my good offices in facilitating communication between the citizens of the Northwest and their elected officials.

RESPONSE TO QUESTIONS FROM SENATOR TSONGAS

9. On July 11, 1975, you made a speech before the City Club of Portland, Oregon, widely referred to as the "Prophets of Shortage Speech," in which you launched a major attack on the motives of this Nation's conservation movement. Let me refresh your memory with a few quotes from that speech: "It is no longer just a conservation movement, but a crusade to stop all development in this country." "The greatest threat to the environmental movement is the environmental movement itself. Over the past several years, it has fallen into the hands of a small, arrogant faction which is dedicated to bringing our society to a halt. I call this faction the prophets of shortage. They are the anti-producers, the anti-achievers." Are these statements still an accurate portrayal of your attitude towards those people and organizations in this country who feel that energy conservation and the development of renewable energy sources are viable alternatives to building nuclear power plants? In this same speech you characterized the requirement to prepare an environmental impact statement, as required by the National Environmental Policy Act a "burdensome requirement upon a Federal agency . . . ." Did you in fact oppose the request of several environmental organizations that you prepare an environmental impact statement on the Bonneville Power Administration's proposed Hydro-Thermal Phase Two Program? What was the final disposition of any litigation on this issue of BPA's EIS on the Hydro-Thermal Power Plant II? Can you provide any relevant court judgments and opinions for the Committee record?

Answer. The speech to which the question refers was made by me at a time when Bonneville Power Administration (BPA) and I, as its Administrator, were experiencing an enormous sense of frustration arising from a series of lawsuits which we felt were aimed not so much at achieving the true intent of the National Environmental Policy Act—preservation of a clean and wholesome environment—as at bringing to a halt virtually every effort on the part of BPA and the publicly- and investor-owned electric utilities in the Pacific Northwest to provide energy to the people of the region. At the time, virtually every participant in the regional power systems foresaw the prospect of a severe shortfall in energy resources during the decade ahead, yet litigation brought under NEPA threatened the very existence of Phase 2 of the Hydro-Thermal Power Program, which BPA and its over 100 customers with diverse interests carefully had worked out to the end that people could have jobs and the other social benefits of an adequate energy supply.

In that speech, I urged my audience "to take up this dialogue." To my chagrin, I learned that verbal challenges as I issued that day can be counter-productive. I now realize that, regardless of the amount of frustration one feels when those programs and policies in which he earnestly believes are sidetracked by antagonists who have equally earnestly held convictions, dialogue is better served by lowering the temperature of the rhetoric.

I am acutely aware that, to be successful as Secretary of Energy, I first must succeed in the commitment I made to the Committee in my opening statement—"to work with you and others toward a broadened energy consensus in the United States." In my first four weeks as Secretary of Energy, I already

have begun that effort by, among other things, meeting with a substantial number of leaders of environmental and conservation organizations to engage in an exchange of views concerning a broad range of energy issues. The discussions have been cordial, straightforward and, I believe, beneficial for all concerned. I have asked my staff to try to arrange follow-on meetings in the near future. I am satisfied that, while the present leadership of environmental and conservation organizations may have some policy disagreements with me, we can interact with each other in a manner which, based on mutual respect, will produce the broadened energy consensus I seek.

In all fairness, I suggest it would be appropriate to note that the persons who bore the brunt of my remarks over seven years ago purposefully were described by me as being a small faction—in contrast to what I termed "the responsible majority of environmentalists," and that I specifically stated: "I have no quarrel with that Act (NEPA) or what I believe to be its intent. We have a right to demand both a clean environment and economic opportunity." Neither should one lose sight of my warning that we must avoid both excesses—unrestrained development and abuse of the NEPA process—and that I wholeheartedly endorsed the suggestion of the then-Governor of Oregon, with whom I otherwise had political differences, that we as a society must adopt a "common sense" approach to development and environmental problems.

I have no personal quarrel with the people and organizations whom the question describes as feeling that "energy conservation and the development of renewable energy sources are viable alternatives to building nuclear power plants." As my opening statement to the Committee made plain, those are exceptionally important energy resources which I long have supported and intend to continue to support at the Department of Energy. Nevertheless, as I stated to the Committee, I believe in "the need for a broad mix of energy resources, ranging from conventional to renewable to exotic."

It is true that the Natural Resources Defense Coucil and other environmental organizations did request BPA to prepare an environmental impact statement (EIS) in regard to Phase 2 of the Hydro-Thermal Power Program referred to in my 1975 speech. BPA already had prepared a draft EIS, entitled "BPA Participation in Regional Interutility Cooperation," which it believed was appropriate, although the Chairman of the Council on Environmental Quality later disagreed. More importantly, the BPA legal staff and the attorneys representing one of the major BPA customers scheduled to sign a contract implementing Phase 2 (known as the Umatilla contract) were of the strong and unanimous view that no EIS was required because, since Phase 2 was a cooperative enterprise between BPA and wholly nonfederal participants, it was not within the scope of NEPA. On the basis of that legal advice, I rejected the abovementioned request for an EIS on Phase 2.

Subsequent litigation held that, because of "federal enablement" of the regional power program, an EIS should be prepared. In one of those cases the court specifically determined: "The record indicates that defendants acted in good faith in not preparing an EIS before signing the Umatilla contract. Another federal court had ruled in their favor in related circumstances." *Port of Astoria* v. *Hodel*, 5 ELR 20657, 20660 (D.Or. 1975) (emphasis added), affirmed 595 F.2d 467 (9th Cir. 1979).

The trial and appellate court opinions in the two, separate cases involving these matters are included for the Committee record in the Appendix hereto. In compliance with court directives to prepare EISs, BPA did so, and the litigation thereafter was dismissed.

Mr. McCLURE. Mr. President, in addition to the extensive discussion of these issues contained in the previous answers, Mr. Hodel at my request also submitted to the committee a letter of December 8, 1982, containing a narrative response to critical comments contained in the testimony of other witnesses at his nomination hearing. I ask unanimous consent that a copy of Mr. Hodel's letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF ENERGY,
Washington, D.C., December 8, 1982.

Hon. JAMES A. MCCLURE,
Chairman, Committee on Energy and Natural Resources,
Washington, D.C.

DEAR MR. CHAIRMAN: On Monday, I delivered to the Committee some additional materials in response to certain questions asked of me at my December 1, 1982 confirmation hearing, as well as my responses to written questions which some Committee members and other Senators propounded after the hearing.

At the confirmation hearing, Senator Baucus expressed various concerns he had about my nomination. He was kind enough to direct written questions to me concerning the issues raised in his testimony, thereby affording me the opportunity to respond to his concerns. The materials I delivered for the record contain what I trust is an appropriate and adequate response to those questions from Senator Baucus.

Certain outside witnesses also testified at my confirmation hearing. Some of them based their views concerning my nomination of their opposition to the Administration's policies concerning energy. My opening statement to the Committee and my responses to the oral and written questions make plain my support for the President's position on energy policy. I have stated my intention to review the Department's FY 1984 budget recommendations to the President, including my focusing on the proper level and the priorities of future federal expenditures concerning energy programs. My opening statement emphasizes, among things, my long-standing philosophical commitment to the need for a broad mix of energy resources, ranging from conventional, to renewable to exotic.

A few of the outside witnesses who testified concerning my nomination made some rather sweeping, conclusory remarks about me. The broadened energy consensus which I seek would not be served by my replying to such clearly rhetorical, generalized characterizations which do not go to the substance of issues. Nevertheless, certain aspects of some outside witnesses' testimony so completely mischaracterized my actions as former Administrator of the Bonneville Power Administration (BPA) and/or my views on important energy issues that I would like to use this letter to comment specifically upon some of them.

BPA OVERSIGHT OF WPPSS PROJECTS NOS. 1, 2 AND 3

In his testimony, Mr. Scott, the Director of Federal Affairs for the Sierra Club, accused me of having "apparent disinterest" in regard to BPA oversight of the first three nuclear projects of the Washington Public Power Supply System (WPPSS). Question 2(D) from Senator Baucus asked for an explanation of the contractual arrangements governing BPA oversight responsibilities of those projects, and his question 2(E) asked whether I thought BPA oversight was adequate. My response to those two questions outlines the then-existing contractual limitations upon BPA oversight, the relationship between BPA, WPPSS, and the participating utilities, and some of my thoughts as to what might have been done differently, knowing what we know now. I am confident there is no factual basis for the suggestion of "apparent disinterest" in oversight on my part or on the part of the rest of BPA management.

Mr. Scott goes on to suggest that the dramatic increase in WPPSS construction costs is evidence of "neglect in performance" of BPA's oversight responsibilities. My views as to the likely causes of cost overruns on WPPSS Projects Nos. 1, 2 and 3 are set forth in my answer to Question 2(C) from Senator Baucus. The cost increases in no way establish lack of oversight, for I pointed out in my answer to that question from Senator Baucus that BPA did evaluate the WPPSS cost overruns and that, as I recall, they tracked in general the cost increases other utilities were experiencing with their nuclear projects. The BPA certainly had no responsibility for the slippages in the construction schedules of WPPSS (whether caused by its labor disputes, the need to conform designs to newly promulgated regulations or new technology, or otherwise) nor for the inflationary pressures on costs felt by those WPPSS projects and other major construction projects in the Nation during the 1970's.

Referring to testimony of Mr. Sterling Munro, my successor as BPA Administrator, Mr. Scott attempts to create the impression that the BPA staff had been aware of the difficulties in regard to oversight of WPPSS Projects 1, 2 and 3, but that I had been unwilling to do anything about it. Mr. Munro's testimony suggests no such thing; neither do the facts. As I pointed out in my answer to Questions 2 (D) and (E) from Senator Baucus, the relationship on oversight was continuously reviewed and adjusted throughout construction and, while I was BPA Administrator, we had discussed the possible need for an independent review of the WPPSS management systems. Those discussions culminated in an independent study commissioned by BPA shortly after I left. There were, of course, other outside studies of WPPSS management made after my tenure as BPA Administrator. Interestingly, one of them (rendered by Decision Planning Corporation in 1980) indicates that the inherent institutional problems which confronted BPA while I was Administrator remained difficult to resolve despite diligent effort of the parties.

THE WPPSS DECISION TO BUILD PROJECTS NOS. 4 AND 5

Role of BPA

In his testimony, Mr. Scott accuses me of having engaged in "polite coercion" of utilities in the Pacific Northwest to agree to Phase 2 of the region's Hydro-Thermal Power Program (HTPP), which included

construction of WPPSS Projects Nos. 4 and 5. Among other things, he plainly suggests that the Notice of Insufficiency issued by me to BPA's preference customers was part of that effort.

My response to Question 1 from Senator Baucus contains comments from me on the historical background of the development of the Hydro-Thermal Power Programs, my active participation in the development of a cooperative regional program as a follow-on to Phase 1 of the HTPP, my support for WPPSS Projects Nos. 4 and 5 as part of Phase 2 of the HTPP, and the need for the Notice of Insufficiency both to protect the federal government's obligations and interests and to give BPA's preference customers sufficient lead time to prepare for the day when BPA no longer could be committed to meeting their load growth because of the insufficiency of federal electric power system resources.

The July 20, 1982 report of GAO on the subject of BPA actions affecting utility participation in WPPSS Projects Nos. 4 and 5, which is included in the Appendix to my responses for the record, does not suggest any coercion on the part of BPA.

Regional power forecasts and conservation

Mr. Scott proceeds to attack the accuracy of the regional forecasts of electricity demand while I was BPA Administrator. He did not mention, as I did in my response to Question 4 from Senator Bumpers, the limited responsibility BPA had at the time in load forecasting, *e.g.*, the larger preference customers and all of the investor-owned utilities forecasted their own loads, and it was not until after enactment of the Pacific Northwest Power Planning and Conservation Act of 1980 (three years after I left BPA) that BPA engaged in its first independent regional forecast. Nor was there any acknowledgement of the difficulties inherent to forecasting a decade in advance, which included, insofar as the early and mid-1970's were concerned, not contemplating the economic downturn which began later on.

More important, however, is that Mr. Scott wholly erroneously suggested that I did not "warn" the region's utilities "about alternatives such as energy conservation" and that, as a consequence, those utilities which decided to participate in WPPSS Projects Nos. 4 and 5 on the basis of the regional forecasts somehow were let down by me. He quotes from an editorial about a 1974 speech I made about the need for additional generating capacity in the Pacific Northwest by the year 2000. Ironically, he did not tell the Committee that, in that very same speech, I plainly told my audience:

"There are a number of possibilities. We can substantially intensify the Nation's paltry research efforts into new and better ways to obtain energy. We can expand the Nation's fledgling energy conservation program to abate the high growth rate of overall energy use. We can prohibit or penalize some kinds of energy use that society deems frivolous and wasteful. We can set minimum performance levels of efficiency for energy-consuming products. We can amend the building codes to require better insulation so as to reduce space heating requirements in winter and cooling requirements in summer. We can allow energy prices to rise sufficiently to cover social costs by removing subsidies and other cozy institutional arrangements that have kept those prices artificially low relative to the prices of other products and thereby encouraged extravagant demand. We can remove barriers to entry into the energy business so as to encourage more competitive behavior. We can concoct a variety of incentives designed to expand development and use of plentiful fuels and discourage use of scarce and uncertain supplies. All of these possibilities and more are available as policy levers to ease us through the period of transition from the era of cheap and abundant oil and gas to the era of cheap and abundant solar energy or fusion energy."

Mr. Scott's referring to my public comments out of context is one thing, but I frankly would not feel comfortable, Mr. Chairman, if I ignored his charge that my "handling" of a study by Skidmore, Owings and Merrill (SOM) of potential energy savings through conservation "demonstrates * * * the lengths to which [I] wil go in order to bury facts which conflict with [my] proposals." Question 5 from Senator Baucus asked for my comments on BPA's handling of the SOM report, and my answer set forth a considerable amount of information which demonstrates that, rather than having been "buried," the views of SOM were the subject of rather considerable awareness and discussion on the part of utilities and the public both before and after utilities committed by contract to WPPSS Projects Nos. 4 and 5.

In my answer to Senator Baucus, I pointed out that, in April 1976, a meeting of BPA preference and other customers was held with SOM at the instigation of BPA. The Northwest Public Power Association (NWPPA) sponsored the meeting. In the announcement to its members, NWPPA stated that the session with SOM had been called, for among other reasons, to "inform Bonneville customers of the elements and progress of the [SOM] study" and to "review suggested conservation programs and recommend ways to make them effective." That meeting, which took place in the BPA auditorium, was attended by a broad spectrum of BPA preference customers, ranging from the largest municipal and public utility district systems to some of the smallest REA cooperatives.

Mr. Scott states the final SOM report was not made publicly available until after it was "leaked" in August 1976 and reporters asked me about it in September. He was mistaken. Records of BPA show that the SOM report was mailed on August 19, 1976, under transmittal letter of August 18, to the designated energy representatives of the Pacific Northwest Governors, the directors of the Public Power Council (which represents BPA's preference customers), investor-owned utilities, BPA industrial customers, and a number of environmental and other public interest groups including the Natural Resources Defense Council, Inc. and the Sierra Club, of which Mr. Scott then and now was an official. He states that BPA's transmittal letter (copy of which, along with the mailing list, are enclosed) expressed reservation about the SOM report. Properly so, in my view; but it did more than that, which Mr. Scott's testimony did not mention. The BPA said: "However, regardless of any apparent shortcomings or differences of opinion, the Skidmore, Owings and Merrill report provides input to an evaluation of the potentials of electric energy conservation. It can be a positive springboard for exploring various techniques which could open up avenues for achieving significant energy savings."

I do not believe I need take second place to anybody among those in the electric utility industry or in government at the time for publicly and repeatedly having urged the imperative nature of conservation. As my opening statement to the Committee points out and as my answer to Question 5 from Senator Baucus elaborates, the strong emphasis I placed in my speeches as Administrator on conservation and the need to treat it as a resource began long before it was fashionable to do so and continued right on to and through the time the region's utilities decided to go forward with the WPPSS projects in question. My personal commitment to cost-effective conservation as a way of life is no less strong today, and I intend to use my position as Secretary of Energy to continue to make the public aware of its benefits.

THE BPA DECISIONMAKING PROCESS AND THE PUBLIC

The testimony of Mr. Scott continues with the theme that I tried to keep the public from considering the effects of Phase 2 of the Hydro-Thermal Power Program by consistently "thumb [ing] [my] nose at NEPA's requirements" for an EIS in regard to the Program. My answer to Question 9 from Senator Tsongas deals with that issue by explaining that an EIS was not prepared because of the strong and unanimous view of BPA's legal staff, supported by numerous industry counsel, that no EIS was required because of the cooperative nature of the Program with non-federal entities. The federal court which later disagreed with that view nevertheless explicitly determined that BPA had "acted in good faith in not preparing an EIS" and that another federal court had ruled in BPA's favor in related circumstances.

Mr. Scott accuses me of a "penchant for decisionmaking behind closed doors * * *." For example, he points to a series of non-public meetings between BPA and its customers in early 1977 in which an attempt was made, following the region's inability to proceed with HTPP Phase 2, to figure out what could be done to meet the region's future power needs. Those meetings were called by the Pacific Northwest Utilities Conference Committee (PNUCC), of which BPA was not a member, to which BPA was invited because of the major role it historically had played in the Pacific Northwest. In response to requests, including the Sierra Club's, to attend those meetings, I personally established the policy that no BPA personnel would be allowed to accept the PNUCC invitations to attend meetings not open to interested members of the public. I am pleased that I was abled to use my good offices as BPA Administrator to broaden the participation in those meetings and, for example, that representatives of the Governors not only came to these meetings latter on, but they played an active role in the discussions.

Further mischaracterization by Mr. Scott's testimony of the BPA decisionmaking process occurred when he charged that "in 1979 it was finally disclosed that Bonneville had secretly agreed with Montana Power Company during Mr. Hodel's tenure to build a BPA-owned line to service a Montana powerplant under construction, at a time when it was telling local officials that the construction of such a line by BPA was only an 'option.'" The powerplant in question, as well as routing of the utility's then-proposed transmission lines, had been approved by the State of Montana on July 22, 1976. Because the proposed lines would cross federal lands, an EIS was begun in November 1976, with BPA as lead agency. I am informed that, in late August 1977, over

1,200 interested public parties were mailed a brochure describing the transmission route selection process and that news releases informed the public of the availability of the brochure. BPA did not have independent authority to build the transmission line, and it was not until December 2, 1977 that BPA formally agreed to seek Congressional authorization for that project. I am advised that the authorizaiton request was in the form of a specific budget line item, which was approved by Congress on October 18, 1978, several months after I left BPA.

CONCLUSION

I have nothing but profound respect, Mr. Chairman, for the democratic processes which enable persons and organizations to state their views to the Congress on matters of public interest, including nominations to the President's Cabinet. Hopefully, this letter will place in factual perspective some of the comments made in regard to me. Thank you for the opportunity to have done so.

Sincerely yours,

DONALD PAUL HODEL.

Enclosure.

August 18, 1976.

LETTER NO. 2 (SEE ATTACHED LIST FOR DISTRIBUTION)

In the preparation of its comprehensive Role Environmental Impact Statement, the Bonneville Power Administration has retained a number of consultants to develop analyses and base data reports as imput for the various sections of the EIS. Enclosed is one of these reports prepared by Skidmore, Owings & Merril on the potential for electric energy savings in the Pacific Northwest.

Our EIS section on conservation will draw upon this document as well as other regional and national, documents for source material. We expect the draft conservation section to be distributed through our normal review process for preliminary comment during September. Meanwhile, we recognize the regional interest in varied methods of conservation, and because of inquires on this subject, we believe an early distribution of this interesting report is warranted.

We caution the readers of this report that, although it addresses conservation through a presentation of seven strategies, the report itself is not complete when viewing the future electric needs of the region. For example, it is silent on the important question of the switch from other energy sources to the use of electricity and does not reflect conservation results already achieved through existing voluntary efforts. In addition, the reader should recognize that many of the proposals require new legislation for the incentive and mandatory features used as a basis for speculating on conservation results as well as a predicted net increase in employment.

The report may stimulate considerable controversy over assumptions, changes in individual lifestyle, social changes and basic data. We at BPA have reservations about many elements of the report and its conclusions. However, regardless of any apparent shortcomings or differences of opinion, the Skidmore, Owings & Merrill report provides input to an evaluation of the potentials of electric energy conservation. It can be a positive springboard for exploring various techniques which could open up avenues for achieving significant energy savings.

Let me repeat, however, that this report shold not be construed as a prediction that the need for electricity in the Pacific Northwest will be less than forecasted. New loads not now foreseen, coupled with the previously mentioned switchovers to electric energy from other energy forms, may increase the growth of electricity needs beyond that now forecasted. However, such important conclusions must await an in-depth study of may factors, including electric energy conservation.

Sincerely yours,

RAY FOLSOM,
Deputy Administrator.

GOVERNORS

Mr. LeRoy Hemmingway, Esq., Public Utility Commission, 3425 NE. 25th, Portland, Oreg.

Mr. Keith Sherman, Director, Washington State Energy Office, 1000 S. Cherry, Olympia, Wash.

Mr. Mike Mills, Office of Program Planning and Fiscal Management, House Office Building, Olympia, Wash.

Mr. Fred Adair, Executive Director, Office of Nuclear Energy Development, Department of Commerce and Economic Development, General Administration Building, Olympia, Wash.

Dr. Albert Tsao, Administrator, Energy Planning Division, Department of Natural Resources and Conservation, 25 South Ewing, Helena, Mont.

Mr. Keith Higginson, Director, Department of Water Resources, Statehouse, Boise, Idaho.

Mr. Matthew Mullaney, Office of the Governor, Statehouse, Boise, Idaho.

PUBLIC POWER COUNCIL—8/19/76

Mr. Robert B. Smith, Manager, Washington Rural Electric Corp. Association, South 222, Scott Street, Spokane, Wash.

Mr. Robert Gillette, Public Power Council, P.O. Box 1307, Vancouver, Wash.

Mr. Ron Chitwood, Washington Public Power Supply System, P.O. Box 968, Richland, Wash.

Mr. Peter Henault, Seattle City Light, 1015 Third Ave., Seattle, Wash.

Mr. Keith Parks, Eugene Water and Electric Board, P.O. Box 10148, Eugene, Oreg.

Mr. Edward Morris, Clark County PUD, P.O. Box 1626, Vancouver, Wash.

Mr. Thomas Wendt, Grant County PUD, P.O. Box 878, Ephrata, Wash.

Mr. Richard Downie, Snohomish County PUD, P.O. Box 1107, Everett, Wash.

Mr. Gene Lubking, Chelan County PUD, P.O. Box 1231, Wenatchee, Wash.

PRIVATE UTILITIES

Mr. R. B. Lisbakken, Vice-President, Power Resources, Pacific Power & Light Co., 920 S. W. 6th, Portland, Oreg.

Mr. Glenn Nogle, Superintendent, Power Operation, P. O. Box 3727, Spokane, Wash.

Mr. Glen E. Bredemeier, Portland General Electric Co., 621 S. W. Alder, Portland, Oreg.

Mr. L. E. Garlinghouse, Assistant Vice-President, Power Operations, Idaho Power Co., Box 70, Boise, Idaho.

Mr. David Knight, Puget Sound Power & Light Co., Puget Power Building, Bellevue, Wash.

Mr. R. A. Hofacker, Vice President, Engineering, Montana Power Co., P. O. Box 1338, Butte, Mont.

Mr. D. L. Bryner, Utah Power & Light Co., P. O. Box 899, Salt Lake City, Utah.

Mr. E. F. Timme, Director, Intercompany Pool, P. O. Box 3727, Spokane, Wash.

INDUSTRIES

Mr. Jack Holtzapple, Kaiser Aluminum and Chemical Corp., 300 Lakeside Drive, Oakland, Calif.

Mr. L. J. Harris, Aluminum Company of America, P.O. Box 120, Vancouver, Wash.

Mr. Bernie Goldhammer, Suite 310, Lloyd Building, 710 N.W. Multnomah, Portland, Oreg.

Mr. T. D. Briggs, Vice President, Intalco Aluminum Corp., P.O. Box 937, Ferndale, Wash.

Mr. Eric Redmond, 200 IBM Building, Seattle, Wash.

SPECIAL PEOPLE

Mr. Norman A. Stoll, Oregon National Building (1212), Portland, Oreg.

Mr. Lloyd K. Marbet, Forelaws on Board, 732 Southwest 3rd, Portland, Oreg.

Western Environmental Trade Association Inc., Suite 200, 2400 Southwest 4th, Portland, Oreg.

Mr. Donald H. Pearlman, Keane, Harper, Pearlman and Copeland (Attorneys), 3500 First National Tower, Portland, Oreg.

Mr. Thomas C. Lee, Asst. U.S. Attorney, Dept. of Justice, 506 U.S. Courthouse, P.O. Box 71, Portland, Oreg.

Mr. Larry Gutteridge, Lands Division, Justice Department, Appellate Division, Washington, D.C.

Mr. Myron R. Katz, Project Director, NW Energy Policy Project, 1096 Lloyd Building, 700 N. E. Multnomah, Portland, Oreg.

Mr. Daniel Steinborn, U.S. Environmental Protection Agency, Region X, 1200 Sixth Ave., Seattle, Wash.

REPRESENTATIVES

Mr. James Blomquist, Sierra Club, 4534½ University Way, NE., Seattle, Wash.

Mr. Larry Williams, Oregon Environmental Council, 2637 S.W. Water Ave. Portland, Oreg.

Dr. Ray Wolfe, 1926 Potter St., Eugene, Oreg.

Mr. Scott Reed, P.O. Box A, Coeur d'Alene, Idaho.

Mr. Terry Lash, Natural Resources, Defense Council, Inc. 2345 Yale St., Palo Alto, Calif.

Ms. Donna Klemka, 1711 37th, Seattle, Wash.

Mr. McCLURE. Mr. President, I am sure that any thoughtful reviewer of the materials provided to the committee by Mr. Hodel would agree that his answers reflect a striking demonstration of balance, integrity, and sensitivity. All of those traits qualify Mr. Hodel well for the Cabinet position of Secretary of Energy. I believe that these materials also should allay the expressed reservations of some regarding his suitability for this position.

Mr. President, the comments of one of our distinguished colleagues from Mr. Hodel's home State of Oregon at the nomination hearing add materially to the committee's confidence that Mr. Hodel will bring great credit to his position as Secretary of Energy. I should note that the Senate has known Mr. Hodel well throughout his professional career. Let me quote briefly from his remarks.

Senator PACKWOOD remarked:

I can simply say to those who will testify in opposition to Don that they will first find a perpetual open door in his office no matter how hard they may have fought his nomination. Secondly, they will be, I think, pleased to discover that they have many things that they will agree upon and when

they do, they will not have a more tenacious ally than Don Hodel. They will have a number of things that they will disagree on and they will find that they will seldom have a tougher opponent but I think in honesty they would have to say they will never have a fairer one or one who ever did an indecent thing in terms of the battle.

The government is lucky to have a man of his caliber. I would urge this committee to give this nomination speedy consideration and refer to the Senate floor so the country may have the privilege of this man occupying the office with the full confirmation of the Senate.

Thank you.

Mr. President, on the basis of the information and testimony that Mr. Hodel has provided to the committee, I have concluded that he is clearly well-suited for the job of Secretary of Energy. On behalf of the Committee on Energy and Natural Resources, I am pleased to recommend Senate approval of Mr. Hodel's nomination.

Mr. HATFIELD. Mr. President, I wish to associate my remarks with those who support the nomination of Donald P. Hodel to be Secretary of Energy.

It is a distinct pleasure to know Don Hodel personally and to have worked with him in State, regional, and now national politics for over 15 years. Regardless of my personal feelings, however, it would have been difficult for the President to have nominated a more qualified professional or a more competent individual to be our next Secretary of Energy.

Mr. President, Don Hodel's background and understanding of national energy markets and public policies affecting private energy production, research, and development are unique. These qualifications will prove invaluable as Don Hodel must now begin to weigh all the political, social, economic, and technical uncertainties which confront our national energy policies.

I am confident, Mr. President, that Don Hodel has the capability to become an outstanding Cabinet member and that his decisions as Secretary of Energy will indeed reflect a balance toward our national energy needs.

Mr. PACKWOOD. Mr. President, today, the Senate is asked to approve the appointment of Donald Hodel as the new Secretary of Energy. It is my hope that his appointment will be approved by the Senate without hesitation.

I have known Don Hodel for 35 years, since we met in high school. In 1969, he was appointed deputy Administrator of the Bonneville Power Administration, then under the direction of Russ Richmond. Russ Richmond was an excellent Administrator, well liked by all who had the opportunity to work with him. When he announced his intent to retire, everyone knew his shoes would be difficult to fill. Don Hodel was asked to replace Russ Richmond as the Administrator of BPA. No one could have done a better job.

Don Hodel is, by all counts, an extremely capable administrator. He has proven this throughout his years as Administrator of the Bonneville Power Administration and again as Under Secretary of the Interior with the current administration. I have found that those who have worked with him and under him have the highest respect for him personally and professionally.

I believe it is important for us to consider Don Hodel's excellent qualifications to be Secretary of Energy. In addition to being a very able and accomplished administrator, Don Hodel is experienced in energy matters and is personally a man of the highest integrity. Most important, all interested groups will find that Don Hodel maintains an open door to his office.

I wholeheartedly support the appointment of Don Hodel as the new Secretary of Energy. I hope the Senate will act quickly in approving this nomination.

Mr. THURMOND. Mr. President, I rise today in support of the nomination of Donald P. Hodel as Secretary of Energy.

In his years of public service as Administrator of the Bonneville Power Administration and Under Secretary of the Interior, Mr. Hodel distinguished himself as a capable and hard-working administrator. As Secretary of Energy, he will follow upon the heels of another capable and hard-working public servant, my good friend and fellow South Carolinian, James B. Edwards.

Secretary Edwards accepted his Cabinet position with the express purpose of working himself out of the job. While Congress has not as yet seen fit to abolish the Department of Energy and transfer its essential functions to other departments and agencies where they might be more efficiently administered, the list of major accomplishments during Secretary Edwards' tenure is quite impressive. I ask unanimous consent that a copy of this list appear in the RECORD immediately following my remarks.

The PRESIDIING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. THURMOND. I call upon my colleagues for their support of the nomination of Donald P. Hodel as Secretary of Energy, as I am sure he will prove to be an outstanding member of the President's Cabinet in every respect. I would also like to take this opportunity to wish Secretary Edwards well in his new post as president of the Medical University of South Carolina.

EXHIBIT 1

MAJOR ACCOMPLISHMENTS—CONGRESSIONAL, INTERGOVERNMENTAL, AND PUBLIC AFFAIRS

A large number of the Congressional office's accomplishments since President Reagan's inauguration were on Capitol Hill. The following examples show the many issues they pursued:

Approval of continued funding of the Clinch River Breeder Reactor was attained.

Efforts to keep the Congress from restoring Carter levels of funding were successful; the three fiscal year reduction is over $10 billion.

The off-gas provisions of the Fuel Use Act were repealed, and a dividend reinvestment provision enacted into law, both of which helped the plight of the Nation's utilities.

Throughout 1981 and 1982, groundwork was laid in industry and in Congress for the deregulation of natural gas, so that when the President makes his decision to go forward, the Administration will be ready.

Approval was obtained for the President's request on the Alaska Natural Gas Transportation System.

DOE responded to 8,787 Congressional letters, and 588 Departmental witnesses appeared before 296 committees, second only to the Department of Defense.

The Senate passed a comprehensive nuclear waste bill, and the House is close, with prospects good for a bill to be signed into law this year.

The President's position on price and allocation authority prevailed, and his veto of the Standby Petroleum Allocation Act was sustained.

In the areas of Public, Intergovernmental, and Consumer Affairs, again many concerns were addressed:

The Intergovernmental Affairs office led a successful effort to reform the method by which Federal agencies dealt with Indian tribes and the Marshallese Government.

The Consumer Affairs office was dramatically reduced, and the policies brought in line with those of the Administration.

The Department saved $12 million in films and $4.7 million on unnecessary publications.

More than 125 individual interviews were held with the Secretary and the Department's top officials.

Many efficiencies were accomplished by combining five offices under one Assistant Secretary. Staffing was reduced from 216 to 128 currently. Spending in the program was cut from $16.8 million to $7.5 million despite increased participation on Capitol Hill.

MAJOR ACCOMPLISHMENTS—CONSERVATION AND RENEWABLE ENERGY

In the Conservation area, DOE has completed a number of exciting tests for translation into the commercial market by industry. Examples are:

Assisted a major U.S. auto manufacturer in determining the optimum spark plug location for improving performance of internal combustion engines.

Successfully inspected and corrected hot steel slabs by heat sensor scanning without cooling, eliminating reheat and rolling operations.

Major advancements achieved in shape, fabrication, and materials strengths of structural ceramics, aiding Ford and GM in rotor construction.

Fuel economy improvement of 9 to 10 percent for heavy duty turbo-compound diesel demonstration.

Successful DOE-funded and directed development and test-marketing of high-efficiency refrigerator-freezer led to Amana production run of 1,000 units.

Several completed projects rapidly being implemented by the private sector:

Foam finishing of textiles on-line in 18 mills.

Advanced ceramic recuperator with 177 units on-line.

In the field of Renewable Energy, many alternative forms of energy are being explored and utilized. These are samples of progress:

The Sky Harbor Airport Project in Phoenix, Arizona, is the largest concentrator photovoltaic system in operation in the United States.

The Ten Megawatt Solar Thermal Power Plant at Barstow, California, is the largest in the world and it will demonstate the technical feasibility of solar thermal electric power generation in centralized application.

Installed and completed testing of the first cluster of multi-megawatt wind turbines; successfully synchronized into the Northwest power grid in the spring of 1982.

Photovoltaic sales have doubled. The solar hot water industry includes over 70 major solar equipment manufacturers and 1,800 installation firms, with estimated sales of $325 million.

Industry is actively commercializing the recovery of methane from landfills, with systems producing 9 megawatts and 21 million cubic feet of gas per day.

Within the Conservation and Renewable Energy program office, the following accomplishments have been achieved:

Reduction of the budget from $1,817 million to $1,016 million in FY 1982.

Personnel reduced from 691 to 416 in May 1982.

Selected 11 finalists in the Alcohol Fuels Loan Guarantee Program.

Reduced the regulatory impact on industry by:

Publishing a new Notice of Proposed Rulemaking which proposes no standards for eight appliances.

Reducing building energy performance standards from mandatory requirements to guidelines

Revising Residential Conservation Service regulations to minimize the regulatory input but still meet the legislative mandate.

MAJOR ACCOMPLISHMENTS—DEFENSE PROGRAMS

In the Nuclear Weapons Program, considerable progress since January 1981 has meant:

Meeting production goals for such strategic systems as Trident, Minuteman, Lance, and the Air-Launched Cruise Missile, always improving features, and enhancing safety and security while retiring older weapons.

Establishing the Coordination Information Center for all documents dealing with atmospheric nuclear testing and fallout in Las Vegas, Nevada, which is open to the public.

Increasing our cooperative efforts with the United Kingdom through testing and assistance with the Trident missile system.

Several achievements in the Nuclear Materials Production Program are:

Producing weapons-grade plutonium and tritium in excess of production goals.

Savannah River gained 159 extra operating days by operating 38 percent more efficiently.

Similarly, Richland gained 16 operating days.

Initiatives at several plants to increase nuclear material production capacity.

A ten-year extension of the agreement between DOE and Washington Public Power Supply System for the sale of N Reactor by-product steam, increasing Federal Government revenues by 69 percent from $37 million to $60 million in 1983.

The Inertial Fusion Program saw continued construction of three major high energy fusion driver facilities and substantial progress in our understanding of the laser beam.

In the vital area of Verification and Control Technology, DOE:

Continued its national multiple-technology nuclear test monitoring.

Developed, produced, and delivered space-borne nuclear explosion detection instrumentation.

Through identification of remaining vulnerabilities at critical facilities, the Department improved Safeguards and Security Systems for greater protection.

In support of the Defense Nuclear Wastes and By-Products Program, DOE:

Completed 25 new double shell tanks for interim storage.,

Began hot operations of the New Hydrofracture Facility and the New Waste Calcining Facility.

Completed drilling of 6-feet and 12-feet diameter WIPP shafts for continuous mining.

Completed cost reduction review of WIPP project generating savings of $200 million in construction and 20 percent in operating costs.

Completed environmental assessment selecting glass as the DWPF waste form.

Improvements were made in Classification Procedures by the Defense Program including a new approach for preparing classification guides and a major effort to improve the effectiveness of the DOE Classification Program.

MAJOR ACCOMPLISHMENTS—ECONOMIC REGULATORY ADMINISTRATION

Within the Enforcement Program, significant progress has been made as:

The working inventory of 1,031 cases was reduced to 660 cases, projected to be 173 by September 30, 1982.

The 365 cases involving 254 non-majors, 22 majors, and 52 special investigations were resolved.

Negotiations with six major companies (Ashland, Chevron, Fina, Getty, Union, Conoco, and Champlin) resulted in collection of $928 million.

Eighty-four non-major companies from crude producers to reseller/retailers negotiated settlements of $94 million.

Seventeen cases were referred to the Department of Justice.

Eighty-three Proposed Remedial Orders were issued alleging $3 billion in violations.

The size of the agency was reduced from approximately 1,800 to 589.

And 39 of 47 field offices were closed.

In order to greatly reduce the administrative burden on industry, the Fuels Conversion Program:

Made major modifications of the Fuel Use Act regulations enacted in 1981, simplifying the procedures under which the program is administered and giving utilities and industrial firms access to a greater choice of fuels without the cumbersome regulatory burden.

Initiated a study on the environmental impacts of the potential conversion to coal of 28 power plants at 15 generating stations in Florida. The purpose of the study is to assess the effect of a large number of plants switching from oil to coal.

In the Oil and Gas Imports Office, efficiency was increased through a new automated petroleum import licensing and accounting system designed and implemented to streamline industry reports on oil imports.

MAJOR ACCOMPLISHMENTS—ENERGY INFORMATION ADMINISTRATION

A great number of improvements have been effected in the areas of Data Collection and Statistical Reporting, including:

Redesign and consolidation of publications to reduce costs. An example is the Petroleum Supply Annual, which replaces four previous annuals.

A redesign of the petroleum marketing information system to more efficient, less costly, and less burdensome statistical collections, to be operational in January 1983. A similarly new petroleum supply data collection is to be operational in early 1984, and a study redesigning electric power data collection will be complete in September 1982.

Reducing the reporting burden by 6.3 million person-hours.

The Energy Information Administration repeatedly used its analytical resources on a variety of key energy issues as:

Energy projections up to five to seven years in the future.

Deregulation of natural gas.

The domestic uranium industry.

The Strategic Petroleum Reserve Sizing Report.

Coal production, emergency preparedness, and others.

Gathering information is not enough. Access to information is a necessary corollary. This important aspect has been enhanced by:

A weekly pre-publication recording for the public.

Development of a public use computer tape with 800 energy-related statistics for the public.

Completion of a Data Resources Directory, a comprehensive single-source inventory.

Concurrently, new methods of information quality assurance have been instituted to guarantee that the information product is improved, consistent, and periodically reassessed.

Finally, in the organization and management of EIA, significant improvement has come from:

Reducing the staff level by 300 and the budget by about one-half from $104 million in fiscal year 1982 to $55 million in 1983.

Establishing a Planning and Policy Review Board and an Annual Operating Plan for monitoring resource expenditures by project.

Consolidated contracts management to reduce administrative overhead.

MAJOR ACCOMPLISHMENTS—ENERGY RESEARCH

In support of the Department of Energy's focus toward long-range, high-risk technology research, the Office of Energy Research has accomplished major steps. The following are examples in the field of High Energy Physics:

Significant progress has been made toward the Spring 1983 completion of an upgrade of the accelerator at Fermilab. This Energy Saver project will allow the accelerator tunnel to operate at reduced electric power consumption and at a higher energy with savings of $5 million or more.

The Tevatron II construction project will give Fermilab a world-wide unique set of secondary beams with energies and intensities which will permit a significant extension of high energy physics experimental capabilities to new frontiers in research.

Recent progress in high energy theory has led to the astounding prediction that the

lifetime of the proton is so long that it is at the boundary of experimental limits for determination. Two new large water Cerenkov detectors have been assembled to detect proton decay events.

In the field of Nuclear Physics, great strides have been made in the past 18 months.

During a test in May 1982, scientists at Lawrence Berkeley Laboratory (LBL) accelerated uranium nuclei to an energy of 100,000 million electron volts, 20 times higher than the highest energy to which uranium nuclei had previously been accelerated on earth.

At the Bates Linear Accelerator Facility, the energy of electron beams was increased from 400 million to 700 million electron volts by recirculation through the same linear accelerator, almost doubling the beam at a small cost increase. This new research capability will be used to measure electric and magnetic fields inside nuclei.

In Basic Energy Sciences, progress occurred in construction of facilities and basic research. Some examples are:

In 1981, the construction of the Combustion Research Facility was completed. Work done at this facility has implications for improved fuels, higher efficiency engines, cleaner and more efficient coal combustion, and greater knowledge of pollutants.

The High voltage Electron Microscope (HVEM) was installed at LBL. This microscope, the most powerful and versatile in the United States, can allow direct observation of corrosive and high temperature phenomena impossible in a lower voltage instrument.

Development of a new method of fabricating a class of less brittle intermetallic compounds with applications in the automotive and industrial fields.

Discovery of a new class of compounds to be used to recover valuable elements like palladium from nuclear waste solutions.

Discovery of a micro-organism that is capable of converting the waste gas, carbon monoxide, into commercially-valuable compounds such as acetic acid.

In Health and Environmental Research:

Determined that classes of organic compounds in coal liquids are responsible for mutagenicity/carcinogenicity, and that these hazardous chemicals in shale oil and coal liquids can be markedly reduced.

Developed an improved scanning technique for bone cancer which has raised two-year survival rates six-fold.

Developed improved imaging systems and short-lived tracers making possible dynamic organ function studies of the heart, lung, thyroid, and kidney under normal and impaired states.

MAJOR ACCOMPLISHMENTS—ENVIRONMENTAL PROTECTION, SAFETY AND EMERGENCY PREPAREDNESS

A substantial effort was made to enhance our energy security through the Strategic Petroleum Reserve which produced:

An average daily fill rate of 300,000 barrels per day for seven months of 1981 with the highest rate of 513,000 barrels per day achieved in May 1981.

A long-term commercial contract, signed in August 1981, with Petroleos Mexicanos, the Mexican state oil company, for delivery of crude oil through July 1986.

An SPR total of 250 million barrels in April 1982 and nearly 160 million barrels added by July 1, 1982.

The NPR produced revenues of $2,413 million in this 18-month period, with oil production dedicated to the Department of Defense and military preparedness.

In the environmental analysis area of the Department, achievements include:

Technical analyses focused on proposed changes to the Clean Water Act, Clean Air Act, and acid precipitation issues.

The costs and benefits of technology-based standards and associated monitoring requirements regarding wastewater effluent permits issued by EPA were documented.

Medical care and radiological monitoring of Marshall Islands people continued, and a final report was completed for the Radiological Survey.

Comprehensive surveys to establish priorities for cleanup and cleanup progress of uranium mill tailing sites continued.

The area of Emergency Preparedness shows significant progress through:

Developed analytical data and interim procedures to support a market-based emergency energy preparedness position.

Supported and participated in a number of emergency preparedness and national security activities, including the Emergency Mobilization Preparedness Board, the REX series of government exercises, and NATO energy activities.

Established the Alert Coordination Officer System, the Energy Situation Reporting System, and the Emergency Response Working Group to enhance DOE preparedness.

In line with the Administration's effort to streamline the Federal Government, the Assistant Secretary for Environmental Protection, Safety and Emergency Preparedness:

Rescinded parts of the EECA Standby Federal Plan, coal allocation regulations, and the funding plan for state EECA grants.

Reduced data collection requirements from 296,000 to 36,000 manhours.

MAJOR ACCOMPLISHMENTS—FOSSIL ENERGY

The Administration's new tax and regulatory policies together with establishment of the Synthetic Fuels Corporation have made it possible for Fossil Energy to transfer responsibility for the commercial development of major synthetic fuel conversion processes to private industry. This action has avoided potential government outlays of over $8 billion over the next ten years for the construction and operation of demonstration plants.

The continuing government role for research and development has been clarified, and the Fossil programs have been redirected to focus on long-term, high-risk, high payoff generic research and technology base development. Examples of such research are:

Design of the SRC-1 demonstration module, allowing the private sector to pursue further development.

Operational testing of the Exxon Donor Solvent and H-Coal direct liquefaction processes at pilot plant scale has been completed.

As a participant in the National Fuel Cell Program, we achieved significant technology improvements in phosphoric acid, molten carbonate, and solid oxide systems. Commercialization is anticipated in the near future.

Technical feasibility of coal-oil and coal-water mixtures as substitutes for boiler fuel in utility applications could potentially displace 2-3 million barrels of oil per day.

Significant achievements in extraction, conversion, and combustion technologies achieved recently include:

Large scale testing of pressurized fluidized-bed approach to direct combustion with our British and German partners.

Testing of the methanol-to-gasoline conversion process by the United States and Germany in partnership with Mobil Oil.

Three atmospheric fluidized-bed industrial boiler demonstration projects have completed operational testing and await commercial offerings by industry.

Long-term field testing of the downhole stream generator has demonstrated commercial feasibility for enhanced oil recovery.

Fossil Energy has also: awarded a $2 billion loan guarantee to the Great Plains Gasification Plant to produce pipeline quality gas from lignite coal.

Concluded a price support agreement with Union Oil which will result in the production of jet fuel from oil shale.

MAJOR ACCOMPLISHMENTS—INSPECTOR GENERAL

Major accomplishments of the Office of Inspector General, in their oversight role at the Department of Energy, include:

During the first six months of fiscal year 1982 the Department sustained Inspector General recommendations to avoid spending over $30 million in one-time costs and realized another $17 million in annual recurring savings. The Department is also seeking to recover an additional $5 million based on Inspector General findings and recommendations. Six indictments, five convictions and seventeen reprimands, suspensions, and terminations were issued during this time period.

Issued 71 Audit and Inspection reports to date in calendar year 82, compared to 52 reports for the entire calendar year 81. In addition, 51 investigation cases were referred to other Federal investigative and prosecutive authorities.

Increased the available audit staff by 46 positions, which represents a doubling of the audit staff.

Established three field offices and quadrupled the field audit staff. This move away from the predominant Headquarters operation placed the limited audit resources closer to the Department's operations and programs.

Conducted vulnerability assessments of the management of a major Federal assistance program and one Energy Technology Center. The results from these pilot vulnerability assessments have been used by the DOE in implementing OMB Circular A-123 to improve internal controls in DOE.

Increased the number of issued Inspector General's Policy and Procedures Directives from 24 to 68, an increase of over 175 percent.

MAJOR ACCOMPLISHMENTS—INTERNATIONAL AFFAIRS

The International Affairs office has worked in support of a number of issues important to the Department of Energy. Some of these efforts are highlighted here.

United States/Mexican energy relations were significantly enhanced on a long-term basis as a result of a series of high-level exchanges.

The climate for nuclear energy is improved at the Nuclear Energy Agency with the appointment of a Director General from the United States and a commitment to focus on technical policy.

The subsequent arrangements process for transfer of nuclear material of U.S. origin from country to country has been streamlined. This has removed the backlog of outstanding requests and resulted in more timely and less costly processing.

At the International Energy Agency (IEA), the petroleum concerns focus on emergency response during a major (7 percent or greater) shortfall, relying primarily on market forces and national stockpiles. Line offices have increased their participation leading to improved understanding of obligations and ability to respond.

The IEA Committee on Research and Development (CRD) has been encouraged to concentrate on their government's focus on long-term, high-risk R&D and leave other efforts in the private sector.

Additionally, DOE program elements have increased their participation in the CRD leading to greater harmony between the United States Government and the IEA Committee on Research and Development.

Administratively, the International Affairs program office has reduced its staff from 152 to 60.

MAJOR ACCOMPLISHMENTS—MANAGEMENT AND ADMINISTRATION

In the area of general management, the office of Management and Administration took major steps to comply with the Administration policy of reducing government spending. Examples are:

Implemented improved internal controls within DOE as a deterrent to waste, fraud, and error.

Ensured timely actions were taken by DOE programs to resolve findings of GAO audit studies.

Provided staff support in Headquarters and field reorganization.

Consolidated office space for 4,000 personnel in the Forrestal Building.

Took the lead in an interagency task force recommending changes to the Davis-Bacon Act and Service Contract Act. The Davis-Bacon regulations were issued and will substantially reduce construction costs to the government.

In the area of Financial Management, improvement included:

Better credit management to prevent debt delinquencies and defaults.

Developed a comprehensive plan to terminate non-essential Departmental activities in the absence of an appropriation, continuing resolution, or other source of funds.

Acquisition Management efficiencies include the following:

Increased the use of competitive contracting.

Performed a comprehensive assessment of DOE procurement and assistance regulations to remove unnecessary burden.

Managed a program which exceeded the Department's Small Business goals by more than $300 million.

In the management of manpower, DOE accomplished important steps. Some of these are:

Provided staff support to the Secretary in the development and implementation of plans to streamline the DOE Headquarters structure resulting in abolishment of two Assistant Secretary level components, the restructuring and consolidation of management and support functions, and overall reduction in the number of organizations reporting directly to the Office of the Secretary from 27 to 9.

Redirected and strengthened the Department's implementation of OMB Circular A-76, Commerical and Industrial Services.

Conducted the analysis and developed the transition plan for the transfer of support functions from DOE to FERC targeted for FY 1983.

Program and Project Management improvements include:

Coordinated and requested the authority from the General Services Administration to intervene in utility rate cases before public service commissions and other rate making bodies in order to protect DOE interests as a consumer of utilities. These intervention efforts have yielded a savings to DOE of approximately $9.2 million per year.

Issued upgraded Departmental management directives to enhance safety and management of DOE nuclear facilities.

Finally, in the area of Information Management, DOE efficiencies are:

Development of the Department's first Information Resources Management Plan in response to OMB guidance.

Expansion of the Energy Data Base to include over 209,000 new descriptions of R&D results. This is an increase of items in the Technical Information Center energy data files to over 1.5 million entries available to DOE scientists, engineers, and program managers in support of their R&D programs. This integrated database saves DOE over $3.6 billion in time and materials and increases productivity over 50 percent.

MAJOR ACCOMPLISHMENTS—NUCLEAR ENERGY

In line with an overall energy policy of greater reliance on private enterprise and marketplace forces, Nuclear Energy programs have been restructured to pursue fewer, larger objectives tied clearly to national goals as expressed in the President's Nuclear Policy Statement. Examples of progress through restructuring:

The Fast Flux Test Facility has successfully accomplished full power test operation.

The Advanced Space Reactor Development Program was initiated in October 1981.

The Large Developmental Plant progressed from conceptual design in March 1981 to a Memorandum of Understanding for cooperative effort signed by the DOE and EPRI in July 1982.

Moved from responsibility for the West Valley Demonstration Project assumed in February 1982 to the final Environmental Impact Statement in July 1982.

In the area of Waste Management, a number of important steps include:

Prepared a record of decision selecting mined geologic repositories for disposal of commercial high level waste.

Successfully screened salt and tuff repository sites.

Completed conceptual designs for spent fuel and high-level waste packages for basalt, tuff, and salt.

Accelerated the date of the first permanent repository to 1998.

The role of the DOE in Three Mile Island Cleanup moved ahead in advance of schedule as:

A cooperative agreement was signed between DOE, GPU, and State of Pennsylvania on respective roles and funding levels.

Decontamination produced reduced rad levels.

TMI-2 reactor vessel explored by camera in July 1982.

Submerged demineralization liner vitrified into glass logs.

The Gaseous Centrifuge Enrichment Plant, the largest construction project in the U.S., remains on schedule and in budget as construction of process building #2 was initiated.

In the area of Uranium Enrichment:

New contracts have been signed with Egypt and Switzerland, with expected revenues of more than $1.5 billion.

Cascade improvement and uprating programs were completed at gaseous diffusion plants which will increase the separation capacity by about 60 percent.

MAJOR ACCOMPLISHMENTS—POLICY, PLANNING AND ANALYSIS

The diversity of studies and papers prepared by the Office of Policy, Planning and Analysis shows the great number of issues which they analyzed:

Published study entitled "A Study of Alternatives to the Natural Gas Policy Act" on the deficiencies of the NGPA, and directed the drafting of legislation to correct the deficiencies.

Issued the National Energy Policy Plan on July 17, 1981.

Completed the Sunset Review required under Title X of the DOE Organization Act of 1977.

Developed U.S. energy projections for submission to the International Energy Agency's Study Group on Long-Term Cooperation.

Completed the fiscal year 84-88 Strategic Program Planning Cycle for the Department.

Sponsored work group effort which brought about Cabinet Council mandate to investigate Federal role in problems of electric utility industry. This is a large ongoing effort targeted for policy positions in late 1983.

Published study entitled "Effects on Investment in Energy Conservation of DOE's Programs and Market Forces."

Prepared submission to FERC on a proposed incentive price for near-deep gas (between 10,000-15,000 feet).

Within the Administration, the single office most responsible for stopping the momentum established at EPA and State concerning Acid Rain agreements (with Canada) and a host of biased reports that would have seriously compromised the Administration. Also, published a report which clearly calculates the cost of controlling SO_2 from the utility sector and is being used as an important document to support the Administration's position on acid rain.

Responsible for the Department's position on the Clean Air Act which enabled the Secretary to be first to table, at the Cabinet Council, a set of comprehensive recommendations.

Provided support to the Secretary on Coal Slurry Pipeline, Clean Water Act and Coal Export Policy for the Cabinet Council.

Coordinated joint DOE/DOI OCS Leasing Announcement.

Developed (with Fossil Energy) DOE synfuels policy for the Secretary as Chairman of the SFC Advisory Board.

MAJOR ACCOMPLISHMENTS—OFFICE OF GENERAL COUNSEL

REGULATORY REFORM

Implemented the President's 1981 Order decontrolling oil, eliminating 203 separate sections of 10 CFR, and reducing the industry reporting burden by over 1 million reporting hours.

Substantially reduced federal regulation of industrial and utility fuel choice under the Fuel Use Act.

Reduced, in some instances by over half, regulations imposing federal control over energy conservation and reversed a proposal to impose federal efficiency standards for appliances, proposing instead a "no-standard" standard.

Conducted a Department-wide review of proposed and existing regulations to determine those appropriate for rescission or modification. As of late April, 70 regulations were targeted for further action, of which 8 existing had been rescinded, 12 proposed withdrawn, and 8 existing or proposed modified.

Developed in coordination with other agencies and industry a legislative proposal for nuclear licensing reform and obtained Administration approval.

PROGRAM SUPPORT

Negotiating and preparing contract, financial, and legal documentation for the Great Plains, TOSCO, and Union synfuels projects.

Implementation of the West Valley Demonstration Project Act, to permit transfer of the West Valley waste management project to DOE.

Pursuit of licensing for the Clinch River Breeder Reactor, resulting in the July 82 work authorization by the NRC to commence site preparation in advance of a limited work authorization.

Drafting, negotiating, and finalizing 23 new international research and development agreements.

LEGISLATIVE ISSUES

Federal Energy Reorganization Act.

Waivers for the Alaska Natural Gas Transportation System.

Standby Petroleum Allocation Act of 1982 (veto) and Energy Emergency Preparedness Act.

Comprehensive nuclear waste management legislation.

Assertion and defense of the principle that Congressional Committees may not participate in the negotiation of contracts by Executive Branch agencies.

LITIGATION-RELATED MATTERS

Numerous court decisions or settlements to return many millions of dollars in overcharges and interest under the oil pricing enforcement program. The largest such case is the stripper well litigation involving more than $1 billion.

Judicial reversal of laws in Illinois and Washington that would have prohibited transportation and storage of nuclear wastes.

Metzenbaum v. DOE, which upheld the President's authority to decontrol oil.

Judicial reversal of Washington State law that would have subjected bond issues for power plants to local referenda.

Settlement of a major class action sex discrimination case, Chewning vs. Edwards.

Negotiation of a compact with the Government of the Marshall Islands to settle radiation injury claims against the U.S., which will now go to the Marshallese residents for ratification.

Representation of DOE in approximately 90 RIF appeals. DOE has sustained in over 70 percent of the Merit Systems Protection Board opinions to date.

PATENT PROGRAM

In addition to several important victories in patent litigation, the General Counsel authorized a class waiver to encourage private sponsorship of research and development at DOE facilities.

MAJOR ACCOMPLISHMENTS—OFFICE OF MINORITY ECONOMIC IMPACT

A great number of efforts were undertaken by the Office of Minority Economic Impact to encourage the participation of minorities in opportunities in energy. Examples include:

Developed and implemented a DOE-wide Historically Black Colleges and Universities (HBCU) Plan to increase the participation of HBCU's in DOE programs and activities.

Began a National Information Clearinghouse on Minorities and Energy.

Enrolled 79 banks in the Minority Bank Deposit Program and increased the program from $17 million to $25.5 million.

Selected sites to establish energy-related Minority Vocational Training targeted towards Native Americans, American Blacks, and American Hispanics.

Issued final loan regulations for Minority Business Enterprises Loan Program and initiated operation of the program.

Identified Minority Business Enterprise Opportunities in DOE Program areas.

Initiated ten regional socio-economic impact analyses of energy on minorities. Five were completed.

Made recommendations for development of energy industry occupations for minorities.

Initiated market research, planning, economic, and business analyses for minority business enterprises.

Formulated a minority energy assessment model.

Instituted programs to increase joint activities between DOE National Laboratories and Historically Black Colleges and Universities. An agreement between Argonne National Laboratory and Atlanta University was signed on July 30, 1982.

Completed a solicitation request for a cooperative development energy program between industry, minority businesses and minority educational institutions.

MAJOR ACCOMPLISHMENTS—OFFICE OF HEARINGS AND APPEALS

During 1981 and 1982, the Office of Hearings and Appeals was responsible for a broad range of precedential decisions and orders concerning DOE. Administratively, the OHA office:

Reduced its inventory of pending cases from 677 to 535 cases, or 21 percent.

Established a new computer tracking system for refund applications.

Significantly improved its hiring and promotions of women (44 percent of the staff) and minorities.

Developed and implemented a new type of administrative proceeding; the special refund process for distributing refunds to persons injured by alleged regulatory violations which were settled by consent orders. Proposed or final refund procedures were established in 97 of 98 cases pending. In the first and most significant decision, refunds from the consent order were directed to be paid to 234 small, midwestern gasoline retailers.

The following cases constitute a representative sampling of OHA's primary function of analyses and adjudication:

Union Oil Company of California. This case represents the first occasion that the Nation's 14 largest domestic refiners were ordered to supply large volumes of crude oil to alleviate a disparity resulting from foreign contract and foreign spot market divergences.

In the Ashland Oil case, OHA ordered nine large domestic refiners to supply Ashland with 5,470,000 barrels of crude oil to alleviate a supply shortage that occurred when the President banned the importation of crude oil from Iran, preventing serious economic dislocations in Ashland's market area.

Phillips Petroleum Company was denied permission to file an amended entitlements reporting form by OHA because public policy and administrative efficiency require strict adherence to the specified reporting period.

States of California, Michigan and New York challenged consent orders agreed to by ERA and Standard Oil and Western Crude Oil. OHA upheld the integrity of the enforcement process and the finality of consent orders in particular.

Austral Oil Company, Inc. This decision finalized a proposed remedial order determining Austral to be liable for over $1,780,000 in pricing overcharges.

Chuck Hansen. In a Freedom of Information Act Appeal, an individual named Chuck Hansen sought a document entitled "weapons development during June 1958". OHA found that inadvertent inclusion of a classified portion with a declassified portion of the same document on the publicly accessible shelves does not cause the classified portion to lose its Restricted Data protection.

State of Delaware filed an Application for Exception which, if granted, would permit it to receive additional funds for expenses incurred in administering Cycle IV of the DOE Institutional Building Grant Program. After considering Delaware's submission regarding four criteria, the OHA found that the State had met these criteria and approved exception relief increasing its Cycle IV administrative grant to 10 percent of its program grant.

MAJOR ACCOMPLISHMENTS—BOARD OF CONTRACT APPEALS

The Board of Contract Appeals is a quasi-judicial tribunal established under the Contract Disputes Act of 1978 (P.L. 95-563). Significant accomplishments by the Board can be measured as they relate to the Board's caseload and their means of coping with it. Thus progress includes:

In response to a request made under its statutory mandate, the Board called to the attention of Office of Federal Procurement Policy (OFPP), OMB the fact that its workload has increased by more than 40 percent since October 81, and more than 465 percent since its last report to OFPP in October 78. All of this additional workload has been handled without an increase in the membership of the Board.

The Board heard and resolved a number of very large cases requiring the use of the "Manual for Complex Litigation." This is significant since it is generally assumed that one such case consumes one Administrative Judge year of effort. In addition to this workload, the Board is on final decision, or has disposed of 52 cases so far in 1982. This is equally significant because the Board's cases average the largest dollar claims before any Board of Contract Appeals in Government.

The Board's rate of settling cases continues to be the highest rate of any Board in Government, approximately 80 percent.

The Board assisted MA and OGC in the development and preparation of a new system for resolving employee discrimination litigation. The proposed new system reduces 4 levels of appeal and review into one final agency action and eliminates an estimated 75 percent of the time and effort involved.

The Board has been delegated a new function as the Patent Compensation Board. It assisted OGC in the preparation of applicable rules.

MAJOR ACCOMPLISHMENTS—ALBUQUERQUE OPERATIONS OFFICE

Significant accomplishments in the Albuquerque Operations Office occurred in several areas. In the Weapons Program:

First production unit of W-70-4 LANCE warhead achieved.

First production of W-70-3 LANCE warhead achieved.

Hot startup achieved on new $215 million plutonium Recovery and Waste Treatment Facility at Rocky Flats Plant. This unique facility was under construction for 10 years, and incorporates advances in technology gained from 25 years of experience in processing plutonium.

Started production of W-79 (8-inch artillery shell) warhead.

Started production of W80-1 (Air Launched Cruise Missile) warhead.

Met all quantitative year-end warhead production commitments contained in the Presidential Stockpile Directive by September 1982.

In the Waste Isolation Pilot Plant Project, progress was achieved by:

Value engineering study reduced project total estimated cost by $200 million (nearly 30 percent) and advanced projected completion date by 6 months.

Consultation and cooperation agreement concluded with State of New Mexico, first of a kind, leading to much improved political and public relations climate for the project.

Site and preliminary design validation phase of project progressing well within cost and ahead of schedule.

In resolution of the Uranium Mill Tailings Remedial Action Project, the Albuquerque Operations Office initiated vicinity site cleanup actions at Salt Lake City and Canonsburg, Pennsylvania, under interim cleanup standards.

MAJOR ACCOMPLISHMENTS—CHICAGO OPERATIONS OFFICE

As part of the April 1981 field reorganization, the Chicago Operations Office integrated within its management system four former Regional Offices, the Environmental Measurements Laboratory in New York, and the National Waste Terminal Storage Program Office in Columbus, Ohio, becoming the largest procurement center in the field, with 2,500 contracts and 4,000 grants.

Major organizational accomplishments:

Eliminated 100 positions, primarily from regional offices.

Established a new Chicago Operations Headquarters.

Increased minority representation to 17.1 percent.

Established the organization, plan, and procedures for monitoring the Great Plains Gasification Loan Guarantee and authorizing the disbursement of funds for this estimated $2.7 billion project.

Completed the phase-out of the four Regional Solar Energy Centers.

Major procurement, program, and project management accomplishments:

Important contributions to the Liquid Metal Fast Breeder Reactor program.

Major developments in the Battery and Fuel Cell Programs.

Major responsibility for field execution of the Industrial Cogeneration Program.

Achieved important technical milestones in diverse elements of the Magnetohydrodynamics Program.

Completed Decontamination and Decommissioning of six major facilities.

Significant milestones in important construction projects:

Completed the National Synchrotron Light Source at Brookhaven National Lab.

Completed conventional construction for ISABELLE and successful testing of the new Palmer cable superconduction magnet.

Fermilab was authorized to begin design and construction of Tevatron II.

The Tokamak Fusion Test Reactor nears completion.

Completion of construction of conventional facilities at the National Superconducting Cyclotron Laboratory, Michigan State University.

Progress was made in the development of a repository site in salt media for nuclear waste as part of the National Waste Terminal Storage Program.

Managed grant-in-aid programs in energy-related areas providing financial and technical assistance to state, local, and tribal governments in 10 states, the District of Columbia, and two territories, involving more than 8,000 grants over the last 18 months.

MAJOR ACCOMPLISHMENTS—HANFORD OPERATIONS OFFICE

Areas of greatest progress include:

Construction and startup testing were completed on the $647 million Fast Flux Facility, the world's largest and most sophisticated facility for testing fuels and materials for liquid metal fast breeder reactors. This represented the successful culmination of a 15-year engineering, construction and testing effort. The plant is now performing its test mission.

A two-year program has been completed using the Near Surface Test Facility located in Gable Mountain to determine the response characteristics of the Hanford basalts when exposed to the high temperatures associated with spent fuel and high-level wastes from commercial nuclear plants. Site characterization work continues.

The conversion of N Reactor to weapons grade plutonium production began in Feb. 82, and will be completed in Oct. 82. The 860 MWe equivalent reactor is scheduled to continue producing weapons grade plutonium at least through the 80's, while providing by-product steam for the production of electricity in the Pacific Northwest.

A ten-year contract extension running to 1993 has been executed for the sale of the N Reactor steam to the Washington Public Power Supply System (WPPSS). Since 1966, over 50 billion kwhr of electricity has been delivered to the Pacific Northwest from the DOE/WPPSS facilities.

Significant progress was achieved toward the Spring, 1984 restart of the PUREX (Plutonium-Uranium Extraction) Plant which has been in a standby condition since 1972. When operational, PUREX will process fuel from the N Reactor to recover plutonium and uranium. A major milestone in the restart effort was the initiation of Enhanced Readiness Testing in July 1982. This testing is a subsystem by subsystem operation of the PUREX solvent extraction system using previously processed uranyl nitrate and, later, unirradiated fuel.

Containers of zeolite from the Three Mile Island Unit 2 were shipped to Hanford where Battelle-Pacific Northwest Laboratory is demonstrating the process of solidifying the inorganic resin, utilizing an adaption of the radioactive waste vitrification process. The zeolite is being used to remove the radioactive cesium and strontium from the contaminated water at Three Mile Island.

Construction was completed on the Commercial Nuclear Steam Generator Examination Facility and operations initiated in January 82. A 200-ton steam generator from the Surry (Virginia) Nuclear Plant has been placed in the facility for evaluations to determine why it failed prematurely. Nondestructive testing and decontamination studies will be performed which will help to better understand corrosion problems and develop techniques to better evaluate the integrity of the steam generator tubing. The NRC and international sponsors will jointly fund the research effort over the next five years.

MAJOR ACCOMPLISHMENTS—IDAHO OPERATIONS OFFICE

Loss of Fluid Test Facility—Continued successful testing included such tests as large-break, loss-of-coolant experiments, reactor shutdown without control rod insertion, and restarting of primary coolant pumps.

Advanced Test Reactor Operations—ATR, used in developing advanced nuclear fuel system and materials for power reactor programs, set a new record for running at effective full power.

DOE formally assumed responsibility for the West Valley Demonstration Project site on Feb. 25, 1982. West Valley Nuclear Services Company (a Westinghouse subsidiary), under the administration of the Idaho Operations Office, will proceed with evaluations of removing the high-level waste from tanks and evaluating the option of utilizing the existing facilities for the waste solidification equipment.

The Waste Calcining Facility (WCF) was retired on March 16, 1982 after 18 years service. September 1982 marks the dedication of the New Waste Calcining Facility (NWCF). It will incorporate the basic WCF process with many improvements and have approximately 30 percent more waste processing capacity.

Technical reviews of various issues have been conducted on nearly 70 commercial power plants, including some CRBR Preliminary Safety Analysis Report sections.

An initial "quick look" examination of the TMI-2 core was accomplished on July 21, 1982, by a miniature camera lowered through an opening in the central control rod assembly. This examination showed no evidence of any melting of the fuel or structural materials.

The Power Burst Facility has been used to conduct numerous tests for NRC, following the TMI-2 accident, providing data from such scenarios as the Power-Cooling-Mismatch test series, the Loss-of-Coolant Accident test series, and the Operational Transient test series. Approximately 40 high-priority tests have been conducted to date since the accident.

Completed irradiation experiments in the Engineering Test Reactor's Sodium Loop Safety Facility. This in-pile sodium loop was designed to provide prototypic fast reactor safety-related phenomena.

Low-Head Hydroelectric Demonstration Projects—The Department of Energy's participation in a hydropower project has been completed as marked by the dedication of the City of Idaho Falls' Bulb Turbine Project as the second of three bulb turbines came on line in July 82. The final plant will come on line in September 82. The City was the first in the United States to utilize bulb turbine technology. The entire project will be completed at a cost of approximately $58 million of which $7.3 million has been provided by a cooperative agreement with

DOE. Idaho Falls power costs about two-cents/KWH.

Since construction was completed in FY 81, the Component Development Integration Facility, which is operated for DOE by Mountain States Energy, Inc., has been conducting a successful series of tests on MHD components.

—

MAJOR ACCOMPLISHMENTS—NEVADA OPERATIONS OFFICE

The prime mission of the Nevada Operations Office is managing and conducting the underground nuclear testing program designed to assure the successful development of the nuclear arsenal for the military services. All such tests have been executed in accordance with international treaties; no leakage of radioactivity has been detected beyond the boundaries of the test site and no unacceptable environmental damage has been incurred.

In order to support the Air Force mission, the Nevada Operations Office mobilized its contractors to execute a construction program for facilities in Central Nevada valued over $100 million. The projects were completed on schedule and within cost ceilings. NV has also supported construction of test projects for the MX missile and has participated in nuclear weapons tests designed to aid the DOD in understanding the effects of nuclear weapons on various materials, equipment, and weapons components.

Research and development on radiation detection equipment; the development of new techniques and procedures for logistical movement, enlargement and repackaging of communications equipment and capability; and more rapid evaluation of threat messages are recent steps to enhance the rapid deployment and efficient operations of the DOE's nuclear emergency search team.

New attention toward NV's programs for test treaty verification includes plans and procedures for deployment to Russia of a DOE team of highly-skilled scientists and technicians with modern equipment designed to monitor nuclear tests by the U.S.S.R. for compliance with yield constraints contained in the treaties.

NV has developed a system for enhancing U.S. national detection means. A network has been established for measuring and recording seismic data via satellite communications.

NV has been investigating various means for interim retrievable storage of spent fuel in both surface and subsurface environments, and for long-term disposal of all forms of high-level waste in deep geologic formations of tuff, a hard rock of volcanic origin. Studies thus far on tuff as apotential disposal/isolation media look very encouraging. It is planned to construct a deep exploratory shaft into the tuff formation next year to study further the acceptability of this media as a location for a high-level waste repository.

An on-going experiment at the Nevada Test Site is measuring the reaction on a host granite formation of 11 spent reactor fuel elements placed in a tunnel 1,400 feet beneath the Earth's surface. This facility has proven the technical feasibility for remote handling and emplacement of these elements.

—

MAJOR ACCOMPLISHMENTS—OAK RIDGE OPERATIONS OFFICE

General accomplishments include:

Administration of 292 uranium enrichment contracts exceeding $2.8 billion.

Management of seven research facilities and administration of 700 contracts for offsite R&D.

Excluding the Gaseous Centrifuge Enrichment Plant (GCEP) and the Clinch River Breeder Reactor Plant Project, management of construction work involving 68 active Line-Item Projects.

Some specific programmatic accomplishments are:

For the Clinch River Breeder Reactor Plant Project, overall plant design is 88 percent complete and R&D work is approximately 97 percent complete. Firm fixed-price contracts for site work and the plant steam generators have been awarded.

Continued engineering development and construction of the $7.5 billion GCEP on schedule and within cost estimates. The GCEP Demonstration Facility was completed ahead of schedule and is operating with the process gas, Uranium Hexafluoride.

Gaseous diffusion plants resulted in $2.8 billion in revenues to DOE since January 1981.

Weapons production commitments have been met on a timely basis including process on five new weapons systems.

Excellent progress has been made in planning for and execution of a major utilities and equipment restoration program at the Oak Ridge Y-12 Plant.

Production commitments in support of increased reactor operations at the Savannah River and Richland sites have been met on a timely basis.

Efforts to develop a high quality alloy for breeder and fossil applications were particularly successful in fiscal year 81 by development of industrial and utility support for the alloy which is called 9 Cr-1 Mo and has superior high temperature structural qualities.

Studies determined a method for screening nitrosamine bearing foods for potential cancer producing agents that should be easier and more economical than current methods.

The Institute for Fusion Studies was established at the University of Texas at Austin as a center of excellence for theoretical studies with emphasis on fundamental plasma physics issues. The $10 million project cost is shared equally by the University and DOE.

Work has begun on cleanup at 14 of the 35 Formerly Utilized Sites Remedial Action Program (FUSRAP) sites.

Surplus Facility Management Program (SFMP) has completed design and construction of the most critical remedial actions at the Niagara Falls Storage Site to obtain control of radiation.

—

MAJOR ACCOMPLISHMENTS—SAN FRANCISCO OPERATIONS OFFICE

SCIENTIFIC AND ENGINEERING BREAKTHROUGHS

Energy Materials Research Co. has developed bonding of infrared reflective materials which would allow passive, radiative cooling during hot weather.

SUNTECH IV, developed by Sun Oil Co. for DOE, will be offered commercially as a foaming chemical for improving steamflood performance in heavy oil recovery.

Lawrence Berkeley Laboratory demonstrated a very high success rate of cancer treatment using heavy ion radiation where other treatment was difficult or impossible.

CONSTRUCTION

In April 1982, the Barstow Ten Megawatt Solar Thermal Central Receiver Pilot Plant generated 8.9 MWe net electric power to the Southern California Edison (SCE) grid. It is the world's largest solar central receiver power plant.

The Sodium Reactor Experiment (SRE) was successfully decommissioned and decontaminated in June 82. It was a "first" because it demonstrates the feasibility of reclaiming buildings and sites previously used for nuclear projects.

The time projection chamber built at LBL was rolled into the beam line at the PEP accelerator at SLAC in January 82.

A five-year joint DOE/State of Hawaii effort culminated in the 3 MWe Geothermal Power Plant in Hawaii.

The NOVA high energy laser conventional facilities were completed.

In early FY 82 successful operation of the Mirror Fusion Test Facility superconducting magnet along with its supporting cryogenic, vacuum and computer control systems was achieved.

The Laser Fusion Target Development Facility of LLNL was completed in July 82 at a cost of $7.6 million.

Phase A construction of the Sodium Pump Test Facility (SPTF) was completed.

The High Explosives Flash Radiography Facility was completed. This facility houses the Nation's most powerful linear-induction electron beam accelerator.

Magnetic Fusion Major Device Facility (TMX-U) was completed at LLNL in Dec. 82.

SIGNIFICANT TEST ACCOMPLISHMENTS

Sandia's air-fired downhole steam generator in California's Wilmington oil field logged 3½ months of run time. The City of Long Beach estimates that 1.8 billion barrels may be recovered using downhole steam generator technology.

A one-year field test of the injection of a temperature resistant chemical with compressed air and steam resulted in a four-fold increase in oil production rates.

The Clinch River Breeder Reactor (CRBR) prototype steam generator was installed in April 82 at the Energy Technology Engineering Center.

The Magnetic Fusion Doublet III Tokamak injected 5 megawatts of neutral beam power when all four ion sources were fired simultaneously.

—

MAJOR ACCOMPLISHMENTS—SAVANNAH RIVER OPERATIONS OFFICE

In the operations of the plant, progress was recorded as:

The production reactors performed with an Innage (percentage of clock time reactors were operating) of more than 80 percent, highest since 1974.

Fiscal year 1982 materials production was the highest since 1974, and 143 percent of the program milestone.

Reactors downtime has been minimized: reloading time in several reactors was the shortest in a decade.

33 percent increased production has been achieved by producing high purity plutonium for blending into weapons grade material.

A new fuel charge for the reactor will permit a 25 percent production increase.

In the separations process, plutonium processing levels achieved new highs and plutonium-238 heat source production was completed for qualification of flight thermoelectric generators for NASA's Project Galileo.

Concerning progress in the weapons facility:

On time delivery of weapon components to the military and weapon assembly plant.

The Reclamation Facility received an "Award of Excellence" upon completing its 50,000th reclamation; savings now exceed $100 million.

In the area of waste management:

Completed last 14 of 27 new waste tanks and achieved a significant reduction in the volume of waste generated per unit of product.

Developed a decontamination of waste salt solution using $50 million facility rather than previously required $600 million facility.

Shutdown the heavy water extraction facility to achieve a savings of about $10 million per year.

A number of safety improvements include:

Operated with no nuclear overexposures to personnel and extremely small releases to the environment.

Achieved no serious industrial accidents and lowest lost time injury rate compared to DOE Headquarters and all field organizations.

Several facility improvements:

Procurement of a reactor simulator to achieve more realistic and in-depth reactor operator training.

Installation of equipment to diagnose the most important causes of multiple alarms in the reactor control rooms.

A number of important environmental papers have been published in support of the National Environmental Policy Act.

Mr. KENNEDY. Mr. President, I oppose the nomination of Donald Hodel to be Secretary of Energy.

This nomination is a distressing continuation of this administration's record of dismal appointments in the area of environment and energy. First came James Watt, whose extremist attacks on our precious lands, air, and water have been repudiated by Congress and all citizens who share our obligation to preserve a nation that can truly be called "America the Beautiful" by the generations that will follow us.

Next came Anne Gorsuch, who has presided over the administration's efforts to decimate the Environmental Protection Agency, who has advocated a dangerous weakening of our laws for clean air and clean water, and who has refused to deal with the growing national crisis of hazardous wastes.

Then we had the nomination of James Crowell, whose previous association with the timber industry made a mockery of his responsibility to protect the Nation's forests.

Finally, there was Secretary Edwards. For the past 2 years, Mr. Edwards has been the point man for the administration's crusade to eliminate all support for conservation and alternate energy, while pushing multibillion dollar white elephants like the Clinch River breeder reactor. The energy policy of our Nation is in disarray. As a result of administration actions, including the veto of the Standby Petroleum Allocation Act and the failure to provide an adequate fill-rate for the standby petroleum reserve, we are unprepared to meet an energy emergency that would be caused by a new cutoff of imported oil. Natural gas prices are skyrocketing by as much as 40 percent; yet the administration's only response is to push for faster decontrol—which will mean more hardship for our senior citizens and a devastating blow to our already depressed economy. The administration has turned its back on conservation—the most cost-effective means of meeting our energy needs. And they have abandoned support of alternative energy sources—solar, wind, ocean, geothermal, that hold such promise for the future.

In the face of the dismal record of these three nominees, the nomination of Mr. Hodel is particularly disturbing. Mr. Hodel completes the front four of the administration line against the environment. During his years as Administrator of the Bonneville Power Administration, Mr. Hodel demonstrated a clear indifference to the interests of consumers in energy policy, and a hostility to conservation as an effective means of meeting energy needs.

As Under Secretary of the Interior, Mr. Hodel has been responsible for the day-to-day operations of the Department. He bears direct responsibility, along with Secretary Watt, for the disastrous policies which threaten our oceans, coastlines, parks, and Federal lands. As Chairman of the Minerals Management Board he has been directly involved in the administration's giveaway proposals for leasing public lands, including the Powder River Basin sale.

Mr. Hodel now claims to be an advocate and a friend of conservation. Yet in the past 2 years, a House subcommittee recently found that the Department of the Interior's own in-house conservation program has been seriously underminded.

The record is clear. Congress should not approve yet another Cabinet official who is insensitive to the future of our environment, and to the energy security of our country. In light of Mr. Hodel's own record and the administration's persistence in nominating individuals whose policies are contrary to the interest of the Nation, I must oppose this nomination.

SEVERAL SENATORS. Vote!

Mr. McCLURE. If there is no objection, let us proceed to the rollcall vote.

Mr. ROBERT C. BYRD. Mr. President, I think I should say that there is no desire for a rollcall so far as I know on the remaining two nominations on the calendar. That being the case, the Senate, following the rollcall on this, I assume would have the understanding that there would be no rollcall votes on the other two nominations, if the majority leader would wish to dispose of them by unanimous consent first to clarify the matter for everyone.

Mr. BAKER. Mr. President, I thank the minority leader.

Mr. President, I would be most pleased to do that.

Let me put this request then, if I may.

Mr. President, in respect to Calendar Orders No. 1058 and 1059, nominations of Martha O. Hesse, of Illinois, and Henry R. Folsom, of Delaware, I ask unanimous consent that they be considered en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

(The nominations considered en bloc are as follows:)

The PRESIDING OFFICER. The nomination will be stated.

DEPARTMENT OF ENERGY

The assistant legislative clerk read the nomination of Martha O. Hesse, of Illinois, to be an Assistant Secretary of Energy.

Mr. McCLURE. Mr. President, on December 7, the Committee on Energy and Natural Resources favorably reported the nomination of Martha O. Hesse to be Assistant Secretary of Energy for Management and Administration. The vote was 19 to 0. Miss Hesse appeared before the committee at the nomination hearing held on December 1.

The Assistant Secretary for Management and Administration has the responsibility for the full range of management activities within the Department, including personnel management, organization and systems analysis, manpower planning and analysis, budget and financial management, contracting and procurement, administrative services, management information systems, equal employment programs, and the activities of the Technical Information Center located at Oak Ridge, Tenn.

Since February of last year, Miss Hesse has served in two management positions within the Federal Government. She was Associate Deputy Secretary of the Department of Commerce, and beginning in May of this year, she served as Executive Director of the President's Task Force on Management Reform. Miss Hesse holds an MBA degree from the University of Chicago, and she has 15 years of management experience in the private sector. For 12 years she was director and chief operating officer of SEI Information Technology, a data processing consulting company located in Chicago.

In her testimony before the committee, Miss Hesse described how she intends to carry out the responsibilities she will assume as Assistant Secretary for Management and Administration. She stated:

I have come here today to tell you not that I am a government manager, but that I am a business executive who will utilize sound business practices in improving the operations for which I will be responsible. I

am committed to effectively managing the ongoing energy programs of the Department.

I believe my experience in the government is useful and demonstrates my commitment to manage well, using members of the career service who are the backbone of the management operations of government.

Mr. Chairman, I recognize that because of the continuing debate over the future of the Department of Energy, you and the other members of this committee are particularly concerned about the ongoing management and operation of the Department. Although the President has proposed to transfer the authorities and responsibilities of the Department of Energy to the Department of Commerce, and some other Federal agencies, I want to emphasize that as long as it remains as a separate department, I will do my best, within my areas of responsibility, to implement the energy policies and programs of the Reagan Administration, to fully discharge the Department's statutory responsibilities, and to act in accordance with the statutes that govern the structure and operation of the Department.

Mr. President, Miss Hesse has fully complied with the committee's rules requiring submittal of a financial disclosure report and a detailed information statement. On behalf of the Committee on Energy and Natural Resources, I am pleased to recommend Senate approval of the Presidential nomination of Martha O. Hesse to be Assistant Secretary of Energy for Management and Administration.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

The next nomination will be stated.

POSTAL RATE COMMISSION

The assistant legislative clerk read the nomination of Henry R. Folsom, of Delaware, to be a commissioner of the Postal Rate Commission.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the nominations were confirmed.

Mr. McCLURE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

DEPARTMENT OF ENERGY

NOMINATION OF DONALD P. HODEL, OF OREGON, TO BE SECRETARY OF ENERGY

Mr. BAKER. Mr. President, there is only one nomination remaining. The yeas and nays have been ordered. As soon as that rollcall is disposed of there will be no further rollcall votes tonight.

The PRESIDING OFFICER. The question is on agreeing to the confirmation of Donald P. Hodel to be Secretary of the Department of Energy.

On this question, the yeas and nays have been ordered and the clerk will call the roll.

The bill clerk called the roll.

Mr. STEVENS. I announce that the Senator from Arizona (Mr. GOLDWATER), the Senator from Illinois (Mr. PERCY), and the Senator from Connecticut (Mr. WEICKER) are necessarily absent.

I further announce that, if present and voting, the Senator from Illinois (Mr. PERCY) would vote "yea."

Mr. CRANSTON. I announce that the Senator from Virginia (Mr. HARRY F. BYRD, Jr.), the Senator from Colorado (Mr. HART), and the Senator from Hawaii (Mr. INOUYE), are necessarily absent.

The PRESIDING OFFICER. Are there any other Senators in the Chamber who wish to vote who have not cast a vote?

The result was announced—yeas 86, nays 8, as follows:

[Rollcall Vote No. 399 Leg.]

YEAS—86

Abdnor	Exon	Metzenbaum
Andrews	Ford	Mitchell
Armstrong	Garn	Moynihan
Baker	Glenn	Murkowski
Bentsen	Gorton	Nickles
Biden	Grassley	Nunn

Baucus	Leahy	Sarbanes
Cranston	Levin	Tsongas
Kennedy	Riegle	

NOT VOTING—6

Byrd, Harry F., Jr.	Hart	Weicker
Goldwater	Inouye	
	Percy	

So the nomination was confirmed.

Mr. STEVENS. Mr. President, I ask that the President be immediately notified of the confirmation of all nominees who were confirmed in today's session.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STEVENS. Mr. President, has there been a motion to reconsider all the nominations which were confirmed today?

The PRESIDING OFFICER. No.

Mr. STEVENS. Mr. President, I move to reconsider the vote on all nominations which were confirmed today.

Mr. SCHMITT. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

LEGISLATIVE SESSION

Mr. STEVENS. Mr. President, I ask unanimous consent that the Senate return to legislative session.

The PRESIDING OFFICER (Mr. ARMSTRONG). Without objection, it is so ordered.

DEPARTMENTS OF LABOR, HEALTH AND HUMAN SERVICES, AND EDUCATION APPROPRIATIONS, 1983

EXPLANATION OF RECOMMENDATIONS OF COMMITTEE ON APPROPRIATIONS

Mr. SCHMITT. Mr. President, today the Labor, Health and Human Services, and Education appropriations bill for fiscal year 1983 (H.R. 7205) was reported to the Senate. Because of the limited time remaining in this lame-duck session, the committee agreed that it would not be possible to file a written report of its recommendations, await expiration of the required 3 days, and expect full floor debate and consideration of the measure, and also reach agreement in a conference on a bill with the House.

While the bill is not accompanied by a written report, the committee has prepared an extensive explanation of the measure and each recommended change. This explanation closely follows the format of a committee report, had one been filed, and in the absence of a written report, represents the intent and views of the committee. It should be made absolutely clear to all Federal agencies, that each directive, earmark, and request contained in this explanation is as applicable as if this were the actual committee report.

Mr. President, I ask unanimous consent that the full text of this explanation be printed in the RECORD so my colleagues may have the benefit of that information prior to floor consideration should it occur later this week.

There being no objection, the material was orderd to be printed in the RECORD, as follows:

EXPLANATION OF THE RECOMMENDATIONS OF THE SENATE COMMITTEE ON APPROPRIATIONS ON THE DEPARTMENTS OF LABOR, HEALTH AND HUMAN SERVICES, AND EDUCATION AND RELATED AGENCIES APPROPRIATION BILL, 1983 (H.R. 7205)

The Committee on Appropriations, to which was referred the bill (H.R. 7205), making appropriations for the Departments of Labor, Health and Human Services, and Education and related agencies for the fiscal year ending September 30, 1983, and for other purposes, reports the same to the Senate with various amendments and presents herewith information relative to the changes recommended.

Amount of comparable house bill (current year only)	$79,256,259,000
Amount of Senate bill over comparable House bill	5,975,737,000
Total bill as reported to Senate (current year only)	85,231,996,000

Amount of comparable appropriations, 1982	84,607,428,000
Budget estimates, 1983 (current year only)	73,965,761,000
The bill as reported to the Senate:	
Over the comparable appropriations for 1982	+624,568,000
Over the Presidential estimates for 1983	+11,266,235,000

BUDGET ESTIMATES

This report reflects all the budget requests submitted by the President to date, including proposals for later transmittal appearing in the appendix to the President's budget which have not yet been formally transmitted. In some instances, the program structure proposed by the administration has been adjusted to reflect current law, instead of legislative recommendations which have not yet been adopted. In the process of making this translation to current law appropriations structure, it has been necessary to make certain assumptions about allocating portions of the budget request to the current law format. Adjustments have also been made to delete amounts requested for items previously appropriated for the entire fiscal year in the current continuing resolution.

NEW PROGRAMS

The Committee did not consider funding for several newly authorized programs. Although budget amendments for some of these programs are or will be submitted, the Committee has not had sufficient time to study these proposals, which are normally examined through public hearings. Funding for newly authorized programs will be considered in a subsequent appropriations bill.

NEW GENERAL PROVISION

The current continuing resolution, Public Law 97-276, previously appropriated $105,000,000 for the entire fiscal year for five activities: immunization of children against communicable diseases, training of practitioners of family medicine and general dentistry, operation of the Runaway and Homeless Youth Act, support of the Chappie James Center at Tuskegee University, and nursing research. The Committee has therefore not included appropriations for these purposes in this regular bill, H.R. 7205. The Committee has also excluded these amounts from the relevant levels that this report shows for comparative purposes; i.e., from the tables and text intended to display the budget request and the House and Senate allowances for each relevant appropriation account.

It has, however, added to the bill a general provision (section 512) to ensure that the amounts previously appropriated for these five activities are not charged against other amounts in the bill (as would otherwise be required by the continuing resolution). The section is a technical one intended only to prevent bookkeeping mechanics that could inadvertently result in the loss of these five appropriations provided in the continuing resolution.

HIGHLIGHTS OF THE BILL

Community service employment for older Americans.—$286,800,000 is recommended, to provide an estimated 56,100 jobs for low-income, unemployed individuals over age 55; this is an increase of 1,900 jobs over the current level.

Veterans employment.—An earmark of $58,100,000 within funding for the Employment Service is recommended, for an estimated 2,000 staff to maintain the Disabled Veterans Outreach Program. In addition, $8,535,000 is included for the Veterans Employment Service, compared to $7,137,000 provided in fiscal 1982.

Health services.—$1,027,846,000 for health services activities, including the Primary Care and Maternal and Child Health block grants.

Centers for Disease Control.—$290,368,000 for disease control activities, including the Preventive Health Services block grant.

National Institutes of Health.—$3,999,887,000, including sufficient funds to maintain at least the 1982 level of new and competing research grants and training positions, and to pay full indirect costs.

Alcohol, drug abuse and mental health.—$858,561,000, including block grant funding and St. Elizabeths Hospital.

Health resources.—$194,338,000 for assistance to students and institutions to maintain the supply of trained health professionals.

Low income energy assistance.—$1,850,000,000 is included for the Low Income Energy program, $550,000,000 more than the requested level.

Social services block grant.—$2,450,000,000 is included, the full amount required by law for this entitlement program.

Human development services.—$1,754,194,000 is included to maintain current services for Head Start, and provide increases for selected programs serving the elderly and the developmentally disabled.

Child welfare services.—$572,669,000 is included to maintain the current level of child welfare assistance programs, and fully fund adoption assistance and foster care entitlement activities.

Community services block grant.—$348,000,000 is recommended to maintain the current level of grants to States for anti-poverty services.

Compensatory education for the disadvantaged.—$3,207,500,000, including $2,727,360,000 for grants to local education agencies.

Impact Aid.—$475,000,000 for school assistance in federally affected areas, the full amount authorized.

Education for the handicapped.—$1,110,252,000, included $970,000,000 for the State grant program.

Rehabilitation services and handicapped research.—$1,036,727,000, to maintain the current level of research, training, and special projects, while providing an increase for basic State grants.

Vocational and adult education.—$803,500,000, including $558,155,000 for basic State grants, $60,875,000 more than the fiscal 1982 level, and $95,000,000 for adult education.

Student aid.—$3,567,800,000 for student financial assistance programs, including Pell grants and work study.

Higher and continuing education.—$374,940,000, including special programs for the disadvantaged and strengthening developing institutions.

Libraries and learning resources.—$80,320,000, including $60,000,000 for public library services.

Corporation for Public Broadcasting.—$130,000,000 in FY 1985 advance funding, the authorized amount and the same as the House level.

Entitlement programs.—$60,223,313,000 is included for programs whose funding is considered mandatory under terms of existing laws. This is an increase of $5,816,557,000 over the House, which funded entitlement programs in anticipation of subsequent supplemental appropriations. Together with $1,924,341,000 of fiscal 1982 advances against fiscal 1983 appropriations, the total for mandatory items is $62,147,654,000.

TITLE I—DEPARTMENT OF LABOR

EMPLOYMENT AND TRAINING ADMINISTRATION

PROGRAM ADMINISTRATION

1982 comparable appropriation	[1] $91,465,000
1983 appropriation request	[1] 78,211,000
House allowance	Not considered
Committee recommendation	Not considered

[1] Excludes funding for the Work Incentives Program.

The Committee concurs with the House in deferring action on this appropriation, which provides for Federal administrative costs of the Employment and Training Administration. Funding for these activities will be considered together with the Employment and Training Assistance appropriation, which is also being deferred due to late enactment of authorizing legislation. In the interim, funding is being provided through a continuing resolution.

EMPLOYMENT AND TRAINING ASSISTANCE

1982 comparable appropriation	$3,031,844,000
1983 appropriation request	2,387,000,000
House allowance	Not considered
Committee recommendation	Not considered

The Committee concurs with the House in deferring action on this appropriation, which provides support for activities primarily authorized by the Job Training Partnership Act. Since this legislation was not enacted until October 13, 1982, the Committee has not yet held hearings to consider funding recommendations. Furthermore, the administration's budget request is based on a legislative proposal that was not enacted by Congress; no new budget request has yet been proposed under the Job Training Partnership Act. In the interim, funding for existing employment and training programs is being provided through a continuing resolution.

COMMUNITY SERVICE EMPLOYMENT FOR OLDER AMERICANS

1982 comparable appropriation	$277,100,000
1983 appropriation request	
House allowance	277,100,000
Committee recommendation	286,800,000

The Committee recommends an appropriation of $286,800,000 for Community Service Employment for Older Americans. This is $9,700,000 more than both the House allowance and the fiscal year 1982 comparable appropriation.

The administration made no fiscal year 1983 request for this program, which provides part-time jobs for unemployed low income persons aged 55 and over.

The Committee action will support an estimated 56,100 slots for the period July 1, 1983 through June 30, 1984, an increase of 1,900 over the current jobs level of 54,200.

The Committee concurs with the House in earmarking 78 percent of these funds for national contractors and 22 percent for

States. Such a split is equivalent to the current distribution of the program's funding.

The Committee urges the Department to seriously consider funding a national organization which would address the unique needs of Pacific Island/Asian American elderly under the Community Service Employment for Older Americans Program. The Committee understands that these citizens have significant problems due to their frequent limited English-speaking ability and that they are not represented satisfactorily by any of the current minority national organizations.

FEDERAL UNEMPLOYMENT BENEFITS AND ALLOWANCES

1982 comparable appropriation	$306,000,000
1983 appropriation request	35,000,000
House allowance	35,000,000
Committee recommendation	280,000,000

The Committee recommends an appropriation of $280,000,000 for Federal Unemployment Benefits and Allowances. This is $245,000,000 more than both the administration request and the House allowance. The recommendation is $26,000,000 less than the fiscal year 1982 comparable appropriation of $306,000,000.

The Committee's recommendation is based on the need for these mandatory benefits and allowances as estimated by the Congressional Budget Office. The Congressional Budget Office estimates that $172,000,000 is needed to operate the programs extant at the time the budget was prepared. This compares to the budget request estimate of $178,000,000. It should be noted that the Administration included an offset of $143,000,000 in this account for proposed legislation which was never enacted and which should, therefore, be disregarded in the appropriation of funds.

In addition to the $172,000,000 recommended for the above programs, the Committee recommends $108,000,000 for the newly-enacted increase in benefits for ex-servicemembers. No estimate of the costs for this program have been received from the Administration and current Congressional Budget Office estimates are being used.

This appropriation provides unemployment compensation benefits to special worker groups, including unemployment payments for former servicemembers, trade adjustment assistance payments for those affected by imports and payments made under other Federal programs which includes, in 1983, only payments made under title II of the Redwood National Park Expansion Act of 1978 to those displaced by the provisions of this Act. In 1982, unemployment insurance payments were also provided on the basis of public service employment.

The Committee recommendation is composed of $205,000,000 for ex-servicemembers, including funds for those benefits recently enacted, $65,000,000 for trade adjustment assistance and $10,000,000 for those affected by the Redwood Act.

GRANTS TO STATES FOR UNEMPLOYMENT INSURANCE AND EMPLOYMENT SERVICES

1982 comparable appropriation	$39,272,000
1983 appropriation request	22,200,000
House allowance	22,200,000
Committee recommendation	22,200,000

The Committee recommends an appropriation of $22,200,000 for Grants to States for Unemployment Insurance and Employment Services. This is the same as the House allowance and the Administration's request and $17,072,000 less than the fiscal year 1982 comparable appropriation of $39,272,000. In addition, $2,454,300,000 is recommended to be expended from the Employment Security Administration account in the Unemployment Trust Fund, which is $131,100,000 over the Administration's request of $2,323,200,000 and $75,400,000 over the House allowance.

Employment Service

The total recommended for the Employment Service is $825,600,000 including both Federal and trust funds. This recommendation is the same as the House allowance and $93,177,000 more than the comparable amount for fiscal year 1982 of $732,423,000 and $84,800,000 more than the President's budget request of $740,800,000. These amounts include contingency funds of $55,400,000 in fiscal year 1982 and $91,200,000 in fiscal year 1983, $9,800,000 over the President's request.

The Employment Service provides State assistance to job seekers, including job findings and placement, counseling, testing and other services to workers. State Employment Service Agencies also assist employers through labor market information, manpower planning, and information on job modification and personnel practices. Although funded primarily with trust fund resources, Federal funding is required for services to persons not covered by State unemployment compensation laws and for whom unemployment taxes, from which the tust funds are derived, are not paid.

The Committee recommends that an additional $84,800,000 in trust funds over the request be provided for the Employment Service to maintain the Service at 24,800 staff years. Approximately 21,800 staff years were requested in the President's 1983 budget, a reduction of 8,200 from the approximately 30,000 staff years realized in 1981. A further reduction in 1983 in the level of effort to the job market in these times of high unemployment is not warranted and appears to this Committee to be counter-productive. In fiscal year 1982, the administration estimates an average of 23,350 to 24,800 Employment Service staff years will be realized. The amount recommended for the Employment Service includes $58,200,000 and an estimated 2,000 staff to maintain the Disabled Veterans Outreach Program.

Unemployment Insurance Service

The total recommended for the Unemployment Insurance Service is $1,650,900,000 in the trust funds an increase of $75,400,000 over the House allowance. This is $112,377,000 more than the fiscal year 1982 comparable amount of $1,538,523,000 and $46,300,000 more than the President's budget request of $1,604,600,000. No Federal funds are recommended for this activity. In fiscal year 1982, $20,000,000 was provided in a supplemental appropriation for the operation of a Federal Supplemental Compensation program. The Committee has included an additional amount of $46,300,000 for the operation of the Federal Supplemental Compensation program in 1983. This is the same as the Administration's estimate and $3,800,000 over the House allowance. The recommended amounts include contingency funds of $511,144,000 in fiscal year 1982 and $535,976,000 for fiscal year 1983. The contingency amount for fiscal year 1983 is $46,300,000 over the President's budget request.

The Unemployment Insurance Service administers State unemployment compensation laws, with two major functions: the collection of unemployment taxes from employers and the payment of unemployment benefits. For fiscal year 1983 the State agencies are expected to collect $14,300,000,000 in State taxes and pay $19,900,000,000 in benefits to 9,200,000 beneficiaries under the Federal and State regular and extended compensation programs.

The Committee approves the request for an additional $6,200,000 for an enhanced Random Audit Program. The Random Audit process will provide resources for 20 State Employment Security Agencies to implement a random audit system of monitoring the rates of improper payments, identifying specific causes, and providing information to use in designing systems and procedures to significantly reduce the level of overpayments. The Committee also approves the President's request to add $425,000 to implement a limited number of automated systems that will reduce and help prevent fraud, waste, and abuse in unemployment benefit payments. The request reflects a reduction in reporting requirements and a redesign of essential national data systems. The Committee continues to look favorably on the added emphasis directed to improving the integrity of the unemployment insurance system.

The Committee also approves the reductions proposed by the President of $1,900,000 for unemployment cost model management and of $27,980,000 to increase productivity while still being able to maintain a high level of efficient and effective delivery of services for all claimants.

In the event economic conditions result in the need for increased appropriations to process mandatory workload of the Unemployment Insurance Service, the Labor Department is urged to promptly notify the Committee and seek whatever additional amounts are necessary. Unemployment Insurance Service staff should be adjusted quickly to insure expeditious handling of unanticipated workload increases; this should be done without diverting Employment Service staff, to avoid disruption of important job-finding activities.

ADVANCES TO THE UNEMPLOYMENT TRUST FUND AND OTHER FUNDS

1982 comparable appropriation	$4,318,000,000
1983 appropriation request	4,572,000,000
House allowance	3,798,000,000
Committee recommendation	5,411,000,000

The Committee recommends an appropriation of $5,411,000,000 for advances to the unemployment trust fund and other funds. This is $839,000,000 higher than the budget request and $1,613,000,000 higher than the House allowance. The recommendation is $1,093,000,000 higher than the fiscal year 1982 comparable appropriation. The Committee recommendation, taken together with $1,361,000,000 in unused 1982/1983 budget authority, will provide a total availability in 1983 of $6,772,000,000.

The advances to the unemployment trust fund and other funds account makes repayable advances to the extended unemployment compensation account, to the Federal unemployment account and to the Federal

employees' compensation account in the unemployment trust fund. Repayable advances are also authorized to be made to the black lung disability trust fund. Nonrepayable advances are also authorized to be made to the extent necessary to the Federal unemployment benefits and allowances account from which unemployment benefits are paid under various Federal unemployment compensation laws. Effective September 12, 1982, non-repayable advances are also authorized to be made to the Unemployment Trust Fund for the newly-enacted Federal Supplemental Compensation program.

The Committee recommendation is based on the budget request of $4,572,000,000 submitted in January, 1982 offset by $1,361,000,000 in unused 1982/1983 funds. The Committee further recommends adding $2,200,000,000 for the newly-enacted Federal Supplemental Compensation program which was enacted subsequent to the budget submission. The House allowance also includes this addition.

The House allowance is based on the Administration's mid-term review estimates for new budget authority and unused 1982/1983 funds. The Committee notes, however, that actual unused 1982/1983 funding available for 1983 programs is $1,361,000,000, $353,000,000 less than the $1,714,000,000 projected in July, 1982.

The Labor Department is urged to promptly notify the Committee in the event additional amounts appear to be necessary for the advances appropriation.

LABOR-MANAGEMENT SERVICES ADMINISTRATION

SALARIES AND EXPENSES

1982 comparable appropriation	$54,910,000
1983 appropriation request	60,153,000
House allowance	56,002,000
Committee recommendation	60,153,000

The Committee recommends an appropriation of $60,153,000 for the Labor-Management Service Administration, the same as the Administration's request and $4,151,000 over the House allowance. The recommendation is $5,243,000 more than the fiscal year 1982 comparable appropriation of $54,910,000.

The Labor-Management Service Administration provides assistance to unions, employers, and State and local governments in labor-management relations matters. It also audits and investigates labor organizations for compliance with Federal laws, including election and embezzlement investigations. Other responsibilities include administering veterans reemployment rights programs and pension and welfare benefit programs.

The Committee recommends restoring the House reduction of $4,151,000 and 150 positions to perform additional embezzlement investigations and financial audits in the Labor-Management Standards Enforcement Activity.

The Committee concurs with the House in allowing increases totaling $2,154,000 for such mandatory items as within-grade promotions, annualization of the Federal pay raise of October 1981, working capital fund charges, and supplies. The increases are partially offset by decreases totaling $1,819,000.

PENSION BENEFIT GUARANTY CORPORATION

1982 comparable appropriation	$91,075,000
1983 appropriation request	106,693,000
House allowance	106,693,000
Committee recommendation	106,693,000

The Committee recommends $106,693,000 for the Pension Benefit Guaranty Corporation. This is the same as the administration's request and the same as the House allowance. The recommendation is $15,618,000 more than the fiscal year 1982 comparable appropriation of $91,075,000.

The Committee recommends allowing the bill language requested in the President's budget, authorizing expenditures within the limits of funds and borrowing available to the Corporation. The Pension Benefit Guaranty Corporation's budget program for fiscal year 1983 includes benefit payments of $75,902,000, multiemployer financial assistance payments of $2,800,000 and administrative costs of $27,991,000. This includes an increase of 40 positions to enable the Corporation to adequately address major priorities and objectives in fiscal year 1983.

The purposes of the Corporation include encouraging continuation of voluntary private pension plans and guaranteeing payment of pension benefits to participants covered by plans that terminate.

EMPLOYMENT STANDARDS ADMINISTRATION

SALARIES AND EXPENSES

1982 comparable appropriation	$157,909,000
1983 appropriation request	169,296,000
House allowance	169,296,000
Committee recommendation	169,296,000

The Committee recommends an appropriation of $169,296,000 for the Employment Standards Administration. This is the same as the administration's request and the same as the House Allowance. The recommendation is $11,387,000 more than the fiscal year 1982 comparable appropriation of $157,909,000. In addition, the amount of $347,000 is recommended to be expended from the special fund in accordance with the Longshoremen's and Harbor Workers' Compensation Act. There is also $21,192,000 recommended to be transferred from the Black Lung Disability Trust Fund for expenses of operation and administration of the black lung benefits program.

This agency administers Fair Labor Standards Act legislation, including enforcement of minimum wage and compliance activities. It also administers worker's compensation programs, as well as Davis-Bacon and Services Contract Acts, which require determinations of "prevailing wages" to be paid under Government contracts. Also, included within the agency is the Office of Federal Contract Compliance Programs which enforce statutes and Executive orders prohibiting employment discrimination by Federal contractors.

Included in the recommendation is a program increase of $3,985,000 for increased ADP support for the agency. This increase is part of a five-year plan to integrate all of the agency's programs into a common system. This will provide managers and staff with the capacity to track cases or claims, provide management information, and provide daily operational capability to the employee benefit claims program. The remainder of the increases reflects such mandatory items as increased pay costs, annualization of the Special Targeted Enforcement Program and various increased miscellaneous costs.

The Committee notes that the Secretary of Labor, during fiscal year 1983 budget oversight hearings before the Senate Appropriations Subcommittee on Labor, Health and Human Services, Education and Related Agencies, testified that there were no plans to close black lung field offices. The Secretary further testified that the cost savings to be derived from closing black lung field offices would be $6,000 or less—the cost of building rental, and that if the closings necessitated additional staffing at the district level, no or little savings would be realized.

There are currently twenty-five black lung field offices which process telephone and walk-in inquiries for black lung beneficiaries and claimants. There are currently 26,500 black lung claims awaiting processing by the Department of Labor. The District Offices are already understaffed and claims are backlogged.

Despite the above, rumors persist and studies continue to be done on the closing of black lung field offices. In view of the above, the Committee directs that the Department of Labor take no action to close black lung field offices.

SPECIAL BENEFITS

1982 comparable appropriation	$348,892,000
1983 appropriation request	339,600,000
House allowance	339,600,000
Committee recommendation	339,600,000

The Committee recommends an appropriation of $339,600,000 for Special Benefits. This is the same as the administration's request and the same as the House allowance. The recommendation is $9,292,000 less than the fiscal year 1982 comparable appropriation of $348,892,000.

The special benefits appropriation provides resources necessary to meet required payments for compensation, medical costs, vocational rehabilitation and other benefits to those individuals eligible for assistance under the Federal Employees Compensation Act (FECA), and the Longshoremen's and Harbor Workers' Compensation Act.

Total estimated obligations for the FECA program are $1,089,000,000, which is $126,000,000 above the estimated fiscal year 1982 obligations of $972,000,000. Obligations in the FECA program are offset by collections from Federal and non-Federal agencies for costs of compensation and medical care incurred by the Department on behalf of the FECA recipients. FECA collections are estimated to be $762,000,000 in fiscal year 1983.

Total estimated obligations for the Longshoremen's and Harbor Workers' program are $3,600,000, which is $366,000 below the fiscal year 1982 obligations of $3,966,000.

BLACK LUNG DISABILITY TRUST FUND

1982 comparable appropriation	$769,450,000
1982 appropriation request	674,300,000
House allowance	674,300,000
Committee recommendation	674,300,000

The Committee recommends an appropriation of $674,300,000 for the Black Lung Disability Trust Fund. This is the same as the administration's request and the House Allowance. The recommendation is $93,055,000 less than the fiscal year 1982 comparable appropriation.

The Black Lung Benefits Revenue Act of 1977, companion legislation to the Black Lung Benefits Reform Act of 1977, established this Government-administered trust fund and shifted the fiscal responsibilities

of the program from the Federal Government to this trust fund. The Black Lung Disability Trust Fund will pay all black lung compensation, medical, and survivor benefit expenses when no responsible mine operator can be assigned liability for such benefits, or when coal mine employment ceased prior to 1970, in addition to all administrative costs associated with the operations of the program.

The Black Lung Benefits and Revenue Amendments of 1981, enacted December 29, 1981, legislates certain changes in the Black Lung program, intended to remedy the continuing deficit in Trust Fund expenditures and place the Black Lung program on a sound financial basis. Among the changes was a doubling of the excise tax on mined coal from which the trust fund is financed. It is estimated that with this tax increase, receipts will total $602,300,000 for fiscal year 1983. The $72,000,000 difference between the receipts and Trust Fund expenditures will be financed by advances to the Trust Fund by the Treasury. It is estimated that the 1981 amendments will eliminate the need for advances to the Trust Fund by fiscal year 1985 and enable the repayment of the advances back to the Treasury by fiscal year 1994.

The budget authority of $674,300,000 provides $463,455,000 for benefit payments to the 191,340 beneficiaries, $175,800,000 for interest payments on repayable advances, and $35,045,000 for administrative expenses.

OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION

SALARIES AND EXPENSES

1982 comparable appropriation	$195,465,000
1983 appropriation request	206,256,000
House allowance	206,256,000
Committee recommendation	204,256,000

The Committee recommends an appropriation of $204,256,000 for the Occupational Safety and Health Administration. This is $2,000,000 less than the House allowance and budget request. The recommendation is $8,791,000 more than the fiscal year 1982 comparable appropriation of $195,465,000.

The Committee has approved the requested program increases totaling $6,340,000 to provide for: training of field compliance personnel, increases in funding for regulatory analyses of proposed rulemakings, and increases in on-site consultation services to employers in States and jurisdictions.

This agency assures compliance with safety and health laws through inspections of business establishments, citations for violations and, where appropriate, financial penalties; develops standards upon which inspections are based; and provides consultative services for employers seeking information on how to voluntarily comply with the law.

The Committee also recommends including the appropriation language restrictions contained in the budget request. First, the bill includes the requested language which prohibits the assessment of penalties for first instance non-serious violations unless there are 10 or more such violations. Second, the bill includes the requested provision prohibiting the use of any funds for the proposal or assessment of any penalty against an employer of 10 or fewer employees in cases where the employer has previously requested on-site consultation and is in the process of making a good faith effort to correct the violations found during the on-site consultation. Third, the bill includes a new requested provision prohibiting the obligation or expenditure of funds to enforce or prescribe as a condition for initial, continuing, or final approval of State plans under Section 18 of the Occupational Safety and Health Act of 1970, State administrative or enforcement staffing levels which are greater than levels which are determined by the Secretary of Labor to be equivalent to Federal staffing levels.

There is included in the budget request new language limiting the amount of funds available to States for grants under Section 23(g) of the Act to $47,625,000, an increase in limitation of $3,925,000, to provide for mandatory increases, and specifying that these grants shall fund no less than 50 percent of the costs which the States are required to incur under plans approved by the Secretary. The Committee approves this request.

The Committee is concerned about the use of Federal funds for contract work, and has reduced the appropriation request by $2,000,000. With the reduction in funding, its is expected that contracts will be limited to only the most essential activities, such as those necessary to give the agency access to highly technical data that might not otherwise be available, so as not to adversely affect the quality and timeliness of standards proposals. In the past, these funds have supported interagency agreements with the National Bureau of Standards, the National Academy of Sciences and the Department of Agriculture.

MINE SAFETY AND HEALTH ADMINISTRATION

SALARIES AND EXPENSES

1982 comparable appropriation	$149,313,000
1983 appropriation request	153,828,000
House allowance	153,828,000
Committee recommendation	153,828,000

The Committee recommends an appropriation of $153,828,000 for the Mine Safety and Health Administration (MSHA), the same as the administration's request and the same as the House allowance. The recommendation is $4,515,000 more than the fiscal year 1982 comparable appropriation of $149,313,000.

Mine safety and enforcement functions were transferred from the Interior to the Labor Department in March 1978 as part of legislation mandating expanded activities. Activities include inspections of mines, health and safety standards, investigations of serious mine accidents, rescue operations, reducing work hazards, education and safety.

The Committee recommends $75,025,000 for the inspection of coal mines. This is the level of the budget request. Also recommended is $29,331,000, the level of the budget request, for the inspection of metal/nonmetal mines.

The Committee recommendation includes increases for such mandatory items as within-grade promotions, GSA space rentals, scheduled replacement of motor vehicles and other equipment, the annualized costs for the additional coal inspectors, and funding for staff years associated with the return of sand and gravel responsibilities to MSHA.

BUREAU OF LABOR STATISTICS

SALARIES AND EXPENSES

1982 comparable appropriation	$113,067,000
1983 appropriation request	120,143,000
House allowance	122,643,000
Committee recommendation	120,143,000

The Committee recommends an appropriation of $120,143,000 for the Bureau of Labor Statistics. This is the same as the administration's request, and $2,500,000 lower than the House allowance. The recommendation is $7,076,000 more than the fiscal year 1982 comparable appropriation of $113,067,000.

Activities of the Bureau include statistical surveys in the areas of: the labor force; prices and the cost of living; wages and industrial relations; productivity and technology; and economic growth and employment projections.

The request for 1,790 positions in fiscal year 1983 represents no change from the fiscal 1982 level. Each program conducted by the Bureau will retain the same number of positions as provided in the previous year.

The recommendation includes an increase of $7.1 million to meet the higher mandatory costs of space rental, telephone service, mail, data collection services, and other administrative expenses. The fiscal year 1983 request will allow the Bureau to maintain the quality and timeliness of the basic core of economic indicator for which it is responsible.

DEPARTMENTAL MANAGEMENT

SALARIES AND EXPENSES

1982 comparable appropriation	$89,882,000
1983 appropriation request	91,705,000
House allowance	91,705,000
Committee recommendation	91,864,000

The Committee recommends an appropriation of $91,864,000 for Departmental Management. This is an increase of $159,000 over both the administration's request and the House allowance. The recommendation is $1,982,000 more than the fiscal year 1982 comparable appropriation of $89,882,000.

In addition to the above there is to be transferred to this appropriation $8,752,000 from the Employment Security Administration Account, Unemployment Trust Fund and $13,097,000 to be derived from the Black Lung Disability Trust Fund account. Within these amounts $8,535,000 is included for the Veterans Employment Service, an increase of $1,398,000 over the fiscal 1982 level of $7,137,000.

This program includes salaries for Federal staff to direct all programs and functions assigned to the Labor Department. Activities include legal services, international labor affairs, promoting employment of the handicapped, civil rights enforcement, Women's Bureau, and the Veterans Employment Service.

The Committee has added $159,000 and 9 positions to the House allowance, in order to maintain the fiscal 1982 level of 79 positions for the Women's Bureau. The staff restored would strengthen the ability of the Women's Bureau to provide technical assistance to address the needs and concerns of women in the work force. It would also allow continuance of the women in apprenticeship initiative, providing training sessions on the most effective means of recruiting, placing, and retraining women in apprenticeship programs.

The Labor Department is directed to fill all Women's Bureau fulltime positions approved by Congress for fiscal year 1983, without making offsetting reductions in other Labor Department staff.

SPECIAL FOREIGN CURRENCY PROGRAM

1982 comparable appropriation	$67,000
1983 appropriation request	200,000
House allowance	67,000
Committee recommendation	67,000

The Committee recommends an appropriation on $67,000 which is the same as the House allowance and $133,000 below the appropriation request.

This program provides for direct funding from foreign currencies determined by the Treasury Department to be in excess of normal requirements of the United States for foreign service conference and consultations. These conferences help foreign service officers stay informed of current Department of Labor needs.

The $67,000 allowance will support a regional conference for all Labor Attachés.

OFFICE OF THE INSPECTOR GENERAL

1982 comparable appropriation	$32,755,000
1983 appropriation request	38,133,000
House allowance	38,133,000
Committee recommendation	38,133,000

The Committee concurs with the House Allowance which provides for a separate appropriation of $38,133,000 for the Office of the Inspector General. The recommendation is $5,378,000 more than the fiscal year 1982 comparable appropriation of $32,755,000.

In addition to the above amounts, there is to be transferred to this appropriation $6,835,000 from the Employment Security Administration, Unemployment Trust Fund.

The Committee recommendation also includes an increase of 52 positions and $4,855,000 to provide for increased audit and investigation staff and audit contracts.

TITLE II—DEPARTMENT OF HEALTH AND HUMAN SERVICES

HEALTH SERVICES ADMINISTRATION

HEALTH SERVICES

1982 comparable appropriation	$1,196,912,000
1983 appropriation request	937,732,000
House allowance	1,002,997,000
Committee recommendation	1,027,846,000

The Committee recommends an appropriation of $1,027,846,000 for the Health Services Administration (HSA). This is $90,114,000 more than the administration request and $24,849,000 more than the House allowance. The recommendation is $169,066,000 less than the fiscal year 1982 comparable appropriation of $1,196,912,000.

The Committee did not consider the administration's request based on proposed legislation which has not been adopted by Congress to date. The proposed legislation would have consolidated the Black Lung Clinics, Migrant Health, and Family Planning categorical programs into the Primary Care Block Grant and would have added the Women, Infants, and Children and Commodity Supplemental Food programs to the Maternal and Child Health Block Grant. These legislative changes have not been acted upon by the authorizing committees of Congress. The Committee therefore is providing funding for the currently authorized health services programs in 1983 and is doing so for fiscal 1983 under the account structure that preceded the recent consolidation of HSA and the Health Resources Administration.

Primary care block grant

The Committee has provided $302,500,000, which is the total amount authorized, for the Primary Care Block Grant program in fiscal year 1983. This is an increase of $52,180,000 over the President's request under current legislation and is an increase of $21,283,000 over the 1982 level of $281,217,000. The House maintained the fiscal 1982 level in fiscal year 1983.

The Committee directs the Department to give consideration in allocating these funds to restoring inpatient services for the needy at centers which previously provided this service to patients in the neediest areas.

The Primary Care Block Grant program supports funding for 588 community health centers which provide a broad range of primary health care services to medically underserved populations. Prior to 1983, these centers were funded and administered directly by the Federal Government. Beginning in 1983, the States will have the option to receive a block grant and assume responsibility for managing these centers.

The Committee recommendation will provide $277,700,000 to maintain primary care activities in existing Community Health Centers at the 1982 services level. Of the $277,700,000, $11,200,000 is projected savings from the phaseout of approximately 125 projects in 1982 which will be available to projects which receive continuing funding in 1983. The Committee recommendation will permit $265,200,000 to be awarded to about 520 projects through direct Federal grants and $12,500,000 for block grants to the two States and one territory which have exercised their option for the Block Grant. Approximately 4.4 million users will be served nationwide.

An additional $10,000,000 is included for promotion/prevention activities started in 1982. This will allow for continuation of the screening detection activities started in the last fiscal year and for implementation of services intended to support efforts to reduce long-term health care costs through comprehensive treatment of chronic health problems.

A total of $8,800,000 is provided to fund high priority medical service expansions based on both need and demand at 20 existing community health centers. This service expansion will include the development of increased service capacity at existing centers and satellites and a limited number of new satellite center openings.

An additional $6,000,000 is provided to restore supplemental services delivery capacity in an additional 165 centers where restorations could not be made even with supplemental funds provided in 1982. This restoration will allow for the provision of such services as dental, vision, nutrition, and health education to an additional 350,000 persons.

Black lung

The Committee has provided $3,240,000 for black lung clinics in 1983, the same amount as provided in fiscal 1982. This amount will support 38 black lung clinics providing services to 47,500 persons. The House allowance was $3,000,000.

The program makes grants to develop a network of clinics to provide services to victims of black lung disease.

Migrant health

The Committee has agreed to provide $38,208,000 for the Migrant Health program in 1983. This is the same as the 1982 level. The funds will provide primary health care services to 394,000 migrants and seasonal farmworkers and their families through 128 migrant health projects; support two birthing centers; provide hospitalization services to 2,858 high-risk mothers and infants; and continue sanitation activities and support the pesticide program in all migrant centers.

Family planning

The Committee recommends $124,176,000 for the Family Planning program in 1983. This is the same as the 1982 level, but $176,000 more than the House allowance. The appropriation provides $119,906,000 to support 95 comprehensive family planning services grants with 4,100 clinics. These clinics would provide services to some 3.3 million persons.

The Committee recommendation also includes $1,000,000 to support 9 services delivery improvement projects; $2,700,000 to fund 15 continuing professional education projects which will provide training for approximately 9,800 clinic staff; and $570,000 to fund 4 information and education projects.

Maternal and child health block grant

The Committee recommends $373,000,000, which is the total amount authorized, for the MCH Block Grant program in 1983. This is the same as the House allowance and a decrease of $750,000 below the 1982 level of $373,750,000, but is $23,000,000 more than the administration's request.

The Committee expects the Department to maintain as much as possible the level of support for those training projects that demonstrate effectiveness in improving state diagnostic and treatment services to children with handicapping conditions. This provision is also intended to continue support for a nationwide network of University Affiliated Facilities (UAFs) and Pediatric Pulmonary Centers which has been carefully established to provide assistance to states and providers and training to professionals in all regions of the country. The network concept is critical to improved service delivery through its ability to disseminate new knowledge and research advances into practice.

The Committee recommendation would provide $317,050,000 to be distributed to the States as block grants and $55,950,000 to support projects of regional and national significance. The Committee directs that the full 15 percent authorized for these projects be made available.

The Committee has learned of the rapid forward movement of the regional programs relating to Cooley's Anemia, which have been ongoing in New York State and in the New England regional areas. That program, which is funded as part of the 15 percent "set aside" in the Maternal and Child Health Administration, in the Health Services Administration, should be continued, as funds for that program become available.

Bureau of Community Health Services—Program support

The Committee has provided $23,443,000 for the program support activity of the Bureau of Community Health Services in fiscal year 1983. This is an increase of $2,748,000 over the President's request under current legislation but is $436,000 less than the fiscal year 1982 funding level. The

House allowance was $22,000,000 for this activity.

The Committee has provided support for 500 full-time permanent positions and related expenses. This is an increase of 75 positions over the President's request, but a decrease of 64 positions compared to the 1982 level. The Committee allowance will be required to support the Bureau's program under current legislation.

The Committee understands that the Bureau has received a significant number of requests for professional consultation and technical assistance from the States, particularly with respect to maternal and child health activities. Within the 500 positions provided, the Committee has included a sufficient number of slots to insure that the Bureau will be capable of responding to these requests from the States

National Health Service Corps

The Committee recommends $93,782,000 for the National Health Service Corps (NHSC) in fiscal year 1983. This is $9,656,000 less than the President's request of $103,438,000 and $1,296,000 less than the 1982 appropriated level of $95,078,000. The Committee allowance will support a federally employed field strength of 2,115 professionals.

Overall, the lower budget requirement for fiscal year 1983 was brought about by a greater number of former scholarship recipients electing to serve under the private practice option (PPO) in 1982, consequently reducing the number of federally employed health professionals serving in the NHSC at the outset of 1983. The Committee commends the program for its vigorous placement of health providers under the PPO which provides services to the underserved at minimal cost to the Federal Government.

The Committee continues to be concerned about the problem of avoiding protracted uncertainty and delay in approving requests to extend the duty tours of NHSC voluntary providers who wish to remain in rural, underserved areas where their services are needed and they have established strong practices. The Committee believes prompt and favorable consideration should be given to the requests for voluntary continuation of such providers with satisfactory performance ratings, especially including evidence of community support, who also reside in rural and other sites meeting the need/demand criteria. To this end, the Committee requests that the Department speedily implement established procedures to assure that in such cases there will be simplified and expedited decision-making by regional officials without the necessity of further review of Washington headquarters.

The Committee has included requested bill language to exclude new Corps personnel from receiving special retention pay if they are serving a period of obligated service. The Committee did not approve language making this retention pay optional for all Public Health Service personnel. NHSC volunteers will continue to receive the special day.

National Health Service Corps scholarships

The Committee recommends $11,042,000 for National Health Service Corps Scholarships Activity, the same as the President's request and $25,316,000 less than the 1982 level. The recommended level will support 953 continuation awards. The scholars to be supported in fiscal year 1983 have previously received NHSC scholarship awards and will be in their final year of funding. In recommending this allowance, the Committee concurs with the House action in reducing the stipend portion of the scholarship and in eliminating the financing of indirect educational costs. This will enable the program to fully fund the tuition and direct fees expense which represents the most critical element of a student's education.

Health professions student loans

The Committee has provided no additional funds for the Health Professions Student Loan program. With approximately $42,800,000 in the program's revolving fund, up $13,800,000 over last year, the Committee believes that sufficient funds are available for loans to those who need them most.

Health professions loan cancellations

The Committee has provided $50,000 for health professions loan cancellations. This is $50,000 more than the administration's request. The funds are required to reimburse health professions schools for their portion of cancelled loans for borrowers who serve in underserved areas.

Exceptional financial need scholarships

The Committee has provided $4,700,000 for exceptional financial need scholarships. This is $4,700,000 more than the administration's request and is the same as the 1982 level.

The Exceptional Financial Need Scholarship program encourages persons with limited resources to enter a health professions school. The scholarships assist students in their first year of post-baccalaureate study without their incurring a service obligation. The Committee recommendation would support approximately 300 scholarships.

Health education assistance loans (HEAL)

The Committee has not approved bill language requested in the budget to limit the amount of loans guaranteed under the Health Education Assistance Loan program (HEAL) to $80,000,000 since Public Law 97-35 established a limit of $225,000,000 in the basic statute.

The Committee is concerned with the need to increase the number of family practitioners available for service, particularly in rural areas, and the need to increase the number of medical graduates available to enter the medical research areas. The Committee requests the Department of Health and Human Services to review the legislation authorizing the Health Educational Assistance Loan program (HEAL) and to submit to the Committee its views on the administrative flexibility which currently exists, if any, to target funding under the HEAL program to such medical students. If such flexibility is not available administratively, the Department should advise the Committee which legislative changes would be necessary in order to accomplish the goal of targeting HEAL funds to students likely to become family practitioners who will serve in rural areas, or to students interested in pursuing research careers.

Nursing student loans

The Committee has provided $1,720,000 for the Nursing Student Loan program. This is $1,720,000 more than the administration's request and the House action which provided no new funds. The administration's request would have maintained only the revolving fund as a source of funding and would have decreased the total number of students assisted from 23,850 in 1982 to 16,250 in 1983.

The Committee allowance, together with the increased nursing student loan revolving fund of $18,800,000, will support a total of 25,650 students, an increase of 1,800 over the fiscal 1982 level and 9,400 over the 1983 budget estimate.

Nursing loan cancellations

The Committee has provided $1,500,000 for nursing loan cancellations. This is $1,500,000 more than the administration's request and $560,000 more than the 1982 level of $940,000. The funds are necessary to reimburse nursing schools for their portion of cancelled loans.

Bureau of Health Personnel Development and Service—Program support

The Committee recommends $17,411,000 to maintain 325 positions for the program support activity of the Bureau of Health Personnel Development and Service (BHPDS) in 1983. The Committee's recommendation is an increase of $647,000 and 20 positions over the President's request and House allowance.

The Committee is pleased with the substantial increase of monies (from $3.5 million in fiscal year 1981 to a projected level of $11 million in fiscal year 1982) returned to the Treasury through the National Health Service Corps site reimbursements and collection. The additional positions provided will be used for debt collection and monitoring efforts in all of the BHPDS programs.

Hansen's Disease Center

The Committee recommends an appropriation of $17,876,000 for the operation of the National Hansen's Disease Center in fiscal year 1983. This amount is the same as the administration's request and is $1,929,000 more than the fiscal year 1982 appropriation of $15,947,000. The increased funds provided for 1983 will be used to meet the mandatory operations costs of the program.

Under the Hansen's disease program, the Federal Government operates the National Hansen's Disease Center in Carville, La., and provides care for persons afflicted with Hansen's disease who had previoulsy received care through the Public Health Service hospitals and clinics system. The Committee believes the Hansen's disease program is beneficial and is in the public's interest.

Federal employees occupational health

The Committee recommends an appropriation of $974,000 for the Federal Employee Occupational Health program. This amount is the same as the administration's request, and is $11,000 less than the fiscal year 1982 appropriation of $985,000.

Under the Federal Employee Occupational Health program, Federal agencies are provided advice on employee occupational health. This program also organizes and operates Federal employee health units for Federal agencies on a reimbursable basis.

Payment to Hawaii

The Committee recommends an appropriation of $1,732,000 for the payment to Hawaii for the treatment of persons afflicted with Hansen's disease. This amount is the same as the budget request and the House allowance.

Payments are made by the Federal Government to the State of Hawaii to assist in the care and treatment of persons with Hansen's disease. Expenses above the amount provided by the Federal Government are borne by the State of Hawaii.

Buildings and facilities

The Committee recommends $3,292,000 for the buildings and facilities activity for fiscal year 1983. This is the same as the ad-

ministration's request and is $1,408,000 less than the fiscal year 1982 appropriation of $4,700,000.

This activity provides for the renovation of patient dormitories, general repairs and improvements, and energy conservation improvements at the National Hansen's Disease Center in Carville, La.

Program management

The Committee recommends $9,200,000 and 179 positions for the Health Services Administration (HSA) program management and administrative activities. This is an increase of $2,325,000 over the administration's request but a decrease of $2,168,000 from the 1982 estimated obligations.

The Committee notes that the HSA has reduced its program management staff from 310 in 1981 to 197 in 1982. The Committee has included funds to support a level of 179 positions in fiscal year 1983.

The Committee allowances includes 160 positions for program management activities and 19 positions for the Uniformed Services University of the Health Sciences. The Committee believes that this level is adequate to manage the HSA programs as they presently are structured.

CENTERS FOR DISEASE CONTROL

PREVENTIVE HEALTH SERVICES

1982 comparable appropriation	$278,362,000
1983 appropriation request	270,918,000
House allowance	286,165,000
Committee recommendation	290,368,000

The Committee recommends an appropriation of $290,368,000 for Prevention Health Services. This is $19,450,000 more than the administration request and $4,203,000 more than the House allowance. The recommendation is $12,006,000 more than the fiscal year 1982 comparable appropriation of $278,362,000.

The Preventive Health Services appropriation provides support for the Centers for Disease Control (CDC), the Public Health Service agency which is the Nation's center of competence in the prevention and control of diseases and certain other conditions. The major goal of CDC is to lead public health efforts to prevent unnecessary disease, disability and death. CDC pursues this goal through: prevention and control of infectious diseases; prevention of disease, disability, and death associated with environmental and workplace hazards; prevention and control of chronic diseases; and the provision of quality support to local, State, academic and national efforts in disciplines basic to such efforts, i.e., epidemiology, laboratory sciences, health, education, and training.

Preventive health services block grant

For the Preventive Health Services block grant, the Committee proposes a level of $90,000,000, $7,400,000 more than the House level and budget request. The fiscal 1982 level was $81,600,000, which included $2,500,000 for administration expenses and block grant transitional costs.

In fiscal year 1983, the Preventive Health Services block grant will be in its second year of operation. Included in this consolidation were the authority for several formerly categorical programs including health incentive grants, risk reduction and health education, rat control, fluoridation grants, home health services, high blood pressure control, and emergency medical services. A total of $3,000,000 is to be used for services to rape victims and rape prevention. Tuberculosis efforts are also allowable under the block grant.

The level provided would enable the Centers for Disease Control to comply with anticipated State requests to furnish prevention experts in lieu of cash. The Committee also directs that of the total provided, $1,000,000 and 20 positions be used for administration and technical assistance to States on the implementation of prevention programs supported by block grant funds.

The Committee concurs with House action to retain the administration of the block grant program within CDC instead of moving it to the Office of the Assistant Secretary for Health (OASH) as proposed by the Department.

The Committee finds that the change from categorical to block grants has not eliminated the need for information at the Federal level about the uses of these funds. It is the Committee's belief that uniform, national data on State use of Federal block grants is important to evaluate the effectiveness of health programs and specifically about the uses of the block grant funding. The Committee encourages the Department to work with the States in developing plans to fill this gap in our knowledge about public health programs and, in particular, about uses of the block grant funds.

Risk reduction and health education

The Committee recommends $1,349,000, the same as the budget request and House allowance, for health education and risk reduction. In 1982 this program was funded with the support funds provided by the Preventive Health and Health Services block grant activity. This effort is to educate individuals and families to the responsibility they have for their own health and to provide the knowledge and skills they need to make decisions which will ultimately reduce unnecessary disease and premature death, improve their quality of life, and make a major impact on the cost of care.

States receiving Preventive Health and Health Services block grants have allocated significant portions of the grant to support health education/risk reduction programs. CDC provides technical assistance to improve the effectiveness and efficiency of programs in this relatively new area of prevention activity, and develops, tests, and disseminates improved methods that can be used by community agencies to accomplish the goals of improved health.

Venereal diseases

For the control of venereal diseases in the United States, the Committee recommends a total of $47,335,000. Included in this amount is $40,000,000 for grants to States, which is $40,581,000 more than the 1982 level, but the same as the budget request and the House allowance. The Committee continues to be concerned about sexually transmitted diseases which spread across State lines and threaten the health of more than 10 million Americans each year. Moreover, some of these diseases are becoming treatment resistant. Grants are awarded to reduce the morbidity and mortality from venereal diseases through the development of prevention and control programs.

Since the beginning of Federal assistance and efforts to control venereal disease, the number of reported cases of syphilis has declined from an all-time high of 575,593 in 1943 to 71,474 in 1981—a reduction of more than one-half million cases. Federally assisted State and local gonorrhea control programs have resulted in a reduction in the growth rate of reported cases of that disease as well.

During 1983, the Committee expects that continued monitoring, screening, contact-referral services and other outreach efforts will provide venereal disease services to an estimated 9.3 million adolescents and young adults. These efforts should result in the treatment of more than 760,000 venereal disease patients and prevent an estimated 6,000 cases of syphilis and more than 230,000 cases of gonorrhea.

Also included in the Committee's recommendation is $7,335,000, the same as the fiscal 1982 level, a slight decrease from the House level by $1,690,000 more than the budget request for venereal disease program operations. This level will support national disease surveillance, technical assistance, operational research, and the development of prevention strategies, technologies, and methods used by the States to implement their venereal disease preventive health strategies more effectively. Funds are also included to reinstate important herpes control activities, such as the implementation of a national surveillance system for congenital herpes, and other previously planned strategies and control efforts to address this serious and growing public health menace.

Childhood immunization

Included in Public Law 97-276, the Continuing Resolution for fiscal 1983, is a level of $39,000,000 for immunization activities. Of that amount, $32,000,000 is for grants, which is the fully authorized level and $7,000,000 is for direct operations.

The Committee recognizes the childhood immunization program as one of the most beneficial and cost-effective of our Federal prevention efforts. The amount appropriated will provide a 95-percent level of vaccinations for children entering school under age 15, will fund efforts to eliminate indigenous measles from the United States and initiate a stockpile of commonly used vaccines.

Fluoridation

The Committee concurs with the House and the fiscal 1982 funding level in providing $1,100,000 for an in-house technical effort at CDC to assist State and local communities, when requested, with their fluoridation programs. There was no budget request for fluoridation technical assistance activities. Funds from the Preventive Health Services block grant may be used by State and local health departments to initiate fluoridation of fluorine-deficient water supplies. The Committee believes that this limited Federal effort to provide technical assistance complements the block grant funding in this area.

Chronic diseases

For Chronic Diseases, the bill includes $21,003,000, which is $1,500,000 more than the budget request and House allowance. This amount is $354,000 more than the final fiscal 1982 level of $20,649,000.

Programs supported under this activity assist in reducing or preventing the burden of illness and in improving the quality of life associated with certain chronic diseases and other conditions by (1) providing technical and financial assistance to States for the purpose of planning, organizing, conducting, and evaluating community-based demonstration programs aimed at reducing morbidity and mortality for complications of diabetes, (2) monitoring births for trends

in birth defects and performing epidemiologic studies on data generated, (3) collecting and analyzing data on genetic disorders, (4) conducting epidemiologic studies and investigations on certain cancers, (5) defining nutrition-related problems and trends and improving nutrition monitoring procedures, and (6) providing surveillance and technical assistance in directing tuberculosis control programs.

To the extent possible, funding should be continued for planned field evaluations of new shorter term (6 months) therapy schedules for tuberculosis. The Committee feels that since great progress is being made in this area, a delay of funding for this program would diminish the ability of CDC to make a determination as to the clincial merits of this shorter term tuberculosis therapy.

The Committee continues to be concerned about the increasing incidence of the serious and often fatal condition known as Acquired Immune Deficiency Syndrome (AIDS). In fiscal 1982, the Congress appropriated $500,000 to enable CDC to begin investigation and surveillance efforts on the nature of this illness which attacks people whose immune systems are weakened. Through recent studies, our knowledge of this illness has grown and it is now apparent that the illness is caused by infectious agents. For further investigations on AIDS, the Committee provides $1,500,000 and twenty-five positions. Of that amount, the CDC is directed to use $1,000,000 to replace resources which had been transferred from virus and venereal disease activities. The remaining $500,000 is to be used to increase epidemiology and laboratory investigations and to expand the surveillance cooperative agreements to at least two other cities reporting a high incidence of AIDS cases. As a separate program, the House has provided CDC with $2,600,000 for AIDS activities.

Environmental health

For environmental health, the Committee recommends $3,746,000, which is the same as the budget request, and $385,000 less than the 1982 appropriation. This amount is $533,000 less than the House level.

CDC's environmental health program assists States and local health departments to improve their capabilities to meet an increasing demand for evaluating the impact of toxic or other hazardous substances in the environment, on the health of the community and the effects of such exposures on unborn children. To this end, technical advice and assistance is provided in the area of epidemiologic and other health effects studies. Laboratory support to test for the presence of toxic substances in exposed persons, and to measure the effects of toxic exposures on human health is also provided.

The medical, scientific and other technical staff supported by this budget item provide the core personnel for coordinating the Public Health Service's response to environmental emergencies.

The Committee does not concur with the House action to provide $533,000 and 10 positions in excess of the President's budget for lead poisoning services. Funding for these services is provided both in the Preventive Health and Health Services and the Maternal and Child Health Block Grant.

Tuberculosis grants

The bill also includes $2,000,000 for the first year of funding for the tuberculosis control program. The House would provide a level of $5,000,000 for this new categorical grant activity, although there was no budget request.

The Committee continues to be concerned about the incidence of this major health problem and with this appropriation indicates its commitment to attempt a reversal in recent trends toward increases in new cases of tuberculosis. The Committee is disturbed by reports of more than 27,000 new cases of the disease in 1981, with an 18-percent increase noted in children under 5 years of age.

The Committee directs that priority for use of the funds should be in such areas as (1) the transmission of tuberculosis to children; (2) problems of drug-resistant tuberculosis; (3) increases in TB-related morbidity; and (4) the significant levels of tuberculosis among foreign born residents.

Other Federal programs offering technical assistance and grant funding for tuberculosis activities in addition to this appropriation include the Preventive Health Services Block Grant, the Department's refugee health program and the Chronic Diseases program.

Occupational safety and health

The Committee recommends $56,281,000 for the Center's occupational safety and health activities. The amount is the same as the House amount and $5,760,000 more than the budget request.

This activity supports the National Institute for Occupational Safety and Health (NIOSH) programs designed to protect the American worker from occupational illness and injury through identification, evaluation, and control of occupational diseases and hazards, and to reduce the high economic and social cost of these illnesses and injuries.

For Occupational Safety and Health research, the Committee concurs with the House in recommending $48,436,000, a decrease of $3,404,000 from the comparable 1982 appropriation and the same as the budget request. This activity supports research into the identification and control of occupational health problems, as well as the development of scientific criteria for standards setting in the Occupational Safety and Health Administration and the Mine Safety and Health Administration. The research program decrease reflects the need to support activities in higher priority areas

The Committee recommends $5,760,000 for Occupational Safety and Health training, the same as the 1982 appropriations and the House allowance. The administration proposed elimination of this activity. Funds should be used to continue operation of the Educational Resource Centers (ERC) for the training of occupational safety and health personnel.

The Committee is supportive of the efforts of NIOSH to provide resources for the advanced training of occupational health nurses who work within private industry settings in order to insure that our Nation's workplaces are as safe and as healthy as possible. To the extent possible within available funding, NIOSH should consider giving greater priority to targeting its training efforts toward nurses.

The Committee also recommends $2,085,000 for scientific and technical services, a decrease of $646,000 from the comparable 1982 appropriation and the same as the budget request and House level.

The Committee does not concur with House action to continue the prohibition against completing the NIOSH headquarters move to Atlanta. The Committee believes that the move should be completed to improve the operation of occupational safety and health programs. The Committee would allow this move to eliminate duplicative administrative services so more of the Institute's limited financial resources could be devoted to its mandated programs.

Epidemic Services

The bill includes $34,757,000, as requested in the budget, for epidemic services, and an increase of $429,000 over the 1982 level.

This activity maintains nationwide surveillance systems and laboratory competence leading to (1) the prevention and control of infectious and vector-borne diseases, and (2) the assessment and evaluation of morbidity and mortality associated with human reproduction. Included in this activity are regulatory responsibilities in the prevention of disease importation from other countries. Efforts focus on three key elements in preventing and controlling diseases: disease surveillance and epidemic aid; disease investigations and studies; and laboratory analysis. This activity will also contribute to the achievement to the 1990 national prevention objectives, and will assist States in setting their priorities and achieving measurable gains in preventing illness and improving health. Priority areas include: surveillance and control of infectious deseases; pregnancy and infant health; misuse of alcohol and drugs; family planning and violence.

The epidemic services activities are an important part of this Nation's approach to protecting its civilian population from epidemics and from deliberate or accidental misuse of biological agents. These programs are carried out by maintaining surveillance systems, epidemic investigators, and laboratory capability for identifying potential problems, and recommending appropriate actions to protect the health and lives of the American people.

Technology development and application

For technology development and application, the Committee recommends $28,142,000, the same as the budget request and House allowance, and an increase of $360,000 over the 1982 level. This activity supports CDC efforts with States, communities, hospitals and other parts of the Nation's health care system to bring about more speedy and general application of disease prevention technology to lower unnecessary sickness and premature death. Activities range from the clinical laboratory improvement and the hospital infection control programs to the provision of commercially unavailable disease reference, research and diagnostic reagents to laboratories. New laboratory procedures and testing procedures are disseminated through training sessions, technical consultation and scientific presentations covering a variety of areas such as laboratory management and safety, bacteriology, clinical chemistry, immunology, mycology, parasitology and virology.

Buildings and facilities

The recommendation includes $2,050,000, the same as the House amount and the budget request, for buildings and facilities projects, an increase of $610,000 over the comparable 1982 appropriation. Of these funds, $305,000 will be used for energy saving projects, and $1,520,000 will fund repair and improvement projects to prevent the deterioration of CDC facilities.

Program management

The Committee recommends $2,605,000, an increase of $89,000 over the comparable 1982 appropriation and the same as the budget request, for program management.

This activity provides for the overall planning and direction of the Centers for Disease Control and for the biosafety of its facilities. The House provided a level of $1,105,000, a 60 percent reduction from the budget request. At that allowance, it is expected that 47 positions would be eliminated. These positions are essential for the effective planning and managing of the Centers' resources to provide the maximum preventive health services to the people of the United States and to provide for the safety of the facilities and employees. At the House level, funds from other essential prevention efforts would have to be redirected to provide these essential managerial and security functions.

NATIONAL INSTITUTES OF HEALTH

1982 comparable appropriation	$3,641,875,000
1983 appropriation request	3,748,771,000
House allowance	4,004,075,000
Committee recommendation	3,999,887,000

The Committee recommends an appropriation of $3,999,887,000 for the National Institutes of Health (NIH). This is $251,116,000 more than the administration request and $4,188,000 less than the House allowance. The recommendation is $358,012,000 more than the fiscal year 1982 comparable appropriation of $3,641,875,000.

Research project grants

The Committee has received a considerable amount of data and testimony over the past few years supporting the need for a stable level of research project grants. This is a time of great promise in biomedical research, and the Committee believes it would be in the national interest to maintain the momentum of Federal support for basic research efforts. This potential for saving lives and alleviating suffering carries with it a sizable potential for reducing health care costs and economic losses from illness.

The Committee has provided funds to support at least 4,779 new and competing research project grants so that each institute would be able to fund no less than its 1982 number of these grants. However, there are sufficient funds and flexibility available within the full NIH appropriation to raise the total of new and competing grants nearer to the 5,000 level which the Committee regards as an important standard of stability. The Committee recommendation also would largely restore the proposed 4 percent reductions in noncompeting grants, and would begin to address the problem of average cost projections for 1983 new and competing grants higher than the levels contained in the 1983 President's budget.

Indirect costs

The 1983 budget request contains a proposal to reduce indirect cost reimbursements by 10 percent from the rate negotiated for each institution. These institutions, mostly universities, would be required to absorb the reductions in the same proportion, regardless of an institution's record of cost-consciousness. That is, the proposal contains no incentive for containing indirect cost expenditures and applies without regard to institutional differences in accounting systems and physical plant configuration.

The Committee has provided sufficient funds to restore the proposed reductions in indirect costs. The Committee recognizes that indirect costs are a legitimate and proper component of biomedical research and should not be reduced in an across-the-board, arbitrary manner.

The Committee, of course, recognizes that indirect costs, as a percentage of total costs of research, have increased from 20.5 percent in 1972 to 29.5 per cent in 1981. Some concern has been expressed about the impact of this increase on the total resources that are available for the direct costs of doing biomedical research. The Committee is concerned about the strains this may cause within the biomedical research community and about its possible effects upon the essential work that is being done. The Committee hopes that the parties—governmental and nongovernmental—will work to ameliorate differences and find equitable, long-term solutions. Meantime, the Department should be prepared to fully discussion the matter, including any alternatives developed with the cooperation of interested parties, at the fiscal year 1984 hearings on NIH.

Research training

The Committee long has been concerned about the continuing need to maintain research training at a level that will ensure an adequate supply of well-qualified investigators. To continue to nurture the Nation's biomedical research training programs, funds are provided to support approximately 9,722 trainees. This will enable each institute to support at least its 1982 number of trainees.

Disease prevention

The Committee is encouraged by the recent advances in the area of disease prevention, especially with the progress made by focusing on the relationship of eliminating lifestyle "bad habits" to overall health. The recent report of a study by the Institute of Medicine, "Health and Behavior: Frontiers of Research in the Behavioral Sciences," cites scientific evidence that modification of lifestyle and behavior may improve the health status of our Nation and help slow down the rapid increase of health care costs. The report stated: "As much as 50 percent of mortality from the 10 leading causes of death in the United States can be traced to life style." The report said that known behavioral risk factors "include cigarette smoking, excessive consumption of alcoholic beverages, use of illicit drugs, certain dietary habits (and) reckless driving," among others. The report pointed out that preventive action by society to improve health "may well reduce, rather than add to, the immense costs of modern health care", but that much remains to be learned about how to motivate people to make permanent changes in their lifestyles. The Committee believes that NIH and ADAMHA need to look very carefully at this matter to determine how research in the life sciences can be broadened to embrace the role of human behavior in preventing and curing disease. One example of disease prevention research by the NIH is the recent epidemiologic evidence that diet may play a role in the prevention of cancer. Worldwide epidemiological studies indicate that there appears to be a significantly lower incidence of cancer in people who consume large quantities of vegetables whose principal component is beta carotene, the precursor to vitamin A. The Committee is pleased that the National Cancer Institute and the National Heart, Lung and Blood Institute are jointly funding a study to examine the effects of beta carotene and encourages such cooperative efforts in the area of disease prevention.

The National Heart, Lung and Blood Institute's High Blood Pressure Education program has provided valuable guidance for the treatment of patients with high blood pressure—the most potent risk factor for stroke. With assistance from the Institute, several major companies have developed programs for their employees to emphasize health promotion through cardiovascular risk reduction. Public awareness of heart disease risk factors has caused changes in lifestyle "bad habits" and this is thought to have contributed to a decreasing incidence of heart disease. The Committee supports such public education efforts to encourage behavior and a lifestyle that will minimize that risk of cardiovascular and pulmonary diseases.

Among other important NIH prevention activities, the National Institute of Allergy and Infectious Diseases continues its efforts to accelerate the development of new vaccines. The Committee hopes that such efforts will lead to effective vaccines against such diseases as genital herpes, gonorrhea, meningitis, and malaria since immunization is one of the most cost effective ways to ease the burden of infectious diseases upon our society.

Striking advances have been made in treating certain allergies including the development of safe and effective allergy shots for individuals who are sensitive to wasp and bee stings and who may experience potentially fatal shock reactions. Moreover, improvements in the chemical contents of allergy shots have done much to help patients suffering from hay fever and seasonal asthma. Through basic research on ways to regulate the immune system by suppressing production of the immunoglobulin E antibodies that trigger the allergy attack, new opportunities to prevent and/or treat these illnesses may emerge.

The Committee has learned of the progress being made in hematologic research in three institutes—Heart, Lung and Blood, Arthritis and Cancer. It understands that the Division of Blood Diseases and Resources of the NHLBI is most concerned with fundamental hematologic research and its clinical applications, while the NIADDK's blood program emphasizes the mechanisms of normal blood cell function and their alterations in disease processes. The NCI is deeply involved with research on malignant alterations of blood cells and how both to treat these disorders and support the patients while they receive anti-cancer therapy. The Committee expects that hematologic research will continue to be supported by all to these Institutes.

Animal research facilities

The Committee is aware that both major animal facility renovations and animal resource improvements are necessary to the conduct of biomedical research using animals. Data from a National Research Council survey show very large funding needs for replacement, renovation, and acquistion of animal facilities space. This problem is of major concern to the Committee. Consequently, the NIH is requested to provide a report prior to the fiscal year 1984 appropriation hearings containing current information on the magnitude of the problem and strategies for its resolution.

Endocrinology

In 1978, a comprehensive evaluation of research needs in endocrinology and metabolism was requested by this Committee, and in late 1979 this report was completed and made available to us. Since that time, no

report has been made on progress in this very important area of biomedical investigation in regard to research support and funding.

Accordingly, the Director of NIH (acting through the Director of NIADDK and in consultation with the Director of NICHD—the two institutes which provide approximately 50 percent of the NIH support for endocrine research) shall within 180 days provide a report to the Committee of the NIH response to the 1979 evaluation, including the amounts that each institute at NIH has spent since 1979 on endocrine research and the percentage of grants funded, by year. In addition, a plan to coordinate efforts in this high priority area should be presented with the report.

Possible land acquisition

The Committee understands that the remaining adjacent land which is privately owned on the NIH campus may possibly be purchased. The Committee requests a report from the NIH discussing its recommendations as to the feasibility of acquiring this property. It would be expected in developing this report that the NIH recognizes its long-term requirements for expansion.

NATIONAL CANCER INSTITUTE

1982 comparable appropriation	$943,029,000
1983 appropriation request	955,449,000
House allowance	981,441,000
Committee recommendation	985,711,000

The Committee recommends an appropriation of $985,711,000 for the National Cancer Institute (NCI). This is $30,262,000 more than the administration request and $4,270,000 more than the House allowance. The recommendation is $42,682,000 more than the fiscal year 1982 comparable appropriation of $943,029,000.

The Committee has allowed sufficient funding to provide the budget request level for new and competing research project grants, to restore training slots to at least their fiscal 1982 levels, and to largely restore the proposed 4 percent cut in noncompeting continuation grants. Additional funds have been provided to pay the indirect costs of research at 100 percent of their negotiated level.

On the 10th anniversary of the national cancer program, the Committee notes recent encouraging data on cancer survival. The first full 5-year survival data gathered by NCI's Surveillance, Epidemiology and End Results (SEER) program show a relative survival rate of 45 percent for all patients diagnosed with cancer between 1973 and 1979. This contrasts with a study done (1967-1973) before SEER was established, a study which showed a relative survival rate of 40 percent. Such a 5 percent change in survival data means, according to NCI, that approximately 320,000 individuals diagnosed in the 1970's have a very good chance of being cured of cancer.

The Committee notes recent efforts at NCI to assure continued support for the most worthy research despite budgetary constraints. This support is especially critical in view of the revolutionary strides taking place in fundamental biology today. In order to maintain an effective level of support for this research, NCI has adopted several streamlining measures, including a reallocation of resources, where appropriate. The Committee hopes these measures will be effective and requests that NCI provide it with periodic management reports on the progress of its efforts and the impact on research.

The testimony presented to the Committee has reaffirmed that finding the causes of cancer and the means to prevent its occurrence remain among the highest priorities of the NCI. Epidemiological studies have been able to show areas of the United States where particular cancers are most common. This data has led to further studies of the precise cause of cancer in a given area and could lead to an understanding of how to intercede in, or prevent, the cancer process.

A major new initiative of the NCI seeks to establish closer links between local community physicians and hospitals with large cancer centers and cooperative research groups which conduct NCI clinical treatment research. This effort to more closely serve the American public by making available the latest treatment, drugs, expertise, and overall knowledge about cancer is called the Community Clinical Oncology Program (CCOP). NCI hopes to establish 100-200 community programs within the next year, geographically located in such a way as to conveniently serve most Americans. The Committee hopes that programs of this type will be instrumental in achieving further improvements in 5-year survival data.

NCI continues to support basic cell research which has been instrumental in recent advances made against cancer. Fundamental studies have yielded clues as to why a normal cell becomes cancerous.

The Committee is also impressed with reports on the new hybridoma technology and believes this should continue to receive adequate support. Through this technology, scientists can grow cells in the laboratory that make pure antibodies which can be specifically targeted to cancer cells. These so-called "monoclonal" antibodies, it is hoped, will form the basis for greatly improved diagnostic and treatment methods. NCI is also continuing efforts to evaluate the efficacy of biological response modifiers. Phase I clinical studies, in which therapeutic dosage and side effects are determined, have been completed for genetically produced interferon and are nearly complete for natural interferon and other substances. The Committee continues to urge study in this area.

In the area of treatment, NCI's continued support of drug development and clinical trials have led to substantial gains, the Committee is advised. NCI has played a major role in development of anti-cancer drugs, participating in clinical trials of all drugs which later became available to the public. The Committee notes that the Institute has eliminated its plant collection program on grounds that it receives a large number of plant products for testing at no cost. The Committee wishes to be kept informed as to whether this change has produced the results expected of it.

The new radiation research program launched by NCI consolidates all extramural research in this field, including low-level radiation, radiation therapy, diagnostic imaging, and the transfer of radiation grants from the National Institute of General Medical Sciences. This new program provides a distinct area and structure not only for current radiation-related research but also for any further responsibilities delegated to the Institute in this field.

The administration budget proposed that the NCI's bioassay program for testing chemical compounds be transferred to the National Institute of Environmental Health Sciences. The result will be to center the National Toxicology program in NIEHS and to avoid the previous joint management approach which apparently has proved cumbersome. The Committee has approved this shift but will expect NCI to maintain close contact with the consolidated program to assure its research takes account of the work NTP does.

The Committee directs the National Cancer Institute to continue the present level of annual investment in the organ site program focusing on cancer research in large bowel, pancreas, prostate, and bladder which has proven to be effective. However, the Committee is cognizant of certain concerns about the task forces that have been raised by NCI and the National Cancer Advisory Board. These relate, among other matters, to the reviews required, review costs, staffing of project headquarters, and cost of staff. The Committee intends to review the program carefully during its fiscal year 1984 hearings.

The Committee is impressed by the progress in cancer research and patient care that has been, and is being, achieved in Cancer Centers nationwide. Much of the basic research in cancer, as well as in the treatment and prevention of this disease, is being accomplished in NCI-supported Cancer Centers. The Cancer Center support grants (core grants) awarded by the National Cancer Institute to Cancer Centers are neither more nor less important than individual research grants and program project support; the Center core grants are in fact the "glue" that holds grant-supported projects in Cancer Centers together, and helps them to function efficiently and effectively.

The Committee has heard from witnesses that since 1977 the proportion of NCI budget dollars devoted to core grants for Centers seems to have fallen steadily, and the Committee urges the NCI leadership to review this trend, and report to the Committee on the matter in time for hearings on the fiscal year 1984 appropriations.

The Committee notes that the budget request contains $200,000 for exploratory grants to be used to develop new cancer centers. The Committee is concerned that existing cancer centers are unevenly distributed throughout the country and hopes NCI will seek to rectify this geographic maldistribution through means of awarding an exploratory grant if an application receives favorable review by the Institute.

The Committee is greatly encouraged by recent research advances in viral carcinogenesis, particularly the recent isolation of the first human RNA tumor virus, and expects the Institute to expand its Biological Carcinogenesis Program of identifying viral transforming genes and their cellular counterparts that are responsible for malignant transformation of normal cells. Research in this area offers an unparalleled opportunity to develop a unified approach to control or reversal of the cancer process including possible prevention of cancer in endemic areas through immunization.

NATIONAL HEART, LUNG, AND BLOOD INSTITUTE

1982 comparable appropriation	$559,637,000
1983 appropriation request	577,143,000
House allowance	620,947,000
Committee recommendation	624,542,000

The Committee recommends an appropriation of $624,542,000 for the National Heart, Lung, and Blood Institute (NHLBI).

This is $47,399,000 more than the administration request and $3,595,000 more than the House allowance. The recommendation is $64,905,000 more than the fiscal year 1982 comparable appropriation of $559,637,000.

The Committee has provided sufficient funding to restore new and competing research project grants and total training slots to at least their fiscal 1982 levels, and to largely restore the proposed 4 percent cut in noncompeting continuation grants. Additional funds have been provided to pay the indirect costs of research at 100 percent of their negotiated level.

The decline in deaths from heart attack and stroke—a decline that became evident in the late 1960's—continues today. Since 1968, there has been a 30 percent age-corrected mortality decrease in cardiovascular disease and a 45 percent decrease in stroke mortality. In spite of this promising overall trend, the toll for diseases of the heart, blood vessels, lungs, and blood continues to be large. Heart disease alone is responsible for three quarters of a million deaths each year and continues to be America's number one killer. The economic burden on the nation as a result of cardiovascular disease is a substantial one. Thus, it is imperative that the momentum that has been gained in combating cardiovascular and pulmonary diseases within the past decade be maintained.

It was only a decade ago that the research mandate of the Institute was expanded to include the lung and that a concerted strategy to address lung disease was initiated. Lung diseases are now the sixth leading cause of death in the United States (chronic obstructive pulmonary disease is the fastest rising among the leading causes of death) and account for more than 100,000 deaths each year, 46 million days lost from work, and 40 million days of bed-restricted activities, according to the Institute. In addition, such diseases cost the economy billions of dollars annually in lost productivity and wages in medical care costs.

The true impact of disorders of the blood is far greater than the death rates attributed to blood diseases. The clotting of blood is centrally involved in a vast array of diseases ranging from myocardial infarction ("coronary thrombosis"), many strokes, and pulmonary embolism, to the fundamental process whereby arteriosclerosis forms.

It is clear from these facts and figures that the task before the Institute is a major one. Certainly its approach must attack the problem of life style "bad habits" that contribute in particular to heart and lung diseases. For example, the Institute's testimony called attention to the "devastating effects of smoking in causing lung and other cancers." The Institute pointed out that chronic obstructive pulmonary disease is "at least 10 times as common" in the smoker as in the nonsmoker and that cigarette smoking doubles the risk of coronary heart disease. The whole area of lifestyle "bad habits," including improper diet and other matters, must be made a priority by the Institute in carrying out a comprehensive program.

While the magnitude of these problems before the Institute remains a real challenge, the Committee notes a number of major advances as a result of the Institute's activities which have provided the bases for future research approaches and opportunities. Among these were the successful conclusion of three major clinical trials, two relating to drugs to deal with heart problems and the third involving a new vaccine to prevent type-B hepatitis.

Although a major portion of the funds managed by the Institute is directed to basic research, which is the Institute's first priority, the NHLBI is also concerned with the immediate alleviation of pain and suffering and the ultimate goal of preventing premature death among the American population.

As such, the Committee has observed with interest the Institute's prevention and education activities. In particular, over the past several years, there has been progress in the National High Blood Pressure Education program whose purpose is to facilitate more effective control of high blood pressure in our population. Building upon relationships developed in this program with the private sector, the Institute has striven to stimulate cardiovascular risk reduction programs at the worksite. It now has worked with more than 50 private sector organizations to promote cardiovascular risk factor reduction. Other encouraging and effective prevention and education activities involve programs in such areas as asthma, which affects millions of children each year, and sickle cell disease, where the Institute has developed an academic tutorial program for children with the sickle cell disease or trait.

The Committee expects the National Heart, Lung, and Blood Institute to set aside an additional $2,000,000 for Sickle Cell centers to permit support of 10 centers, the same as the number supported in 1982.

Cystic fibrosis is among the most serious respiratory diseases affecting our nation's youth, and ranks as one of this nation's top genetic killers. NHLBI has long had an active program of research in CF, with particular emphasis on lung infections. The Committee is optimistic that continued research in this and other Institutes at NIH will soon allow improved treatment and prognosis for those with cystic fibrosis.

The NHLBI has made substantial progress in its mission to understand, treat, and prevent heart, lung, and blood diseases. There are, however, still multiple opportunities in fundamental and clinical research, including development of noninvasive diagnostic techniques, which can be addressed to continue the important research progress; the Committee will also want to be kept abreast of the Institute's findings as it proceeds with its examination of the impact on life expectancy and quality of life of coronary bypass surgery.

NATIONAL INSTITUTE OF DENTAL RESEARCH

1982 comparable appropriation	$71,983,000
1983 appropriation request	74,462,000
House allowance	80,304,000
Committee recommendation	77,416,000

The Committee recommends an appropriation of $77,416,000 for the National Institute of Dental Research (NIDR). This is $2,954,000 more than the administration request and $2,888,000 less than the House allowance. The recommendation is $5,433,000 more than the fiscal year 1982 comparable appropriation of $71,983,000.

The Committee has provided sufficient funding to restore new and competing research project grants and total training slots to at least their fiscal year 1982 levels, and to largely restore the proposed 4-percent cut in noncompeting continuation grants. Additional funds have been provided to support the higher average costs of research project grants and to pay the indirect costs of research at 100 percent of their negotiated level.

NIDR continues to conduct and support research related to the cause, prevention and methods of diagnosis and treatment of oral diseases and conditions. To pursue this goal, NIDR provides grant and contract support for the conduct of research and for training research manpower, as well as engaged in its own program of intramural research primarily focusing upon basic science. Six categorical program areas provide the core for NIDR's research program strategy.

The Committee has been particularly supportive of the NIDR's efforts to deal with dental caries which still exact a health cost in the billions of dollars. The Committee was pleased to hear testimony indicating that there has been an estimated 25-30 percent decrease in the prevalence of dental caries among school-aged children in about the last decade. The Committee also notes that progress continues to be made toward developing a safe vaccine against caries. The Institute should press ahead with its studies to define the characteristics of foods and eating patterns that can lead to caries in school-age children.

The Institute is planning studies related to establishing better attitudes needed to prevent oral diseases. In its testimony, the Institute stated that the public does not take full advantage of known preventive measures, such as use of fluorides and diet modification. This can be an important area for disease prevention which the Institute should pursue. It also should pursue its finding that an estimated 10 percent of the population "avoids needed dental treatment because of excess fear." Here again, there may be an opportunity to strengthen the disease prevention effort through research and bring needed care to a significant portion of our population.

The Institute's research directed toward periodontal diseases has contributed greatly to the understanding of the causes and progression of these diseases. Studies have continued to make progress in the identification of bacteria implicated in the initiation of these diseases, and are now beginning to reveal some of the mechanisms by which these bacteria may be a causative factor.

Investigations in craniofacial anomalies pursue the areas of congenital anomalies, denotofacial malrelations, and acquired defects. The Committee is pleased to note that significant advances have been made in understanding of developmental processes. These include studies of factors regulating the proliferation, the migration, and the localization of cells during development at the functional, the biochemical and the molecular levels. The Committee is supportive of the Institute's program in pain research where new advances have been made in understanding of the brain stem and spinal cord neural circuits involved in pain transmission.

The Committee notes that progress has been made in the area of prevention and treatment of human herpes virus infections. The possibility of developing a safe effective vaccine has been greatly enhanced by the development of new methods to purify virus glycoproteins. Also, in an attempt to improve the effectiveness of potential therapeutic agents for the treatment of herpes infections, investigators are testing a new method of drug application to the skin. When applied to patients with herpes infections of the lips, the method appears to result in the reduction in pain and duration of the ulcer.

NATIONAL INSTITUTE OF ARTHRITIS, DIABETES, AND DIGESTIVE AND KIDNEY DISEASES

1982 comparable appropriation	$368,191,000
1983 appropriation request	379,422,000
House allowance	408,508,000
Committee recommendation	415,856,000

The Committee recommends an appropriation of $415,856,000 for the National Institute of Arthritis, Diabetes, and Digestive and Kidney Diseases (NIADDK). This is $36,434,000 more than the administration request and $7,348,000 more than the House allowance. The recommendation is $47,665,000 more than the fiscal year 1982 comparable appropriation of $368,191,000.

The Committee has provided sufficient funding to restore new and competing research project grants and total training slots to at least their fiscal year 1982 levels, and to largely restore the proposed 4 percent cut in noncompeting continuation grants. Additional funds have been provided to support the higher average costs of research project grants, a problem of significant proportions at this Institute, and to pay the indirect costs of research at 100 percent of their negotiated level.

The Institute is responsible for research and research training on many of the most debilitating and costly diseases affecting the public health: arthritis, diabetes, musculoskeletal diseases, skin diseases, digestive diseases, nutritional disorders, and kidney and urinary tract diseases as well as endocrine and metabolic disorders. NIADDK therefore supports much of the clinical research on diseases of internal medicine and related subspecialties as well as a strong basic science effort to sustain the productivity of the Institute's disease-related programs.

The diseases encompassed by NIADDK research programs affect tens of millions of people of every age, sex, race, and geographic locale. The economic burden borne by society because of these diseases is enormous.

The importance of the Institute's research programs is reflected in NIADDK's recent elevation from institute to bureau status, with four divisions—arthritis, diabetes, digestive diseases, and kidney diseases. NIADDK is also noted for its intramural research program and facility. By providing leadership and coordination, the Institute contributes to the strengthening of all Federal programs in arthritis, diabetes, and digestive diseases.

More than 37 million Americans, including 250,000 children, are estimated to suffer from the 100 or more different forms of arthritis and musculoskeletal diseases. The most common crippling disability, inflicting pain and sometimes death, arthritis costs the Nation billions each year for medical care and lost productivity. A strong program of fundamental research on such factors as the immunologic basis and underlying mechanisms of inflammation in arthritis and related diseases is essential for improving care and rehabilitation and ultimately preventing these diseases.

The Committee notes the significant discoveries made recently on immune system defects implicated in rheumatic diseases. The importance of these findings was highlighted by the success of total lymphoid irradiation. The Institute advises that this experimental therapy produces marked clinical improvement in patients with severe, active rheumatoid arthritis who are unresponsive to conventional treatment.

Continued research is needed on the cause and treatment of rheumatoid arthritis and other rheumatic diseases, particularly osteoarthritis, which involves progressive degeneration of the joints in approximately 16 million people in the United States. Another important area of research which the Institute should vigorously pursue is juvenile arthritis.

The Committee wishes to be kept apprised of the Institute's research into mycoplasma related causes of rheumatoid arthritis. The Committee expects the Institute to examine relevant clinical data and report back within the year its assessment of whatever lines of inquiry may be suggested. Such a review should take into account the possible importance of duration of treatment as a variable in evaluating the mycoplasma perspective.

The Institute is also expected to strengthen its efforts in musculoskeletal disease research. NIADDK has initiated a major clinical study of osteoporosis, the most common disease of the bone, predominantly in older women. This and other studies are aimed at identifying the factors which characterize osteoporosis. Of special importance to patients with both rheumatic and musculoskeletal diseases, the development of artificial joints has resulted in relief of pain and increased mobility for more than 150,000 Americans each year. Improving the function and durability of these prostheses should remain a strong NIADDK research emphasis. The Institute should intensify its research effort on the cause and treatment of low back pain.

Diabetes affects an estimated 10 million Americans and is the fifth leading cause of death by disease in this country. If vascular complications are taken into consideration, diabetes may be responsible for as many as 300,000 deaths each year, making it one of the most serious public health problems in the U.S. The Committee has consistently supported diabetes research and welcomes the recent advances made. Because of one of the most striking of these advances, the synthetic production of human insulin using recombinant DNA techniques, unlimited quantities of this hormone will soon be available for treatment of diabetes and additional research. These techniques have also produced human growth hormone for the treatment of growth disorders in children.

New progress in transplantation of pancreas islet cells in animals may prove fundamental to the future development of improved treatment of diabetes and its complications. The Institute also reports rapid improvement in the day-to-day treatment of diabetes, including new techniques for more reliable monitoring of blood glucose control, home monitoring methods for patients, and a variety of new automated systems, including insulin pumps, developed by Institute grantees for the delivery of insulin. The Committee is glad to note that there appears to be increasing private sector interest in development of this technology.

The Committee is advised that these and other advances have so improved blood glucose control that the Institute is now able, for the first time in over 50 years of diabetes research, to design and undertake a long-term study to resolve whether strict control of blood glucose levels will prevent, postpone or lessen the severe complications of diabetes.

Given the debilitating and potentially tragic consequences of diabetes for patients and their families, the Committee supports NIADDK's diversified program on the causes of diabetes and prevention of its complications. The Committee also has been most concerned about careful coordination among all of the Institutes investigating diabetes to assure that the best results are achieved. The Committee reiterates its determination that careful coordination be maintained.

Digestive diseases, including hepatitis, cholesterol gallstones, and peptic ulcers, are major world-wide public health problems, causing more hospitalization than any other group of diseases. The Committee is interested in the treatment implications of a new finding: that hepatitis B viral DNA in the nucleus of liver cells of patients with chronic active hepatitis may be associated with the development of cancer of the liver. The ultimate aim of future research would be to determine whether it is possible to intervene in this process and thus lower the risk of liver cancer.

The Institute's recent completion of a long-term clinical trial on treatment of cholesterol gallstones has given a more precise understanding of the benefits and risks of a potentially important drug and will help to prevent its inappropriate use. The Committee supports NIADDK's commitment to an intensified research effort on alternatives to surgical treatment of cholesterol gallstones. The Committee is also pleased with NIADDK's innovative efforts in nutrition research, an area of great public interest and importance.

Although the lives of nearly 10,000 new kidney disease patients are saved by dialysis or kidney transplants each year, kidney disease still claims the lives of 45,000 Americans annually. The Committee supports the NIADDK's aims in kidney research which emphasize basic investigations into the cause, course of progression, and mechanisms of the several diseases of the kidney which lead to end-stage renal disease. It is vital that these diseases be prevented or more effectively treated, thereby reducing the number of individuals who must depend on artificial kidney substitutes.

Scientists at NIADDK supported centers have developed treatment regimens using diet and drugs which can prevent recurrence of kidney stones. The Committee also looks forward to continued progress by Institute researchers on sickle cell disease and Cooley's anemia, two of the most common and serious inherited blood disorders. The Committee also urges the Institute to continue and strengthen its research into cystic fibrosis.

The Committee has been pleased to learn that the Report on Research Needs and Priorities in Dermatology issued in 1979 at the request of the Committee has contributed substantially to upgrading research in skin diseases. Since all such reports eventually become out of date and thus become less useful, the Institute is encouraged to support the revision of that document to reflect the changing needs and priorities for skin diseases research.

The Committee continues to support the Institute's efforts to learn more about the cause of lupus erythematosus, a disease of the connective tissue.

NATIONAL INSTITUTE OF NEUROLOGICAL AND COMMUNICATIVE DISORDERS AND STROKE

1982 comparable appropriation	$265,901,000
1983 appropriation request	274,505,000
House allowance	294,361,000
Committee recommendation	297,077,000

The Committee recommends an appropriation of $297,077,000 for the National Institute of Neurological and Communicative Disorders and Stroke (NINCDS). This is $22,572,000 more than the administration request and $2,716,000 more than the House allowance. The recommendation is $31,176,000 more than the fiscal year 1982 comparable appropriation of $265,901,000.

The Committee has provided sufficient funding to restore new and competing research project grants and total training slots to at least their fiscal year 1982 levels, and to largely restore the proposed 4-percent cut in noncompeting continuation grants. Additional funds have been provided to support the higher average costs of research project grants and to pay the indirect costs of research at 100 percent of their negotiated level.

NINCDS conducts and supports research and research training on an array of brain and nervous system disorders, and problems of language development, speech, and hearing. Many of these disorders are severely disabling and chronic; they victimize Americans from newborns to the aged, exacting a national economic and emotional toll beyond calculation. In its testimony, the NINCDS presented evidence for optimism concerning basic understanding of normal and abnormal brain function and the ultimate conquest of nervous system disease.

The NINCDS continues to commit a major portion of its efforts and funds to basic research to develop the insights and methods needed for more specific disease-oriented studies. The Committee is encouraged to learn that important new knowledge and techniques—developed largely through funds appropriated to the NINCDS in the past—engender hope that biomedical science may be on the threshold of discovering how the central nervous system works and why it sometimes fails. Major research efforts using positron emission transverse tomography (PETT) are under way with NINCDS support at 11 U.S. institutions. Already this new technology is helping scientists identify the precise areas of the brain involved in stroke, and to assess to the extent of pathology and the potential for recovery. PETT has also proven to be valuable in localizing the region where pathology develops in Alzheimer's disease and other dementias, and in measuring altered metabolic activity associated with head trauma, brain tumors, and epileptic seizures.

While the piecing together of basic information progresses, clinical investigators are focusing their efforts on preventing those neurological and communicative disorders that are somewhat better understood, or minimizing their effects. According to the NINCDS National Survey on Stroke, for example, Americans can expect to see a continued decline in the incidence of stroke, largely as a result of the reduction of stroke risk factors. Nevertheless the Committee is concerned that stroke remains the number one neurological problem in the United States, and that while stroke mortality is declining, morbidity is on the rise. Too many stroke survivors must live with lifelong disabilities. Mindful of the charge to NINCDS-supported stroke clinical research centers to identify risk factors whose control can prevent stroke, the Committee expects the Institute to continue these prevention research activities, and to intensify its search for ways to protect brain cells during the acute stroke episode so that there can be a maximum return of function. The Committee also urges the continued development of improved pharmacological and surgical therapies, and of diagnostic tools to help clinicians identify the type of stroke a patient has suffered.

The Institute reports considerable strengthening of its Communicative Disorders program, whose responsibilities encompass research on hearing loss, speech and language impairment, and disorders of smell and taste. A new intramural laboratory is being established for clinical research, and the NINCDS is funding extramural communicative disorder and sensory disorder research centers to address the poorly understood problems of hearing loss and sensory deprivation. A second purpose of these new initiatives is to recruit and develop the clinical and basic investigators needed for an expanded effort to treat communicative and sensory disorders. Already, new methods developed by NINCDS grantees to treat otitis media, a middle ear disease, have substantially reduced the risk of permanent hearing damage. The Institute looks forward to similar awards from the continued development of the cochlear prosthesis.

The Committee observes that accidents are the fourth major cause of death in the United States, with traumatic injury to the brain and spinal cord a leading factor in these deaths. Even when trauma is not fatal, the victim often is left permanently paralyzed and disabled. Several years ago the Committee asked the Institute to designate neuronal regeneration as a research area of focused attention, with the aim of finding ways to reestablish functional connections within the central nervous system. The Committee is advised that research progress continues to be encouraging. It is now known that injured axons in special areas of the central nervous system of higher animals can regenerate. However, information is still lacking on why, in the human spinal cord, regenerating neuronal fibers will not grow across the injured area to make functionally useful connections. Other encouraging reports come from NINCDS-supported clinical studies which show that patients with severe head and spinal cord injuries survive best and have the best chance to regain function when there is prompt medical intervention to reduce the swelling of nervous system tissue and to improve blood flow. The Committee is well aware of the complexity of central nervous system research, but expects the Institute to press ahead with this urgent work so as to find more effective treatment and an eventual cure for paraplegia.

The Committee also wishes to receive an early report on current work with the pharamaceutical industry to develop and evaluate "orphan drugs" to treat certain types of epilepsy that do not respond to traditional therapies. It is the Committee's hope that the Institute will continue to take a similar approach to developing drugs to treat movement disorders such as Parkinsonism and Tourette syndrome, as well as developmental and genetic disorders such as autism and Huntington's disease.

The Committee's desire that the Institute magnify its commitment to research on autistic children has resulted in the establishment of a section on autism and behavorial disorders within the NINCDS Neurological Disorders program, and the appointment of a section chief. This positive move will expedite long-needed research on the neurobiological aspects of autism and related disorders. Newly reported advances in communicating with autistic children through words and signs, and new language-training approaches to overcoming the autistic child's speech rhythm and sentence structure difficulties, give hope that this NINCDS research effort will prove to be exceptionally fruitful.

The Institute reports an increase in research activity directed toward the problem of Reye's syndrome. The Committee hopes for favorable findings from current evaluations of two possible treatment regimens, and from a variety of basic studies. The Committee urges continued dissemination of information to the public and to health care professionals as one way to promote early identification and treatment of this lethal disorder.

Because of the opportunities available in research on the nervous system, the Committee finds it necessary to have an evaluation completed by a non-government agency of the research opportunities and research needs of the NINCDS.

The Committee requires therefore that a review of research opportunities and research needs of the Institute be studied by the Institute of Medicine or a similar institute, and that a report be made to the Committee six months thereafter.

The Committee anticipates that the study would cost approximately $800,000 and directs that these funds be made available for this purpose.

The Institute also reports new hypotheses regarding abnormalities of brain lipids and decreased serum testosterone levels in patients with amyotrophic lateral sclerosis. These clues should be pursued vigorously, along with continued research on animal models.

Also of considerable scientific interest is NINCDS-supported research on a group of Venezuelan families who show an extremely high incidence of Huntington's disease. Work should also continue on the development of animal models for Huntington's disease and on a reliable early diagnostic test.

Batten's Disease is a progressive neurological disorder, inherited as a recessive genetic disease affecting children causing deterioration in vision, coordination, mental faculties, and ending in death by the late teens or early twenties. Batten's Disease may have an incidence as high as PKU or Huntington's chorea. The cause and cure for this disease are unknown.

The Committee expects the Institute to expand the research effort on Batten's Disease and related areas within the limits of high quality research available.

NATIONAL INSTITUTE OF ALLERGY AND INFECTIOUS DISEASES

1982 comparable appropriation	$235,895,000
1983 appropriation request	246,043,000
House allowance	276,367,000
Committee recommendation	270,795,000

The Committee recommends an appropriation of $270,795,000 for the National Institute of Allergy and Infectious Diseases (NIAID). This is $24,752,000 more than the administration request and $5,572,000 less than the House allowance. The recommendation is $34,900,000 more than the fiscal year 1982 comparable appropriation of $235,895,000.

The Committee has provided sufficient funding to restore new and competing research project grants and total training slots to at least their fiscal year 1982 levels, and to largely restore the proposed 4 percent cut in noncompeting continuation grants. Additional funds have been provided

to pay the indirect costs of research at 10 percent of their negotiated level.

The Institute conducts and supports research on microbiology and immunology, on a wide range of infectious diseases, and on disorders of the immune system, such as asthma and other allergic, immuno-deficiency and autoimmune diseases. The Institute is the principal, and in many cases the only, source of Federal grants for research on certain diseases including allergic disorders, the common respiratory and gastrointestinal infections, sexually transmitted diseases such as genital herpes, bacterial pneumonias and meningitis, and infectious diseases of international importance.

Infectious diseases remain one of the major health problems of the Nation and one of the leading causes of absenteeism from work and school. A recent Federal report attributed at least 156 million days lost from work each year to infectious diseases, with a cost for treatment and lost productivity of at least $24 billion.

Much of the Institute's research to combat infectious diseases is in the area of prevention, particularly on protective vaccines. Historically, the Committee has shown strong interest and support for the Institute's efforts to develop successful vaccines for meningitis, pneumococcal pneumonia, rabies and rubella. Last year, the Institute described a program for the accelerated development of new vaccines for those infectious diseases with the greatest need and the most promise for success. These included vaccines for a major cause of meningitis in children; gonorrhea; serious respiratory infections in infants and children caused by certain respiratory and parainfluenze viruses; and childhood diarrhea caused by rotaviruses.

The Committee was glad to learn that the Institute has strengthened its attack on sexually transmitted diseases (STD) and is coordinating its research program with the VD prevention and control activities of the Centers for Disease Control. It notes that investigators are pursuing two different types of vaccines for gonorrhea. Both are undergoing evaluation in volunteers.

An NIAID intramural laboratory in Montana now has a program focusing on the gonococcus and chlamydia, two prominent microorganisms causing STD. The opening of the Ambulatory Care Research Facility on the NIH Bethesda campus has allowed the Institute to expand its research related to genital herpes. The Committee expects the Institute to press strongly ahead with efforts against genital herpes for which no cure presently is available.

The Committee continues to follow the work the NIAID's network of asthma and allergic disease centers. Scientists and physicians at these centers continue to report important advances, including improved materials and methods for immunizing patients with hay fever and seasonal asthma, sensitivity tests to diagnose those at risk of developing asthma 2 to 3 years before its clinical appearance, and safe and effective immunization procedures to prevent potentially fatal, allergic shock reactions to the venoms of bee and wasp stings.

NATIONAL INSTITUTE OF GENERAL MEDICAL SCIENCES

1982 comparable appropriation	$335,462,000
1983 appropriation request	345,621,000
House allowance	367,009,000
Committee recommendation	372,114,000

The Committee recommends an appropriation of $372,114,000 for the National Institute of General Medical Sciences (NIGMS). This is $26,493,000 more than the administration request and $5,105,000 more than the House allowance. The recommendation is $36,652,000 more than the fiscal year 1982 comparable appropriation of $335,462,000.

The Committee has provided sufficient funding to restore new and competing research project grants and total training slots to at least their fiscal year 1982 levels, and to largely restore the proposed 4 percent cut in noncompeting continuation grants. Additional funds have been provided to support the higher average costs of research project grants and to pay the indirect costs of research at 100 percent of their negotiated level.

NIGMS supports basic research studies, most of which are designed to provide insights into the structure, function, and related processes of the most fundamental units of biology: cells and molecules, chromosomes and genes. This basic research serves as the foundation essential to further more targeted studies relating to the prevention, diagnosis, and treatment of disease and disability. In addition, the concepts and research techniques developed during the course of this basic research often become vital tools for a broad range of research activities. One noteworthy recent example of this is the development of recombinant DNA technology. The use of this technology is growing in biomedical research studies, as well as in commerical applications such as the production of drugs, and other biologically important substances, and certain chemicals used in agriculture and industry.

The research efforts funded by NIGMS are administered by four major programs—genetics, cellular and molecular basis of disease, pharmacological sciences, and physiology and biomedical engineering. All these programs emphasize the support of investigator-initiated research project grants.

The Committee is aware of the discoveries emerging from research in the field of genetics. Studies of the mechanisms that control the activity of genes, the dynamic nature of DNA, the location and function of specific genes on chromosomes, and the effects on genes of chemicals and other environmental agents are among those which promise to expand our understanding of human inheritance. Such understanding is critical to efforts to prevent or treat specific genetic diseases and to determine the genetic factors associated with such diseases as cancer, hypertension, arthritis and diabetes.

The research supported by the cellular and molecular basis of disease program complements genetic studies by focusing on molecular, subcellular, and cellular structures, functions and processes in both their normal and diseased states. At times, these studies explore the relationships between genetic expression and the proper functioning of a vital protein, an enzyme, a cell organelle, or a cell membrance. Other studies concentrate on improving our understanding of the various individual components of the cell. All this work produces basic findings useful in determining how normal cellular activity prevents disease and how abnormal cellular activity contributes to disease.

The Committee notes that the pharmacological sciences program continues to support important research on the chemical and molecular processes involved in the actions of therapeutic drugs. Findings from studies involving targeting drugs to particular disease sites, examining the interactions of drugs in the body, and determining the factors which influence drug metabolism are among those which eventually may be applied to the development of safer, more effective drugs or treatment strategies.

The physiology and biomedical engineering program supports diverse research activities which apply the physiological, chemical, physical and engineering sciences to the solution of biomedical problems. The continuing refinement and testing of an artificial skin to be used on extensive burn wounds is a noteworthy example of such research. The Committee observes that the development of improved research instrumentation and the NIGMS shared instrumentation initiative are other important efforts of this program.

To assure that biomedical research flourishes in the future, NIGMS continues its significant investment in research training programs. By emphasizing broad, multidisciplinary predoctoral training, the Institute's grantees prepare bright young investigators for research careers in many biomedical fields. Two special NIGMS-supported training programs—the medical-scientist (M.D.-Ph.D.) training program and the minority access to research careers (MARC) program—address shortages in clinical investigators and minority biomedical scientists, respectively. The Committee's interest in all the research training programs of NIGMS continues.

NATIONAL INSTITUTE OF CHILD HEALTH AND HUMAN DEVELOPMENT

1982 comparable appropriation	$226,309,000
1983 appropriation request	233,575,000
House allowance	251,561,000
Committee recommendation	255,749,000

The Committee recommends an appropriation of $255,749,000 for the National Institute of Child Health and Human Development (NICHD). This is $22,174,000 more than the administration request and $4,188,000 more than the House allowance. The recommendation is $29,440,000 more than the fiscal year 1982 comparable appropriation of $226,309,000.

The Committee has provided sufficient funding to restore new and competing research project grants and total training slots to at least their fiscal year 1982 levels, and to largely restore the proposed 4 percent cut in noncompeting continuation grants. Additional funds have been provided to pay the indirect costs of research at 100 percent of their negotiated level.

NICHD supports and conducts research to improve the health and well-being of the developing infant and child to prevent problems that have their origins early in life and lead to adult disabilities and early death.

Problems associated with reproduction and development such as birth defects, premature birth, and mental retardation are among the most significant and costly health problems of our society. To prevent or ameliorate these problems, the NICHD supports and conducts a comprehensive research program that combines maternal and child health research with a full range of population studies that focus on the complexities involved in contraception, childbearing, and childrearing. The NICHD program includes biomedical, behavioral and social sciences projects.

The Foundation of the Institute's research program is a plan based on these research areas: fertility and infertility; pregnancy, birth, and the infant; nutrition; Sudden Infant Death Syndrome; congenital defects; mental retardation; child and adolescent development; contraceptive development; contraceptive evaluation; and population dynamics.

An important area for NICHD research is the prevention of premature birth, one of the most common causes of neonatal mortality and morbidity. Infants born with low birth weight (less than 5.5 pounds) or after short gestation account for two-thirds of the 45,000 infants who die in the United States each year.

Institute figures show that improvements in the treatment of premature infants and other research advances have contributed to a decline in infant mortality since 1976, though the infant mortality rate in the U.S. remains too high. A number of NICHD-supported research projects focus on the basic question of what triggers the start of labor. When this answer is found, more progress can be made in preventing prematurity, according to the Institute. One promising line of study investigates the role that infection may play in triggering premature labor. If infection is confirmed to be a major cause of prematurity, this knowledge could lead to treatment that substantially reduces the incidence of prematurity.

The nutrition research program of the NICHD is designed to provide information on the interrelationships of food, nutrition, and human development and to develop new understandings of nutritional imbalances and interactions in early life that may lead to diseases and disability in later life. This program includes research on breast-feeding and the causes of intrauterine growth retardation (IUGR). NICHD-supported investigators have recently developed an animal model of IUGR in which nutrients are delivered directly to the fetus through the amniotic fluid. If this treatment proves successful, infant mortality and morbidity associated with IUGR can be reduced, the Institute advises.

The NICHD continues its comprehensive research program into Sudden Infant Death Syndrome (SIDS). The Institute recently reported the first findings from its Cooperative Epidemiologic Study of Risk Factors, a large multicenter study designed to identify factors which differentiate SIDS infants from non-SIDS infants. The Committee is advised that early data confirm many of the findings from other SIDS research. For instance, it was found that those who appear to be at increased risk of SIDS are: male infants, premature or low birthweight infants, babies from a low socioeconomic background, and babies born to mothers who smoked or were anemic or had an amniotic fluid infection during pregnancy. In addition, preliminary data were released from this study to allay fears over a reported association between SIDS and DPT vaccination. The Institute states that the study has found no such association. It is hoped that other findings from this study will in the future enable physicians to identify infants at increased risks for SIDS and to take preventive measures. The risk factor study and other SIDS studies continue with this goal in mind.

Some 150,000 newborns in this country have significant congenital malformations or hereditary disorders. While representing 3 to 5 percent of all births, they account for approximately 20 percent of infant mortality and account for many cases of mental retardation, physical disability, blindness and deafness, and developmental disabilities. For the great majority of congenital and developmental defects, the cause remains unknown. Thus, an important priority of the Institute is research on the causes, prevention, alleviation and treatment of these problems.

An important priority of the Committee is research on mental retardation, a condition which affects nearly 7 million Americans. As urged by the Committee, Institute-supported scientists have developed an important research tool—an animal model for the specific chromosomal defect most often responsible for Down's syndrome. Down's syndrome is the most common and readily identifiable genetic condition associated with mental retardation. Using this animal model, scientists are able to conduct experiments which would not be feasible using human subjects. The NICHD recently announced the availability of this new animal model to the research community and anticipates an acceleration of research relating to Down's syndrome.

The Institute maintains significant research interest in the behavioral and social aspects of human development as well as the physical aspects. Institute-supported scientists are studying the response and interaction of infants to their environment. Studies on the development of learning ability make it possible to assess the condition of infants who are born at risk for abnormal development and to evaluate environmental effects and the impact of special programs on these infants. NICHD-supported researchers also study learning disabilities such as dyslexia, and impairment of reading ability. Tests developed with Institute support are useful for both diagnosing and prescribing remedial procedures for reading disability.

The Committee has closely followed NICHD's efforts in the areas of regulation of fertility, alleviation of infertility, and treatment for reproductive diseases that rest on understanding basic reproductive biology. Research in this area by NICHD intramural scientists and by grantees has led to the discovery of a basic hormone in the brain which regulates reproductive functions in both men and women. According to the Institute, this hormone has been used successfully to treat specific causes of infertility in both men and women and is currently being investigated as a new contraceptive agent for women and the first chemical contraceptive for men.

The primary objective of the NICHD contraceptive development program is to make available effective, safe, and acceptable means of contraceptive by developing new methods and improving the technology of fertility regulation. The Committee notes that research is continuing on improving traditional methods of contraception such as diaphragms, and clinical trials are underway to test the efficacy of cervical caps. Studies are also supported on natural family planning methods.

Research continues on the health effects of currently used contraceptive methods such as oral contraceptives and vasectomy. Research has shown that the most important side effect of oral contraceptive use is increased risk of cardiovascular disease, especially for women over the age of 35 who smoke. On the other hand, very recent research reports indicate that oral contraceptive use may offer some protection against the development of ovarian cancer, according to the Institute. Research on this and other issues related to oral contraceptive use should continue.

The NICHD also maintains a research program in population dynamics. Behavioral and demographic studies are supported on the relation between women working outside the home and their decisions regarding childbearing, the cost of raising a child, and changes in population patterns due to migration and social factors such as the increasing divorce rate.

NATIONAL EYE INSTITUTE

1982 comparable appropriation	$127,374,000
1983 Appropriation request	131,550,000
House allowance	138,763,000
Committee recommendation	144,360,000

The Committee recommends an appropriation of $144,360,000 for the National Eye Institute (NEI). This is $12,810,000 more than the administration request and $5,597,000 more than the House allowance. The recommendation is $16,986,000 more than the fiscal year 1982 comparable appropriation of $127,374,000.

The Committee has provided sufficient funding to restore new and competing research project grants and total training slots to at least their fiscal year 1982 levels, and to largely restore the proposed 4 percent cut in noncompeting continuation grants. Additional funds have been provided to support the higher average costs of research project grants and to pay the indirect costs of research at 100 percent of their negotiated level.

Eye disease and blindness cause suffering, disability, and loss of productivity for millions of people throughout the world. In the United States alone, more than 10 million people suffer from visual impairment that cannot be corrected by eyeglasses or contact lenses. Added to the physical pain and emotional hardship that vision disorders cause is their staggering economic burden, estimated in the billions of dollars.

Over the past 14 years support for vision research provided by NEI has led to numerous accomplishments and discoveries that have greatly advanced the fight against blindness and visual disability. Most recently a nationwide clinical trial demonstrated that laser treatment can be highly effective in preventing or retarding severe visual loss from one of the leading causes of blindness, age-related maculopathy.

Intensive research has led to dramatic improvements in the diagnosis and treatment of eye diseases, and in some cases to means of restoring the visual loss they cause. However, the fact that most of the more common and serious diseases are still poorly understood underscores the need for continued and intensified research.

Diabetes affects a number of eye tissues, but exerts its most harmful effects of the tiny blood vessels of the retina where it triggers a series of events which may lead to severe and irreversible visual loss. The Committee understands that timely laser treatment can halt the progress of diabetic retinopathy and forestall blindness in a large percentage of cases. In some instances, impaired vision can be improved through a surgical procedure known as vitrectomy. As impressive as these findings are, however, much more research is needed to find better ways of treating this disease. The Institute should continue the search for better meth-

ods of treatment and for ways of preventing and curing diabetic retinopathy.

Herpes simplex virus is the leading infectious cause of corneal blindness and impairment in the United States. Acute ocular herpes infections are difficult to treat, but a number of effective antiviral drugs are now available. In fact, most of the anti-herpes drugs now on the market were first tested and proven effective in the eye, and research on ocular herpes and its treatment has made a major contribution to knowledge and treatment of herpes infections generally. Unfortunately, none of the present agents can prevent recurrences of ocular herpes, because the virus remains latent within nerve tissues behind the eye. Therefore, the Committee believes that further research on this painful and disabling condition is a high priority.

The National Eye Institute devotes most of its funding in the cataract program to research aimed at developing means of preventing or slowing cataract development or of treating it nonsurgically. It has been estimated that if it were possible to slow the progression of cataracts enough to delay the need for surgery by only 10 years, the number of cataract operations performed in the United States could be reduced by 45 percent annually and more than $530 million per year could be saved, according to the Institute.

In the search for a cure for glaucoma, an understanding of the normal cellular processes that regulate the flow of aqueous humor through the eye, and how drugs act upon them, is essential, as is determining how optic nerve damage is related to intraocular pressure. Research to improve our understanding of the basic processes in the optic nerve which are affected in glaucoma should continue. This, the Committee is advised, may lead eventually to the development of ways to protect the optic nerve and perhaps to a means of reversing nerve damage and subsequent blindness from glaucoma.

The Committee is pleased that two NEI-supported grantees shared the 1981 Nobel Prize in medicine or physiology. Their basic research has been translated into clinical situations and has saved many children from lifelong blindness caused by congenital cataract and strabismus. Basic neurobiology and clinical research on the structure, function, and development of those parts of the brain and extra-ocular muscle system that make vision possible should be further emphasized in fiscal 1983.

The NEI intramural program is also pursuing several promising areas of investigation. One of these is uveitis, and inflammatory disease of the inner eye which is responsible for 10 percent of all visual impairment in the United States. A new drug, cyclosporin A, is being tested in a clinical trial to determine its effectiveness in treating uveitis. Initial results indicate that the drug is successful in treating some forms.

The Committee also notes that there will be increased opportunity for collaborative efforts with the shift of NEI intramural scientists to contiguous space. The Committee hopes that the consolidation of scientists in this setting will produce even more effective research results in behalf of the visually impaired.

In another branch of the intramural program, basic scientists are gaining many insights into the mechanisms by which aldose reductase causes damage. Studies have shown that aldose reductase is responsible for cataract formation in diabetic rats. Perhaps more important new evidence points to the possibility that aldose reductase may be involved in the manifestation of other complications of diabetes, such as neuropathy and retinopathy as well. Finally, the Laboratory of Molecular and Developmental Biology is looking at ways to correct major disorders, particularly those that are congenital or hereditary, by correcting defects at the gene level. These investigations may pave the way for novel approaches to treating congenital ophthalmic disorders. Studies such as these will increase the opportunity to prevent as well as treat vision disorders.

NATIONAL INSTITUTE OF ENVIRONMENTAL HEALTH SCIENCES

1982 comparable appropriation	$154,258,000
1983 appropriation request	157,448,000
House allowance	162,695,000
Committee recommendation	166,040,000

The Committee recommends an appropriation of $166,040,000 for the National Institute of Environmental Health Sciences (NIEHS). This is $8,592,000 more than the administration request and $3,345,000 more than the House allowance. The recommendation is $11,782,000 more than the fiscal year 1982 comparable appropriation of $154,258,000.

The Committee has provided sufficient funding to restore new and competing research project grants and total training slots to at least their fiscal year 1982 levels, and to largely restore the proposed 4 percent cut in noncompeting continuation grants. Additional funds have been provided to support the higher average costs of research project grants and to pay the indirect costs of research at 100 percent of their negotiated level.

NIEHS conducts and support research on the effects of environmental agents on human health. This research serves the practical purpose of identifying toxic agents and improving understanding of the manner in which they cause cancer, birth defects, and other damage to human biological systems. This is the necessary first step in preventing disease. Such information is transmitted to other scientists, physicians, and interested Federal agencies as the first step in risk reduction.

In the past 2 decades much has been learned about the potential adverse health effects of chemicals. Increases in many diseases have been linked to specific environmental agents. However, many compounds still remain to be identified and their effects understood.

Two areas of particular environmental concern, according to the Institute, are the contamination of drinking water sources by synthetic organic chemicals. The second involves some 50,000 sites where chemical wastes are buried. The Committee will wish to thoroughly explore these problems with the Institute during fiscal 1983 hearings.

A significant portion of the NIEHS research effort goes into the National Toxicology program (NTP) which is one of the primary mechanisms the Federal Government has to identify and characterize toxic chemicals. In fiscal year 1983 the NTP will continue efforts to test chemicals for a variety of toxic effects and to develop realistic alternatives to the costly and time-consuming test methodologies now available. The NTP expected to have approximately 205 comprehensive bioassay tests under way to determine carcinogenic effects and to provide more complete toxicological profiles of the chemicals under study. Additionally, there will be approximately 380 ongoing tests of specific compounds to determine their ability to induce genetic mutations and 12 tests ongoing to determine the chemicals' ability to cause birth defects.

As the Toxic Substances Control Act is implemented and the burden for testing single chemical compounds shifts from the Federal Government to the private sector, NTP will place increasing emphasis on developing faster, less expensive methods to replace the current long-term bioassay now used. The NTP will also become increasingly involved in designing tests for mixtures of chemicals, and in developing the methodology needed to assess the risk posed by chemicals. The Government needs to be able to determine the risk posed by multiple toxic chemicals if it is to rationally regulate their use.

The NIEHS plays a significant role in the training of environmental toxicologists, epidemiologists, pathologists, and biostatisticians through fellowship and training grant awards. These scientists meet a growing need in the private sector, academic research institutions, and government agencies to develop new knowledge about the many and varied environmental health problems the Nation faces.

The laboratory portion of the new NIEHS facility was scheduled for occupation this year. These modules will provide up-to-date work space for the Institute's laboratory programs.

NATIONAL INSTITUTE ON AGING

1982 comparable appropriation	$81,903,000
1983 appropriation request	84,556,000
House allowance	96,104,000
Committee recommendation	91,887,000

The Committee recommends an appropriation of $91,887,000 for the National Institute on Aging (NIA). This is $7,331,000 more than the administration request and $4,217,000 less than the House allowance. The recommendation is $9,984,000 more than the fiscal year 1982 comparable appropriation of $81,903,000.

The Committee has provided sufficient funding to restore new and competing research project grants and total training slots to at least their fiscal year 1982 levels, and to largely restore the proposed 4 percent cut in noncompeting continuation grants. Additional funds have been provided to pay the indirect costs of research at 100 percent of their negotiated level.

The number of elderly in the United States is expected to reach 30 million in this decade and to exceed 40 million by 2020. Only by knowing more about aging and the difficulties and changes that occur as the Nation's population grows older, can we promote the health and well-being of the aged and the aging. This is the job of the NIA and it is an important one indeed.

The Committee, recognizing the demographic impact of an aging population, fully supports research into the processes of aging and the causes and prevention of diseases and disorders associated with aging. Such research has great potential for reducing the incidence of the debilitating conditions of old age. Thus, new knowledge provides a better understanding of the mechanisms of aging and how to prevent and treat age-related disorders. For example, significant progress has been made toward improved understanding of senile dementia, a

condition of high incidence among the elderly population and of enormous social cost. Approximately 3 to 4 million elderly Americans suffer from some type of dementia. Some 1,500,000 of these have senile dementia of Alzheimer's type with intellectual deterioration and inability to carry out the normal tasks of daily living.

One of the most recent scientific leads concerning Alzheimer's disease comes from scientists working with slow viruses. These viruses typically require between 10 and 20 years to produce their damaging effects on the nervous system. The recent discovery of a virus-like particle that does not appear to contain nuclear material—referred to as prion—may give scientists a significant lead to a possible cause of senile dementia of the Alzheimer's type, according to the Institute.

The Committee is anxious to see that Alzheimer's Disease research efforts now under way at various Institutes and other agencies of government have strengthened coordination and cooperation. The Committee directs that, prior to next year's hearing, a report be submitted to the Committee on the state of the science of Alzheimer's Disease, as well as on the efforts undertaken to ensure better coordination among the Institutes and other agencies of government.

The NIA has initiated a small clinical research program at the Warren G. Magnuson Clinical Center to strengthen the research capabilities of its laboratory of neurosciences. The clinical program, working with the basic research program, will examine cerebral changes as they relate to aging and dementia. The Committee notes the progress being made, and encourages the Institute to expand this program when the six-bed clinical research unit is made available. The Committee has supported establishing such a research unit.

In 1981, the NIA proposed the creation of a teaching nursing home award to speed clinical investigation and training in specific disorders that bring a need for long-term care of the elderly population. The Nation's expenditures for nursing homes are nearing $22 billion annually and will more than triple by 1990. These high costs are in part a reflection of the lack of knowledge about effective and cost-saving methods of management and treatment of many of the disorders of the elderly. The research will focus on senile dementia, incontinence, gait disorders, prevention and management of bedsores, behavioral and organizational interventions to improve patient functioning, and drug interactions. The Committee understands that the teaching nursing home award is an important component of an overall effort to develop a research program in geriatric medicine to increase the body of knowledge in this area, and encourages the Institute to strengthen its commitment with a portion of the additional funds made available.

The emphasis being placed on developing and validating indices of human performance along functional rather than chronological age lines is encouraging. The Committee understands that studies will be directed at examining technological changes in work and their impact upon work roles, aging, and human performance; specifying the conditions that can sustain the health, well-being, and independence of older persons; and how timing and sequencing of life events are influenced by industrialization, urbanization, and other changes in institutions and populations.

Research done over a number of years at the NIA's Gerontology Research Center with experimental animals has resulted in the development of a technique which opens up the blood-brain barrier. This normal barrier is selectively permeable to substances circulating in the blood stream. Thus, the opening-up technique may prove valuable in enhancing the effectiveness of drugs used to treat conditions in the elderly such as senile dementia of the Alzheimer's type, certain nervous disorders, and perhaps even brain tumors. The opening-up technique has been shown to cause no neurological changes and to be reversible. Trials for the use of the technique in the treatment of brain tumors are underway. Trials for use of the technique with other age-related disorders are currently being considered for feasibility.

RESEARCH RESOURCES

1982 comparable appropriation	$184,177,000
1983 appropriation request	191,024,000
House allowance	227,642,000
Committee recommendation	199,967,000

The Committee recommends an appropriation of $199,967,000 for the Division of Research Resources (DRR). This is $8,943,000 more than the administration request and $27,675,000 less than the House allowance. The recommendation is $15,790,000 more than the fiscal year 1982 comparable appropriation of $184,177,000.

The Committee has provided sufficient funding to maintain research project grants and training positions at their fiscal 1982 levels. Additional funds have been provided to pay the indirect costs of research at their full negotiated level and to restore funding for the six general clinical research centers proposed to be closed.

The Division of Research Resources (DRR) is unique among the components of the National Institutes of Health. DRR is the organization charged with the responsibility for strengthening and enhancing the research environments of institutions engaged in health-related research. This is done through developing and sustaining a wide variety of resources essential to the conduct of biomedical research. Such resources are used by a broad spectrum of investigators in helping to carry out the mission of the NIH. Approximately 30 percent of all NIH grants and 25 percent of the total of NIH extramural funds are held by research investigators who are users of the DRR resources. These resources are multicategorical in nature, and the investigators using them are conducting research that covers virtually all disciplines of biomedical science.

Through its extramural programs, the Division develops and supports biotechnology resources that provide access to the latest technologies from the physical sciences, mathematics, and engineering; general clinical research centers that are specialized clinical research environments within larger teaching hospitals; and animal resources that support projects resulting in the most effective use of animals in research. In addition, it supports the seven national primate research centers and a number of valuable animal colonies. The Division also awards minority biomedical research support grants to increase the participation of ethnic minority students and faculty in the biomedical sciences and health professions; and biomedical research support grants that enable institutions to more efficiently and effectively conduct their biomedical research programs through the use of flexible funds and local decisionmaking.

As a result of the work of the general clinical research centers there have been developed artificial kidneys, insulin pumps and heart pacers, as well as new techniques for certain organ transplantations. In addition, new drugs and diets have been developed for the effective treatment of atherosclerosis, coronary artery disease, hypertension, obesity, diabetes, arthritis, viral disease, and psychiatric disorders. The clinical research environments provided by these centers are vital in translating basic research findings into clinical applications leading to the prevention of disease in man. The Committee recommendation will provide support for 71 general clinical research centers and affiliated activities in 1983. DRR, where possible and appropriate, should continue to encourage research involving outpatients rather than hospitalized patients in an effort to hold down rapidly rising hospital care costs.

The biotechnology resources program is designed to develop new technologies and provide access to sophisticated research instrumentation for use by biomedical scientists. In addition to developing new research technologies and methods, this program also can help alleviate instrumentation shortage and obsolescence in laboratories conducting federally-supported biomedical research. Biotechnology resources are regional and national in scope and provide a unique opportunity for researchers to have access to specialized technologies often not available at their own institutions. Technological capabilities are provided in this way to overcome restraints of cost, complexity, or scarcity.

The Committee is interested in DRR activities involving industry and other federal agencies in the development of research resources and new technologies. DRR staff should continue efforts to bring together the knowledge bases and resources of the private and public sectors for overall benefits to health research. Of particular interest to the Committee is the PROPHET Computer Network, which is being used by several pharmaceutical houses as well as the Food and Drug Administration for drug development and testing purposes, and the CLINFO System, which was developed by DRR and is now being made available commercially to provide clinical researchers with a tool to efficiently manage clinical data. The Committee also notes the cooperation that DRR has received from other components of the NIH in providing support for Minority Biomedical Research Support grants. The Committee regards the MBRS program as worthy of continued support.

The Biomedical Research Support Program is designed to enhance the ability of institutions to conduct research by providing flexible funds on which to draw to support new research efforts, bright young investigators who have not yet obtained direct grant support, and pilot projects. Additionally, these funds provide a portion of the cost of shared research equipment and research facilities.

The Committee is concerned about the Department's decision to increase the threshold to qualify for biomedical research support grants. The Committee is particularly concerned about the impact this revision (raising the eligibility threshold from $200,000 to $500,000) will have on small research institutions. It was informed that a number of nursing, dental and pharmacy schools will not receive BRSG support in

fiscal 1983, thus adversely affecting research programs at these schools.

In the interest of maintaining high quality research, the Committee intends to examine the impact of this proposal on the smaller research institutions during its fiscal 1984 hearings. The proposed threshold requirement therefore should not be implemented until this review is completed and the results are evaluated by the Committee.

The Committee takes note of the report on shortages in research equipment and instrumentation that was submitted by the NIH. The report estimates that the NIH community of scientists, given the opportunity, would demonstrate a substantial need for shared research instrumentation. To meet this need, DRR initiated a new shared instrument grant program in 1982 which generated considerable interest in the biomedical research community. This brought some $40,000,000 in applications from more than 200 institutions seeking new research equipment or upgrading obsolete instrumentation. The Division was able to fund 22 of these applications at a cost of $3,700,000. In light of this demonstrated need, the Committee believes that DRR, to the extent possible, should set-aside a portion of program funds for grantee institutions participating in the Minority Biomedical Research Support program.

The Committee notes that DRR has come up with a biomedical research model development to better serve the needs of investigators who require appropriate research models, and to meet the concerns of animal welfare groups which are urging the Federal Government to find alternatives to the use of laboratory animals for research. In fiscal 1983, this activity will consist of initiating planning efforts through workshops and conferences aimed at understanding the problems and identifying areas of research and technology most likely to benefit from the development of models.

JOHN E. FOGARTY INTERNATIONAL CENTER

1982 comparable appropriations	$9,205,000
1983 appropriation request	10,147,000
House allowance	10,147,000
Committee recommendation	10,147,000

The Committee recommends an appropriation of $10,147,000 for the John E. Fogarty International Center for Advanced Study in the Health Sciences. This is the same as the administration request and the House allowance. The recommendation is $942,000 more than the 1982 comparable appropriation of $9,205,000.

The John E. Fogarty International Center for Advanced Study in the Health Sciences is the organizational component of the NIH that promotes and coordinates international cooperation in significant areas of biomedical research. Through its postdoctoral research fellowships in the United States and abroad, exchanges of senior scientists with other countries, and international conferences and seminars, the Fogarty International Center (FIC) provides a bridge to facilitate the development and communication of new technologies and discoveries that bear on health problems of the American people. In addition, the Fogarty International Center is the liaison between the NIH and the PHS Office of International Health, the Department of State, foreign governments, and international health organizations.

The Fogarty International Center currently discharges its responsibilities through four programs—Advanced International Studies, International Research and Awards, International Coordination and Liaison, and Foreign Scientists Assistance. The common goal of these programs is to assure better scientific communication and to foster exchange of information and data between our scientists and researchers in foreign countries.

The Advanced International Studies Program utilizes the unique resources of the Fogarty Scholars-in-Residence and conferences and seminars to focus attention on critical and rapidly developing areas of research. Fogarty Scholars are world-renowned investigators who spend up to a year at the NIH writing and lecturing, and participating in collaborative research projects with NIH scientists. During their residency, these scholars organize conferences and workshops designed to communicate up-to-date information on topics of far reaching importance, assess the state of the science, and develop areas for future investigation. During the past year the Fogarty International Center hosted 10 scholars. The Center is reviewing the Scholars Program to determine whether a broader range of disciplines should be included—such as epidemiologists and behavioral scientists; whether some scholars, who cannot come for a full term of residence, should be invited for shorter periods; and whether changes in the nominating procedure are desirable.

International conferences and symposia facilitate the exchange of current research information, serve as a forum to develop new hypotheses, provide the means to assess the value and direction of past and present research in a given field, and identify gaps in knowledge for future research undertakings. The FIC provides a central role in planning and organizing these conferences and, in conjunction with NIH Institutes and other organizations, provides funds to support them.

A third component of the Advanced International Studies Program is the study of biomedical research issues that deal with specific health problems of international concern. One such issue—the eradication of specific diseases—is underway. Two problems to be addressed by the International Issues-Study Progam are the feasibility of the eradication of measles and poliomyelitis.

The International Research and Awards Program provides fellowships to scientists at various stages of their careers to pursue collaborative research projects in the United States and abroad. Senior International Fellowships are awarded to productive American scientists to permit them to work in foreign laboratories with scientists who have similar interests. The International Research Fellowships are designed to bring to the United States bright, young foreign scientists, nominated by expert committees in their home country and reviewed by NIH study sections, to share their ideas with investigators in American institutions.

The International Coordination and Liaison Program of the Fogarty International Center serves as the link between the NIH and the biomedical research communities in other countries and international organizations concerned with medical research. Advice is also provided to the Director, NIH, and to the Directors of NIH Bureaus, Institutes, and Divisions for development of international policies, procedures and activities. There are currently 41 bilateral agreements which involve NIH with 26 countries in three types of agreements: agreements made at the government-to-government level which promote broad science and technology objectives; agreements between Department-level agencies which may have general preventive health or health-maintenance objectives, as well as concerns with specific disease issues; and agreements between NIH and a foreign counterpart in which specific components of NIH are identified and participating in particular disease or biomedical research areas. The provisions of bilateral agreements include visits and consultations, conferences and workshops, collaborative or coordinated research, and the cost sharing of scientific exchange. Major agreements are with China, U.S.S.R., other Eastern European countries, Japan, Egypt, Israel, India, and Nigeria.

The Fogarty International Center also serves as the administrative channel for funds appropriated by the Congress of the Gorgas Memorial Institute for the maintenance and operation of the Gorgas Memorial Laboratory in Panama. The Committee wishes to know whether it would be possible to obtain, more participation from other countries in the Central American region in contribution to the support of this laboratory. The Fogarty International Center should make the necessary inquires through the appropriate channels toward this end, and should provide the Committee with a report prior to the beginning of fiscal 1984 hearings.

NATIONAL LIBRARY OF MEDICINE

1982 comparable appropriation	$45,035,000
1983 appropriation request	46,043,000
House allowance	46,043,000
Committee recommendation	46,043,000

The Committee recommends an appropriation of $46,043,000 for the National Library of Medicine (NLM). This is the same as the administration request and the House allowance. The recommendation is $1,008,000 more than the fiscal year 1982 comparable appropriation of $45,035,000.

The National Library of Medicine is the Nation's principal resource for information used in biomedical research, health education, and health care delivery. It is in the forefront of developing the information services required to provide the health community with rapid access to the world's scientific and scholarly biomedical literature. As a major biomedical-communication center, NLM is applying the latest computer and communications technologies to health information transfer problems.

The health community relies heavily upon NLM's online computerized MEDLARS (Medical Literature Analysis and Retrieval System) system to aid in the identification and dissemination of the professional literature. MEDLINE, the most frequently used of the Library's online date bases, recently marked its tenth anniversary. Initiated with a group of 25 health science institutions in 1971, the NLM online network today comprises 1,800 centers in the United States and abroad located within universities, medical schools, hospitals, government agencies, and commercial organizations. In fiscal year 1982, users of the network generated over two million searches.

Concerns have been raised that some NLM services unfairly compete with similar services provided by the private sector since NLM's prices fail to recover the full cost of creating and providing MEDLARS services.

NLM's current policy is to charge the full cost to access its system but its pricing does not include all other costs such as the costs of data creation. In a time of fiscal restraint it is important to examine these complex public/private sector issues. The Committee notes that the OTA has completed its study of NLM's MEDLARS pricing policies and generally concluded that NLM's pricing policies are consistent with existing statutes and regulations. GAO has also studied this issue. While generally finding NLM's pricing policies to be reasonable and legal, GAO recommended total full cost pricing of MEDLARS to certain non-health-related users.

The Department of Health and Human Services is currently studying the MEDLARS pricing issue, among others, regarding the NLM, and intends to issue a report in September 1983. The Committee believes it would be useful to have a report from the Department, as well as the OTA report and completed GAO study of the pricing issue, in time for the first budget resolution of May 1983. This would permit the Committee sufficient time to consider taking legislative action.

In fiscal year 1983, NLM will continue the development of a third-generation computer-based system for library and information services. The primary goal of this evolving system, known as MEDLARS III, is to automate more fully such internal functions as acquisitions, cataloging, and indexing. MEDLARS III has great potential for reducing the cost of handling literature and for speeding the delivery of biomedical information to professionals who require it.

The Medical Library Assistance Act provides support for developing health information services for the Nation's health professionals. One major activity authorized by this Act, the Regional Medical Library Program, has created a biomedical communications network through which comprehensive medical information is provided to the Nation's health professionals. This program has developed an effective and efficient document delivery system through which more than two million interlibrary loans were provided to the health community in fiscal year 1981. The network soon will be reduced from eleven to seven regions. The Committee encourages the continued development of a cost effective system, but cautions that such a reconfiguration must ensure that the quality of service to health professionals is sustained. The Committee also assigns a high priority to NLM's computers-in-medicine research program, an activity that is effectively integrating computer technology into clinical medicine.

The Lister Hill National Center for Biomedical Communications conducts applied research and development in the fields of computer science and communications technology to improve health care delivery, health science education, and biomedical research. Programs are aimed at developing new systems to provide health professionals with better access to the knowledge contained in books, journals, and reports. The Committee recognizes that improvement in the dissemination of research results is heavily dependent on innovative research on the application of new technologies for information handling.

The National Medical Audiovisual Center, which is dedicated to improving the transfer of biomedical information through creative use of audiovisual materials and technology, will be organizationally merged with the Lister Hill Center in fiscal 1983. The Committee hopes this will result in more efficient operation of these programs.

The Toxicology Information Program, through creative specialized information services, provides users in government, educational institutions, and industry with rapid access to information about the effects of drugs, chemicals, and other toxic substances on humans and the environment.

OFFICE OF THE DIRECTOR—NIH

1982 comparable appropriation	$23,618,000
1983 appropriation request	24,283,000
House allowance	24,683,000
Committee recommendation	24,683,000

The Committee recommends an appropriation of $24,683,000 for the Office of the Director. This is the same as the House allowance. The recommendation is $1,065,000 more than the fiscal year 1982 comparable appropriation of $23,618,000.

The Office of the Director provides the overall direction for the National Institutes of Health. The appropriation funds those offices responsible for intramural and extramural research policy development, medical applications of research, communications, program planning and evaluation, equal opportunity, contract and grant administration, management policy, investigation and review, protection from research risks, and financial and personnel management.

The increase over the 1982 level is for mandatory expenditures and for the cost of the October 1981 pay raise.

NIH BUILDINGS AND FACILITIES

1982 comparable appropriation	$9,898,000
1983 appropriation request	17,500,000
House allowance	17,500,000
Committee recommendation	17,500,000

The Committee recommends an appropriation of $17,500,000 for NIH buildings and facilities. This is the same as the administration request and the House Allowance. The recommendation is $7,602,000 more than the fiscal year 1982 comparable appropriation of $9,898,000.

This appropriation provides for the design, construction, improvement, and major repair of the building and support facilities of the National Institutes of Health.

Of the total amount provided, $6,600,000 is for the program to renovate the main part of the Clinical Center in Bethesda, a facility which has been operational for more than 25 years and is in need of life safety code and other work.

Funds of $5,000,000 are provided for the first phase in the expansion/renovation of Building 8. This is part of a long-term rehabilitation effort to upgrade six laboratory buildings which have been operational for approximately 40 years.

Funds of $1,000,000 are for the construction of an addition to Building 21 to handle hazardous chemical and radioactive wastes and $700,000 provides for the installation of sun screens and double-glazing of windows on Building 31C, an essential factor in reducing the cooling load and in saving energy.

Funds for routine repair and improvements in the electrical, mechanical, and structural components of buildings at NIH installations at Bethesda, the Poolesville animal farm, the Gerontology Research Center in Baltimore, the Rocky Mountain Laboratory at Hamilton, Mont., and at other NIH field stations, total $1,620,000. The appropriation also includes $2,580,000 for repairs and improvements to meet program requirements resulting from changes in research activities. The total repair and improvement funds are $4,200,000.

ALCOHOL, DRUG ABUSE, AND MENTAL HEALTH ADMINISTRATION

ALCOHOL, DRUG ABUSE, AND MENTAL HEALTH

1982 comparable appropriation	$768,037,000
1983 appropriation request	738,177,000
House allowance	768,106,000
Committee recommendation	782,056,000

The Committee recommends an appropriation of $782,056,000 for alcohol, drug abuse, and mental health activities. This is $43,879,000 more than the administration request and $13,950,000 more than the House allowance. The recommendation is $14,019,000 more than the fiscal year 1982 comparable appropriation of $768,037,000.

The mission of the Alcohol, Drug Abuse, and Mental Health Administration (ADAMHA) is to develop an understanding of and to address alcoholism, drug abuse, and a range of mental illnesses. Toward these goals, ADAMHA maintains intramural research facilities and awards project grants and contracts in support of extramural research, research training, and prevention programs. Additionally, ADAMHA provides technical assistance to States and communities as they establish and operate alcohol, drug abuse, and mental health programs, and serves as the major federal agency in educating the public about these problems.

The agency consists of three Institutes with direct programmatic responsibility for the ADAMHA health areas and providing policy guidance in the development and administration of ADAMHA programs. They are: the National Institute of Mental Health (NIMH), the National Institute on Drug Abuse (NIDA), and the National Institute on Alcohol Abuse and Alcoholism (NIAAA). Each of these institutes is divided into research, training, and program support components. In fiscal 1983, the Alcohol, Drug Abuse and Mental Health block grant will continue to be administered within ADAMHA. Separate budget activities are also provided for overall agency administration, for the ADAMHA services block grant, and for intramural research facilities repair and renovation.

Alcohol, drug abuse and mental health block grant

For the Alcohol, Drug Abuse and Mental Health Block Grant, the Committee recommends $446,000,000, an increase over the budget request and House allowance of $14,000,000. This block grant was established by the Congress as part of the Omnibus Budget Reconciliation Act of 1981, at which time all mental health and substance abuse service programs were consolidated into this block grant, to be administered by the States. It was believed that this approach would allow States the opportunity to develop appropriate treatment and prevention programs tailored to the special needs of their population. The Committee, by recommending an increase, recognizes the seriousness and complexity of our societal problems in these areas and expresses its confidence in the capacity of the States and localities to serve the appropriate population.

Mental health community support program

The Committee concurs with the administration in providing no funds for the categorical community support program, although the House has recommended $8,000,000, a $2,240,000 increase over the 1982 level. The Committee understands that, in establishing the ADAMHA block grant, the intent of Congress was to consolidate all formerly categorical service programs in the alcohol, drug abuse and mental health areas, and does not believe it appropriate to continue this separate categorical program.

The Committee recognizes that the Community Support Program has been successful in demonstrating effective ways to care for chronic mental patients who are deinstitutionalized into local communities. In providing an increase for the ADAMHA block grant, the Committee wishes to emphasize that the States may use funds provided within the block grant either to continue CSP demonstrations on their own, or to implement successful examples of the program, to the extent possible within current law.

Mental health research

The Committee recommends an appropriation of $152,300,000 for mental health research, the same as the House level. This is an increase of $11,147,000 over the comparable fiscal year 1982 level, and is $2,338,000 more than the administration's budget request.

One of the highest priorities of the Committee is to ensure continuity in the number of new and competing research awards. The amount over the budget request will restore the proposed 10-percent reduction in indirect costs for regular research grants. At the recommended level, grants will be awarded and research conducted to include such priority areas as brain and behavior; prevention; childhood disorders; schizophrenia; and depression. The Committee directs the National Institute of Mental Health (NIMH) to emphasize basic and applied research in the neurosciences; behavioral sciences; psychopharmacology; clinical investigations; and evaluations of treatments and services.

The Committee recommendation includes sufficient funds to purchase a positron emission tomography scanner for use in the intramural research laboratories. This will allow the program to continue developing the technique, for which it earned national awards and recognition, for visually mapping metabolism in the brain. This investment can reap considerable rewards through the continued clarification of the basic processes underlying mental illness. The Committee also approves the budget request to allow three additional positions to be added to the intramural program in support of this breakthrough.

Mental health training

For Research Training, the Committee recommends $15,360,000, the same as the fiscal 1982 level, but $950,000 more than the budget request and House allowance. This level will support an additional 50 trainees over the number supported by the President's budget and House allowance. At a time when the research budget is being increased, the Committee believes it is unwise to reduce the research training effort.

For Clinical Training, The Committee provides $25,000,000, a level that is $7,000,000 more than the House amount. The budget proposed a total elimination of clinical training funds in fiscal 1983.

The Committee cannot agree with the administration's proposal for phasing out this important program in view of the documented demand for care. The Committee expects that the agency will fund an equitable proportion of grants from the four core disciplines: psychiatry, psychology, nursing, and social work. Further, the Committee is especially concerned that priority be given to training minority mental health professionals and the Minority Fellowship Program in particular, as well as prevention and child-oriented training programs. The Committee in general concurs with the House in its method of distributing funds for clinical training, focusing on mental health shortage areas, minorities and disadvantaged students and supporting State manpower development programs. The Committee also directs NIMH to continue support of the paraprofessional/mental health worker to the extent possible within available funding.

While the Committee agrees with the House on the principle of establishing a new Clinical Training program in fiscal year 1983, the Committee believes that existing continuation grants which are consistent with priorities and are of exemplary and innovative quality should be carefully considered in the new program.

The Committee expects the clinical training program to address the needs of underserved rural areas. In addition, the Committee is interested in clinical training of mental health professionals participating in the "payback" provision which requires trainees to serve in designated shortage areas in return for support for their training.

Mental health program support

The Committee recommendation for program support is the same as the House level and the administration request of $31,411,000, an increase of $3,306,000 over the 1982 level. This will permit NIMH to meet all cost of living increases, and enable it to track national trends in service needs and utilization of mental health personnel; to support initiatives relating to prevention of mental illness; and to ensure that the dollars invested in research are translated into findings which are quickly made available to the mental health community.

The Committee expects ADAMHA to be responsive to the Committee's continuing interest in insuring an increase in the participation of professional nurses in the Institutes' advisory committees. The Committee is aware that during the past year, the names of a number of highly competent nurses from across the nation have been brought to the attention of ADAMHA, and again urges ADAMHA to continue to seek and appoint qualified nursing candidates to its advisory committees.

Drug abuse research

For drug abuse research, the Committee recommends $47,374,000, the same as the House amount and $1,018,000 over the budget request. The increase over the budget will reinstate the proposed 10 percent reduction in indirect costs to the 1982 level. The fiscal 1982 level for research was $41,026,000.

Research to be supported will focus on selected new initiatives on the biological, behavioral, and psychological factors involved in drug abuse; the collection and analysis of epidemiological data; and the development of more effective prevention and treatment methodologies. These initiatives will include research focusing on the health effects of marijuana use, with particular emphasis on studies of the behavioral and performance effects (e.g., driving and work safety) of chronic marijuana use. Another major initiative will involve an expansion of ongoing research to develop portable drug detection systems that can be used by the private sector, police departments, and the military. Other initiatives include the development of more effective approaches to the prevention of drug abuse, studies of drug effects on the brain and nervous system, the development of more effective treatment agents for opiate abuse and other abused drugs, clarification of the health effects of opiate use, the pharmacokinetics of cocaine, and studies of drug interactions.

Drug abuse training

The Committee approves the budget request and House allowance of $891,000 for drug abuse research training, an increase of $75,000 over the comparable fiscal year 1982 level. This amount will enable the Institute to maintain a research training program comparable in numbers of researchers being trained to that of fiscal year 1982. This will ensure the continued development of skilled researchers in the biomedical and behavioral sciences.

Drug abuse program support

The Committee recommends an appropriation of $13,087,000 for drug abuse program support. This is an increase of $360,000 over the comparable fiscal year 1982 level. This level of funding will provide mandatory and programmatic increases necessary to restore essential management and data processing functions in support of the Institute's research program and the drug abuse information needs of the Nation.

Alcoholism research

In an area of alcoholism research, the Committee recommends $33,484,000, the same as the House level but $573,000 over the budget request. The increase will, as in the other research areas, restore indirect costs of research grants to their 1982 level. The 1982 research funding level was $23,413,000.

The Committee recognizes the enormous impact of alcohol abuse and alcoholism on the health, well being and safety of people; on job performance and productivity; and on the family and other social units. The economic costs of alcoholism and alcohol abuse were nearly $50 billion annually according to estimates for 1977, with lost employment and reduced productivity accounting for more than half this amount. Motor vehicle accidents are the leading cause of death for young people between the ages of 15 and 24—and alcohol is very often involved. Alcohol also accounts for an estimated 35,000 accidental deaths each year, and it is a common antecedent to a myriad of major health problems, including such serious illnesses as cirrhosis of the liver, heart disease, and hepatitis.

With their budget increase in 1983, the National Institute of Alcohol Abuse and Alcoholism (NIAAA) will continue its efforts to reduce the incidence of alcohol-related problems with an aggressive research agenda. Areas under study will include: effects on the fetus, impaired adolescent development, highway fatalities, child and spouse abuse, aggressive and criminal behavior, disrupted family life and alcohol-related medical problems incuding various heart diseases, cirrhosis, gastrointestinal disorders and malnutrition.

The Committee is interested in seeing that NIAAA give special attention to quality

applications that would address the unique alcoholism needs of our Nation's native Hawaiians and other Native American Pacific Islanders. Earlier congressional directives request NIAAA to provide priority for this population during its last two reauthorization acts. The Committee believes there is a special Federal responsibility to see that the problem of native American peoples in these areas is addressed in a timely fashion.

Alcoholism training

The Committee's recommendation for research training of $1,086,000 will permit that program to continue funding 22 ongoing projects. It will enable NIAAA to meet its commitments to provide a cadre of well-trained alcohol researchers, and will support a total of 66 trainees. This level is the same as the budget request and the House allowance.

Alcoholism program support

The Committee's recommended level of $9,040,000, is a decrease of $880,000 from the fiscal year 1982 level for program support. This amount should be sufficient to support 3 new positions related to the increased level of responsibilities in the extramural research program, as well as proved mandatory costs for existing program support activities. This is the same as the budget request and House amount.

Buildings and facilities

The Committee has provided $100,000 for routine repairs to ADAMHA intramural research facilities. Specifically, this will support improvements to NIAAA's research laboratory, including renovations of the heating, air conditioning and fire prevention and sprinkler systems. Extensive renovations to the mental health and drug facilities have been recently completed with funds appropriated in fiscal year 1982.

Program management

The Committee concurs with the House and budget request in providing $6,923,000 for program management, an increase of $729,000 over the comparable fiscal year 1982 level. This activity provides overall leadership and general support services to the ADAMHA components. Funds provided would allow the agency to cover mandatory increases for pay raises, telecommunications, computer services, space rental, and other essential central services.

ST. ELIZABETHS HOSPITAL

1982 comparable appropriation	$92,592,000
1983 appropriation request	67,505,000
House allowance	76,505,000
Committee recommendation	76,505,000

The Committee concurs with the House recommendation of $76,505,000 for St. Elizabeths Hospital in fiscal year 1983, $9,000,000 more than the administration request and $16,087,000 less than the fiscal 1982 appropriation of $92,592,000.

Funds are provided for the treatment and care of the mentally ill who are either residents of the District of Columbia (90% of patients) or who are Federal beneficiaries. The Hospital operates inpatient and outpatient programs, as well as a security treatment facility. In addition, it conducts clinical research and training programs and administers a community mental health center serving approximately 160,000 of the District of Columbia.

The Committee generally endorses the concept of reducing the direct Federal appropriation by requiring reimbursement from those who directly benefit from the Hospital's services, and through other Federal payments and District of Columbia Medicaid receipts. In this regard, the Committee believes that the District of Columbia government should begin to assume greater financial responsibility for D.C. residents of the Hospital. However, it questions whether the D.C. government can increase its financial support of the Hospital as rapidly as the administration proposed, and therefore agrees with the House in providing an additional $9,000,000 over the budget request to ensure that no shortfall in funding occurs.

HEALTH RESOURCES ADMINISTRATION

HEALTH RESOURCES

1982 comparable appropriation	$197,724,000
1983 appropriation request	111,828,000
House allowance	183,293,000
Committee recommendation	194,388,000

The Committee recommends an appropriation of $194,388,000 for Health Resources. This is $82,510,000 more than the administration request and $7,673,000 more than the comparable House allowance. The recommendation is $3,386,000 less than the fiscal year 1982 comparable appropriation of $197,724,000. Figures have been adjusted to exclude amounts previously appropriated in the continuing resolution.

Health planning

The Committee strongly supports the continuation of the health planning program as it is now constituted in the absence of the enactment of legislation which would determine the program's future. The Committee has deferred funding consideration of the program in this bill because funds to maintain activities and staffing levels are contained in the continuing resolution. The committee intends to provide a new appropriation when legislative action is completed.

Health teaching facilities

The Committee has approved $40,500,000 for health teaching facilities for fiscal year 1983. This amount is $31,887,000 more than the administration request and $568,000 less than the House allowance. Of the total, $1,500,000 will permit the Bureau of Health Facilities to continue support of loan guarantees and interest subsidy payments in connection with construction of health professions teaching facilities and to continue to promote the effective utilization of these facilities. Interest subsidy payments are included for four loans which were guaranteed in prior years by the Federal Government.

The Committee concurs with the House in providing $5,000,000 over the Administration request for construction grants in order to permit support to Morehouse Medical college in Atlanta. These funds are a one time grant to permit the construction of teaching facilities necessary for the school to convert from a two-year to a four-year medical school.

The Committee has approved $5,000,000 and 139 positions for health facilities program support activities in fiscal year 1983. This amount is $568,000 less than the House allowance and $813,000 less than the Administration request. The fiscal year 1982 amount was $5,175,000.

Loan repayment

The Committee agrees with the House in providing $29,000,000 to pay the outstanding balance of a federally guaranteed loan used to finance the construction of Hubbard Hospital at Meharry Medical College in Nashville, Tennessee. Meharry is one of three institutions in the country which primarily train black physicians. Almost half of all black physicians in the United States are educated at Meharry. Because of financial problems at Meharry, an intergovernmental task force was established in June of this year. The task force recommended that the Department of Health and Human Services pay off the outstanding balance of the hospital loan. The President agreed with the task force recommendation. Accordingly, the Committee has approved $29,000,000 but recognizes that the exact amount may vary from that and could in fact be somewhat lower. In light of the Committee allowance, it has deducted from the Interest Subsidies appropriation the $1,300,000 requested to make the annual default payment for 1983.

The Committee agrees with the House in providing $7,286,000 for the Advanced Financial Distress program for fiscal year 1983. This recommendation is $1,686,000 more than the Administration request and $182,000 more than the fiscal year 1982 appropriation. Under the new provisions of the law, the Advanced Financial Distress program provides Federal assistance to health professions schools in the form of multi-year support grants or cooperative agreements to meet incurred or prospective costs of operation to the extent essential to remove schools from serious and longstanding financial instability.

The Financial Distress program has helped in maintaining quality training or preventing the closure of health professions schools. Currently there are several health professions schools which meet the eligibility criteria necessary for advanced financial distress assistance. These include Meharry (medical and dental), Tuskegee and Xavier.

The Committee recognizes the need to insure the operation of these four schools which primarily train minorities and to assist them in achieving financial independence.

Startup/conversion

In assisting Morehouse Medical College, a two-year school, to convert to a four-year school program, the Committee has approved $800,000 for the conversion grant program. This amount is the same as the House allowance and $800,000 more than the Administration request.

Public health and health administration capitation

The Committee recommends $4,176,000 for Public Health Capitation grants. This amount is the same as the 1982 level and the same as the House allowance. No funds were requested by the Administration for this activity for fiscal year 1983.

This program provides grants to some 23 schools of public health to help them meet the costs of their educational programs. These schools are at the forefront in carrying out national needs in the public service areas of health promotion and disease prevention.

Traineeships

The Committee has approved $2,500,000 for the Public Health Traineeships program in fiscal year 1983. This amount is the same as the Administration request and the House allowance and is $380,000 less than the fiscal year 1982 level.

Public health traineeships focus on stengthening graduate level preparation for health professionals. This program supports graduate or specialized training of health personnel in high-priority targeted public health fields much as biostatistics, epidemiology, dietetics, nutrition, environmental health, health administration and planning, health policy analysis and maternal and child health.

These funds will be used to provide support to students pursuing graduate training in these fields. Over 700 students enrolled in a variety of graduate level programs in 23 schools of public health will be supported.

Special projects

The Committee provided no funds for the Public Health/Health Administration Special Projects program for fiscal year 1983 because the legislative proposal to reestablish authority for this program has not been enacted into law.

Health administration grants

The Committee recommends an appropriation of $1,440,000 for the Health Administration grants program. This amount is the same as the fiscal year 1982 level and the same as the House allowance. The Administration did not request funds for this activity.

These funds will be used to provide grants to public or non-profit private educational entities, but excluding schools of public health, in order to support the expansion and improvement of graduate programs in health administration, hospital administration and health planning.

The management of the health care system has become increasingly complex and has revealed the need to strengthen the educational curricula in important areas such as financial management, health economics and health planning.

Health administration traineeships

The Committee recommends an appropriation of $480,000 for the Health Administration Traineeships Program. This amount is the same as the fiscal year 1982 level and the House allowance. The Administration did not request funds for this activity.

These funds will be used to provide grants to public or non-profit graduate programs, excluding schools of public health, in health administration, hospital administration or health policy analysis and planning.

These awards will provide assistance support for graduate students engaged in these areas.

The Committee believes that health and hospital administrators and health planners must be as thoroughly trained as possible in order to operate and manage complex hospital and health care programs in a more cost effective manner to combat spiraling health care costs that are affecting all Americans.

Family medicine

The Committee has provided no funds for the Family Medicine programs in this bill because $34,000,000, the authorized level, was appropriated in the continuing resolution for this activity for fiscal year 1983.

Family medicine departments

The Committee has recommended $10,000,000 for the family medicine department programs for fiscal year 1983. This amount is $2,320,000 more than the 1982 level and the House allowance. This figure is $2,952,000 more than the amount requested by the Administration.

This program provides for project grants to schools of medicine to establish and maintain academic administrative units to provide clinical instruction in family medicine. As family medicine units currently lack the necessary resources to provide a comprehensive approach to the training of family physicians which is comparable to other medical specialties, the Committee hopes that these funds will aid in strengthening the effort to maintain and expand family medicine clinical instruction at the undergraduate level.

General internal medicine and pediatrics

The Committee has approved $11,412,000 for the general internal medicine and pediatrics program for fiscal year 1983. This amount is the same as the Administration request and the House allowance. The recommendation is $4,908,000 less than the fiscal year 1982 level.

This program provides grants and contracts to hospital and medical schools to support residencies in general internal medicine and general pediatrics.

Physicians assistants

The Committee has provided $4,800,000 for the physicians assistants program for fiscal year 1983. This amount is the same as the fiscal year 1982 level and the House allowance. The recommendation is $495,000 more than the Administration request.

This program supports physician assistant training programs through grants or contracts to schools of medicine and osteopathy and other public or nonprofit private entities. Studies have shown that physician assistants in the health care system can provide cost-effective, primary health care services in geographic areas previously underserved or not served.

Area health education centers

The Committee has provided $17,920,000 for the Area Health Education Center (AHEC) program. This amount is $4,000,000 more than the Administration request and the same as the House allowance. The recommendation is $320,000 less than the fiscal year 1982 level.

The AHEC program serves to attract and retain primary care health professionals in shortage areas by linking the academic resources of health science centers to the clinical resouces of underserved communities for training and educational purposes.

Studies have shown that AHECs improve accessibility and availability of primary medical personnel in needy areas. AHECs have also served to improve the attraction and retention of health professionals in shortage areas.

Manpower supply and distribution analysis

The Committee has provided $2,962,000 for the Manpower Supply and Distribution analysis program for fiscal year 1983. This amount is the same as the fiscal year 1982 level and the House allowance. The recommendation is $462,000 less than the administration request.

This activity provides information and data on the health professions not available through other sources. The identification, designation and review of health professions shortage areas throughout the United States are also the responsibility of this program, in coordination with the states, local communities and professional groups.

For the past two sessions, the Committee has expressed its concern that the Health Resources Administration has been unable to establish criteria for the designation of "mental health manpower shortage areas." The Committee was, therefore, most pleased to learn in reviewing the Department's budget request that funds have been allocated to collect data pursuant to the Committee's request.

Disadvantaged assistance

The Committee has approved $17,240,000 for the Disadvantaged Assistance program for fiscal year 1983. This amount is the same as the administration request and the House allowance. The recommendation is $358,000 more than the fiscal year 1982 level.

This program is the principal direct Federal training program for underrepresented minorities and other students who are financially or otherwise disadvantaged and who are interested in pursuing a health career. This program helps assure that opportunity for health professions education is not inappropriately limited. Funds are awarded through grants and contracts directly to public and nonprofit private health or educational entities to support motivation, recruitment, admissions, retention and placement of students.

The Committee allowance will support about 116 projects benefiting some 20,300 minority or low-income individuals.

Preventive medicine residencies

The Committee has provided $1,000,000 for the Preventive Medicine Residencies program for fiscal year 1983. This amount is the same as the administrtation request and the House allowance. No funds were appropriated for this new program in fiscal year 1982.

In today's economic climate of high health care costs, the Committee believes that this program is a vital health activity that should be implemented. Preventive medicine, a proven cost-effective and efficient health care measure, should be taught and practiced throughout the entire health care system.

The major goals of the program are: to assure a sufficient number of high quality trained physician personnel in preventive medicine in order to address national goals for reducing death and disability and enhancing over all health; to encourage the selective placement of physicians trained in preventive medicine; and to provide training opportunities which emphasize preventive measures necessary to improve the general health, reduce risk of disease and disability and ultimately reduce overall health care costs.

Special Health Professions Initiatives

The Committee has provided $4,000,000 for the Special Health Professions Initiative Program for fiscal year 1982. This amount is $405,000,000 less than the administration request and $4,000,000 more than the House allowance. No funds were appropriated for this program in fiscal year 1982.

The Committee believes that the Health Professions Curriculum Development Program can make an important contribution to solving many health care problems. This program provides broad authority by supporting projects in a variety of high priority areas. The program should focus on: a strategy to increase primary care practitioners for shortage areas; projects to support curriculum improvment for the better preparation of allied health personnel in the fields of health promotion and disease prevention; and continuing education projects ensuring the continuing competency of health professionals.

The Committee directs that curriculum development in geriatric medicine be included among the high priority projects for fiscal year 1983 funding. Considering the

growing number of elderly who will be needing medical care in the coming years, the Committee believes this area deserves special attention. The Committee also urges the Department to continue to encourage development of support systems for practicing professionals in underserved areas.

In addition, the Committee urges that every consideration be given by the Department to funding projects that emphasize using allied health personnel within the Special Health Professions Initiatives activity. The Committee also continues to be very interested in the Department's developing a comprehensive approach to its unique federal responsibilty for the Pacific Basin region, based on our treaty obligations. The Committee directs that a health professions training plan be developed this fiscal year and that the Department report on its recommendations during the Committee's forthcoming hearings. The Committee would especially be interested in learning whether the Area Health Education Center program might be an appropriate mechanism.

Advanced nurse training

The Committee has approved $15,000,000 for the advanced nurse training program for fiscal year 1983. This amount is $3,480,000 more than the fiscal year 1982 level and the House allowance. The recommendation is $13,855,000 more than the administration request.

This program provides institutional support through grants or contracts to nursing schools to strengthen and expand graduate nurse training at the masters or doctoral level leading to the development of clinical nurse specialists, teachers, administrators and supervisors.

Nurse Practitioner

The Committee recommends $12,000,000 for the Nurse Practitioner Program for fiscal year 1983. This amount is $480,000 more than the fiscal year 1982 level and the House allowance. The recommendation is $6,274,000 above the administration request.

This program provides grants to public or non-profit hospitals and other entities to train nurse practitioners in primary health care and improve educational programs to assure competency of primary health care providers. Students are trained to work in collaboration with other health care providers and agencies in both urban and rural settings where shortages of primary care health professionals exist.

Nursing special projects

The Committee recommends $7,000,000 for the nursing special projects program for fiscal year 1983. This amount is $1,333,000 more than the administration request and the House allowance. The recommendation is $825,000 more than the fiscal year 1982 level.

This program provides grants and contracts to nursing schools and other institutions to develop innovative nursing methods especially for treating high-risk groups, such as the elderly, children, and pregnant women. The program is also aimed at increasing nursing education for individuals from disadvantaged backgrounds and addressing other areas emphasizing primary care, bedside nursing, and specialized nursing skills.

Traineeships

The Committee recommends $9,600,000 for the Professional Nurse Traineeships Program for fiscal year 1983. This amount is the same as the 1982 level and the House allowance. The Administration requested no funds for this program for fiscal year 1983.

This program provides support to eligible public or nonprofit institutions which in turn award traineeship grants to professional nurses receiving advanced educational preparation for leadership positions. These traineeships prepare the professional nurse to teach in various fields of nursing, to serve in administrative or supervisory capacities, or to serve in other professional nurse specialties.

Fellowships

The Committee recommends $960,000 for the Nursing Fellowship program for fiscal year 1983. This amount is the same as the fiscal year 1982 level and the House allowance. The administration requested no funds for this program for fiscal year 1983.

This program provides grants to individuals and institutions in support of fellowships. Awards are made for predoctoral and postdoctoral nurse fellowships for specified research training to prepare professional nurses to conduct independent research, and to collaborate in interdisciplinary research.

Research grants

The Committee provided no funds for the nursing research grants program in this bill because $5,000,000 is appropriated for this program in the Continuing Resolution for fiscal year 1983.

Health professions program support

The Committee has provided $13,381,000 and 270 positions for the Health Professions and Nursing Program support activities for fiscal year 1983. This is an increase of $4,358,000 and 70 positions above the administration request and the same as the House allowance. The recommendation is $767,000 more than the amount appropriated for fiscal year 1982. The Committee has allowed the same number of positions as were provided in 1982.

It is essential to have available an adequate number of experienced staff to administer these programs so important to the health needs of our nation.

Program Management

The Committee recommends $9,881,000 and 100 positions for the program management activities of the Health Resources Administration for fiscal year 1983. This amount is $1,681,000 and 10 positions more than the administration request and the same as the House allowance. The recommendation is $371,000 more than the fiscal year 1982 appropriation. The Committee allowance maintains the fiscal year 1982 staffing levels for these activities.

MEDICAL FACILITIES GUARANTEE AND LOAN FUND

1982 comparable appropriation	$22,000,000
1983 appropriation request	32,000,000
House allowance	32,000,000
Committee recommendation	32,000,000

The Committee recommends an appropriation of $32,000,000 for the Medical Facilities Guarantee and Loan Fund. This is the same as the administration request and the House allowance. The recommendation is $10,000,000 more than the fiscal year 1982 comparable appropriation of $22,000,000.

These funds are used to pay interest subsidies on loans guaranteed in prior years for hospital modernization, construction, and conversion.

OFFICE OF THE ASSISTANT SECRETARY FOR HEALTH

SALARIES AND EXPENSES

1982 comparable appropriation	$104,559,000
1983 appropriation request	109,563,000
House allowance	98,676,000
Committee recommendation	94,713,000

The Committee recommends an appropriation of $94,713,000 for the Office of the Assistant Secretary for Health. This is $14,850,000 less than the administration request and $3,963,000 less than the House allowance. The recommendation is $9,846,000 less than the fiscal year 1982 comparable appropriation of $104,559,000.

The Committee understands that the Assistant Secretary for Health, through the Alcohol, Drug Abuse and Mental Health Administration, has begun to address the Committee's concern that serious consideration be given to reviewing the current mental health benefit under Medicare and Medicaid while, at the same time, insuring that only appropriate and efficacious forms of psychotherapy be reimbursed. The Committee was pleased to learn of the Department's responsiveness and looks forward to receiving a report at the appropriate time.

Health services research

The Committee has approved $10,506,000 for the National Center for Health Services Research for fiscal year 1983. This amount is the same as the administration request and the House allowance. The recommendation is $760,000 more than the appropriation for fiscal year 1982.

The Center is the principal source of support for general research to improve the delivery of health services. The Center undertakes and supports research, demonstrations, and evaluations on problems in the organization, delivery, and financing of health care services; serves as the focal point for coordination of health services research within the Public Health Service; and disseminates the findings of health services research to policy and decision-makers in the public and private sectors.

The Committee recommendation includes support for commitments to such high priority research areas as institutional productivity, competition in health care and medical technologies.

It is the intention of the Committee that the National Center's User Liaison Program continue, improve, and strengthen working relationships with State and local governments by continuing workshops and developing syntheses, as well as the initiation in fiscal year 1983 of at least two projects of directed contract research designed and monitored in close collaboration with State and local officials. Such projects should address current pressing health care delivery and financing issues and problems identified by State and local officials.

Program support

The Committee has provided $5,615,000 for Health Services Research Program Support activities for fiscal year 1983. This amount is the same as the administration request and the House allowance. The recommendation is $839,000 less than the fiscal year 1982 appropriation.

This program provides support for management activities including special studies, technical assistance, and evaluation of the design and conduct of program activities.

The Committee believes that the efforts of the National Center for Health Services Research are very much in the long term interest of the Department and, accordingly, wants the current position level to be maintained in order for the Center to meet its objectives.

Health Statistics Program Operations

The Committee recommends $37,254,000 for Health Statistics program operations for fiscal year 1983. This amount is the same as the administration request and the House allowance. The recommendation is $2,434,000 more than the fiscal year 1982 appropriation.

This activity is the focal point for collection and maintenance of national health statistics on illness, disability, health hazards and other health data in the United States. The Committee recommendation provides an increase of funds for two major surveys. The first allows the expansion of the Hispanic Health and Nutrition Examination Survey (HANES) to include Puerto Rican Americans and Cuban Americans, in addition to Mexican-Americans in the Southwest. The allowance also provides for the orderly growth of the National Health Interview Survey to allow the collection of important trend data and special health topic data.

Program support

The Committee has approved $3,040,000 for Health Statistics Program Support activities in fiscal year 1983. This amount is the same as the administration request and the House allowance. The recommendation is $328,000 less than the appropriation for fiscal year 1982.

This program provides for the planning, coordination, management, and evaluation of vital health, and health related statistical programs. Emphasis will continue to be placed on developing more efficient and effective resource allocation and utilization, and improved performance reporting and monitoring.

HMO Management Training and Technical Assistance

The Committee has approved $480,000 for Management Training and Technical Assistance for fiscal year 1983. This amount is the same as the budget request and the House allowance.

Technical assistance is provided to expedite the development of new HMOs and resolve operating problems that may be encountered. Management training is designed to alleviate the shortage of skilled HMO managers which has been a serious problem in the development of the HMO industry. Technical assistance and management training are the most productive tools available for increasing the probability of success in HMOs and thus protecting the Federal investment of $145,000,000 in grants and $193,000,000 in loans.

Program support

The Committee has provided $4,220,000 for program support activities for fiscal year 1983. This amount is the same as the budget request and the House allowance. The recommendation is $51,000 more than the fiscal year 1982 appropriation.

This activity is responsible for monitoring the operations of qualified organizations to assist them in meeting the requirements of the program. The program assists the development of HMOs and monitors loans and loan guarantees.

Smoking and Health

The Committee recommends $2,098,000 for Smoking and Health activities for fiscal year 1983. This amount is the same as the administration request and the House allowance. The recommendation is $154,000 more than the fiscal year 1982 appropriation.

The recommended level of funding will permit the Office of Smoking and Health to continue efforts to reduce death, disability and health care costs associated with cigarette smoking. Efforts will focus on strengthening public and technical information activities.

Health Promotion

The Committee recommends $2,326,000 for the health promotion program for fiscal year 1983. This amount is the same as the administration request. The recommendation is $1,000,000 more than the House allowance and $1,156,000 more than the fiscal year 1982 appropriation.

This program increase will support high priority prevention efforts within the Department including the National Health Information Clearinghouse and the National Health Promotion Media Campaign. In addition, cooperative agreements will be established with major national organizations to develop a health promotion training network.

Physical fitness and sports

The Committee has approved $1,100,000 for the physical fitness and sports program for fiscal year 1983. This amount is the same as the administration request and the House allowance. The recommendation is $91,000 more than the fiscal year 1982 appropriation.

The objective of this activity is the promotion of a national program of physical fitness and sports. Staff support and assistance is provided to the President's Council on Physical Fitness and Sports which is the focal point for Federal efforts to encourage physical fitness.

Adolescent family life

The Committee has approved $11,037,000 for the adolescent family life program for fiscal year 1983. This amount is the same as the fiscal year 1982 appropriation. The recommendation is $4,963,000 less than the administration request and the House allowance.

The objective of this program is to find effective means of addressing the problems associated with adolescent premarital sexual activity, pregnancy, and childbearing, giving particular attention to the role of the family in these matters. In order to accomplish these objectives, the program supports and evaluates model demonstration projects to identify effective service delivery programs for use by States and local communities and by supporting research, evaluation, and dissemination efforts.

Public Health Service management

The Committee has approved $17,037,000 for the Public Health Service management activity for fiscal year 1983. This amount is the same as the budget request and the House allowance. The recommendation is $1,641,000 less than the fiscal year 1982 appropriation.

This activity provides funding for regional and headquarters offices that support the Assistant Secretary for Health in discharging responsibilities for planning and directing the activities and mission of the Public Health Service.

PHS termination costs

The Committee provided no funds for the PHS termination costs activity for fiscal year 1983.

The Committee has approved funds to maintain positions within the Health Services Administration, the Health Resources Administration and the Office of the Assistant Secretary for Health. Therefore, funds are not required within this activity to cover costs associated with reductions in force.

HMO loan and loan guarantee fund

The HMO Loan and Loan Guarantee Fund was established to make direct loans to public and non-profit HMOs to cover initial operating deficits and for the acquisition or construction of ambulatory health care facilities. Funds are also used to acquire equipment for those facilities.

In 1983, it is anticipated that eight initial operating loans will be made.

It is the Committee's understanding that the Supplemental appropriation of $17,500,000 provided during fiscal year 1982 was sufficient to cover requirements of the Fund for the foreseeable future. While it appears that additional funds will be required at some future point, the Committee has recommended that no additional capital for the Fund be included at this time. However, funds will be provided when the Department has a definite estimate of what the actual requirements will be.

RETIREMENT PAY FOR COMMISSIONED OFFICERS

1982 comparable appropriation	$106,172,000
1983 appropriation request	85,433,000
House allowance	78,861,000
Committee recommendation	78,861,000

The Committee recommends an appropriation of $78,861,000 for Retirement Payments for Public Health Service Commissioned Officers. This is $6,572,000 less than administration request and the same as the House allowance. The recommendation is $27,311,000 less than the fiscal year 1982 comparable appropriation of $106,172,000.

Retirement Pay

The Committee has approved $59,943,000 for Retirement Payments for Public Health Service Commissioned Officers for fiscal year 1983. This amount is the same as the administration request and the House allowance. The recommendation is $10,797,000 more than the fiscal year 1982 appropriation.

This activity provides for mandatory payments to commissioned officers of the Public Health Service who have been retired for age, disability or specified length of service.

Survivors' Benefits

The Committee recommends $1,862,000 for Survivors benefits for fiscal year 1983. This amount is the same as the administration request and the House allowance. The recommendation is $1,243,000 less than the fiscal year 1982 appropriation.

This activity provides for the payment of annuities to survivors of retired officers of the Public Health Service who had elected to receive reduced retirement payments under the retired serviceman's family protection plan and survivors benefit plan.

Medical Care

The Committee has approved $17,056,000 for the Medical Care activity for fiscal year 1983. This amount is the same as the administration request and the House allowance. The recommendation is $36,865,000 less than the fiscal year 1982 appropriation.

The medical care activity provides for the cost of medical care rendered in non-Federal and in uniformed service facilities to active duty and retired members of the Public

Health Service Commissioned Corps and dependents of active duty, retired, and deceased members.

The reduction from fiscal year 1982 is accounted for by the transfer of medical care costs for the Coast Guard and the National Oceanic and Atmospheric Administration to those agencies' own budgets in 1983. The Committee did not concur with the administration's rationale for including a contingency reserve and has not provided $6,572,000 which was requested.

HEALTH CARE FINANCING ADMINISTRATION

GRANTS TO STATES FOR MEDICAID

1982 comparable appropriation	$17,539,843,000
1983 appropriation request	17,895,162,000
House allowance	17,895,162,000
Committee recommendation	19,652,750,000

The Committee recommends an appropriation of $19,652,750,000 for Grants to States for Medicaid. This is $1,757,588,000 more than the administration request and the House allowance. The recommendation is $2,112,907,000 more than the fiscal year 1982 comparable appropriation.

Medicaid funds vendor payments to health care providers and pays for State and local administration of the program and for State certification of health care providers. The percentage of costs which these funds cover varies from 50 percent to 83 percent, based on a formula that measures a State's average per capita income relative to the national average per capita income.

The Committee recommendation takes into account the effects of legislative action for fiscal year 1983. The effect is to reduce Federal costs by an estimated $167,000,000. Major savings result from: permitting States to impose copayments on additional services; modifications in lien provisions for long-term care; and 3 percent error rate tolerance.

In addition, savings are reflected in this account as a result of changes in the SSI and AFDC programs.

The Committee recommendation includes $1,089,075,000 for State and local administration of Medicaid. It is necessary to make these funds available under this account since Congress did not agree to administration proposals for a Combined Welfare Administration Block Grant.

The bill also provides an advance appropriation of $5,105,600,000 for the first quarter of fiscal year 1984, as requested by the administration.

PAYMENTS TO HEALTH CARE TRUST FUNDS

1982 comparable appropriation	$14,338,000,000
1983 appropriation request	15,576,000,000
House allowance	15,576,000,000
Committee recommendation	15,743,000,000

The Committee recommends an appropriation of $15,743,000,000 for Payments to Health Care Trust Funds. This is $167,000,000 more than the administration request and the House allowance. The recommendation is $1,405,000,000 more than the fiscal year 1982 comparable appropriation of $14,338,000,000.

This appropriation covers payments to three activities: Federal payments for military service credits, which reimburse the hospital trust fund for benefits to veterans based on military service for which no contributions to the fund were made from 1946 to 1956; funds for supplementary medical insurance (Medicare Part B), which provide the Federal matching contribution for the monthly premium payment made by every participant in the Medicare Part B program; and payments for hospital insurance for the uninsured, which reimburse the hospital insurance trust fund for the cost of medical care for individuals over age 65, whom Congress included in the medicare program despite the fact they have not contributed to the medicare trust fund.

For military service credits, the Committee recommends an appropriation of $207,000,000, the same amount requested by the administration and appropriated in fiscal year 1982.

For supplementary medical insurance, the Committee recommends $14,669,000,000. The increase of $189,000,000 above the administration's request results from a more current estimate of need as developed by the Congressional Budget Office. The amount allowed represents an increase of $1,346,000,000 over the fiscal year 1982 level. The Committee recommendation takes into account the effects of legislative action for fiscal year 1983. Major savings result from revising reimbursement of provider-based physicians, prohibiting reimbursement for assistants at surgery in specified instances, and eliminating duplicate overhead payments for outpatient services.

The Committee recommends an appropriation of $867,000,000 for hospital insurance for the uninsured. The decrease of $22,000,000 from the administration's request is due to fiscal year 1983 legislative savings relating to hospital reimbursement. This represents an increase of $59,000,000 over the fiscal year 1982 appropriation.

PROGRAM MANAGEMENT

1982 comparable appropriation	$81,777,000
1983 appropriation request	89,405,000
House allowance	92,905,000
Committee recommendation	92,905,000

The Committee recommends an appropriation of $92,905,000 in federal funds for Program Management. This is the same as the House allowance. The recommendation is $11,128,000 more than the fiscal year 1982 comparable appropriation.

In addition, the Committee authorizes the transfer of $969,671,000 in trust funds for Program Management.

The following table shows the distribution of funds in this account:

	1982 comparable	1983 budget request	1983 House	Committee recommendation
Professional standards review organizations non-hospital activities: Trust funds	($24,409,000)	($5,000,000)	Defer	($25,000,000)
Research, demonstration, and evaluation:				
Federal funds	11,500,000	20,000,000	$20,000,000	20,000,000
Trust funds	(18,000,000)	(10,000,000)	(10,000,000)	(10,000,000)
Subtotal	29,500,000	30,000,000	30,000,000	30,000,000
Medicare contractors: Trust funds [1]	(711,000,000)	(704,000,000)	(755,000,000)	(755,000,000)
Contingency fund			0	(20,000,000)
State certification:				
General program support Federal funds	535,000	535,000	535,000	535,000
Medicare certification trust funds	(13,591,000)	(18,700,000)	(32,300,000)	(32,300,000)
Subtotal	14,126,000	19,235,000	32,835,000	32,835,000
ESRD Councils: Trust funds	(4,546,000)	(4,546,000)	(4,546,000)	(4,546,000)
Federal administration:				
Federal funds	69,742,000	68,870,000	72,370,000	72,370,000
Trust funds	(115,287,000)	(113,325,000)	(122,825,000)	(122,825,000)
Subtotal	185,029,000	182,195,000	195,195,000	195,195,000
Total program management:				
Federal funds	81,777,000	89,405,000	92,905,000	92,905,000
Trust funds	(886,833,000)	(855,571,000)	(924,671,000)	(969,671,000)

[1] Does not include $45,000,000 made available separately in fiscal year 1983 by Public Law 97-248.

Professional standards review organizations

For the Professional Standards Review Organization (PSRO) program, the Committee authorizes a trust fund transfer of $25,000,000. This is $20,000,000 more than the request of $5,000,000. The House deferred action on this item. Funds appropriated under the program management account cover the direct operating costs of PSROs.

Additional amounts needed for medicare hospital utilization review are provided directly from the trust funds. The continued growth in hospital costs and admissions requires a continued investment in monitoring the appropriateness of expensive hospital care. Congress has recognized this need and mandated hospital reviews in this year's reform of the PSRO program. The Administration based its 1982 estimate of $47,908,000 for PSRO hospital reviews on an activity level of 5.3 million reviews. Since recent evidence indicates that the actual admissions subject to PSRO review exceeded 8,000,000, the Committee anticipates that at least the 1982 level of spending will be required for hospital reviews in 1983. The provisions of Public Law 97-248 prevent a reduction of PSRO reviews to the lower 1983 level of $20,000,000 originally proposed by

the Administration. The Committee therefore directs the Department to maintain the current admissions review rates for both focused and retrospective reviews without imposing any substantial reduction in average expenditure per review, and report to the Committee by May 1 on the estimated costs to the trust funds of the reviews required under Public Law 97-248.

If a State elects to have a PSRO perform medicaid hospital utilization review, those costs will continue to be paid out of the grants to States for medicaid account at a 75 percent Federal matching rate.

As a result of enactment of Public Law 97-248, Congress has instituted changes which repeal the PSRO program and establish a program of utilization and quality control peer review. Congress, however, has prohibited the Secretary from terminating a PSRO in effect until a contract with a peer review organization is established in that geographical area. This requires continuation of the funding of currently funded PSROs until a peer review program is implemented. The Committee bill provides funding for 145 PSROs at about the fiscal year 1982 level. The Committee estimates that the actual transition from PSROs to the new peer review organizations will not take place until fiscal year 1984; therefore, it has not appropriated money for the new peer review orgnizations during fiscal year 1983.

The Committee expects the Department, in its fiscal year 1984 budget, to make realistic estimates of the amounts needed to effectively support peer review organizations and to provide a thorough analysis of how the transition from PSROs to peer review organizations will be implemented.

Research, demonstration and evaluation

For Research, Demonstration and Evaluation, the Committee recommends an appropriation of $30,000,000, which is the same as the fiscal year 1982 funding level, and consists of $20,000,000 in Federal funds and $10,000,000 in trust funds.

The Committee believes that research efforts should focus on ways to hold down both Federal and private sector health care costs. When the Department comes before Congress for its fiscal year 1984 budget, the Committee expects HCFA officials to be prepared to answer questions about measurable ways in which research and demonstration activities funded under this account have helped to improve health care management and to reduce costs. In addition, the Committee will want to know in what way projects funded herein have a bearing on increasing competition in the health care area, one of this administration's stated priorities.

Medicare contractors

The Committee has included $755,000,000 for medicare contractors in fiscal year 1983 for the purpose of processing medicare claims and for audit and medical review. This is the same level as the House allowance. The Committee allowance provides for $755,000,000 in trust fund transfers in addition to $45,000,000 for the contractors made available separately by section 118 of Public Law 97-248. This total of $800,000,000 is identical to the annual operating level for medicare contractors provided in the First Continuing Resolution of 1983.

The Committee recognizes, however, that the program may encounter unanticipated workload costs as it moves to deal with an expected substantial increase in the volume of claims. To assure that HCFA is able to handle this potential workload and provide for timely processing of claims, the Committee has included bill language making $20,000,000 available from the trust funds as a contingency fund for this purpose.

The Committee continues to encourage HCFA to reduce any overly restrictive requirements placed upon the medicare contractors. It supports HCFA's efforts to streamline the existing functions required of medicare contractors in administration of the program and to restructure present medicare operations to effect increased efficiency. Further, the Committee expects officials of the Department of Health and Human Services to be able to identify savings targets, and evaluate the progress of the medicare contractors in meeting these targets, when the Department comes before Congress for the fiscal year 1984 budget.

State certification

The Committee recommends a total appropriation for State certification of medicare providers of $32,835,000, the same as the House level. Of this amount, $535,000 is a direct appropriation and $32,300,000 is a transfer from the medicare trust funds. This funding level represents an increase of $13,600,000 above the budget request.

The purpose of this program is to assure that health care providers and institutions meet standards of quality and safety to give Federal beneficiaries an acceptable level of care. The budget request would provide only approximately 50% survey coverage of all facilities requesting medicare eligibility. The recommended increase would provide coverage of more facilities and more beneficiaries than the proposed budget. The Committee believes its level is needed to protect a most vulnerable population in nursing homes.

Moreover, Congress, in enacting the 1982 Tax Equity Act and the First Continuing Resolution of 1983, placed a lengthy moratorium on HHS issuing new survey and certification regulations for nursing homes. This action was taken to permit more time for Congress and the public to comment on the Department's proposals. This delay will result in an increase in the number of surveys that must be done and will boost costs commensurately.

The Committee allowance also provides funds for surveys of newly authorized provider groups including ambulatory surgical centers and comprehensive outpatient rehabilitation facilities.

ESRD network coordinating councils

The Committee recommends a trust fund transfer of $4,546,000 as requested by the administration for End Stage Renal Disease Network Coordinating Councils. Fiscal year 1983 marks the first year that funding for the Councils is shown as a separate line item in Program Management rather than as a part of medicare benefit payments. The Committee allocation is the same as the House level.

Administration

The Committee recommends a total of $195,195,000 for HCFA administration. Of this amount, $72,370,000 is a direct appropriation and $122,825,000 is a transfer from the medicare trust funds. These funds cover payroll and operating costs for the Health Care Financing Administration (HCFA). It is the Committee's intention that these amounts maintain HCFA at an adequate staffing level without the necessity of any reductions-in-force.

The administration had proposed a reduction of 730 positions (from 4,719 to 3,989) in fiscal year 1983. This would have come on top of a substantial loss of staff within the agency since fiscal 1981. The Committee recognizes the complex workload carried by the agency, including implementation of the sweeping legislative changes made in medicare and medicaid by the Tax Equity Act. In light of this, HCFA will need a stable workforce over the next fiscal year, and this is the basis of the Committee recommendation.

Office of Demonstrations

The Committee was pleased to learn that during the past year the Office of Demonstrations has been giving serious consideration to addressing the issues of interprofessional competition (i.e., the use of alternative health care providers such as geriatric nurse practitioners) and also the relationship between providing mental health services and overall physical health care costs. Both of these initiatives could demonstrate considerable cost-savings and the Committee would appreciate being kept informed of HCFA's efforts in these areas.

SOCIAL SECURITY ADMINISTRATION

PAYMENT TO SOCIAL SECURITY TRUST FUNDS

1982 comparable appropriation	$844,698,000
1983 appropriation request	855,213,000
House allowance	855,213,000
Committee recommendation	855,213,000

The Committee recommends an appropriation of $855,213,000 for Payment to Social Security Trust Funds. This is the same as the administration request and the House allowance. The recommendation is $10,515,000 more than the fiscal year 1982 comparable appropriation of $844,698,000.

The Payment reimburses the trust funds for the cost of crediting beneficiaries for periods of military service; for qualified beneficiaries who were too old to have established eligibility before retirement; and for SSA's costs related to providing individuals with their vested pension rights under the Pension Reform Act (Public Law 93-406). The appropriation restores the trust funds to the same financial position they would have been in had they not incurred the costs of benefits or administrative expenses from these categories of eligible beneficiaries.

The appropriation request for fiscal year 1983 is higher than that of 1982 due to the increase in the number of veterans, as well as their dependents, who are entitled to OASDI benefits for military service prior to 1956.

SPECIAL BENEFITS FOR DISABLED COAL MINERS

1982 comparable appropriation	$1,098,765,000
1983 appropriation request	1,102,000,000
House allowance	1,102,000,000
Committee recommendation	1,093,000,000

The Committee recommends an appropriation of $1,093,000,000 for Special Benefits for Disabled Coal Miners. This is $9,000,000 less than the administration request. The recommendation is $5,765,000 less than the fiscal year 1982 comparable appropriation of $1,098,765,000.

The funds under this program are used to provide monthly benefits to coal miners disabled by Black Lung disease, as well as to their widows and certain other dependents. The Social Security Administration is responsible for processing and paying benefits for claims filed between December 30, 1969

and June 30, 1973, and for those claims filed within 6 months following the death of a miner or window already on the beneficiary rolls. The Department of Labor bears the responsibility for Black Lung claims filed after June 30, 1973.

Of the total amount provided, $1,082,000,000 is for benefit payments, and $11,000,000 is for administration. The basic Black Lung Benefit is one-half of the amount paid to disabled Federal Employees in GS–2, step 1. The Committee recommendation for this program is based on the Congressional Budget Office's most recent estimates which anticipate lower program costs from continued low rates of inflation.

SUPPLEMENTAL SECURITY INCOME

1982 comparable appropriation	$7,772,388,000
1983 appropriation request	8,919,495,000
House allowance	8,571,749,000
Committee recommendation	8,543,616,000

The Committee recommends an appropriation of $8,543,616,000 for Supplemental Security Income. This is $375,879,000 less than the administration request and $28,133,000 less than the House allowance. The recommendation is $771,228,000 more than the fiscal year 1982 comparable appropriation of $7,772,388,000.

The Committee recommendation for Federal Benefit payments is based upon the Congressional Budget Office's most recent estimate for this program. CBO estimates lower average benefit payments per recipient and larger savings from the 1981 Reconciliation Act than the Administration. According to CBO, recent spending in the program has fallen below expected levels.

Of the total recommendation, $7,637,254,000 is for Federal Benefit payments. These payments provide assistance to aged, blind, and disabled persons. There are approximately 3.6 million recipients of Federal SSI benefits; the average monthly benefits for an aged person is $138 and $227 for the blind or disabled. The average benefit is higher for the latter group as its nonassistance, earned income is lower. The recommended amount reflects 13 months of payments in compliance with the accelerated check provision of the Social Security Act (P.L. 95–216). This part of the law provides for the delivery of checks a day earlier than regularly scheduled when that day falls on a Saturday or a Sunday. A 7.4 percent cost-of-living increase was effective in July 1982.

Some $15,300,000 of the amount recommended is for hold harmless payments. This represents the second year of a three-year phase-out of hold harmless payments to two States, Wisconsin and Hawaii.

The Committee recommends $4,616,000 for Beneficiary Services. This provides funds for two activities:

Vocational rehabilitation. Reimbursement is provided for rehabilitation providers for reasonable and necessary costs for services which enable disabled SSI recipients to perform substantial gainful activity.

Drug addicts and alcoholics. This program monitors the treatment of certain disabled SSI recipients who are drug addicts or alcoholics.

Of the total amount recommended, $20,737,000 is provided for federal fiscal liability. This is paid to States for errors the Federal Government made in administering State supplemental payments. Currently, the Federal Government administers supplemental payments programs for 26 States and the District of Columbia.

A total of $865,709,000 is recommended for Administration of the Supplemental Security Income program.

ASSISTANCE PAYMENTS

1982 comparable appropriation	$7,115,854,000
1983 appropriation request	5,284,635,000
House allowance	5,284,635,000
Committee recommendation	6,684,207,000

The Committee recommends an appropriation of $6,684,207,000 for Assistance Payments. This is $399,572,000 more than the administration request and the House allowance. The recommendation is $431,647,000 less than the fiscal year 1982 comparable appropriation of $7,115,854,000.

Maintenance assistance

The Committee recommendation includes $7,291,231,000 for the basic Aid to Families with Dependent Children (AFDC) Program. This basic assistance benefit is expected to provide 3,802,000 families and over 11,000,000 individuals with cash and other assistance. Under AFDC, States are given broad flexibility to design their own welfare and assistance programs for which they receive a Federal matching payment.

The Committee has also approved $951,000,000 to reimburse State and local governments for costs of administering AFDC. This is substantially above the Administration's request primarily because the proposed Combined Welfare Administration Block Grant, designed to produce economics in administration, was not agreed to by Congress. The Committee recommendation also includes $13,350,000 for Adult Categories. These provide benefits for aged, blind, and disabled persons in Puerto Rico, Guam, and the Virgin Islands who were not federalized into the Supplemental Security Income Program in 1974. Also included is $6,716,000 for administration and training in Puerto Rico, Guam, and the Virgin Islands.

The Committee has provided $49,000,000 for Emergency Assistance. There was no request for this program as the Administration proposed to combine this activity with the Low Income Energy Assistance Program—a step Congress rejected. The Committee has also recommended $1,801,000 for repatriation. This program provides temporary assistance to mentally ill or destitute Americans returning from foreign countries.

It has come to the Committee's attention that, in implementing new AFDC and Medical Assistance regulations, some states are considering mineral acre/surface Indian trust lands as available resources for the purpose of determining eligibility for programs administered by those states under the Social Security Act, including AFDC under Title IV and Medical Assistance under Title XIX, thereby compelling Native Americans either to sell or attempt to sell their mineral acre/surface lands or forgo participation in these programs. The Committee believes that Indian trust land, by virtue of its legal nature, does not constitute a currently available resource. This has been the policy of the BIA since 1961, and the Committee urges that HHS work with the Department of the Interior to clarify treatment of Indian trust lands and make sure that the policies of the two departments are uniform.

Research

The Committee has approved $2,950,000 for research and evaluation. Through this program, the Social Security Administration explores new avenues to prevent or reduce dependency and to provide better coordinated and more efficient administration of programs under the Social Security Act.

Administrative expenses

The Committee has provided $32,000,000 for Federal Administration of the Assistance Payments program. This is the same as the request and House level and $4,400,000 more than last year's level.

Advance appropriation

The bill includes an advance appropriation of $1,718,000,000 for the first quarter of fiscal year 1984.

CHILD SUPPORT ENFORCEMENT

1982 comparable appropriation	$510,457,000
1983 appropriation request	284,877,000
House allowance	284,877,000
Committee recommendation	347,500,000

The Committee recommends an appropriation of $347,500,000 for the Child Support Enforcement Program. This is $62,623,000 more than the administration request and the House allowance. The recommendation is $162,957,000 less than the fiscal year 1982 comparable appropriation of $510,457,000.

The Committee recommendation is in addition to the $123,500,000 previously approved for Child Support Enforcement activities as part of the fiscal year 1983 advance appropriation for Assistance Payments. This is a new account in fiscal year 1983; in prior years, funds for this program were requested as part of the Assistance Payments appropriation.

The Committee recommendation reflects the Congressional Budget Office's most recent estimate of the needed program level. The recommendation is higher than that of the request level since the Administration assumed savings which have not been enacted.

The Child Support Enforcement Program attempts to ensure that absent parents meet their responsibility of providing support for their children.

The Committee supports the goals of Child Support Enforcement, but strongly recommends that the Administration and Congress initiate steps to improve the efficiency and fiscal posture of the program.

Advance appropriation

The Committee recommends an advance appropriation of $118,000,000 for the first quarter of fiscal year 1984.

LOW-INCOME ENERGY ASSISTANCE

1982 comparable appropriation	$1,875,000,000
1983 appropriation request	1,300,000,000
House allowance	1,850,000,000
Committee recommendation	1,850,000,000

The Committee recommends an appropriation of $1,850,000,000 for the Low Income Energy Assistance program. This is $550,000,000 more than the administration request and the same as the House allowance. The recommendation is $25,000,000 less than the 1982 comparable appropriation.

Of the amount, the Committee recommendation includes $1,847,800,000 for grants to States and $2,200,000 for administration. This program is administered principally through grants to States which may provide energy assistance through a variety of mechanisms including the direct provision

of fuel, payments for energy through a vendor line of credit or direct financial assistance.

As provided by law, States may transfer up to 10 percent of the amount they receive to other block grants. States are authorized to use up to 15 percent of their allocation for low-cost weatherization work in low-income households. States may also carry over up to 25 percent of their allocation to the next year.

The Committee urges both the Department and OMB to apportion funds to States under this program in a way that permits States the use of low income energy funds when they are most needed. The Committee believes the Department should behave flexibly in this matter. It is clear, for example, that warmer States will require less money in the early part of the fiscal year than colder States, and the Department should take these factors into consideration when making apportionments.

OFFICE OF REFUGEE RESETTLEMENT

REFUGEE AND ENTRANT ASSISTANT

1982 comparable appropriation	$670,670,000
1983 appropriation request	532,152,000
House allowance	Not considered
Committee recommendation	Not considered

The Committee has deferred consideration of the Office of Refugee Resettlement pending a further budget request or budget amendment based upon new legislation. This program was not re-authorized until October 1, 1982 at which time the Senate accepted, without amendment, the House bill H.R. 5879. The House report accompanying H.R. 5879 notes that the House "made substantial changes" in the administration's proposed legislation upon which the original budget request was based. The Refugee programs will operate on a continuing resolution until a further request is provided.

The Committee looks forward to receiving such a request in the near future.

LIMITATION ON ADMINISTRATIVE EXPENSES

1982 comparable appropriation	$3,131,000,000
1983 appropriation request	3,408,451,000
House allowance	3,408,451,000
Committee recommendation	3,408,451,000

The Committee includes authority to spend $3,408,451,000 for expenses of administering programs in the Social Security Administration. This is the same as the administration request and the House allowance. The recommendation is $277,451,000 more than the fiscal year 1982 comparable appropriation of $3,131,000,000.

This budget pays for roughly 74,000 full-time permanent and 8,000 temporary and part-time social security employees, computer support, and other costs of running the Social Security Administration.

The Committee has provided $47,026,000 for construction projects. This amount is $9,000,000 less than the House allowance and the request level. The Committee understands that SSA will proceed with only three of nine construction projects in the request and that the other six projects will be accommodated through alternative means such as rental or expansion. The Committee has earmarked $151,625,000 for automated data processing and telecommunications activities. This will provide: improved telecommunications linkage between SSA field offices and the central computer facility, replacement of magnetic tape files with disk storage, expanded program test and development systems in order to meet software improvement goals, replacement of obsolete peripheral card reading equipment and central processing equipment used for case control, and replacement of outdated central processing hardware.

The Committee is pleased to see the Department undertaking a Systems Modernization Plan to upgrade its outmoded computer systems. An adequate computer system is necessary to insure that Social Security benefits are paid in a timely fashion and that they are calculated accurately.

However, the Committee is concerned about several deficiencies in the Systems Modernization Plan (SMP) which have been pointed out in a recent GAO review. The General Accounting Office estimates the SMP will take from seven to ten years to complete, but it contains no flexibility to accommodate major legislative changes. The Committee notes that major legislative changes have occurred every three or four years in the past, and that the current fiscal condition of the Trust Funds makes it clear that further legislative changes will be needed in the future. The Committee therefore directs the Department to modify the SMP to provide for flexibility to accommodate legislative changes, and to report to the Committee on the modification no later than June 30, 1983.

The GAO review was also critical of the SMP for not spelling out any plans to improve privacy and security, pointing out that the computer system is "vulnerable to fraud and abuse perpetrated by SSA employees." The Committee believes that such vulnerability is not tolerable for a system as large and important as Social Security, and directs the Department to include improved security measures, such as issuing Personal Identification Numbers to computer system users, and report to the Committee on such changes by June 30, 1983.

In order to facilitate the implementation of the SSA systems modernization plan which will improve service to beneficiaries and safeguard the timely and accurate disbursal of Social Security checks, the Committee approves new language which will permit SSA to carry over into the next fiscal year all unobligated balances from this account to provide funding flexibility for automatic data processing and telecommunications leases, purchases or contracts for the purpose of modernizing SSA's systems, and will provide authority to use the $50,000,000 contingency for administrative expenses for automation projects after maximum absorption of such costs within the remainder of the existing limitation.

The Committee acknowledges the Administration's plan to review the Social Security Disability rolls in compliance with Section 311 of P.L. 96-265; however, the Committee is disturbed by reports of wrongful termination of persons on the disability rolls. The Committee understands that the Administration has recently reduced the number of planned reviews in Fiscal 1983 to 640,000 from 806,000, and that the Administration now requires face-to-face interviews before termination of benefits as a measure to reduce wrongful termination. The Committee urges the Administration to act quickly in reducing the backlog of appeals from decisions adverse to persons on the disability rolls and to make every effort to insure that termination of benefits is justified, particularly when the benefits represent a major source of income for an individual.

The Committee also expects the Administration to report to the Committee on the Administration's review of the disability rolls before the Committee begins hearings on the fiscal year 1984 bill.

ASSISTANT SECRETARY FOR HUMAN DEVELOPMENT SERVICES

SOCIAL SERVICES BLOCK GRANT

1982 comparable appropriation	$2,400,000,000
1983 appropriation request	1,974,126,000
House allowance	1,974,126,000
Committee recommendation	2,450,000,000

The Committee recommends an appropriation of $2,450,000,000 for the Social Services Block Grant, the full entitlement funding level mandated by law. This is $475,874,000 more than the administration request and the House allowance. The recommendation is $50,000,000 more than the fiscal year 1982 comparable appropriation of $2,400,000,000.

Social Services block grant funds enable States to provide services to assist low-income persons achieve or maintain self-sufficiency, including recipients of aid to families with dependent children, supplemental security income, and medicaid program funds. These services are intended to prevent, reduce or eliminate abuse or exploitation of children and adults; to prevent or reduce inappropriate institutional care; and to secure admission or referral for institutional care when other forms of care are not appropriate.

The House, while including only the $1,974,126,000 budget request level, did not include the proposed legislative language to cap this entitlement program at less than the required $2.450,000,000 level. While this would appear to necessitate a supplemental appropriations bill to provide the remaining $478,874,000, the Committee recommends funding the entire amount at this time. By removing uncertainty over availability of funding, the Committee's action would avoid possible deterioration of services which might otherwise result. The Committee does not wish to see confusion over funding levels, causing eligible individuals to shy away from necessary services.

HUMAN DEVELOPMENT SERVICES

1982 comparable appropriation	$1,716,705,000
1983 appropriation request	1,605,104,000
House allowance	1,751,697,000
Committee recommendation	1,754,194,000

The Committee recommends an appropriation of $1,754,194,000 for Human Development Services programs. This is $149,090,000 more than the comparable administration request and $2,497,000 more than the House allowance. The recommendation is $37,489,000 more than the fiscal year 1982 comparable appropriation of $1,716,705,000. Excluded from these amounts is $18,000,000 for the Runaway Youth Program, previously appropriated for fiscal year 1983 under the terms of the continuing resolution.

Children and youth

For Head Start, the Committee recommends the budget request and House allowance of $912,000,000, an increase of $300,000 over the amount appropriated in fiscal year 1982. Funds for this program are used to provide direct comprehensive child development services, including education, health, nutrition, and social services, to pre-school

children from low-income families. Emphasis in 1983 will be on maintaining services to 377,300 preschool children and their families, the same number supported in 1982. At least 10 percent of the fiscal year 1983 Head Start enrollment, or 37,730 children, will be handicapped.

The Committee recommends last year's level of $16,199,000 for child abuse prevention programs, the same as the House allowance, but $11,579,000 more than the budget request. This includes $6,720,000 for State grants to prevent and treat child abuse and neglect, as well as $9,479,000 for discretionary activities such as research and demonstration projects.

Aging programs

For aging programs, the Committee recommends $671,726,000, the same as the House allowance, an increase of $35,263,000 over the comparable 1982 appropriation, and $103,590,000 over the comparable budget request. The Administration on Aging will continue to implement programs which foster independence of the elderly, with emphasis on providing services to those who are socially and economically needy and on providing alternatives to institutionalization. The vulnerable elderly—those who are chronically impaired, those over 75, those who live alone, and minorities, will continue to be priorities of services provided.

For State agency activities, the Committee recommends $21,673,000, the same as both the House allowance and the fiscal 1982 level, but $1,745,000 over the administration's request. These funds are awarded by formula to each State with an approved plan. Funds are used to assist State evaluation, service development and leadership responsibilities. The system is implemented at the community level by a network of area agencies.

For supportive services and senior centers, the Committee recommends $240,869,000, the same as both the House allowance and the fiscal 1982 appropriation, but $24,670,000 over the administration's request. These funds are awarded by formula to each State with an approved plan. The funds pay up to 85 percent of the cost of operating and establishing supportive services and multipurpose senior centers. Supportive services designed to foster economic and personal independence for elderly persons include access services, in-home services, community and neighborhood services, and services to residents of care-providing facilities.

For nutrition services, the Committee recommends $381,099,000 consisting of $319,074,000 for congregate meals and $62,025,000 for home-delivered meals. This recommendation is $37,000,000 above the fiscal 1982 level, and $74,824,000 above the budget request, but the same as the House allowance. These funds are awarded by formula to States for both congregate and home-delivered meal services. The funds provided, together with non-Federal resources, will support about 678,000 meals per day, compared to about 653,000 average daily meals supported in 1982. The Committee concurs with the House in not approving requested bill language to transfer $84,022,000 in Department of Agriculture cash/commodity funds to the Department of Health and Human Services.

The Committee recommends last year's level of $5,735,000 for grants to Indian tribes, the same as allowed by the House. Approximately 84 awards will be made directly to eligible Indian tribes to promote the delivery of social services and nutrition services.

The Committee recommends the House allowance and last year's level of $22,175,000 for research, training and discretionary projects, an increase of $1,868,000 over the budget request. Emphasis will be on services systems development, management improvements, and development of indirect-service approaches. These activities are designed to further the well-being of older persons.

The Committee has also provided $175,000 for the Federal Council on Aging, the same as the budget request and House allowance, and a decrease of $16,000 from the comparable 1982 appropriation of $191,000. The Council will continue in its advisory role to the President, Secretary of HHS, Commissioner on Aging, and the Congress.

The Committee recommends that the Administration on Aging continue the career manpower development program and State education and training activities funded under Title IV-A of the Older Americans Act at their fiscal year 1982 levels. Federal training dollars are essential in stimulating support from other State, local, and private resources. The experience and personnel already developed by institutions of higher education and State and local offices on aging make them the logical focal points for conducting these training activities. Without Federal support to these institutions directly or to those purchasing the training, these programs may be discontinued, thereby increasing the severe shortage of trained personnel.

Developmental disabilities

The Committee recommends $61,180,000, the full amount authorized, for activities under the Developmental Disabilities Assistance and Bill of Rights Act. This consists of $43,180,000 for basic grants, $8,000,000 for protection and advocacy programs, and $2,500,000 for special projects and $7,500,000 for university affiliated facilities. The House allowed $58,683,000 for these activities, the same as the fiscal 1982 appropriation, compared to the $31,977,000 budget request. The Committee recommendation represents a 4-percent increase over the fiscal 1982 level, and is intended to offset the impact of inflation to at least maintain the current level of services.

The Secretary of Health and Human Services is expected to work with the university affiliated facilities to explore productive means for increasing personnel training with respect to diagnosis and treatment of autistic children.

Native Americans

The Committee recommends $28,000,000, the same amount appropriated in fiscal year 1982, for Native American programs. This is the same as the House allowance, and $4,718,000 over the budget request. The funds provided are intended to promote economic and social self-sufficiency for Native Americans. Emphasis will continue on strengthening capabilities of tribal governments and Native American organizations to develop and promote stable economies or activities which provide jobs, reduce dependency on welfare and otherwise enhance the well-being of Native Americans.

Program direction

For the salaries and expenses of Federal employees administering programs of the Office of Human Development Services, the Committee recommends $65,089,000, the same as the budget request and House allowance. The funds provided are intended to support 1,260 full-time permanent positions and 125 other-than-permanent full-time equivalents. The amount provided also includes built-in increases.

CHILD WELFARE SERVICES

1982 comparable appropriation	$477,669,000
1983 appropriation request	410,920,000
House allowance	410,920,000
Committee recommendation	572,669,000

The Committee recommends $572,669,000, an increase of $161,749,000 over the budget request and House allowance, and $95,000,000 above the comparable fiscal 1982 appropriation for child welfare services activities.

Entitlement activities

The Committee recommends $395,000,000 for foster care and $5,000,000 for adoption assistance, the full amount estimated to meet requirements under existing law for these entitlement programs. The House included only $238,251,000 for these activities in its version of the bill, the same as the budget request level, while indicating it expected the need for a supplemental to meet the full entitlement costs. However, without having the full amount needed early in the fiscal year, the level of services could be curtailed due to uncertainty over appropriations.

Discretionary Activities

The Committee concurs with the House in recommending the following amounts for discretionary child welfare services: $156,326,000 for child welfare assistance, $1,912,000 for adoption opportunities; $3,823,000 for child welfare training; and $10,608,000 for child welfare research. These amounts are the same as the fiscal 1982 appropriations for these activities. Within the child welfare research activity, bill language has been added to permit funding of social services research projects, authorized under sections 1110 and 1115 of the Social Security Act, at $3,555,000. These projects provide funding for research and demonstration projects in the area of social services delivery and management projects which affect more than one of the target populations of the Office of Human Development Services.

WORK INCENTIVES

1982 comparable appropriation	$280,760,000
1983 appropriation request	
House allowance	280,760,000
Committee recommendation	260,760,000

The Committee recommends an appropriation of $260,760,000 Work Incentives. This is $20,000,000 less than both the fiscal 1982 appropriation and the House allowance. The Administration did not request funding for this program, which it proposed for block grant consolidation.

The Work Incentive Program is designed to assist welfare recipients achieve self-support through job training, work experience, child care, and other supportive services. It is jointly administered at the Federal level between the Department of Labor and Health and Human Services, but operated through State agencies at the local level.

The $260,760,000 recommended, together with available carryover funds, is intended to approximately maintain the current level of services, which annually help about 200,000 individuals enter employment. The

Committee does not anticipate any further reductions in the WIN program in fiscal year 1983 and expects the program to stabilize after last year's cuts. If it becomes apparent later that the proposed appropriation plus the funds carried over from fiscal year 1982 are not adequate to achieve this objective, additional funding will be considered.

The Committee concurs with the House in not approving the proposed consolidation of the WIN Program into the social services block grant. Instead, efforts should be made to improve administration of the program, such as correcting deficiencies cited in a recent General Accounting Office report.

COMMUNITY SERVICES BLOCK GRANT

1982 comparable appropriation	$366,075,000
1983 appropriation request	103,500,000
House allowance	360,500,000
Committee recommendation	360,500,000

The Committee recommends an appropriation of $360,500,000 for the Community Services Block Grant. This is $257,000,000 more than the administration request and the same as the House allowance. Included in the recommendation is $348,000,000 for block grant activities, the same as the fiscal 1981 level, and $12,500,000 for administrative costs. The Committee concurs with the House in not approving the requested transfer of $9,000,000 from the Rural Development Loan Fund.

Community Services block grant funds may be used for a wide variety of anti-poverty activities, such as promoting self-sufficiency of low-income individuals, and providing emergency food and nutrition services.

The Committee agrees with House bill language earmarking $31,320,000 for Secretary's discretionary activities, as follows: rural housing and community facilities, $3,840,000; assistance for migrants and seasonal farmworkers, $2,880,000; community economic development, $18,840,000; and national youth sport, $5,760,000.

The Committee has deleted House bill language to pass through 90 percent of block grant funds to Community Action Agencies, since this language is redundant to a provision carried in the current continuing resolution. However, the Committee has included a modification to the 90 percent pass-through provision under the Community Services Block Grant Act contained in Public Law 97-276, the current Continuing Resolution for fiscal year 1983, to accommodate unique problems in the States of Wyoming, Utah, Colorado, and Nevada with respect to the delivery of community services in those four States:

The Committee anticipates States will be fully capable of assuming complete responsibility according to the terms and conditions of the community services block grant legislation beginning October 1, 1983.

In view of the fact that the Committee recommended maintaining block grant funds at fiscal year 1982 levels, the Secretary shall ensure that funds are expended during this fiscal year to staff the Office Community Services, at a level not lower than the number of on-board staff as of October 1, 1982.

The Secretary shall ensure that former Community Services Administration employees be assured of priority placement within HHS consistent with their rights as separated Federal employees and the regulations governing reemployment placement priorities within the Department.

Pursuant to the direction of this Committee, the Secretary committed in fiscal 1982 to expend $5,000,000 in Rural Development Loan Funds (RDLF) and $1,600,000 in Community Development Credit Union Revolving Loan Funds. The Committee is distressed by the Department's failure to carry out this commitment. Accordingly, the Committee directs the Secretary to make loans totaling $5 million from the Rural Development Loan Fund for fiscal 1982 plus a like amount for fiscal year 1983; and expenditures from the Community Development Credit Union Revolving Loan Fund totaling the entire unexpended balance thereof. RDLF loans should be made to nonprofit organizations with previous experience in administering RDLF funds and which had, by the end of fiscal 1982, disbursed half or more of their available RDLF funds, Community Development Credit Union Revolving Loan Fund expenditures should be made in a manner which ensures the availability of appropriate management and technical assistance to eligible low-income credit unions.

DEPARTMENTAL MANAGEMENT

GENERAL DEPARTMENTAL MANAGEMENT

1982 comparable appropriation	$146,709,000
1983 appropriation request	158,143,000
House allowance	158,143,000
Committee recommendation	158,143,000

The Committee recommends an appropriation of $158,143,000 for General Departmental Management. This is the same as the administration request and the House allowance. The recommendation is $11,434,000 more than the fiscal year 1982 comparable appropriation of $146,709,000.

Also included is an authorization to transfer $8,000,000 from the Social Security Trust Fund. This is the same as the request level and $320,000 more than last year's transfer.

This appropriation supports two basic kinds of activities:

Departmental direction involves those activities related to the Secretary's overall responsibilities for the management of the Department such as budget formulation, personnel management, grants and contracts management, policy analysis, and selected legal activities including drafting and reviewing regulations.

Departmental operations involves services which meet work requirements directly resulting from agency program operations including legal services provided to the Social Security Administration; enforcement of long-term nursing home care standards; and facilities engineering and surplus property functions.

The Committee concurs with the effort being made to reduce the staff resources requested for this appropriation and approves the administration's request for a reduction of 284 positions. The Committee also recognizes the need to support the management improvements and built-in cost-of-living increases, comprised principally of pay-related and space and building management increases, and has approved the request for these funds accordingly.

OFFICE OF THE INSPECTOR GENERAL

1982 comparable appropriation	$69,983,000
1983 appropriation request	71,267,000
House allowance	71,267,000
Committee recommendation	71,267,000

The Committee recommends an appropriation of $71,267,000 for the Office of the Inspector General. This is the same as the House allowance and the administration request. The recommendation is $1,284,000 more than the fiscal year 1982 comparable appropriation of $69,983,000.

In addition, the Committee recommends a transfer of $6,000,000 from the Social Security Trust Funds which is $240,000 more than last year's transfer.

The Office of the Inspector General (OIG) was created by law to provide leadership and coordination of the Department's efforts to promote efficiency and economy and to prevent fraud and abuse in its programs. The major functions of OIG in combating fraud, abuse, and waste are to:

Conduct audits and investigations;

Coordinate activities of the Department's principal operating divisions in the prevention and detection of fraud, waste, and abuse; and

Coordinate relationships with the other governmental and non-governmental entities.

The Committee recognizes the important nature of the work of the Office of the Inspector General and has approved funding sufficient to maintain a vigorous, effective program to promote economy and efficiency and prevent fraud, waste, and abuse in the Department's programs. In addition, the resources approved will fully fund the costs of the Federal portion of the State Medicaid Fraud Control Units program The Committee approves a fiscal year 1984 advance appropriation of $10,000,000. This will simplify a complex borrowing device now used to fund first quarter grant awards. The total new budget authority for OIG, including advance, is $81,267,000.

OFFICE FOR CIVIL RIGHTS

1982 comparable appropriation	$17,460,000
1983 appropriation request	19,163,000
House allowance	19,163,000
Committee recommendation	19,163,000

The Committee recommends an appropriation of $19,163,000 for the Office of Civil Rights. This is the same as the administration request and the House allowance. The recommendation is $1,703,000 more than the fiscal year 1982 comparable appropriation of $17,460,000. In addition, the Committee recommendation includes a transfer of $2,350,000 from the Social Security Trust Fund which is $94,000 more than last year's transfer.

The role of this office is to rectify racial and national origin discrimination prohibited by Civil Rights statutes. To enforce these anti-discrimination statutes the Office of Civil Rights investigates complaints of discrimination; conducts comprehensive reviews of programs to correct discriminatory practices; conducts outreach initiatives and provides technical assistance to encourage voluntary compliance among health and human services providers and constituency groups; and establishes compliance standards and procedures to clarify the application of the civil rights laws and regulations to particular programs or practices.

The amount approved provides built-in cost-of-living increases principally to cover the cost of pay-related and space and building management increases.

POLICY RESEARCH

1982 comparable appropriation	$13,440,000
1983 appropriation request	14,718,000
House allowance	13,440,000
Committee recommendation	14,718,000

The Committee recommends an appropriation of $14,718,000 for Policy Research. This is the same as the administration request and $1,278,000 more than the House allowance and the fiscal year 1982 comparable appropriation of $13,440,000.

This program is authorized by section 1110 of the Social Security Act. The program is one of the Department's principal sources of policy-relevant data and research on income sources of the low-income population; on the impact, effectiveness and distribution of benefits under existing or proposed programs; and on other issues that cut across HHS agency lines. It is used to analyze issues that cannot be covered in other departmental research programs or under existing evaluation activity.

The Committee recommendation restores $1,278,000 which was deleted by the House. That amount provides built-in cost-of-living increases which would allow continuation of this program at the fiscal 1982 level.

The Committee has added language to the bill directing the Office of Policy Research to continue funding the Institute for Research on Poverty at a level of $1,500,000. The Institute has provided independent and objective analyses about issues affecting poverty for nearly twenty years. It is the only research organization focusing exclusively on poverty issues and the Committee believes its important work must be continued.

TITLE III—DEPARTMENT OF EDUCATION

COMPENSATORY PROGRAMS FOR DISADVANTAGED STUDENTS

1982 comparable appropriation	$3,040,980,000
1983 appropriation request	1,942,000,000
House allowance	3,040,980,000
Committee recommendation	3,207,500,000

The Committee recommends an appropriation of $3,207,500,000 for Compensatory Programs for Disadvantaged Students. This is $1,265,500,000 more than the administration request and $166,520,000 more than the House allowance and the fiscal year 1982 comparable appropriation.

Since the passage of the landmark Elementary and Secondary Education Act (ESEA) of 1965, the Federal government has assumed a responsibility to assist State and local education agencies with the costs of special educational services to children most in need of improved academic performance. Along with this support has been the recognition that by assisting disadvantaged children with their level of educational achievement, their opportunities to participate more fully in society and obtain productive employment will be improved.

The main source of Federal support for disadvantaged children in elementary and secondary schools has been through title 1 of the ESEA, recently modified to become chapter 1 of the Education Consolidation and Improvement Act (ECIA) of 1981, which continues this policy of serving the most needy of educationally-deprived children through funded programs to the States and local school districts.

Through its recommended appropriations levels for the Education Consolidation and Improvement Act program, the Committee is reaffirming its commitment to the value of educational gains and enhancement for all children throughout the Nation. The programs authorized under chapter 1 are advanced-funded: that is funds appropriated in fiscal year 1983 become available on July 1, 1983 for use in school year 1983–84. The following table provides a breakdown of the Committee's recommendations for the ECIA chapter 1.

	Fiscal year 1982 comparable enacted	Fiscal year 1983 estimates	House recommendation	Committee recommendation
COMPENSATORY EDUCATION FOR THE DISADVANTAGED				
Grant for the disadvantaged chapter 1:				
Grants to local educational agencies	2,562,754,000	1,726,256,000	2,562,754,000	2,727,360,000
State agency programs:				
Migrants	255,744,000	167,012,000	255,744,000	255,744,000
Handicapped	146,520,000		146,520,000	146,520,000
Neglected and delinquent	32,616,000	21,886,000	32,616,000	32,616,000
State administration	30,575,000	22,100,000	30,575,000	32,000,000
Evaluation and studies	5,760,000	4,746,000	5,760,000	5,760,000
Total, title I	3,033,969,000	1,942,000,000	3,033,969,000	3,200,000,000
Migrant education:				
High school equivalency program	5,851,000		5,851,000	6,300,000
College assistance migrant program	1,160,000		1,160,000	1,200,000
Total, compensatory education programs	3,040,980,000	1,942,000,000	3,040,980,000	3,207,500,000

For basic Grants to Local Education Agencies, the Committee proposes a level of $2,727,360,000, an increase of $164,606,000 over the final fiscal 1982 level and the House allowance. That amount is also $1,001,104,000 more than the budget request. This amount will provide financial assistance to nearly 14,000 school districts, approximately 90 percent of all districts, to support supplementary compensatory education services for an estimated 5,185,000 children in school year 1983–84 compared with 4,872,000 served at the House level. The Committee has assumed an average cost per pupil of $526, which is $126 greater than the administration's assumption of $400 per child.

Programs funded by Basic Grants to Local Education Agencies focus on young children in elementary schools. Estimates indicate that approximately 71 percent of the chapter 1 participants will be elementary school students in grades 1–6 and another 7 percent will in preschool and kindergarten programs. The remaining 22 percent are students in junior and senior high school.

Local education agencies will use approximately 75 percent of their funds to support compensatory instructional services, focusing primarily on the basic skills of math and reading. About 20 percent of their funds will be used to cover fixed charges, operation and maintenance of physical plant, and capital outlay. The remaining 5 percent will go for auxiliary services such as health and counseling services.

In 1982 a supplementary amount of $148,000,000 was provided to protect States from a sudden loss of funds due to the uncertainty over whether 1970 or 1980 census data were to be used in making chapter 1 allocations to the school districts. Education agencies received awards based on the higher allocation they would receive under either the 1970 or 1980 data base. This supplemental amount is no longer needed as a hold-harmless provision, and so will be included, along with the increase provided, in the overall total for chapter 1 for distribution according to the mandated formula.

State agency programs

For the three State Agency programs, the Committee recommends the same amounts as the 1982 levels and the House amounts.

At the recommended level of $255,744,000 for the State Agency Migrant program, approximately 468,300 children would be served at an average Federal contribution of $531 per child. Compared with the budget request of $167,012,000, an additional 163,200 children would be served at the recommended amount. The level would support migrant coordination activities such as the Migrant Record Transfer System at approximately $7,065,000 in the 1983–84 academic year.

An amount of $146,520,000 would be provided for the State Agency Handicapped program. The administration requested no funds in fiscal 1983 for this activity, but proposed instead that it be consolidated under the block grant for handicapped services. At the Committee's recommended funding level, about 245,000 children would be served at an average cost to the Federal Government of $598 per student. These funds provide partial support for the education of handicapped children who are served by, or who have in the past been served by, programs operated or supported by the States, funds for which are awarded on the basis of formula grants to the States.

The Committee also recommends $32,616,000 for the State Agency Neglected and Delinquent program. It is expected that this level will serve about 47,000 students in institutions for neglected and delinquent children, at an average Federal expenditure of $694 per student. This level would serve 9,000 more students than at the amount requested by the administration.

For Chapter 1 State Administration, the Committee includes $33,014,000, an increase of $2,439,000 over fiscal year 1982 and the House level, and $10,914,000 more than the budget request. It is the intent of the Committee that these additional funds will be used to permit the Department to fund a State's administrative costs up to the one-percent of a State's Chapter 1 allocation as provided by law.

For Evaluation and Studies, the Committee provides $4,746,000, the budget request level and $1,014,000 less than the House level. With these funds, approximately $4,416,000 will support ten technical assistance centers, with the remaining funds being used for national evaluations of the Chapter 1 program.

Migrant education

The Committee recommends a total of $7,500,000 for the High School Equivalency Program (HEP) and College Assistance Migrant Program (CAMP), an amount that is $489,000 more than the House and 1982 total of $7,011,000. The administration proposed to eliminate these two programs in fiscal 1983.

The HEP program provides grants to institutions of higher education to assist migrant and seasonal farmworkers beyond the age of compulsory school attendance to complete courses necessary to receive a high school diploma or its equivalent. Career and personal counseling services are provided, as well as placement assistance.

CAMP assists migrant students enrolled in their first undergraduate year at a postsecondary institution through provision of tuition scholarships and stipends. Tutoring and counseling services are also provided.

SPECIAL PROGRAMS AND POPULATIONS

1982 comparable appropriations	$536,880,000
1983 appropriation request	433,000,000
House allowance	538,920,000
Committee recommendation	530,080,000

The Committee recommends an appropriation of $530,080,000 for Special Programs and Populations. That is $97,080,000 more than the administration request and $8,840,000 less than the House allowance. The recommendation is $6,800,000 less than the fiscal year 1982 comparable appropriation of $536,880,000.

Included under this account are the Education Block Grant (Chapter 2 of the Education Consolidation and Improvement Act) and a number of categorical programs which the administration proposed to eliminate as individual programs in fiscal year 1983.

The actual appropriation level for the block grant was $470,400,000, but because three formerly categorical programs—law-related education, career education, and the biomedical sciences program—were mandated for inclusion into the block grant in fiscal 1983, a comparable 1982 amount has been computed to reflect the addition of these programs in the block grant.

For the block grant, the Committee includes $475,000,000, which is $4,600,000 more than the actual 1982 appropriation of $470,400,000, but $8,840,000 less than the comparable 1982 level of $483,840,000, computed to reflect the inclusion of three formerly categorical programs in the block grant at a 1982 total of $13,440,000. Of the total provided, $446,500,000 will go for State activities, at least 80 percent of which must be passed through to local education agencies. There is a 1-percent set-aside for the territories and a 6-percent set-aside of the total for the Secretary's discretionary fund.

Block grant funds will be used in accordance with local priorities to carry out activities in the areas of basic skills development, educational improvement and support services, and special projects similar to the activities previously funded from nearly thirty separate programs. It is hoped that the block grant approach will eliminate duplicative paperwork and administrative overhead while granting State and local education agencies greater control to design and provide educational programs which best meet local needs.

The Committee provides the full 6 percent, or $28,500,000 for the Secretary's discretionary activities. This is $1,580,000 more than the administration requested and $530,000 less than the House allowance. This level provides support for three mandated programs: the inexpensive Book Distribution Program (Reading is Fundamental); Programs of National Significance under Arts in Education; and Alcohol and Drug Abuse Education. The recommended level for 1983 is as follows: Reading is Fundamental, $5,850,000; Arts in Education, $2,025,000; and Alcohol and Drug Abuse Education, $2,850,000.

The remaining funds in the discretionary allowance would be used to support the National Diffusion Network, Educational Television and Technology and other special initiatives. The allowance also provide for evaluation studies of Block Grants for Improving School Programs. This is the first block grant program in education and the Committee believes that a thorough analysis of its operation and effectiveness should be undertaken.

The Committee continues to have a strong interest in and support for the National Diffusion Network. This program is the only federally sponsored program designed to improve educational quality by disseminating information on exemplary programs directly to school districts throughout the country. Therefore, the Committee expects that the Secretary will maintain the program's activities at approximately the same level as in fiscal 1982.

The Committee encourages the Department to continue its funding of such educational television series as the Children's TV Workshop "3-2-1 Contact". These programs are especially important in helping to meet our nation's growing need for more science and mathematics education.

Other programs

The Committee concurs with the House in including funding at approximately the fiscal 1982 levels for each of six categorical programs: Civil Rights Training and Advisory Services, Follow Through, Territorial Teacher Training Assistance, General Assistance to the Virgin Islands, Ellender Fellowships, and Women's Educational Equity. The administration requested no funding for these programs in fiscal 1983.

For the Training and Advisory Services authorized by title IV of the Civil Rights Act, the Committee recommends $24,000,000. With this amount, State and local educational agency civil rights units and 40 desegregation assistance centers would be supported.

The Committee recommends $19,440,000 for Follow Through, to improve the quality of educational and educational-related services for economically disadvantaged children in kindergarten through early elementary grades. At this level, awards would be made to approximately 69 projects. Funds will primarily be directed toward the continuation of existing service projects in local school districts, along with ongoing support for sponsoring institutions and resource centers. About 30,000 children would be served at an average cost of $545 per child. By law, Follow Through is to be phased into the Education Block Grant at the end of fiscal year 1984.

For General Assistance to the Virgin Islands, the Committee includes $1,920,000 to improve elementary and secondary education. Funds have been used primarily for the expansion of school facilities to accommodate an expanding school age population and for curriculum development.

For Territorial Teacher Training, the Committee recommends $960,000. At this level, awards will be made to departments of education in the Virgin Islands, Northern Mariana Islands, and the Trust Territory of the Pacific Islands to provide training for elementary and secondary school teachers, based upon need and performance.

The Committee also concurs with the House in recommending $3,000,000 for the Ellender Fellowships, of which $1,500,000 is provided for each of fiscal years 1983 and 1984. The Committee has chosen therefore not only to increase the annual appropriation by $540,000 over the 1982 level, but also to allow for a transition to forward funding for this program. At the Committee level, a sole source contract of $1,500,000 will be awarded to the Close-Up Foundation of Washington, D.C. to assist with the expenses of sending approximately 3,000 economically disadvantaged students and their teachers per year to the Nation's Capital for 1 week comprehensive seminars on the functioning of the Federal Government. The major portion of the program's costs are provided by community and private sources.

For the Women's Educational Equity Act program, the Committee provides $5,760,000 for grants and contracts to public agencies, private and nonprofit organizations and to individuals for the development, demonstration and dissemination activities to promote educational equity for women and girls at all educational levels. Grants are awarded on a competitive basis with applications reviewed by panels of Federal and non-Federal experts in the area of educational equity.

The Committee expects that funds appropriated for the Women's Educational Equity Act (WEEA) program will be used in accordance with existing priorities and current WEEA regulations.

The Committee earlier directed the Department to prepare a comprehensive report identifying those programs which could effectively address the unique educational needs of native Hawaiians. The Committee has been most pleased with the considerable progress that has been made to date and looks forward to receiving this report upon its completion.

With regard to the Washington Workshops program, the Committee is impressed with the preliminary information provided about the important work that Washington Workshops performs in bringing senior high school students to the nation's capital to study the federal government and observe it first-hand. However, the Committee is reluctant to move ahead on an item for which there is no existing authorization and on which it has not been able to hold a hearing. The Committee intends to explore the role of the Washington Workshops program at its next round of hearings and hopes to be able to act favorably on providing funds at a later date.

BILINGUAL AND MINORITY LANGUAGE EDUCATION

1982 comparable appropriation	$138,057,000
1983 appropriation request	94,534,000
House allowance	138,057,000
Committee recommendation	138,057,000

The Committee recommends an appropriation of $138,057,000 for Bilingual and

Minority Language Education. This is $43,523,000 more than the administration request and the same as the House allowance. The recommendation is the same as the fiscal year 1982 comparable appropriation.

Grants to school districts

The Committee recommends $84,126,000 for grants to school districts for fiscal year 1983. This amount is $23,602,000 above the adminstration's request, $504,000 above the House allowance, and $4,904,000 more than the fiscal year 1982 approriation.

Activities carried out under this program are intended to assist children of limited English proficiency to improve their ability to read, write and speak English while progressing in classroom subject matter.

Training grants

The Committee recommends $31,288,000 for training grants in fiscal year 1983. This amount is $5,788,000 more than the administration requested, and $2,452,000 more than the House allowance and the fiscal 1982 appropriation.

The Committee believes that training continues to be a high priority activity, since the lack of trained personnel has consistently been identified as a major problem. A variety of training activities will be supported during fiscal year 1983, which include fellowships, stipends and aid to universities for support of both graduate and undergraduate programs in bilingual education. Professional development of teachers and State agency personnel, and training and technical assistance programs carried out in bilingual service centers will also be supported.

Support services

The Committee has provided $18,957,000 for the support services activity in fiscal year 1983. This amount is $10,447,000 above the administration's request and $4,400,000 more than the House allowance. The recommendation is the same as the fiscal year 1982 appropriation.

A variety of activities are carried out within this program which supports operations of the other bilingual education programs. Some of the projects which are supported include grants to State educational agencies for coordination and technical assistance, evaluation and research studies, a clearinghouse to disseminate research findings, and an advisory committee.

Bilingual desegregation grants

No funding is provided for bilingual desegregation grants for fiscal year 1983. This recommendation is the same as the administration's request, and $7,356,000 less than the House allowance and the fiscal year 1982 appropriation.

Many districts undergoing desegregation are already funded under the basic grants program. Consolidation will reduce duplication and effect a cost savings.

Bilingual vocational training

The Committee recommends $3,686,000 for the bilingual vocational training activity for fiscal year 1983. This amount is the same as the House allowance and the appropriation for fiscal year 1982. The administration proposed making these funds available under the grants to school districts activity.

This program provides bilingual vocational training and occupational-related English language instruction to out-of-school and unemployed or underemployed youth and adults.

SCHOOL ASSISTANCE IN FEDERALLY AFFECTED AREAS

1982 comparable appropriation	$456,200,000
1983 appropriation request	286,880,000
House allowance	475,000,000
Committee recommendation	475,000,000

The Committee recommends an appropriation of $475,000,000 for Impact Aid. This is $188,120,000 more than the administration request and the same as the House allowance. The recommendation is $18,800,000 more than the fiscal year 1982 comparable appropriation of $456,200,000. The funding included in the bill for this program represents the full amount authorized.

Impact Aid is a program to help compensate local school districts for the cost of educating children where availability of revenue from local taxes has been adversely affected by the presence of Federal activities.

The full amount authorized, a total of $435,000,000, is recommended for "A" and "B" payments under section 3. "A" payments are made to school districts for children who live and whose parents work on Federal property or are on active duty in the uniformed services. "B" payments are made to school districts for children whose parents work on Federal property or are on active duty in the uniformed services. The allowance for these payments represents an increase of $17,400,000 over the amount available in fiscal year 1982 and is the same as the House level. The distribution of payments for "A" and "B" children would follow generally the same pattern as used for fiscal year 1982.

Payments for "A" children would be calculated by prorating the funds according to the amount each school district received in 1981. In recognition of the particular hardships faced by school districts impacted heavily with "A" children, in addition to the phase-out of payments for "B" children with no authorization provided for "B" payments in fiscal year 1984, mandated by the Omnibus Reconciliation Act of 1981, the Committee provides 100 percent of their fiscal year 1981 payments to the so-called Super "A" districts (school districts having 20 percent or more "A" children). "A" payments to districts which do not meet the 20 percent "A" criteria are provided at 90 percent of the fiscal year 1981 payments, the same level recommended by the House and more than three percent in excess of the amount these districts received in fiscal year 1982. Payments are to be made for "B" children, in districts where they comprise 20 percent or more of total enrollment, at approximately 48 percent of the 1981 payment. In districts where "B" children comprise less than 20 percent of total enrollment, payments would be at approximately 14.6 percent of the 1981 payment.

Under the proposed formula, any school district whose total payment would be less than $5,000 would receive no payment.

While the Committee recognizes the severe hardship borne by those school districts which are very heavily impacted by federally-connected children, it believes that a limit must be placed on the amount of funds available under section 3(d)(2)(B). Estimates presented to the Committee by the Department on the number of potentially eligible districts under this section vary greatly. In addition, the Committee is deeply concerned about how the money is distributed. Accordingly, the Committee directs the Department to conduct a thorough review of the provisions of this section toward the goal of determining what changes are necessary in order to ensure the targeting of funds to those districts most in need. The Committee expects a full report on this matter within forty-five days from the time of issuance of this report.

The Committee directs the Secretary to develop expeditiously a comprehensive policy which fulfills the federal government's commitment to those school districts which are impacted by the presence of federal facilities. In particular, the Secretary should work, in cooperation with the Secretary of Defense, to aid school districts whose tax bases are reduced by the existence of Federal military installations.

The Highland Falls-Fort Montgomery School District, adjacent to the United States Military Academy at West Point, is a perfect example of a school district for which the Committee expresses a real concern. Over 93 percent of the taxable land in the school district now belongs to West Point. However, the federal government has, over the last several years, reduced assistance to the school district. For the well-being of the students in Highland Falls as well as the promotion of good relations between the community and the Academy, the Committee believes that a firm policy must be developed.

Special provisions (section 2)

The Committee recommends an appropriation of $10,000,000 for Section 2 districts which are heavily impacted by Federal Government removal of properties from the tax base. This is the maximum amount authorized by Reconciliation and is an increase of $1,200,000 over the budget request. The recommendation is $400,000 over the fiscal year 1982 and is the same as the House allowance.

The Committee again calls attention to the Douglas School District in Box Elder, S. Dak., which is responsible for educating large numbers of children whose parents work and/or live on the Ellsworth Air Force Base.

In addition to its regular section 3 payments, this district, which is taxing at the maximum rate allowed and which will reach shortly its legal debt limit, has relied extensively both on section 3(d)(2)(B) and section 2 payments.

Consequently, notwithstanding any proration of section 2 payments, the Committee has included statutory language to ensure that Douglas will receive 100 percent of its section 2 entitlement in fiscal year 1983.

Disaster assistance

The Committee recommends an appropriation of $10,000,000 for Section 7 Disaster Assistance, the maximum authorized by Reconciliation. This is an increase of $200,000 over the fiscal 1982 level. The recommendation is the same as the House allowance.

Construction

The Committee recommends an appropriation of $20,000,000 for Impact Aid construction, the maximum authorized by Reconciliation. This is an increase of $17,000,000 over the 1983 request, and $800,000 over the fiscal year 1982 level. The recommendation is the same as the House allowance.

Bill language is proposed to give priority to schools attended by children residing on Indian lands (Section 14) and schools for children residing on Federal property where

legal or other reasons prevent local school districts from fulfilling this need (Section 10).

EDUCATION FOR THE HANDICAPPED

1982 comparable appropriation	$1,068,580,000
1983 appropriation request	845,668,000
House allowance	1,103,680,000
Committee recommendation	1,110,252,000

The Committee recommends an appropriation of $1,110,252,000 for Education for the Handicapped. This is $264,584,000 more than the administration request and $6,572,000 more than the House allowance. The recommendation is $41,672,000 more than the fiscal year 1982 comparable appropriation of $1,068,580,000.

In its budget presentation, the Department of Education indicated that legislation would be proposed to revise the State Grant program and to streamline discretionary activities under a single Special Purpose Funds authority. This legislation was not enacted and the Committee has once again based its recommendations on existing authorities for two formula programs (Basic State Grants and Pre-school Incentive Grants) and for the several separate discretionary activities.

State grant program

The Committee recommends an appropriation of $970,000,000, an increase of $38,992,000 over FY 1982 level.

The primary purpose of the State Grant program is to provide assistance to State in carrying out the mandate of the Education for All Handicapped Children Act in providing handicapped children with a free, appropriate public education. Each State is entitled to receive an amount equal to the number of handicapped children aged 3-21 receiving special education and related services multiplied by a percentage of the national average per pupil expenditure.

The Committee recommendation should serve approximately $4,050,000 students and will provide a Federal contribution of 9.3% of the average per pupil expenditure toward the education of these children in school year 1983-84 under this advance funded program.

Pre-School incentive grants

The Committee recommends full funding, or $25,000,000, for Preschool incentive grants. No funds had been requested since this program was proposed to be folded into a State Block Grant program. The House allowance is $24,000,000, the same as the FY 1982 level.

This program is designed to stimulate State and local education agencies to expand educational services to handicapped pre-school children, ages 3-5, thereby increasing their opportunities to benefit from early education intervention. The amount recommended would provide approximately $103 per child for this purpose, given an estimated enrollment of 243,000 children.

Deaf-Blind Centers

To fund single and multi-State centers, which coordinate the delivery of services to 6,100 deaf-blind children who have been identified in this country, as well as to support a limited number of demonstration projects, $15,360,000 has been recommended. This is the same as the fiscal year 1982 and the House levels. Given the age of the majority of these children, many of whom were victims of the rubella epidemic of 1965, the Committee is interested in the extent to which funded centers work in conjunction with other appropriate governmental units and with the State agencies funded by the Rehabilitation Services Administration to plan for a continuum of services and training after the age of 21. The Committee expects future budget submissions to address this concern.

Severely handicapped projects

Level funding of $2,880,000 is proposed, the same amount available in fiscal year 1982 and the House allowance. This program awards contracts to State Departments of Education, colleges and universities and other institutions, to develop and disseminate model projects demonstrating the best methods of educating severely handicapped children in order to develop their self-reliance and reduce their need for institutional care.

Early childhood education

The Committee recommends $16,800,000, the same as the final 1982 and House levels. The Early Childhood Education programs supports grants and contracts for demonstration projects to develop and disseminate effective models of educational services to pre-school age handicapped children. The Committee recognizes the value of early intervention in limiting the effects of a handicapping condition and applauds the goals of this program and of the Pre-school incentive program. The Committee notes with interest the extent to which demonstration projects had been maintained with local funds after special Federal support had concluded. The Committee would like to learn more about the procedures whereby States are informed about models developed under this program and if the Department is able to identify the extent to which models have been adopted, in whole or in part, nationally. These concerns may be addressed in forthcoming hearings.

Recruitment and information

This program supports contracts to provide information on educational resources for handicapped children and on employment opportunities in the field of special education. Funds are awarded on a competitive basis to operate a National Information Center for the Handicapped and to issue public service announcements in the media on the needs of the handicapped. The Committee recommendation is to maintain funding at $720,000, the same as the fiscal year 1982 level and the House amount.

Special education personnel development

The Committee recommends a level of $49,300,000, the same as the 1982 level and that of the House. This program addresses the need to train an adequate supply of educational personnel competent to deal with the special education needs of handicapped children. Grantees include institutions of higher education, State education agencies, and other appropriate nonprofit agencies.

The Committee encourages the Department to work with participating institutions to see that funds be targeted on retraining existing educational personnel needing employment to enable them to re-enter the work force as special education teachers. A report on this issue, requested in Senate Report 97-516, will receive the Committee's close attention.

Special studies

The Committee recommends maintaining funding at the fiscal year 1982 level of $480,000 to ensure the collection and analysis of sufficient data to adequately reflect the effectiveness of Federal, State, and local efforts to provide a free, appropriate public education to all handicapped children. These studies are reflected in the required annual report to Congress on the implementation of Public Law 94-142.

Regional, vocational, adult, and postsecondary programs

The Committee recommends $2,832,000, the same amount available under this 1982 Continuing Resolution. As a result of report language in authorizing and appropriations bills in fiscal year 1974 and 1975, most of the funds each year have been spent on programs for the deaf in four postsecondary schools: Seattle Community College, California State University at Northridge, St. Paul Vocational Technical Institute, and Delgado College in New Orleans. The Community endorses the Department's plans to make these awards in fiscal year 1983 on a competitive basis to enable other eligible schools to participate in this program, which provides direct services to disabled students.

Innovation and development

The Committee has included $12,000,000 for Innovation and Development, the same as the House level and $1,200,000 more than the fiscal year 1982 comparable appropriation. This program funds research and development and model program activities. The Committee is pleased with its success in promoting educational achievement by handicapped children through the development of inventions, curriculum materials, and diagnostic/assessment instruments for a range of disabilities.

Media services and captioned films

An amount of $12,000,000 is included, an increase of $480,000 over the fiscal year 1982 level, and $2,000,000 less than the House. Under this program, media projects such as film captioning, the National Theater for the Deaf, and Recordings for the Blind, Inc., are supported.

Regional resource centers

The Committee recommends maintaining support for this program at the 1982 level of $2,880,000. Center activities include testing and diagnosis, training personnel in state departments of education, direct referral services, and the development of individualized education programs.

REHABILITATION SERVICES AND HANDICAPPED RESEARCH

1982 comparable appropriation	$952,171,000
1983 appropriation request	650,000,000
House allowance	1,035,227,000
Committee recommendation	1,036,727,000

The Committee recommends an appropriation of $1,036,727,000 for Rehabilitation Services and handicapped Research, an increase of $1,500,000 over the House allowance. The recommendation is $84,556,000 more than the fiscal year 1982 comparable appropriation of $952,171,000.

For fiscal year 1983, legislation was proposed for the administrative simplification of the Basic State Grants program and to consolidate several discretionary authorities into a special purpose fund. These proposed amendments to the Rehabilitation Act have not been enacted. The Committee has, therefore, based its recommendations on the existing legislation which includes separate authorities for several categorical programs. For these categorical programs, the Committee has recommended $62,574,000,

the same as the House allowance, which is $18,834,000 more than the comparable amount requested for the proposed Special Purpose Fund. At this funding level, 1,500,000 clients will be served, 100,000 more than in fiscal year 1982. An estimated 229,000 disabled individuals will be rehabilitated compared to 226,000 in fiscal year 1982.

Basic State grants

For Basic State Grants, the Committee recommends $943,900,000, the full amount authorized for fiscal year 1983 by the Omnibus Reconciliation Act of 1981. This is $80,860,000 more than was made available in fiscal year 1982 under the Continuing Resolution, and the same as the House allowance.

The Basic State Grants program provides an 80 percent Federal match to State vocational rehabilitation agencies for the provision and administration of programs to prepare disabled individuals to engage in gainful employment. A statutory requirement gives priority in the provisions of services to severely handicapped individuals.

Funding at the authorized ceiling is recommended to help reverse the decline in the number of disabled men and women rehabilitated that has occurred in recent years as a result of inflation and the priority to serve disabled clients who are more costly to rehabilitate. Moreover, as a result of amendments to the Social Security Act in the 1981 Omnibus Reconciliation Act, funds from the Supplemental Security Income (SSI) program and the Beneficiary Rehabilitation program are no longer transferred to the State vocational rehabilitation agencies at levels comparable to those of previous years. The amount advanced to the agencies by the Social Security Administration in fiscal year 1982 was approximately $3,500,000. In the previous year, $124,050,000 was transferred from the SSI program and the trust funds for the purpose of rehabilitating eligible clients and beneficiaries.

Service projects

The Committee recommends $26,094,000, the same as the House allowance, for the various discretionary programs within the service projects activity. This is an increase of $2,200,000 over the fiscal 1982 appropriation level. Of this amount, $8,000,000 shall be set aside for the Projects With Industry program. Bill language has been included, as in fiscal years 1981 and 1982, earmarking $650,000 to maintain the Navajo Vocational Rehabilitation project.

Service projects assist individuals who have unique disabling conditions, develop new and innovative approaches to meeting their needs, and provide clients with special training and employment opportunities. The main types of service projects are: Projects With Industry; Severely Disabled; Migratory Workers, Indians; Helen Keller Center; Recreation Programs; and Client Assistance.

Independent living

The Committee recommendation of $17,280,000 for independent living projects is the same as the 1982 level, as well as the House allowance. Appropriated funds support centers which provide a wide range of services designed to better enable severely handicapped individuals live more independently in family and community settings as a more cost-effective, personally satisfying alternative to institutionalization.

The Committee has included bill language to protect centers and projects funded through the Independent Living and Projects With Industry programs. This language is intended to make available such amounts as are necessary for fiscal 1983 to fund all projects and centers which received assistance through the Independent Living and Projects With Industry programs in fiscal 1981. The purpose of this language is to allow the authorizing committee to review these two programs early next year and to determine if and/or how the present grantees ought to be changed. Without assured continued support this option would be lost to the Congress.

Training

For rehabilitation training, the Committee recommends $19,200,000, the same as both the House allowance and the fiscal year 1982 appropriation.

The purpose of the training program is to increase the numbers and improve the skills of rehabilitation personnel.

It is the Committee's understanding that the Department has complied with its directive to maintain funding for prosthetic and orthotic education in fiscal year 1982 at the fiscal year 1980 level. It directs the Secretary to maintain that level in fiscal year 1983 in order to address the severe manpower shortage in the professions which contribute significantly to reducing the cost of hospital care and to expediting the return of physically impaired citizens to productive lives. The Committee directs that training activities in the field of physical therapy be maintained at the fiscal year 1981 levels.

National Institute of Handicapped Research

The Committee recommends an appropriation of $30,060,000 for the National Institute of Handicapped Research, an increase of $1,500,000 over the House allowance and the fiscal year 1982 comparable appropriation. This increase reflects the Committee's deep concern over the erosion of resources devoted to research regarding rehabilitation and the needs of handicapped Americans in the past three years.

The National Institute of Handicapped Research supports research through two major center programs, Rehabilitation Research and Training Centers located at major university research centers throughout the country, and seventeen Rehabilitation Engineering Centers. In addition, a small part of the Institute's budget supports individual R&D projects.

The Committee remains interested in the NIHR's efforts to address the unique rehabilitation needs of the Pacific Basin region and also that of other Native American peoples under their research and training center authority. The Committee understands that NIHR has made a special effort to obtain appropriate applications from these special populations, and is planning on providing the necessary technical assistance to insure that quality applications are submitted. The Committee is pleased with the responsiveness of NIHR to this important area.

The Committee requests the NIHR to conduct a study for determining appropriate training methodology for use by State rehabilitation personnel in the provision of vocational training services to persons with Autism and their particular needs.

National Council on the Handicapped

The National Council on the Handicapped establishes general policies regarding Federal activities concerning the rehabilitation of handicapped individuals. This Committee agrees with the fiscal year 1983 budget request and House allowance of $193,000 for the operations of the Council, compared to $197,000 available in fiscal 1982.

VOCATIONAL AND ADULT EDUCATION

1982 comparable appropriation	$735,025,000
1983 appropriation request	500,000,000
House allowance	829,500,000
Committee recommendation	803,500,000

The Committee recommends an appropriation of $803,500,000 for Vocational and Adult Education. This is $303,500,000 more than the administration request and $26,000,000 less than the House allowance. The recommendation is $68,475,000 more than the fiscal year 1982 comparable appropriation of $735,025,000. No individual amounts were requested by the administration for specific items in this account. The budget request was based on a proposal to consolidate and repeal the Vocational Educational Act and the Adult Education Act. The Committee recommendations are based on current law, as Congress has taken no action on these legislative proposals.

The Committee directs the Department to give attention to the problem of training and re-training youth and adults in this time of increasing unemployment. While many factors contribute to unemployment, it is known that training assists displaced workers and disadvantaged youth and adults to make the transition to a new job, or to gain initial employment.

The Committee finds that (1) skilled worker shortages are alarmingly high and many industries report a growing need for advanced level workers; (2) technological innovations are making worker skills obsolete and creating a need for training; (3) retraining of displaced workers is required so that they are sufficiently skilled to build, operate and maintain sophisticated new machinery required by high technology industries.

While the State's vocational education agencies and institutions conduct training under collaborative agreements with private sector employers, the need for training is greater than current funding will allow. A current 20 State survey shows that approximately 300,000 people wish to, but are not able to, enroll in vocational training. The Committee has, therefore, provided additional funding to assist vocational education agencies and institutions to train youth and adults and place them in jobs available in the private sector.

The Committee believes that vocational and adult education must play a significant role in the country's economic revitalization. Moving to higher levels of industrial technology will create increased need for highly skilled workers. Shortages of skilled laborers are already placing ecoomic hardships on certain areas and are likely to increase as we attempt to resume rapid economic growth. Although the Federal contribution accounts for only a small protion of total expenditures for vocational and adult education at all levels, it can have major value in supporting program improvement and attention to economic development and skilled workforce training.

Basic grants

The Committee has provided $558,155,000 for the vocational education basic grants. This amount is $60,875,000 more than the fiscal 1982 appropriation, and the same as the House allowance.

These funds help to promote the development of a prepared workforce. This activity

provides grants to states to extend, maintain and improve vocational education training for persons who need or desire such training. At this funding level, approximately 13,000,000 students will be served.

Program improvement and supportive services

The Committee has provided $89,590,000 for the program improvement and supportive services activity for fiscal year 1983. The recommendation is the same as the appropriation for fiscal year 1982 and $20,000,000 less than the House allowance.

The Committee continues to urge the Department to focus on upgrading the technological level of vocational education training and on the continued development of vocational programs in new and emerging occupational areas.

Programs of national significance

The Committee recommends $7,178,000 for programs of national significance. This amount is $1,000,000 less than the appropriation for fiscal year 1982 and the House allowance. It is the intention of the Committee that the $1,000,000 reduction be taken from the National Center for Research in Vocational Education. The Committee understands that an evaluation of the Center was recently completed and believes that funds for the Center should be limited until such time as the Committee has the opportunity to review the report and its recommendations.

Special programs for the disadvantaged

The Committee recommends $14,356,000 for special programs for the disadvantaged. This amount is the same as the House allowance and the fiscal year 1982 level.

Consumer and homemaking education

The Committee has provided $29,133,000 for consumer and homemaking education. The recommendation is the same as the appropriation for fiscal year 1982 and $5,000,000 less than the House allowance.

State advisory councils

The Committee recommends $6,500,000 for State advisory councils. This amount is the same as the fiscal year 1982 appropriation and the House allowance.

State planning

The Committee recommends $3,588,000 for State planning activities. This amount is the same as the House allowance and the fiscal 1982 appropriation.

Adult education

The Committee has provided $95,000,000 for adult education programs. The recommendation is $8,600,000 more than the fiscal year 1982 level and the same as the House allowance.

This program has proven its effectiveness in assisting the States in combatting illiteracy among the Nation's adults, 16 years of age and older. Those funds will support programs that assist educationally disadvantaged adults to develop into members of a skilled and literate workforce.

STUDENT FINANCIAL ASSISTANCE

1982 comparable appropriation	$3,569,480,000
1983 appropriation request	1,800,000,000
House allowance	3,569,480,000
Committee recommendation	3,567,800,000

The following table shows the distribution of the Committee allowance.

[In thousands of dollars]

	Fiscal year 1982	President's request, fiscal year 1983	House allowance	Committee recommendation
Pell grants	2,419,040	1,400,000	2,419,040	2,419,040
Supplemental educational opportunity grants	355,400		355,400	355,400
Work-study	528,000	397,500	528,000	550,000
Direct loans:				
Federal capital contribution	178,560		178,560	178,560
Teacher cancellations	14,800	2,500	14,800	14,800
Subtotal, direct loans	193,360	2,500	193,360	193,360
State student incentive grants	73,680		73,680	50,000
Total, student financial assistance	3,569,480	1,800,000	3,569,480	3,567,800

Pell Grants

The Committee recommends an appropriation of $2,419,040,000 for the Pell Grant program, the same as the fiscal 1982 level and the House allowance and $1,019,040,000 more than the administration requested. The Pell Grant program provides direct grants to financially needy undergraduate students who are enrolled at least half-time at the nearly 7,000 participating postsecondary institutions.

Students apply directly to the Federal government for a determination of eligibility based upon a national needs analysis system. Student need is the difference between educational cost and expected family contribution. Pell Grants may be distributed to the student by the institution or directly from the Federal government.

It is estimated that 75 percent of Pell Grant recipients are from families with incomes at or below $15,000, while 50 percent of the beneficiaries are from families living below the poverty line. Approximately 2.6 million students received Pell Grants in academic year 1982-83.

The Committee has included appropriation language which will maintain the maximum award at $1,800. The Committee has rejected the administration's language which would have lowered the maximum award to $1,600 and allowed the Department of Education to use a new needs analysis system for the Pell Grant program. The Committee also disapproves language which would have permitted the Secretary of Education to establish the cost of attendance used in the calculation of the amount of a Pell Grant a student will receive.

The Committee has adopted language similar to the House provision which continues previous Pell Grant eligibility to veterans also receiving veterans' education benefits.

Supplemental education opportunity grants

The Committee recommends that $355,400,000 in appropriations be provided for the Supplemental Educational Opportunity Grant program in fiscal year 1983, the same amount provided in fiscal year 1982, and approved by the House. No funds were requested by the administration.

The Committee recognizes the need to fund this program, which serves as a supplement to the Pell Grant program for needy students. Funds are distributed to students by the postsecondary institution they attend. After demonstrating financial need, through a needs analysis system, students may receive up to $2,000 per year. There are 3,700 institutions of higher education which participate in the SEOG program serving approximately 650,000 students.

Work-study

For Work-Study, the Committee recommends an appropriation of $550,000,000. This is $152,500,000 above the level requested by the administration, and $22,000,000 more than the 1982 appropriation and the House allowance.

The Committee in providing additional funding recognizes the ever-increasing importance which self-help must play in the financing of postsecondary education.

The program is administered by the postsecondary institutions participating in the program. Students in need of financial assistance are provided with part-time jobs at their schools, with Federal, State or local agencies or with nonprofit organizations. This program provides grants to eligible institutions for partial reimbursement of wages paid to students. Federal funds may be used to pay up to 80 percent of the student's wages. Over 950,000 students will be assisted in 1983.

The Committee has been advised of possible discrepancies among some States in the allocation of funds for College Work Study, National Direct Student Loan and the Supplemental Education Opportunity Grant programs. In comparing allocations to States of relatively equal student populations, per capita income and state population, significant discrepancies may exist in the campus-based allocations. Taking into account the differences in total cost of education, discrepancies may still be apparent. Therefore, the Committee directs the Secretary of Education to undertake a comparative study of the allocation formula and the actual dollar allocation in these programs and to report to the Committee his findings and recommendations for correcting any inequities in time for consideration of this matter at the fiscal year 1984 Labor-HHS-Education hearings.

Direct loans

The Committee recommends that $178,560,000 be provided for Federal capital contributions to the National Direct Student Loan funds. This is the same as the 1982 appropriation and the House allowance. The administration had requested no funding for Federal capital contributions.

The Committee recommends that funds be provided for the program because it helps to ensure adequate loan availability to financially needy students. The appropriation will add new Federal capital contributions and continue to provide new loans to students through institutional revolving funds. In fiscal year 1983, due to repayment on prior year loans, as well as this appropriation, some 800,000 students will receive National Direct Student Loans totaling $6,000 for under-graduates and $12,000 for graduate students.

Teacher cancellations

The Committee recommends $14,800,000 for Teacher Cancellations, the same as the House allowance and the fiscal 1982 appropriation, and $12,300,000 over the administrations request. These funds are used to reimburse institutions for up to 100 percent of the principal of a student's loan, if the student agrees to teach in low-income areas, or to teach handicapped children.

State student incentive grants

The Committee recommends an appropriation of $50,000,000 for the State Student Incentive Grant (SSIG) program, a decrease of $23,680,000 below the House level and the fiscal 1982 appropriation. The ad-

ministration had requested that no funds be provided.

Under the 50-50 matching requirement of the State incentive program, most States considerably overmatch the Federal contribution, suggesting considerable State level commitment regardless of Federal expenditures. Of 41 States which overmatched Federal funds, 23 provided at least 62 percent more need-based grant aid than is required to match Federal funds. The Committee believes this program has succeeded in encouraging States to use their own funds to help finance postsecondary education. The Committee feels, therefore, the Federal contribution to SSIG can be phased down but should not be be abruptly discontinued.

The Committee has included "ratable reduction" language to insure that the funds appropriated will be apportioned to States in relation to the amount they received in fiscal year 1982. This is needed to insure that the reduction in funding will be distributed fairly and will not disproportionately affect any State.

STUDENT LOAN INSURANCE

1982 comparable appropriation	$3,073,846,000
1983 appropriation request	2,484,631,000
House allowance	2,484,631,000
Committee recommendation	3,100,500,000

The Committee recommends an appropriation of $3,100,500,000 for the Guaranteed Student Loan (GSL) program. This is $615,869,000 above the administration's request and the House allowance.

The Committee's action does not assume enactment of the administration's proposed statutory changes in the GSL program, which would have significantly altered the program and placed a heavier financial burden on students pursuing graduate education. The Committee maintains the program with the changes made in 1981 under the Omnibus Budget Reconciliation Act.

The Committee bases its recommendation on the most up to date estimates of GSL costs and changes in the interest rate and loan volume for fiscal year 1983. It is possible that economic changes may require additional funding through a supplemental appropriation during the course of the year.

The Guaranteed Student Loan program provides Federal insurance, reinsurance, and interest subsidies for educational loans made to students and parents. These loans are made at low-interest rates by banks and other lenders.

In almost all States, the program is administered through State and private nonprofit "guarantee agencies" which serve as intermediate insurors of these loans. Federal advances, reinsurance payments and administrative allowances are provided to these guarantee agencies to support their insurance of student and parent loans.

The Federal Government pays an "interest benefit" subsidy, equal to the borrower's interest rate, on behalf of GSL student borrowers while they are in school and during certain grace and deferment periods. For purposes of this subsidy, students with adjusted gross family incomes above $30,000 must demonstrate need. A Federal "special allowance" is also paid to banks and other lenders which assures them a total yield, based on outstanding loan volume, equal to the most recent quarterly average 91-day Treasury bill rate plus 3.5 percent. Students are currently charged a 5 percent origination fee which helps offset these Federal subsidy costs.

HIGHER AND CONTINUING EDUCATION

1982 comparable appropriation	$382,156,000
1983 appropriation request	262,352,000
House allowance	391,990,000
Committee recommendation	374,940,000

The Committee recommends an appropriation of $374,940,000 for Higher and Continuing Education. This amount is $17,050,000 less than the House allowance, $7,216,000 less than the comparable fiscal year 1982 appropriation, and $103,588,000 more than the budget request.

Special programs for the disadvantaged

For Special Programs for the Disadvantaged, also known as the TRIO programs, the Committee recommends $150,240,000, which is the same amount as the 1982 appropriation. The Committee allowance, would continue funds for the Upward Bound program, an on-campus program designed to identify youths capable of completing secondary and postsecondary education, Special Services, an on-campus education program that provides counseling and tutorial services for postsecondary students, and the Talent Search, Educational Opportunity Centers and Staff Training programs. The recommended funding level will support approximately the same number of projects and serve the same number of disadvantaged youth as in fiscal year 1982.

Veterans cost of instruction

The Committee agrees with the budget request to eliminate funding for the Veterans Cost of Instruction (VCIP) activities authorized under title IV of the Higher Education Act. In 1982, $4,800,000 was appropriated, the same as the House allowance.

The Veterans Cost of Instruction program provided grants to institutions of higher education to support outreach, recruitment, special educational services, and counseling to veterans. The program was created to respond to the special adjustment needs of the Vietnam era veterans. The Committee believes that veterans' need of these services has declined from its post-Vietnam peaks and that funds are not longer needed for this program. Moreoever, the same services can be provided under the TRIO program, which the Committee has provided a level of $150,240,000 for fiscal 1983.

Institutional aid programs

The Committee recommends $129,600,000 for Institutional Aid Programs (formerly Strengthening Developing Institutions), the fully authorized level, and the same as the budget request and the House allowance. This is $4,816,000 less than the fiscal 1982 amount. The funds will be for continuation awards to assist over 400 postsecondary institutions solve problems that threaten their ability to survive and to stabilize their management and fiscal operations so that they may achieve self-sufficiency. Programs funded under this head fall into three categories: Strengthening institutions (Part A) and to institutions with special needs (Part B) and challenge grants (Part C). The Committee acknowledges the effort the Department has recently made to provide technical assistance to institutions which have large enrollments of Hispanic and Native American students and expects that effort to be continued.

Minority institutions science improvement program

The Committee recommends $4,800,000 for the Minority Institutions Science Improvement program, the same as the budget request and the House allowance. These funds will help postsecondary institutions with a minority enrollment of at least 50 percent to upgrade their science, mathematics and engineering programs through the purchase of needed equipment, the development of curricular materials, and the training of faculty at approximately 100 institutions.

Cooperative education

The Committee recommends $14,400,000 for the Cooperative Education program, the same amount as provided in 1982 and the House allowance, and disagrees with the budget request to eliminate funding for the program, which is authorized under title VIII of the Higher Education Act.

This program provides assistance to help postsecondary institutions offer students paid work experiences closely related to their academic studies and career pursuits. The recommended level will support 179 administration grants for operating costs of campus based programs, 8 demonstrations and 9 training grants. The Committee believes that past successes of this program warrant its continuation.

International education

For International Education programs, the Committee recommends a total appropriation of $26,000,000, an increase of $2,000,000 above the fiscal year 1982 appropriation. This amount is $1,000,000 more than the House level and $15,686,000 more than the budget request. Of this total, $21,000,000 will fund domestic programs and $5,000,000 will fund overseas programs.

The Committee strongly disagrees with the Administration's proposed spending reduction of 58 percent in this program. A reduction of this magnitude would seriously impair our Nation's inter-cultural knowledge base by reducing the number of National Centers by half and the number of Foreign Language and Area Study Fellowships to 300 from 800. The United States has a pressing need for language and area specialists, as well as for a public that is sophisticated about U.S. international needs and commitments. The reduction of these funds is shortsighted, counterproductive in both the long and short run, and weakens our Nation's security.

The Committee also wishes to restate its strong position of previous years that these funds should not be limited for advanced work only, but should also be used to improve undergraduate and secondary school instruction in foreign languages and cultures. The Committee clearly intends that funding be continued for the Undergraduate Program and the Foreign Curriculum Consultant Program.

Under domestic programs, the funds will support National Resource Centers, Exemplary programs, Foreign Language Area Studies Fellowships and Research projects. Under overseas programs, the funds will support approximately 795 participants, about the same as the fiscal 1982 level in group projects abroad, Fellowships for Faculty Research Abroad, Fellowships for Doctoral Dissertation Research Abroad, and Special Bilateral Projects.

The Committee is also providing $1,000,000 for the funding of Part B—International Business Education Programs. The Committee believes that the funding of Part B would be cost-effective, eventually resulting in the improvement of the U.S. export activities and the international competitive position of U.S. businesses. The Committee

notes that this program is a matching grant program and should generate substantial activities beyond its modest dollar contribution.

Graduate support—Fellowships for graduate and professional study

The Committee recommends $10,000,000 for this program, disagreeing with the budget request for its termination. This is $1,360,000 above the fiscal 1982 level, and the same as the House allowance. The Committee believes that graduate support in these areas continues to be an important priority in light of the assistance it provides to women and minorities in the pursuit of their professional education. At the recommended level, 1,190 fellowships for minorities and women will be supported, an increase of 155 over the 1982 level.

Graduate support—Public service fellowships

The Committee is recommending $1,000,000 for Public Service Fellowships, which is $920,000 less than the House and the fiscal 1982 levels, but $1,000,000 more than the budget request. The Committee, while rejecting the elimination of this program, as proposed by the administration, recommends a phase-out. At present, many institutions currently offer high quality graduate programs in such areas as public administration, and there is evidence of a substantial supply of qualified persons to fill public service jobs. Moreover, the number of Masters degrees in these areas awarded in the last decade increased by more than 140 percent, and doctoral degrees awarded in that period increased by 107 pecent.

Graduate students in public service are eligible to receive assistance through a number of Federal student aid programs. In addition, the Committee understands that increasingly, Federal, State, and local government offices are recruiting personnel for jobs among those with more specialized degrees such as law, economics, and engineering. Therefore, the need to maintain the previous level of Federal involvement in this particular program is questionable.

Construction—Interest subsidy grants

The Committee recommends $25,000,000 for construction interest subsidy grants, the same as the House allowance and the budget request. This is a mandatory appropriation required to meet the Federal commitment to pay interest subsidies on 615 prior year loans for the construction of academic facilities. Federal subsidy grants pay the difference between the rate of interest secured by an institution in commercial markets and the 3 percent interest rate charged by the program. No new awards have been made since 1973, and there will be no new awards in 1983.

Special endowments—General Daniel "Chappie" James Memorial

Included in Public Law 97-276, the Continuing Resolution, is $9,000,000 for the General Daniel "Chappie"' James Memorial Education Center at Tuskegee Institute. This amount will enable establishment of an aerospace science and health education center in honor of the first black four-star general in the U.S. Air Force. It is hoped that this Center will significantly increase the enrollment of black professionals in the areas of science, technology, engineering and other related fields.

Robert A. Taft Institute of Government

The Committee concurs with the House in providing $750,000 for the Robert A. Taft Institute of Government. Grants will be awarded by the Department of Education to the Robert A. Taft Institute of Government in New York City. The Institute is a nonprofit educational organization which conducts bipartisan seminars for high school teachers on college campuses throughout the Nation. The main emphasis of this popular program is to stimulate a broader understanding of our two-party system of government.

Wayne Morse Chair of Law and Politics

The Committee has agreed to include bill language requested by the administration and adopted by the House extending the availability of unobligated matching funds through the end of fiscal year 1985 for the Wayne Morse Chair of Law and Politics.

Legal training for the disadvantaged

The Committee recommends $1,000,000, disagreeing with the budget request of no funding for Legal Training for the Disadvantaged. This is an increase $40,000 above the fiscal year 1982 level, and the same as the House allowance. Funds will support the continuation of the program's effectiveness in increasing the number of disadvantaged youth who enter and complete law school.

Law school clinical experience

For Law School Clinical Experience, the Committee recommends $250,000, which is $250,000 more than the budget request but $710,000 less than the House allowance. The Committee recommendation would provide for an orderly phase-out for this program. The Committee believes that the concept of clinical legal education and programs are being supported at most accredited law schools. Federal appropriations have provided a total of $10,000,000 for these activities, which also enjoy the support of corporate contributions. Those institutions considering the program valuable should seek community or private support in order to continue.

Fund for the improvement of postsecondary education

The Committee recommends $11,900,000 for the Fund for the Improvement of Postsecondary Education (FIPSE), the same as the budget request. This is $380,000 higher than the 1982 appropriation and the House allowance.

The Fund was established to improve the effectiveness of postsecondary education through the support of innovative projects. Many FIPSE projects have been successfully disseminated and replicated with local funding after Federal support has ended. With the increase in funds, the Committee encourages support of projects in computer technology and telecommunications. The amount included will support over 100 continuation awards and approximately 80 new projects.

HIGHER EDUCATION FACILITIES LOAN AND INSURANCE FUND

1982 comparable appropriation	$11,096,000
1983 appropriation request	20,143,000
House allowance	20,143,000
Committee recommendation	20,143,000

The Committee recommends an appropriation of $20,143,000 for the Higher Education Facilities Loan and Insurance Fund. This is the same as the administration request and the House allowance. The recommendation is $9,047,000 more than the fiscal year 1982 comparable appropriation of $11,096,000. A permanent indefinite appropriation, now estimated at $134,000, will also be available for fiscal year 1983. In fiscal year 1983, the outstanding balance of direct loans under this program will be approximately $400,000,000.

No new loans have been made in this program since fiscal year 1981. The 1983 appropriation will be used to cover mandatory operating costs. The permanent indefinite appropriation of $134,000 is required for interest insufficiencies on participation certificates sold in 1967. The annual appropriation of $20,143,000 will be used to pay interest owed to the Treasury on the outstanding balance of direct loans. Other operating expenses of the program will be financed from loan repayments and other income. In fiscal year 1983, the outstanding balance of direct loans under this program will be approximately $400,000,000.

COLLEGE HOUSING LOANS

The Committee concurs with the House allowance and the budget request in recommending no annual appropriation for College Housing Loans. No funds were provided under the annual appropriation in fiscal 1982. The Committee concurs with House language, however, which will make available $40,000,000 for new loan commitments in fiscal year 1983 using loan payments and other income in this account. The President's budget has asked that no new loans be made. Loan repayments also will be used to retire the program's debt to the Government National Mortgage Association and to pay other mandatory operating expenses associated with prior year loans. In 1983, the outstanding loan volume in this program will be approximately $3,000,000,000.

A permanent indefinite appropriation, now estimated at $40,000,000 will be available in fiscal 1983 to pay interest insufficiencies on participation certificates sold in 1967 to provide capital for new loans.

EDUCATIONAL RESEARCH AND STATISTICS

1982 comparable appropriation	$61,978,000
1983 appropriation request	62,392,000
House allowance	61,978,000
Committee recommendation	64,203,000

The Committee recommends an appropriation of $64,203,000 for Educational Research and Statistics including both the National Institute of Education and the National Center for Education Statistics. This is $1,811,000 more than the administration request and $2,225,000 more than the House allowance and the fiscal year 1982 comparable appropriation of $61,978,000.

National Institute of Education

For the National Institute of Education, the Committee recommends an appropriation of $55,614,000, an amount which is $1,969,000 more than the Administration's request and $2,225,000 greater than the House allowance and the fiscal year 1982 comparable appropriation.

The National Institute of Education (NIE) is the primarly vehicle within the Department of Education for research on the problems faced by our educational institutions, teachers and students. The Institute's three major programs focus on teaching and learning, the dissemination of research findings and improvement of practices, and educational policy and organization. NIE was created by Congress in 1972.

The Committee expects that the Institute's fiscal year 1983 activities will continue to build upon past work on such major issues as the characteristics of effective

schools, and improving instruction in reading and writing, science, and mathematics. The Committee directs the Institute to continue support for the National Assessment of Educational Progress (NAEP) and the Educational Resources Information Centers (ERIC).

The Committee also directs the Department to continue support for the work of eight regional education laboratories and nine national research centers at a fiscal 1983 level of not less than $28.2 million. These laboratories and centers were established by the Congress to engage in research and development to enhance the quality of American education.

Of the amount appropriated for the laboratories and centers, sufficient funds should be used to establish and maintain, through a competitive process, a new central midwestern regional educational laboratory. The competition should insure that the laboratory is chosen consistent with the intent of section 405(f) of the General Education Provisions Act and operated under terms and conditions of the Long-term Special Institutional Agreement.

The Department also should work with the laboratories and centers to develop a set of regulations for the fiscal year 1984 recompetition of these institutions, consistent with Section 405(f) of the General Education Provisions Act.

In forthcoming hearings, the Committee intends to explore the ability of the labs and centers to address the special educational needs of areas which may not be served by these 17 institutions due to geographic distances, such as may be the case with the Pacific Basin region.

National Center for Education Statistics

For the National Center for Education Statistics (NCES), the Committee recommends $8,589,000 which is $158,000 less than the Administration's request but the same as the House allowance and the fiscal 1982 level. NCES collects and analyzes data and disseminates information on the condition of education. NCES also assists States in implementing standard statistical systems. NCES was established by Congress in 1974.

The Committee expects that the Center's fiscal year 1983 activities will continue to build upon past work including the core data collection activities for such publications as "The Condition of Education", the Higher Education General Information Survey (HEGIS), and the longitudinal study High School and Beyond.

EDUCATIONAL, RESEARCH, AND TRAINING ACTIVITIES OVERSEAS

1982 comparable appropriation	$960,000
1983 appropriation request	516,000
House allowance	516,000
Committee recommendation	516,000

The Committee recommends an appropriation of $516,000 for Educational, Research, and Training Activities Overseas. This is the same as the administration request and the House allowance. The recommendation is $444,000 less than the fiscal year 1982 comparable appropriation of $960,000. These funds will support the Grants to American Institutions program, which enables U.S. educational personnel to study and conduct educational research abroad in the Middle East and Indian subcontinent.

The Committee recommends that no appropriation be provided for the Research and Demonstration program which supports overseas research projects concerning rehabilitation of handicapped persons. Unobligated funds carried forward from fiscal year 1982 will remain available to support projects in Burma, Guinea, India, and Pakistan.

The activities supported under this account are funded solely from excess foreign currencies held by the U.S. Treasury which are determined to be in excess of other requirements. No U.S. dollars are expended.

LIBRARIES

1982 comparable appropriation	$80,080,000
1983 appropriation request	
House allowance	80,080,000
Committee recommendation	80,320,000

The Committee rejects the Administration's proposal to eliminate federal funding for the Libraries account and instead, includes $80,320,000 in the bill, $240,000 more than the House allowance and the fiscal 1982 level. Federal library funds are used to assist the states in efforts to extend and improve their services. The Federal appropriation also supports resource sharing efforts among libraries, programs for personnel training and the improvement of services, aid to college libraries and support for research libraries.

The Federal contribution for libraries represents only a fraction of the operating budgets for libraries, but these funds are directed to programs which increase library access to individuals and groups with special needs.

The recommendation of the Committee is as follows:

Public Library Services

The Committee recommends $60,000,000 for aid to public libraries to strengthen and improve programs in states where services are inadequate. This level is the same as the House and the fiscal 1982 amount.

Efforts supported by this program make services more accessible to persons who, by reason of distance, residence, physical handicap or other disadvantageous situations, might not have the opportunity to benefit from the information and educational services of the public library. Among those targeted by the Federal program are the homebound, the institutionalized, the rural and urban disadvantaged, the physically handicapped and those with limited English speaking ability. Funds are distributed to the states on the basis of a formula grant and are administered by the officially designated State library agency. The Committee, in continuing this limited Federal investment in public libraries, recognizes that inflation and eroding tax bases increasingly place burdens on library budgets. Millions of people still are without access to those services at a time when states and communities are unable to provide additional resources. The Committee wishes to emphasize that it views the public library as a key component in our nation's system of public education and in the commitment to lifelong learning.

Interlibrary cooperation

The bill includes $11,520,000, the same as the fiscal 1982 and the House level for Interlibrary Cooperation. Projects funded under this formula grant program are aimed at improving the efficiency and effectiveness of the nation's library system through networking and other cooperative activities.

A 1978 evaluation study indicated that this program was a major factor behind the development of multi-type library cooperation and networking in 46 states.

College library resources

The Committee has included $1,920,000 for college library resources, the same as the House allowance and the fiscal 1982 level. At this level, the 2,600 eligible institutions would receive a grant of about $798 to purchase books, periodicals and other library material.

The Committee wishes to indicate, however, that future funding for this program may depend upon the establishment of a needs criteria so that only the most deserving institutions would receive an award sufficient to provide a meaningful supplement to the library materials budget. At present there is no established needs eligibility and 2,600 institutions receive the same amount regardless of their financial capacity or need.

Training and demonstrations

The Committee recommends $880,000 for the jointly authorized library career training and demonstrations program, the same as the House and fiscal 1982 levels. This discretionary grant program assists higher education and library organizations to train or retrain individuals for service in all types of library and information centers. The objectives are to increase career opportunities in these areas for minorities and disadvantaged individuals and to assist in the upgrading of skills for those in the field. In the past 10 years, over 60 percent of the awards have been made to members of minority groups. The program also awards grants and contracts to encourage research and demonstrations leading to improved library services, including the development of computer assisted institutional programs.

Research Libraries

The Committee recommends $6,000,000 for research libraries, an amount that is $240,000 more than the House allowance and the fiscal year 1982 level. The purpose of this program is to strengthen major research library collections, both private and public and to make these collections available to individual researchers, scholars and to other libraries. Program objectives include: the acquiring of distinctive research materials, preserving of unique collections, new research projects, and the promotion of interinstitutional cooperative activities.

Since the beginning of the program in 1978, about half of the project funds have been used in the area of bibliographic control, making unique collections more accessible to scholars, and the other half has been divided equally between developing collections and preserving existing collections.

The Committee believes it is critical to maintain a small but significant Federal effort in the preservation and development of priceless collections which otherwise might be lost to society.

SPECIAL INSTITUTIONS

AMERICAN PRINTING HOUSE FOR THE BLIND

1982 comparable appropriation	$5,000,000
1983 appropriation request	4,924,000
House allowance	5,000,000
Committee recommendation	5,000,000

The Committee recommends an appropriation of $5,000,000 for the American Printing House for the Blind. This is the same as the House allowance and the fiscal year 1982 level. The recommendation is $76,000 more than the budget request.

The American Printing House for the Blind, which is located in Louisville, Kentucky, provides materials to legally blind students, below the college level through an

annual Federal appropriation. The materials are distributed to the schools and States through established per capita allotments based on the total number of blind students. The recommended level will provide a per capita allotment of $121.35 for 38,400 eligible blind students.

NATIONAL TECHNICAL INSTITUTE FOR THE DEAF

1982 comparable appropriation	$26,300,000
1983 appropriation request	26,297,000
House allowance	26,300,000
Committee recommendation	26,300,000

The Committee recommends an appropriation of $26,300,000 for the National Technical Institute for the Deaf (NTID). This is the same as the House allowance and the fiscal year 1982 level, but $3,000 more than the administration request.

The National Technical Institute for the Deaf is located on the campus of the Rochester Institute of Technology (RIT) in Rochester, N.Y. It was established by Congress, under Public Law 89-36 as a postsecondary institute for young adults, providing educational and technical training and has an impressive record with regard to job placement. In fiscal year 1983, the Institute expects an enrollment of approximately 1,000 students.

To serve the Nation's deaf population, NTID also trains professional manpower and conducts applied research in communications, economic, employment and social factors associated with deafness.

GALLAUDET COLLEGE

1982 comparable appropriation	$52,000,000
1983 appropriation request	52,000,000
House allowance	52,000,000
Committee recommendation	52,000,000

The Committee recommends an appropriation of $52,000,000 for Gallaudet College. This is the same as the administration request, the House allowance and the fiscal year 1982 appropriation.

Within the appropriation for Gallaudet College, funds are provided for Gallaudet, the Model Secondary School for the Deaf and the Kendall Demonstration Elementary School.

Gallaudet College, located in Washington, D.C., is a private nonprofit educational institution providing college preparatory, undergraduate and continuing education programs for the deaf, and a graduate program in fields related to hearing impairment. In fiscal year 1983, the college expects an on-campus enrollment of approximately 1,700 degree students—undergraduates and graduates—and 2,400 nondegree students. In addition to the on-campus programs, the college offers a number of public service prgrams throughout the country.

The Committee recommends $33,910,000 for the college, an amount which is $1,600,000 more than the fiscal year 1982 level. This amount is the same as the budget request and the House allowance. The increase will be used for faculty and facilities operation and maintenance costs. These funds are also needed to meet the educational needs of an expanded enrollment of college-age students born during the rubella epidemic nearly two decades ago.

A total of $11,700,000 is included for the Model Secondary School for the Deaf which is the same as the Administration request and the House allowance. The Model Secondary School for the Deaf serves as a laboratory for educational experimentation and development, disseminates models of instruction for the deaf, and prepares deaf adolescents for postsecondary academic or vocational education. The Model Secondary School for the Deaf is funded entirely through annual Federal appropriations.

The bill also includes $6,390,000 for Kendall Demonstration Elementary School for the Deaf an amount equal to the Administration request and the House allowance. The Kendall school develops exemplary educational programs and on-site instruction for children from infancy through age fifteen and is funded entirely through annual Federal appropriations.

No funds are provided for construction for which $1,600,000 was appropriated in 1982. Some of Gallaudet's housing and office space needs have been met by the acquisition of the old Marjorie Webster College campus and buildings.

HOWARD UNIVERSITY

1982 comparable appropriation	$145,200,000
1983 appropriation request	145,200,000
House allowance	145,200,000
Committee recommendation	145,200,000

The Committee recommends an appropriation of $145,200,000 for Howard University. This is the same as the administration request, the House allowance and the fiscal year 1982 appropriation.

Howard University, located in the District of Columbia, has for the past 115 years offered higher education opportunities to all students, without regard to race, sex, creed, national origin, or religion. The university offers undergraduate and graduate degrees and consists of 17 schools and colleges. The University also administers the Howard University Hospital.

The Committee recommends $123,094,000 for the academic program. This is the same as the Administration request and the House allowance, and is $13,500,000 above the 1982 level. These funds will be used for built-in increases in faculty and staff salaries and benefits, as well as increases in the various academic departments.

For the Howard University Hospital, the Committee recommends $22,106,000 the same as the fiscal year 1982 level. The hospital provides both in-patient and out-patient care, as well as training in the health professions. Increases in operating costs will be financed by an increase in revenues from patient care receipts. These receipts are to be obtained from further improvements in collection procedures.

No new funds are provided for construction which received $13,500,000 in 1982. The construction projects funded in 1982 and prior years are non-recurring, and there are sufficient unobligated balances to continue them in 1983.

OFFICE FOR CIVIL RIGHTS

SALARIES AND EXPENSES

1982 comparable appropriation	$45,038,000
1983 appropriation request	44,868,000
House allowance	44,868,000
Committee recommendation	44,868,000

The Committee recommends an appropriation of $44,868,000 for the Office for Civil Rights. This amount is the same amount as the budget request and the House allowance. The recommendation is a decrease of $170,000 from the fiscal year 1982 comparable appropriation.

The Office for Civil Rights enforces Federal prohibitions against discrimination in programs and activities funded by the Department of Education. The Office investigates complaints, initiates compliance reviews, monitors remedial plan agreements, provides technical assistance and conducts research in areas involving discrimination.

The Office for Civil Rights operates under the following legislative and court mandates: Title VI of the Civil Rights Act (racial and ethnic discrimination); Title IX of the Education Amendments of 1972 (sex discrimination); Section 504 of the Rehabilitation Act of 1973 (discrimination against the handicapped); Age Discrimination Act of 1975 (age discrimination); *Adams* vs. *Hufstedler* which requires that complaints be investigated within an established time frame; and *Lau* vs. *Nichols* which requires monitoring of compliance plans that ensure equal education opportunity for children whose first language is not English.

The slight decrease is the net change after increases of approximately $1,600,000 for annualization of the 1983 costs of the 1982 pay raise, rate increases for rent, telecommunications and mail, and expanded technical assistance contracts offset by decreases of approximately $1,800,000 for reductions in employment, equipment, travel, and other items.

DEPARTMENTAL MANAGEMENT

SALARIES AND EXPENSES

1982 comparable appropriation	$226,950,000
1983 appropriation request	222,000,000
House allowance	222,000,000
Committee recommendation	222,000,000

The Committee recommends an appropriation of $222,000,000 which is the same as the budget request and the House allowance. The recommendation is a decrease of $4,950,000 from the comparable 1982 appropriation.

Departmental Management, Salaries and Expenses is a consolidated administrative account for the Department of Education which is the source of funds and positions for the administration of over 100 programs and 13 offices. This includes support for Advisory Committees and for Program and Management Evaluation. The funds in this account provide for personnel compensation, benefits, travel, rent, communications, utilities, printing, automated data processing, contracts, equipment, supplies, and other services.

Program Administration

Of the total appropriation, $217,900,000 is for the Program Administration activity which will support the salaries of 3,752 full-time equivalent positions and operating expenses for the administration of the Department's offices and programs. This amount is $4,950,000 less than the fiscal year 1982 funding level primarily due to the savings associated with the reduction of 501 full-time equivalent positions which will be achieved through attrition. Offsetting this major decrease are increases in the rates for rent, telephones and mail, and an increase in funding automated data processing for the Student Financial Aid Program

Advisory Committees

The Committee recommends $1,750,000 for the operating expenses of the Advisory Committees which is the same as the budget request and the comparable 1982 level. This amount will support continuation activities of eight advisory committees.

Program and Management Education

The Committee recommends $2,350,000 for Program and Management Evaluation, which is the same as the comparable fiscal 1982 funding level. This activity provides studies and evaluations to provide current information on the operations and effects of education programs.

OFFICE OF THE INSPECTOR GENERAL

1982 comparable appropriation	$11,994,000
1983 appropriation request	12,840,000
House allowance	12,840,000
Committee recommendation	12,840,000

The Committee recommends an appropriation of $12,840,000 for the Office of the Inspector General. This is the same as the administration request and the House allowance. The recommendation is $846,000 more than the fiscal year 1982 comparable appropriation.

The Office of the Inspector General has authority to inquire into all program and administrative activities of the Department and the related activities of all parties performing under contracts, grants or other fiduciary agreements with the Department. These inquiries may be in the nature of audits, investigations, or such other reviews as may be necessary.

The recommended funding level will continue to fund the salaries and expenses of 304 full-time equivalent positions, the same number of positions as in 1982. The increase in the funding level will support primarily full-year cost in 1983 of the 1982 pay raise, rate increases for rent and communications, and $305,000 for the first full-year operating cost of an automated case tracking system.

The Committee has included a technical bill language amendment to bring the structure of the Inspector General appropriation account into conformance with the Department of Health and Human Services format.

TITLE IV—RELATED AGENCIES

ACTION

DOMESTIC PROGRAMS

1982 comparable appropriation	$131,866,000
1983 appropriation request	117,721,000
House allowance	129,073,000
Committee recommendation	125,490,000

The Committee recommends an appropriation of $125,490,000 for ACTION domestic programs. This is $7,769,000 more than the administration request and $3,583,000 less than the House allowance. The recommendation is $6,376,000 less than the fiscal year 1982 comparable appropriation of $131,866,000.

The Committee has included language which prohibits ACTION from closing any state offices or reducing personnel in the state offices. The Committee understands that ACTION had planned a reduction in force of 89 positions together with closing or greatly reducing state offices. Under the language included, ACTION must maintain state offices at the current personnel level. The Committee urges ACTION to find savings in other areas including a review of its non-career personnel requirements.

VISTA

The Committee recommendation of $8,000,000 for Volunteers in Service to America is an increase of $7,769,000 over the budget request and $3,831,000 less than the House allowance. An $8,000,000 appropriation floor for VISTA was established by Public Law 97-35. This marks the second year of a 2 year phase-out of this program.

It is the intent of this Committee that VISTA volunteers in service be maintained at a level of not less than 1,800 volunteers throughout the entire 1983 fiscal year. The Committee has included this directive in order to give the authorizing committees an opportunity to act on reauthorization or sunset.

Service-learning programs

The Committee recommends an appropriation of $1,830,000 for service-learning programs. This is the budget request level and $73,000 over the House recommendation.

Older Americans volunteer programs

For ACTION's Older Americans Volunteer Programs the Committee recommends a total of $87,861,000, the same as the House level. The Committee bill includes $27,445,000 for the Retired Senior Volunteer program (RSVP), which is the same as the House allowance and the budget request, and $1,057,000 above the fiscal 1982 level. This program provides part-time volunteer service opportunities for persons 60 years of age and over. Volunteer recruitment, development, and placement is provided through grants awarded to local sponsoring organizations. $26,511,000 will be used to continue 727 projects and 345,000 volunteers. Also, the Committee has provided $738,000 for training and technical assistance and $196,000 for program evaluation.

The bill includes $48,400,000 for the Foster Grandparent Program. This is the requested amount and $2,321,000 above last year's allowance. This program provides meaningful assistance for two groups—older Americans and disadvantaged youths. The program provides service opportunities for low-income persons over 60 who assist children with special needs in a variety of settings. $47,952,000 will be used to continue 233 existing projects and 18,100 volunteers. Also, the Committee has provided $238,000 for support and training and $210,000 for program evaluation.

For the Senior Companion program, the Committee provides $12,016,000, which is the same as the budget request and the House allowance and $154,000 below the 1982 appropriation. This program provides a vehicle for persons 60 years of age and over to assist elderly persons with physical, mental, or emotional impairments in a variety of private and institutional settings. $11,854,000 is for 77 existing projects and 4,200 volunteers. In addition, the Committee has provided $72,000 for training and technical assistance and $90,000 for program evaluation.

The Committee has provided $1,984,000 for Citizen Participation and Volunteer programs which is the same as the request level and $175,000 more than the House allowance and last year's appropriation. The Committee believes this increase necessary to maintain the programs which provide support and technical assistance for voluntary citizen participation activities.

The bill includes $25,815,000 for program support which is the budget request level, but $1,848,000 below last year's level. This activity provides for the management and direction of ACTION's programs.

CORPORATION FOR PUBLIC BROADCASTING

1982 comparable appropriation	$130,000,000
1983 appropriation request	85,000,000
House allowance	130,000,000
Committee recommendation	130,000,000

The Committee recommends an appropriation of $130,000,000 for the Corporation for Public Broadcasting. This is $45,000,000 more than the administration request, but the same as the House allowance, and the fiscal year 1982 comparable appropriation.

The Corporation for Public Broadcasting is the primary vehicle for providing Federal financial assistance to the radio and television stations which currently compose the noncommercial broadcasting system.

The amount provided is the authorized level, and the Committee believes that the sum will enable public broadcasting to undertake long-range planning and production commitments.

FEDERAL MEDIATION AND CONCILIATION SERVICE

1982 comparable appropriation	$24,552,000
1983 appropriation request	20,190,000
House allowance	21,721,000
Committee recommendation	21,321,000

The Committee recommends an appropriation of $21,321,000 for the Federal Mediation and Conciliation Service. This is $1,131,000 more than the administration request and $400,000 less than the House allowance. The recommendation is $3,231,000 less than the fiscal year 1982 comparable appropriation of $24,552,000.

The Federal Mediation and Conciliation Service provides skilled professional mediators to prevent and minimize work-stoppages. The service also offers technical assistance and training in the development of management-labor relations and practices.

The Committee has provided $488,000 to continue the arbitration program and $643,000 for the labor-management co-operative program, the same as the House allowance.

The Committee has approved 362 permanent positions, which is the number requested and 10 less than the number provided by the House, resulting in a reduction of $400,000 below the House allowance.

FEDERAL MINE SAFETY AND HEALTH REVIEW COMMISSION

1982 comparable appropriation	$3,544,000
1983 appropriation request	3,686,000
House allowance	3,686,000
Committee recommendation	3,686,000

The Committee recommends an appropriation of $3,686,000 for the Federal Mine Safety and Health Review Commission. This is the same as the administration request and the House allowance. The recommendation is $142,000 more than the fiscal year 1982 comparable appropriation of $3,544,000.

The Commission adjudicates disputes between the Labor Department's Mine Safety and Health Administration and Employers or employees to whom MSHA has issued a citation charging a violation.

The Committee recommendation provides for 70 full-time positions, six less than last year.

NATIONAL COMMISSION ON LIBRARIES AND INFORMATION SCIENCE

1982 comparable appropriation	$674,000
1983 appropriation request	0

House allowance	674,000
Committee recommendation	674,000

The Committee recommends an appropriation of $674,000 for the National Commission on Libraries and Information Science. This is $674,000 more than the administration request and the same as the House allowance. The recommendation is the same as the fiscal year 1982 comparable appropriation of $674,000.

This permanent, independent agency advises the President and Congress on national library needs, and acts as a coordinator of national, State, and local activities in meeting national library priorities.

NATIONAL COMMISSION ON STUDENT FINANCIAL ASSISTANCE

1982 comparable appropriation	$960,000
1983 appropriation request	840,000
House allowance	345,000
Committee recommendation	840,000

The Committee recommends an appropriation of $840,000 for the National Commission on Student Financial Assistance. This is the same as the administration request, as amended by the November 12, 1982 budget amendments, and $495,000 more than the House allowance. The recommendation is $120,000 less than the fiscal year 1982 comparable appropriation of $960,000.

The Commission, authorized by the Education Amendments of 1980 (Public Law 96-374), is charged with studying student aid issues and reporting to Congress. Nineteen studies are planned for 1983, and their results and the Commission's recommendations are due to the Congress and to the President no later than July 1, 1983.

The amount recommended by the Committee would provide sufficient funds for the Commission's reports and final recommendations and all close-out costs.

NATIONAL LABOR RELATIONS BOARD

1982 comparable appropriation	$117,600,000
1983 appropriation request	133,000,000
House allowance	124,045,000
Committee recommendation	124,045,000

The Committee recommends an appropriation of $124,045,000 for the National Labor Relations Board. This is $8,955,000 less than the administration request and the same as the House allowance. The recommendation is $6,445,000 more than the fiscal year 1982 comparable appropriation of $117,600,000.

The Committee approves the request of 3,213 permanent positions for the Board, the same as last year. The $6,445,000 increase over fiscal year 1982 is for salary increases and a number of deferred items such as printing, training, and office furniture. The Committee did not approve a further increase of $8,955,000 which was requested in anticipation of an increase in cases coming before the Board. The increase of cases has not materialized.

The Board resolves representation disputes in industry and remedies and prevents unfair labor practices by both labor unions and employers.

NATIONAL MEDIATION BOARD

1982 comparable appropriation	$4,758,000
1983 appropriation request	3,618,000
House allowance	5,468,000
Committee recommendation	5,468,000

The Committee recommends an appropriation of $5,468,000 for the National Mediation Board. This is $1,850,000 more than the administration request and the same as the House allowance. The recommendation is $710,000 more than the fiscal year 1982 comparable appropriation of $4,758,000.

The Committee has approved sixty permanent positions, one less than last year. An increase of $333,000 over fiscal 1982 is for mandatory increases such as salaries, office space costs, and travel costs. Also, the Committee has approved an increase of $400,000 for activities authorized under the 1981 Reconciliation Act (Public Law 97-35) which includes fact finding panels and 5 emergency boards created under section 9A of the Railway Labor Act dealing with commuter carriers.

The Committee has not approved a decrease of $1,850,000 which was to be made up through user fees. The Committee does not believe an appropriations bill is the appropriate vehicle for such legislative changes and has, without prejudice, not included the necessary language.

OCCUPATIONAL SAFETY AND HEALTH REVIEW COMMISSION

1982 comparable appropriation	$7,092,000
1983 appropriation request	6,316,000
House allowance	6,316,000
Committee recommendation	6,316,000

The Committee recommends an appropriation of $6,316,000 for the Occupational Safety and Health Review Commission. This is the same as the administration request and the House allowance. The recommendation is $776,000 less than the fiscal year 1982 comparable appropriation of $7,092.00.

The Commission adjudicates disputes between the Occupational Safety and Health Administration (OSHA) and employers or employees to whom OSHA has issued citations.

The Committee has approved 121 permanent positions, a reduction of five from last year.

RAILROAD RETIREMENT BOARD

1982 comparable appropriation	$390,200,000
1983 appropriation request	350,000,000
House allowance	430,000,000
Committee recommendation	430,000,000

The Committee recommends an appropriation of $430,000,000 for the Railroad Retirement Board. This is $80,000,000 more than the administration request and the same as the House allowance. The recommendation is $39,800,000 more than the fiscal year 1982 comparable appropriation of $390,000,000.

The Committee recommendation will fully fund the Railroad Retirement "windfall" benefit for all of the more than 400,000 recipients.

This account was created in 1981 to fund dual benefits for railroad retirees eligible for Railroad Retirement and Social Security benefits.

LIMITATION ON ADMINISTRATION

1982 comparable appropriation	$47,032,000
1983 appropriation request	44,080,000
House allowance	46,361,000
Committee recommendation	46,361,000

The Committee recommends an appropriation of $46,361,000 for limitation on administration for the staff of the Railroad Retirement Board. This is $2,281,000 more than the administration request and the same as the House allowance. The recommendation is $671,000 less than the fiscal year 1982 comparable appropriation of $47,032,000.

This account is funded from the Railroad Retirement Trust Fund and represents a limitation on the amount of trust funds which may be used to pay the expenses of administering that fund. The amount recommended by the Committee will provide for the needed level of effort for administration of railroad retirement payments to 974,000 beneficiaries and will provide 1,104 permanent positions.

The Committee has approved House language which mandates a staffing level of 1,162 full-time equivalent positions and bill language mandating an apportionment to the Railroad Unemployment Insurance Limitation Account.

MILWAUKEE RAILROAD RESTRUCTURING ADMINISTRATION

1982 comparable appropriation	$240,000
1983 appropriation request	250,000
House allowance	250,000
Committee recommendation	250,000

The Committee recommends an appropriation of $250,000 for Milwaukee Railroad Restructuring Administration. This is the same as the administration request and the House allowance. The recommendation is $10,000 more than the fiscal year 1982 comparable appropriation of $240,000.

The recommended appropriation will fund administrative expenses incurred by the Railroad Retirement Board in carrying out its responsibilities under both the Milwaukee Railroad Restructuring Act and the Rock Island Railroad Transition and Employee Assistance Act. Appropriations for the amount payable for benefits under these two acts are transferred to the Board for disbursement. The Board's administrative expenses are incurred for the process of determining eligibility for and entitlements to benefits.
